THE YEAR 1874.

IT is scarcely necessary to say much concerning the year that has just ended. A more memorable one has not, it is true, been known since the Mutiny, yet as the story of the great Famine has been repeatedly told we may be excused from noticing it in this place. Only so recently as last month Dr. George Smith in a conspicuously able speech delivered in Edinburgh referred to it, and an extract from what he then said will be found in another column; the observations of the late editor of the *Friend of India* will doubtless be read with interest by that large body of persons in this country who admire his conscientiousness, his talents, his unflinching courage, and his unwearying zeal. That Dr. Smith did a great deal to arouse public and official attention here and in Great Britain to the magnitude of the calamity that twelve months ago threatened Bengal and Behar must be admitted by everyone. The very great service rendered by him at a time when it was absolutely necessary for the salvation of millions that the public press should speak out boldly it is difficult to estimate at its full worth; he did his duty, but it was at no small personal cost in more ways than one. We trust the time is coming when full justice will be done him. His Excellency the Viceroy and Sir Richard Temple have made themselves names for all time in Indian History in connection with the Famine of 1874. It is no injustice to them to say that they were backed in their policy by public opinion, and that without extensive moral support they could scarcely have done what they did. As one of the leading writers on the press of India and of Europe, Dr. Smith did great things in winning public sympathy for the starving population of Tirhoot. The journalists of every large city in India ably co-operated with him. The measure of what was thus accomplished is not to be found in subscription lists, but in the fact that public opinion has given its approval to the addition of millions to the taxation of the country for the sake of the famine-stricken. The Government of India, despotic though it may be in form, is as a matter of fact no despotism. Not only is it far from being so in the character of the Viceroy, than whom we believe no humaner, no juster man ever came to India, but it is also far from being so in this, that it can do nothing great for good or evil without public support in this country and in England. That support generally finds its expression in the tone adopted by the Secretary of State. As a member of the Cabinet, as one of the ministry, Lord Salisbury is under a great obligation to work in harmony with the sentiments of the British people. As the mouthpiece of those behind him, as well as from a conscientious conviction of duty, he endorsed fully and emphatically Lord Northbrook's famine policy. To have done otherwise—we feel morally certain that he had not the slightest wish to do otherwise—would have involved the ministry in ruin, the mind of the British people being fully made up that no expense should be spared in the saving of life. What we now feel bound to declare is that the condition of the public mind on this great question was due in no small degree to Dr. Smith and his co-labourers. They battled with the famine, after the fashion of journalists, by exciting the public conscience to a sense of the infamy that would result from the neglect of a great national duty.

During the past year there were many occurrences of importance. Very early came the disgraceful Bombay riots, which could easily have been prevented, yet were not effectually checked for some days. English opinion in India has never forgiven the timidity of action shown by the Bombay Government, and there is reason to believe that there is not a town in this part of the world in which Mahomedan *budmashes* have not drawn a mischievous inference from the feebleness of Sir Phillip Wodehouse. The successful mission of Mr. (now Sir Douglas) Forsyth to Kashgar has opened a new market for English goods, if it has not done more. The Foreign department of the Government of India is to be congratulated upon its enterprizing spirit. To its enlightened policy we owe the Bhamo expedition to China which is now bravely making its way Eastward. An event in the year was the separation of Assam from Bengal, which followed the visit of the Viceroy to the former province. It is impossible not to regret the decision of the High Court in the case of Mr. Meares, a decision which was upheld by Sir Richard Temple. The case was not one of law, but of fact, and public opinion was the best possible guide to a correct appreciation of the evidence. We shall probably soon hear that the Secretary of State, who has had all the papers sent him, has condemned the course pursued by the Lieutenant Governor of Bengal. The discovery of a gold field in the Wynaad, the completion of the Hooghly bridge, the settlement of the great question as to the broad and narrow guage, and the success of the Bhamo expedition are all subjects for congratulation, and show us that India is progressing, that the Government is in capable hands, that the resources of the country are being developed, and that there is abundant cause for hopefulness. Our retrospect of 1874 is intentionally a brief one, and it can therefore have no claim to completeness, but while omitting much that is undoubtedly worthy of notice we cannot pass by the remarkable circumstance that a few months ago there was good reason to believe the British Government had the rebel Nana in safe-keeping. It is truly surprizing that Colonel Willoughby Osborne and the Maharaja Scindiah should both have been completely deceived.

DR. SMITH ON INDIA.

THE last overland mail has brought the report of a very interesting speech delivered in Edinburgh on the 9th ult. by Dr. George Smith, who, as our readers are aware, is now editing the *Daily Review*. The large Hall of the Edinburgh Literary Institute was crowded with the respectability of "Auld Reekie," it being well known that there is no one in Great Britain more competent to speak on Indian affairs than Dr. Smith. We are glad to find that his great abilities as a lecturer are highly appreciated in a city which it is simply just to say is one of the most critical in Europe. It is to be regretted, that it is out of our power to give the whole of Dr. Smith's address; it was throughout full of the most valuable detail in reference to the present position and future prospects of this country, the vastness of the subject demanding an amplitude of treatment that left the speaker no alternative but to deliver an oration of considerable length. We must necessarily limit ourselves to a few extracts. Dr. Smith, who was received with loud applause, gave his hearers, at the outset of his observations, some idea of the various languages, creeds, and stages of civilisation of the 240 millions of people entrusted to our care in India, as well as the responsibility of the Viceroy and the eleven Governors, who have first of all to keep the peace internally and externally, then to tax the people, then to educate them in the widest sense of that word, and at the same time to prevent periodical famines among them.

The lecturer said—After some twenty years' intimate contact with all classes of the population, after living among the great Bengalee race, and going to and fro among the others, alike in ordinary British and in feudatory territory, north, south, east, and west, I must pronounce them a loveable people. They are loveable to those who know them, not always in the ordinary sense, for the customs which spring from caste and the position of the ruling race forbid that, on either side, save in rare instances. But their poverty their ignorance, their fatalism, on the one hand, and their grace, their courtesy, their gratitude—born of an ancient, though now *effete* civilisation on the other, call forth a mingled admiration and pity, which, in every well-regulated mind, will stimulate to action for their good, and a desire to learn from them, so that such action may be sympathetic and successful. (Applause.) Especially for the multitude is a feeling of compassion created. For centuries they have been the patient victims of an oppression which, in northern lands, would have been impossible long ago, under successive governments which have failed to give them even the rudiments of a secure administration, such as would save their souls from death, or deliver them from famine, in return for severe exactions. Under our own rule this feeling of compassion is extended to the old, the hereditary aristocracy, whom our land-laws first separate from the soil, and our civil courts then hand over to the tender mercies of the usurer, which are cruel. Whatever of rebellion there was, as distinguished from mutiny in 1857, was due to *these* laws and courts. Between the mass of the poor and the old families whom our administration has failed to attract, and who frequently, in whole households, become the victims of famine, there is the direct result of our rule—the smug, prosperous, oppressive *novus homo*, be he landowner, trader, official, or professional man educated in English, who enjoys and makes no adequate return for all the fruits of our administration, kept up at a cost of 50 millions sterling a-year, which is provided chiefly by the masses who pay the land, the salt, the stamps, and the customs taxes. There is much that is attractive in them, too, but, as a rule, where we do not directly interfere, this class in transition, as we may describe them, are the oppressors whom our system has created and fails to control, thereby perpetuating injustice to the mass of the people, and laying up a store of political discontent as well as moral wrong, which a second Fifty-seven may be required to sweep away—and many of them, as in the mutiny, with it. This prosperous, educated middle class, rejecting Christianity for Theodore Parker in a few cases, and for Comte or Huxley in the majority of instances, Hindoos in profession and self-indulgent in practice, require excessively severe pressure from high officials and public opinion to do their duty in time of famine, and many may be charged with provoking or intensifying famine by their rack-renting and usury. Whatever may be the respective advantages of the *grande* and *petite culture* in Europe, there can be little doubt that in India a freehold peasant proprietary would avoid the extremes alike of that periodically increased land tax on the people who, receiving no right of property, are unable to withstand either dearth or usury, and of that perpetual settlement which has handed over the millions of Bengal to a few landholders who steadily ignore the duties of property.

The learned lecturer having described in eloquent language the way in which the people of India live and die, referred in the following terms to the nature of the climate, and the characteristics of the rainfall.

A poor, scantily-clad, imperfectly-housed and somewhat under-fed agricultural people, such as we have described, depend for their comfort, their health, and their very life on the climate to which they may be exposed. In its normal condition the climate of India is, fortunately, most favourable to its inhabitants. There are all varieties, even on the plains, from the northern districts which are out of the tropics and contain a hardy, tall race, to the eastern deltas and

southern tracts of palm trees, where a cold season is unknown, but the equable sea breeze tempers the excessive heat to the diminutive races. As a rule the native of India dislikes that cold winter season to which the panting, wearied European looks forward for new vigour. To the native the heat is grateful, except when in May it becomes excessive, and his whole mode of life is regulated by it. His village is buried in unsanitary vegetation, and beside the pools from which he has dug the mud required to make his house. This hut is shut in by leafy walls, roofed by thick thatch, and supplied with small verandas. The peasant toils in his fields before the sun is very high in the heavens, and again before it sets, shutting himself up in his own privacy when its rays are most deadly. And, at the worst which to him lasts only a few weeks, the life-bringing, life-giving rain is at hand, heralded by the early showers which sometimes make May as tolerable as cooler months. With good reason have the Aryan children of nature, in the absence of any revelation, deified the rain-god Indra, who seems to have taken the principal place in the Vedic ritual so soon as the Hindoos forgot the splendour of the heavens as witnessed in their ancestral seats and typified by Varuna, the Greek Ouranos. Indra held his place before even the sun-god, the fire-god, the wind-god, as the anthropomorphic process went on, till we find a comparatively late poet like Kalidas thus apostrophising the Lord of Rain:—

> "Who is this that driveth near
> Heralded by sounds of fear?
> Red his flag, the lightning's glare
> Flashing through the murky air,
> Pealing thunder for his drums,
> Royally the monarch comes.
> See he rides amid the crowd,
> On his elephant of cloud,
> Marshalling his kingly train,
> Welcome, O thou Lord of Rain!"

(Applause.) To appreciate the truth as well as the beauty of this description one must have panted, as I have done for eighteen years, through the heats of April, May, and half June, while all nature is burned up, and life becomes a burden. To feel it as the peasant does, who watches the heavens hour after hour as June comes on and vanishes into July, one must know that very life depends on the showers of heaven falling not merely plenteously, but at the right season—not in a continued deluge, which is often as dangerous as the opposite extreme of drought: but in gradually slackening and often repeated falls interspersed wtih intervals of sunshine. Then you may see the green blade of the food crops growing before your eyes with a rapidity, a strength, and a promise unknown outside the tropics. The land which was a sandy plain yesterday, is green to-day, and all nature lives again. (Applause.)

No one can be better entitled to speak on the scarcity of 1874 than Dr. Smith. The early visit paid by him to Tirhoot, and the deep study he has bestowed on every question connected with the famine-problem make all his utterances in relation to the by gone year, peculiarly important. He thus traced the history of what would have been a great calamity, but for the unexampled exertions of Government.

Towards the end of September 1873 the great rains ceased so generally all over Behar that a telegram appeared in the *Times* vaguely suggesting danger. All circumstances conspired to quicken the authorities and the public. The latter could not so soon forget the mortality of 1861, the indignation caused by the failure of Government to do its duty in 1866, or the victims of drought and the locust in 1869. As to the officials, Sir George Campbell, who had reported so well on the Orissa famine, was Lieutenant-Governor of Bengal, and he happened to be living in the uplands of the threatened country in 1873. When October came, and the heavens were still as brass, two telegrams appeared in the *Times*, telling England that a famine like that of 1770 threatened Bengal if the rain continued to hold off, and that Behar especially was menaced. In India itself, as the calamity centred more and more on the fine indigo and rice districts of Tirhoot or North Behar, where there are so many Scotch planters, the Press urged the immediate construction of a light railway from the Ganges north to the county town, at once to give labour and means of transport. This was considered officially, and condemned. November came, and, in an evil moment, as I believe, the Government of India took the management of the matter out of the hands of the responsible Bengal Government. Except, perhaps, the Governor-General himself, who had quickened his departure from Simla on receiving the warning of Sir George Campbell, no member of that Government believed in the probability of a calamity, and their subordinates publicly ridiculed those who did. As a Governor-General comparatively new to office—as a financier who had abolished the income tax, and whose Budget was based on the idea that India will always be peaceful and prosperous, Lord Northbrook was in a most difficult position. Personally most humane, shrewd, and indefatigable, he yet proved to be like Lord Canning, who early in 1857 would not believe in mutiny till it nearly mastered him. The Viceroy's relations with the Government of Bengal had been far from cordial on other matters, and on this he totally differed from Sir George Campbell as to the necessity of stopping the export of rice from Bengal at least. So, on the plea that it would be cheaper for one authority to purchase the requisite imports of rice secretly, his Excellency took this into his own hands This was the second blunder. The Bengal Government was still responsible for providing means of transport, but it was denied the information necessary to arrange for such means, and relief was further hindered by the want of a cordial understanding and co-operation between the two. The third mistake consisted in the Viceroy's speech at Agra, in which, before the evidence could be all before him, he publicly deprecated the action of the Lord Mayor of London in proposing to raise subscriptions as premature, and thus sought to neutralise the appeals of the *Times* and the *Spectator*. Many, Sir George Campbell especially, would pronounce the refusal to stop the export of rice from Bengal the greatest mistake of all. Believing that the then threatened calamity, as interpreted by subsequent facts, was of that urgent and serious character which Adam Smith expressly excepts from the ordinary laws of free trade, I thought, in common with the Lieutenant-Governor and the principal merchants of Calcutta, that the unanimous cry of the people and the local Government on this point should have been heard. In November there were no contracts for export to speak of, and very slight compensation could have met such cases. The producers and traders in the interior would not have suffered, for higher prices than they got for their export cargoes were afterwards offered to attract the food naturally from the surplus eastern to the starving western districts. The colonies and foreign purchasers would not have been affected, for they could much more easily have gone to the Burma and Madras markets than Lord Northbrook did. The result of these four mistakes, pointed out and protested against at the time, was an enormous addition to the cost of transport, unnecessary delay in reaching the starving with loss of life and intensified suffering, the substitution of an inferior and unpopular food grain from Burma for the favourite rice of the starving people, and the creation of an official opinion that there was no famine, and if there was, that it was the beneficial means by which nature disposes of a surplus population, and should not be interfered with! How this affected the subscriptions you all know.

But to have done with controversy, of which we are likely to hear enough when the official report of this famine appears, the end of 1873 came without rain, and only half the great food crop of the year was gathered in all Bengal. Had the people stores of their own? All recent experience was against Government trusting to that. January was drawing to a close, and now the spring rains held off. The Government of India became alarmed at last, summoned the public aid which it had formerly prevented, hurried up Sir R. Temple to Tirhoot, hitherto as Finance Minister, the most incredulous on the subject, and hastily ordered the construction of the railway urged by me four months previously. From that hour to this both Sir Richard Temple, as Sir George Campbell's able successor in the Government of Bengal, and the Governor-General have sought to atone for their previous delay. All that man can do to save the people has been done, and with success. For not only has money flowed like water, but Providence has co-operated with man, sending down spring rains which, though late, gave partial crops to supplement the December failure, and again blessing the year by the great rains which have been unusually seasonable, and prolonged even to last month. This has proved a one year's famine, lasting over the nine months from February to October inclusive, affecting more or less 30,000,000 of people, and requiring Government to feed daily in four different forms, numbers rising from half-a-million in February to 4,000,000 in the first fortnight of June, and then gradually falling to half-a million again in October. Government has spent, chiefly of money specially borrowed for the purpose, at least £6,000,000 sterling on food, transport, relief organisation, and public works—half of which, I believe, would have been avoided if the early and urgent recommendations of the Indian and English Press and the policy of Sir George Campbell had been allowed to prevail. It purchased half- a-million of tons of rice 100,000 of which was as a reserve for a second year of famine, and the greater portion of that reserve has been consumed in the one year. The public in Bengal have subscribed £100,000, that of Great Baitain £130,000, and Government has made loans to landholders and traders to the amount of £400,000.

Dr. Smith referred to the local officials as follows.

No eulogy can be too high for the heroism of the men, chiefly young civil servants, who, through nearly all this year, have worked night and day, in heat and cold, in rain and deadly sunshine, to save the millions. I saw them, all too few at that time, in tents and huts in the open and under mango groves, themselves often without supplies of the food to which they were accustomed, and sometimes borne down with the expensive duty of hospitality to others who might be passing through their stations. The Bengal Government, from the highest to the lowest, has, in this famine, nobly atoned for its *laches* in 1866. Nor do I wish to leave the impression that the British Government in India has been always culpable in its relations to the people under famine. Up to 1861 it was; in 1866 it undoubtedly was. In 1874 the controlling power was slow to move, and the result was unnecessary expense. But first in 1869, and then in 1874, Government has publicly proclaimed its sense of its responsibity for human life, and it has saved its subjects to an extent no one expected, at whatever cost. (Applause.) That cost involves questions of finance and administration, dealing with which the Government may seem weak or wise, but we have a right to rejoice that, by whatever means, the British Government has been led to publicly recognise for the first time its duty to the people of India.

The address concluded with the following reference to the proper means of preventing famines.

"This is one of those severe inflictions of the Almighty by which offending creatures who forget their Maker are reminded of His being and of his government of the universe. Nature being on so grand a scale in the tropics, man there will probably always be more the victim of physical calamity than elsewhere. But whether ruled or ruler, he is called on to anticipate as well as mitigate such judgments. First of all, in a summary of preventives, I place this—that the people shall not be obstructed, but as far as possible be aided, in striving to withstand famine. The root of the question lies there. Now I can only categorically assert it as the result of twenty-one years' experience of India and study of four famines on the spot, that the land tax, by its severity, by its interference with the structure of society, by its periodical assessments, by preventing accumulation, the sense of property and thrift, hands over the population to the money-lender and the courts, and prepares it to succumb to natural calamity. (Applause.) We must fall back on the teaching of Baird Smith and the policy of Lord Canning. My second remedy flows from this—the extension of vernacular education, which has been fully conceded after years of fighting for it—and, above all, of Christianity as, on the lowest ground, the best means of forming character. Thirdly, let the public works' policy be reorganised, as laid down by the Marquis of Dalhousie when he opened the Ganges Canal a quarter of a century ago, and saved thousands in the famines of 1861 and 1869. Fourthly, let the facilities for the great and increasing population migrating from densely to sparsely inhabited districts be increased. The fears of those who think they are increasing too fast, when vast provinces with their wealth of tea, and rice, and iron have not a dozen to the square mile, seem to me chimerical. Fifthly, let the people be attracted from the land to a new manufacturing system which will take the place of that we have destroyed. There is no problem so great as the Indian question in all its variety, no duty so imperative as that which we are called to discharge to the people of India. The famines of the past century will not have been sent in vain if they stimulate you and me, and every thoughtful Englishman, to seek the solution of that problem, or at least to attempt that duty. (Loud applause.)

MADRAS IN 1874.

WE have at different times during the past year given the latest figures with reference to the population of the Southern Province, but the Sanitary Commissioner has been the first to place those figures side by side with the vital statistics of Madras and otherwise to throw light on them. There is no more important question, among the many subjects presented in the administration of India, than that which relates to the population of the Peninsula. We have for the last two decades been endeavouring to arrive at some satisfactory conclusion, but it is only now that tolerably correct numbers have been obtained, after immense labour and a vast expense. And yet there are those who still challenge the accuracy of the latest enumeration, going so far as to assert that the inhabitants of the Indian, exceed those of the Celestial, Empire.

Be that as it may we are thankful to Dr. Cornish for his latest exposition on the population of Madras as it was in 1874, and for the careful inferences and deductions which he draws therefrom. We find that the total population of the Province is 31,281,177 there being about two hundred thousand

more males than females, or in the proportion of ninety-nine to a hundred. Excluding the population of the areas where no census had been previously taken it was found that the numbers in 1871 were sixteen per cent. above the quinquennial returns taken in 1866; but as it is unlikely the increase would be so great in five years, we may assume that the former enumerations were incorrect. The total population is thus divided:

Hindoos, including aboriginal tribes ...	28,863,978
Mahomedans	1,857,857
Native Christians	490,299
East Indians	26,374
Europeans	14,505
Jains	21,254
Others (unspecified)	6,910
Total ...	31,281,177

Generally, those districts on the littoral and the deltas of the large rivers, where the pump and the canal help to produce the food-supplies, exhibit the greatest number of people in a given area, while inland and among the uplands the population is but thinly distributed. For instance, in Tanjore, as a whole, there are only five hundred persons to the square mile, while in the Combaconum talook of that district there are so many as a thousand. Again, the Jeypore hills have twenty-four persons upon a similar extent, and the Neilgherry Mountains sixty-six. The people of the South are not migratory. There is, however, a steady emigration of a temporary character from the more southern districts to Ceylon and Burma; but this, Dr. Cornish states, is much of the same character as the influx of Irish labourers into England during harvest time. There is, moreover, a demand for labour on the coffee estates of Ceylon, met by the migration of coolies from Southern India, but the majority of these return to their villages when they are masters of a few rupees. There are about six and a quarter millions of houses in Madras, containing, on an average, five people each, four-fifths of the habitations being built of mud and thatch. Females are most numerous among Mahomedans, East Indians and Brahmins, and fewest among Rajpoots, and Pariahs. Amongst Europeans, the female population is naturally small, or only in the proportion of forty-six to every hundred men. Children and young people are numerically strong; but as regards adult ages the proportions are not very different from those in England, although in ages above forty there are relatively fewer who survive in India than in Great Britain.

The population of the South is essentially non-Aryan, the number of persons claiming—often without the slightest grounds—to be of Aryan descent being one sixteenth of the whole. The Mahomedans, also, appear to be largely aboriginal and are increasing by the conversion of low caste Hindoos, more especially in the districts of the Western Coast, where the old helot races are treated with contumely by their caste fellows. The Hindoos are classified as Siva, Vishnoo and Lingam, worshippers, the Vishnoo cult prevailing most commonly in the North and amongst the Teloogoo nation, while in the Tamil districts of the extreme south and west Siva is the popular deity; but the great bulk of the Hindoo community adore local gods and have no acquaintance with the niceties of Vedanta theology. The majority of the Mahomedans are Soonees, with a considerable number of Sheeas and a sprinkling of Wahabees. Half a million of the native inhabitants are returned as Christians: they originally belonged to all castes, although the lower strata of society have given the most recruits. Roman Catholic Christians are in the proportion of four to one of Protestants. Sixty three per cent. of the males—rather more than the whole of the people above twelve years of age—follow some employment, two-thirds being connected with the cultivation of the soil. Only a million and a half of the entire population can read and write. A wide difference exists in the degree of education in the several districts: in the capital eighteen per cent. can read and write, but in Ganjam only two per cent. Except in Madras itself and Tinnevelly, thanks to mission efforts, female culture has made little progress. The Europeans and East Indians occupy the best position educationally, then the Brahmins and then the native Christians. Altogether there are 129,686 infirm persons in the Province: 14,000 suffer from diseases of the mind; 100,000 are blind, deaf, or dumb, while 14,000 are victims to that loathsome malady leprosy.

Last year the total number of births was 538,123 and deaths 513,222; but, acoording to Dr. Cornish "we are not registering much more than *one half* of the actual births, and probably not more than *two-thirds* of the deaths"! The village accountants who are required to collect these statistics are the parties primarily in fault: in theory the village commune, with its magistrate, accountant and public servants is a perfect institution for the gathering of statistical data, but, unfortunately in practice it is utterly unreliable. If legal responsibility were made to attach to rural functionaries in connection with the registration of births and deaths greater curacy would be certain, and until the correct collection of the number of persons dying and born is made compulsory we must rest content to see money and labour expended without any adequate results. Curiously, registration is worse in Government talooks than in zemindary estates! A birth of only twenty-six per thousand among an Indian population is ridiculous. If in European countries, where the marriage of females is usually deferred some years after the nubile age, and where many women are content to remain maids, the birth rate ranges from thirty to thirty-five per thousand of population, this ratio must necessarily be higher where the people breed like rabbits. Another strange fact in connection with life and death in Madras is that while the capital had for so long a period cholera domesticated in it—hardly a week passing without several deaths occuring from the disease—during the last two years there have been singularly few cases. The first death in 1873 was that of a Mahomedan horse-keeper who had been employed on the beach and the second, two months later, that of a European seaman. At the end of August the steamer *Assyria* arrived with a large number of emigrants who had suffered severely from wet and exposure on the voyage from Calcutta, and the sick portion of whom, thanks to complicated bungling on the part of the marine and emigration authorities, were allowed to be landed and carried through the town to the native infirmary. Here four of them died of cholera; and yet, although there were rumours of choleraic seizures in Black Town, no evil results followed the landing of the infected persons. This, in a place where cholera has been epidemic time out of mind, is as remarkable as it is satisfactory.

Connected with the public health there is no more important consideration than that which relates to the fall of rain. The western, midland and northern districts of the Madras Province derive their principal rain from the south-west monsoon, while the southern and eastern Coast districts, known as the Carnatic, are watered chiefly by the north-east. The season of the south-west monsoon extends from June to October, and of the north-east from October until February or March, but it rarely happens that any heavy rainfall occurs in the Carnatic after the month of December. January, February, and March are usually clear dry months everywhere. In April and May showers of rain fall in many districts, and this season of the year, which marks the change of the monsoons, is not unfrequently characterised by violent cyclonic storms. The south-west monsoon rains, though setting in at the usual time in 1873 on the Western Coast, were very much later than ordinary in the midland and northern districts; and Ganjam and Vizagapatam, which had 15·2 and 7·8 inches of rainfall, respectively, in June 1872, had only 1·7 and 2·1 inches in the same month of the following year. The rains were very late, also, throughout the whole of the Deccan and Mysore. It is usual for the whole country to be green with grass and young grain by the end of June, but last year the land was brown and bare up to the end of July, and great fears were at one time entertained that the rains would come too late to save the raggy—*eleusine*—crops of Mysore; but, although late, the Heavens opened in time to secure an adequate dry grain harvest. The end of the south-west monsoon in October gave heavy rain in all parts of the country, but the north east rains from the end of October were not so heavy as usual, and in some districts, as in Trichinopoly, failed almost entirely. In Tinnevelly the rice crops would have been lost but for the timely showers in February on the Western Ghauts—flooding the mountain streams, filling the tanks, and giving a sufficiency of water for the ripening of the harvest. The peculiarities of the seasons of 1873 in the south of India seem to have been (1) heavy rainfall in February over most of the southern districts; (2) a late south-west monsoon, with heavier rainfall, usual in October; and (3) a scanty north-east monsoon, with deficient rainfall, in the districts removed from the Eastern Coast line. The heavy rains in February had the effect of diluting the salt water of the lagoons to such an extent that no salt could be manufactured until a much later period in the year than usual. The average rainfall for the whole area was 14·56 inches less than in 1872, and 5·41 and 5·12 less than in 1871 and 1870.

The dealings of Providence differed in the South from the order of events in the North. Notwithstanding grave fears as to the position of the poorer classes early in the year, as the months drew on it became evident that famine had passed by, and that, at the most, a slight remission of the land revenue, a few relief works would tide over the wash of the great famine wave in Ben[illegible]

THE CIVIL SERVICE IN 1750.—I.

THAT prolific writer, Mr. A. Dalrymple, left behind him, among his numerous pamphlets and papers with reference to the affairs of the East India Company, a curious *brochure* entitled "A View of the Antient System of the East India Company," and published in May 1784. As there are only three copies of this interesting document obtainable at the present day, it appears to us that the facts stated therein may have no small interest for our Anglo-Indian readers.

The General Court of the E. I. C. was composed only of the proprietors of stock, every holder of £500 worth being qualified to a vote on all questions, but no one having more than a single vote, however large his interest in the Company might be. "I believe," writes Mr. Dalrymple, "that Lord Clive was the first who introduced the practice of making Split Votes; having such at stake, and great command of money, with a mind fertile in resource, by a collusive transfer of £500 capital stock to various persons, who had no actual interest in the prosperity or ruin of the Company, he commanded a majority, and thus the General Court, instead of being an Assembly of individual proprietors, became the Tools of a Party." This, although an evil, was an evil which in some measure had an antidote arising within itself; for when one party divided their property to make nominal proprietors, the example was followed by others, a "balance of power" being thus maintained in the Court, which was only augmented in numbers. The proprietors were empowered to elect twenty-four persons as Directors, for the management of all affairs at home and abroad, but subject to the General Court in which all questions were to be decided by ballot. The servants of the Company usually began work in their sixteenth year, rising by regular gradation from the position of "writers" to the higher appointments. On their arrival in India the young men were employed in the Secretariat in copying the proceedings of the Governor and Council, the correspondence with subordinate and other settlements—termed "letters received" and "sent"—and correspondence with the natives, called "country correspondence." The writers served five years on a salary of Rs. 50 a year, then for three years as factors on Rs, 150, afterwards becoming junior merchants on Rs. 300. Three years later they were promoted to senior-merchants with the magnificent annual stipend of Rs. 400! A hundred years ago the covenanted servants of the Company when they had reached this height could go no further till they were admitted into the Council. "Antiently the Company kept a Publick Table for all their Servants, but this being abused, a sum was allotted to the Governor, who was to pay to every Civil Servant a monthly subsistence, as diet money, and this was the same to every degree viz. 8 Pagodas 23 Fanams and 40 Cash (about £3-10). All the Servants had apartments to live in from the Company; who also paid Surgeons to attend the Sick to whom Medicines were administered at the Company's Expence." Every covenanted official in those times, except the Governor, regularly sorted the cloth provided for the Company's investments! The Court of Directors were not restrained, by any positive regulation, from appointing persons not brought up in the service by regular gradation; but this power was seldom exerted and ever considered as unjust, when not sanctioned by necessity or the public weal. When persons were sent out as factors from England, they served five years in that capacity, instead of three years as in the usual course. Thus employed, the servants of the Company acquired insensibly, from habit, a general knowledge of the Company's affairs, and being unseduced by those systems of dissipation which prevailed at home, and secure of their promotion by the regulations of the Service, business was regularly carried on, and as every one had a view to the highest station, in his turn, every one, who had the smallest spark of ambition, made it his study to qualify himself for that preeminence, which merit alone could entitle him to, after good service had, at the end of twelve or fifteen years, introduced him into Council. The power, lodged with the Administrations abroad, to set aside from Council any man unfit, by want of ability or general misbehaviour, secured the service from an inundation of fools in the higher offices: and the power of appeal home, prevented—while the Court of Directors remained impartial and independent—any injustice on the part of the Governor and Council. According to the original plan, a fit person from the Council was nominated to the Government, without, however, being appointed in preference to men of ability and good character standing before him on the List. "A Council composed entirely of men of Genius, would be much too refined for business; as one in ten of the Company's servants, may be reckoned a man of superior parts, that will be sufficient for the succession to the Government. Of the other nine, there will always be enough, of *sound understanding*, to conduct the Company's affairs, if men are secured in their rights." The power formerly vested, at least by usage, in the Governor, of allotting their several stations and appointments to the Company's servants under his Government, was admirably adapted to maintain that subordination and dependence necessary to the well-being of the service. When the Court of Directors interfered in the nominations, their action was productive of nothing but disorder. It must be obvious, asserts Mr. Dalrymple, that the "antient mode of providing Governors cannot be improved, and that the education of the Company's servants was admirably adapted to supply the highest offices with wise and able men in due succession. This was proved by experience, in a struggle through difficulties for almost twenty years." On rare occasions the Court of Directors nominated persons serving abroad to posts in India: the men so placed were always distinguished on the list as "entertained." There was, however, no further distinction, the gradation being the same as if they had come out direct from England. In a few instances the Court appointed "fixed" civil servants; that is servants who could never rise to a higher post than that to which they were first appointed. They were generally men sent out to perform particular work; but the plan was sometimes followed in the case of writers who, while not deserving dismissal, had, from incapacity or other causes, shown themselves to be unworthy of promotion. The Company's Administrations abroad had no authority to appoint any one a covenanted servant, but were empowered to grant commissions to military officers, who rose according to seniority in the same manner as if appointed by the Court at home. Such Administrations had also the power of military supersession: they could dismiss or suspend any of the civil or military servants; and in case of suspension they could reinstate, unless the matter was referred to England; but they had no power to restore a civil servant when dismissed.

The Correspondence between the Court of Directors and their "Administrations" in India was carried on under the heads of—Shipping; Goods from Europe, or from one part of India to another; Investments; Country Government and Transactions with European Nations in India; Fortifications, Buildings and Revenues; Company's Civil and Military Servants and their Accounts; Accounts; Charter, and His Majesty's Ships and Forces. There was, besides, a supplement, containing an account of what had occurred since the letter was begun; and a P. S. which gave the list of the bills of exchange. Epistles written under any of these heads were called "General Letters," to distinguish them from letters on subjects of major importance.

AN AMERICAN ON CALCUTTA.

ONE of Cook's tourists, with an inclination towards Methodism and a decided *penchant* for unintelligible writing, has for some months past been occupying weekly two columns of a New York journal with descriptions of a visit to India and remarks on its "benighted" inhabitants. He began with an account of Bombay, which, according to the tourist, is peopled by Parsees who were drawn *thither during the cotton mania-time*, and have remained at the express desire of Government, which wished them to inculcate industrious habits in the natives and otherwise improve the place. The writer then visited Madras, a city where, he stated, the people sleep upon beds cooled with an ice pan, and where snakes are as common as caterpillars. Grass grows in the roads of the southern capital, if we may believe this correspondent, while the lethargy of the citizens is so great that they have never measured their "People's Park", and usually doze for six hours in the day-time to escape the heat. Calcutta has now been honoured with notice, Americans being informed that a battery of artillery is always present near Government House, that the merchants' offices are guarded by sepoys, and that the Maidan was so named because an English girl was murdered there during the mutiny! Jackals run about the streets at night in myriads, and frequently obtain their supper off a drunken man "unable to defend himself."

Calcutta, we are informed, "is a city of churches, mosques, and temples. Christianity has made a greater advance in this city than in any other place in India; but even here Budhism is not dead nor is it sleeping. The temples are thronged with worshippers, and they seem to be serious and intensely in earnest. Their faith demands a pure life, and promises that with great self-denial they may attain to an absorption with the Deity, but it pronounces the most dreadful punishment to the disobedient. The numerous mosques with their marble platforms and gilded domes proclaim the wealth and power

of those professing the Islam faith in this great metropolis of India. They have inscribed over many of their archways, in gilded letters, 'There is no God but God.' That is the first truth they teach, and when a heathen, as they call the Hindoo, comes to say that inscription, and that Mahomed is the prophet of God, they receive that person as a true believer. They are still making converts to their faith."

The English churches are not "generally so grand as the mosques; the "new" cathedral is "beautifully located", and is "quite elegant and grand," but,—does not look well! Its Gothic arches "do not seem in harmony with the palm trees and the great long punkahs inside." This delightful individual was in the city during the week of prayer. "The services were held in a different church each day, and were conducted in the same manner as at home. The natives took part daily in all these services and performed their part quite as well as any one. I think every church that we entered had a marble floor, and elegant mahogany pews or sofas; no carpets are used." Naturally, this seeker after strange things visits Serampore, in order to say that he had stood in Dr. Carey's pulpit, and walked over the same paths that the great missionary trod when in this life. "We walked," he states, "through the extensive grounds sat down under mahogany trees two feet in diameter, which he planted. They look like our black cherry. These grounds are elevated and stretch along the Hooghly. The location is very beautiful. Barrackpore is on the opposite side of the river, in which is located the country residence of the Governor-General." This assertion is not very far from the truth certainly, but the mahogany trees referred to are nearer four feet in diameter than two. Henry Martyn's pagoda is of course visited; and from "this ancient temple we went to the house of Juggernauth, which is located in this village. Juggernauth is a Hindoo god, and is called by them 'The Lord of the world.' The temple of the god is at Orissa. The society has two cars and they are both very large and heavy, and are mounted on twenty-four rude wooden wheels. These cars are about thirty feet square, and high enough for a small church steeple. A strong force is required to move them—each one weighing several tons. They are covered all over with enigmatical characters of all kinds of gods—of which the monkey god seems to be the favourite. These cars are taken out on festival days, and seem to be drawn more for the amusement of the people than as a religious ceremony; but in many other places it is different. The cars are fast going to decay, and no one cares to repair them." This, too, is tolerably correct, although Serampore is not exactly a "village," nor are the great cars worked on a joint stock principle as we are led to infer from the word "society", which in this case is synonymous with "concern;" and then, unfortunately, the cars are to be repaired in March next, and the priests, more generous than we are, have promised to give a European gentleman the two wheels that will be replaced by new ones, for transmission to the British Museum and an American curiosity-shop.

We protest against Bombay being compared to a broken-down manufacturing town which has lost the staple necessary to its existence; to the statement that Madras is a sleepy hollow where nought but snakes and grass thrive; and above all, to the description of the metropolis, which, regarded from an American point of view, is ever in a state of siege. The Jabberwock who limned these three pen-and-ink sketches will, we hope, receive his deserts if not in this world then in the next—for he has told an astounding list of—the alliteration provokes us to continue, but no!—untruths.

CONNUBIAL REFORMATION.

(Communicated by a Hindoo.)

THERE has been of late a great stir amongst the *Sett* and *Bysack* community of Calcutta, who form a respectable portion of its inhabitants. Formerly they have had to undergo immense hardships in marrying their daughters. Without the payment of a certain sum in *cash* varying from Rupees 600 to Rupees 1,500 to the guardian of the bridegroom, the marriage of a daughter could hardly have been settled. This practice, baneful as it is to society, prevailed for years and years together to the great dissatisfaction and oppression of those amongst the sect whose circumstances are limited. We are glad to state, that through the painstaking endeavours of some of the liberal, and well educated members of the class, a practical scheme has for some days past been set on foot. All marriages in the *Sett* and *Busack* families of Calcutta were hitherto confined to their *own* castes in the town. Now they have commenced coming into contact with the inhabitants of other parts of Bengal where the horrid system does not exist. Little had been known before concerning their own sect at Malda, Beerbhoom, Dacca, and Moorshedabad. After local investigation and strict enquiries in the matter, they have lately, for the first time in their history, opened communication with the inhabitants of Malda. Baboo Mohendro Nauth Bysack of Brindabun Bysack's Street (Calcutta) was the first to embark in the reform. Some days past he married his daughter to the son of one Dhookeeram Haldar of that locality, notwithstanding the violent opposition of the orthodox portion of his nearest relatives, and a great many other difficulties. His example was followed by others. The nuptial bargain was a most simple one, anything compulsory being totally avoided in it. Much credit is due to Baboo Mohendro Nauth Bysack for the good he has done to his poor fellow-brethren by his noble and heroic action. Baboos Nilcomul Bysack and Radha Nath Bysack—with their co-labourers in the field—Baboos Nobin Chundro Dutt, Russick Laul Sett, Makum Laul Bhuttacherjee, and Tariny Churn Dutt—deserve praise for rendering invaluable assistance in the matter. The names of Baboos Wooma Churn Sett, Woodoy Chund Dutt, and Burroda Canto Bysack should also be recorded for their hearty co-operation in the cause. They did all they could to enhance the interest of the noble object. But it deserves special mention that matters must have assumed a contrary shape, had not Baboo Rajkristo Haldar, a respectable inhabitant of Pattoriahghatta street in Calcutta lent his powerful aid and stood as the great *Agogos* of the glorious band. Having taken the helm of the ship in his own hand, he guided her to a land freed from all tempestuous breezes amidst the deafening applause and loud cheers of the whole crew. The event, indeed, is a memorable one, and as such will undoubtedly form a bright chapter in the history of the *Sett* and *Bysack* caste of the metropolis.

LONDON LETTER.

LONDON, *December 11th*, 1874.

THERE is literally no news of any interest except that the Transit of Venus is over, and that in the majority of the positions from which it was observed, the observations have not been successful owing to the haziness of the weather. You appear to have been most fortunate in India. It is to the highest credit of our trans atlantic cousins that they have sent a larger number of expeditions, and expended larger sums of money than any of the old European nations. The most remarkable circumstance connected with this Transit is that whereas, on the last occasion, a century ago, when Captain Cook conducted the expedition for this object to Otaheite two or three months elapsed before any tidings of it were received in England, we have in the present instance news of the result at twenty stations, some at the antipodes, in a few hours.

I think I wrote you a fortnight ago to say that the other Railways which dovetail with the Midland have been under the necessity of adopting its reduced fare of a penny half penny per mile for first class passengers, but intend to retain the second class at the intermediate rate of five farthings, leaving the third class at a penny. This movement has led me to compare the charge for first class on the Midland with that on the East Indian Railway, and I find it is fifty per cent. higher with you than with us, while the returns are a mere bagatelle. It is announced in the papers this morning that the profits on the East Indian line for the half year ending June 30th have been at the rate of ten per cent. per annum which is considered very satisfactory. This is due partly to the receipts from the conveyance of grain, which were exceptionally large, but not less to the economy of working, the expenses being about 32 per cent., a perfect miracle of cheapness. It would be a matter of interest to strike a balance between the sum contributed by the Government in India to the receipts of the line in the half year by its subsidy for the conveyance of rice, and the sum received by Government in its share of the surplus profits.

On the Continent the French Assembly is again at Versailles, but it is impossible from present appearances to forecast the progress of events. It was predicted that the ministry would be outvoted, but the speech of the Marshal President does not give an indication of such a change. Every thing is uncertain, and we read the two columns of daily telegrams in the *Times* without being able to come to any conclusion. The German Parliament opened with a storm. The war between the Vatican and the German Government rages with increasing violence. Prince Bismarck is said to have lost the equilibrium of his temper. He has attacked the Ultramontanes with extreme virulence, asserting that the attempt on his life was traced to their influence. He assured the House that

he had clear evidence that the Franco-German war was the work of the Jesuit curia at Rome, and that Napoleon plunged into it against his own better judgment, under the predominant influence of the Empress egged on by the priests who were omnipotent in her circle. This statement serves to confirm the general impression on the public mind in Europe that it was Rome and the Jesuit cabinet which brought on the war, in the hope that France would be victorious, and paralyze the hated power of the new Protestant German empire, and replace the Vatican in the commanding position which it had lost in Europe. By the wise dispensation of Providence this plan was frustrated, and on the field of Sedan the Pope lost the possession even of Rome itself, and has ever since been most assiduously employed in embarrassing and weakening the German power.

A telegram from Calcutta within this week announces that the man whom Sindia arrested is positively known not to be the Nana Sahib. My friend Mr. W. Edwards wrote to me on the announcement of the arrest that when he was special Commissioner at Cawnpore in 1860 he received information of a very detailed and positive kind that the Nana had died of fever in the Nepal Terai and that Lord Canning considered the report quite conclusive, and had informed the Home Government to that effect. The illustrated papers have embraced the occasion to reproduce the scenes at Cawnpore, and have more particularly depicted the Memorial Church built over the Well. It is greatly to be regretted that it was ever erected. As an addition to the Christian edifices in India it may be all right and proper, but the locality and the designation of it was a great mistake. It is our triumphs not our defeats that we are to commemorate. The Church is a memorial of our disgrace, of which it was not politic to remind our native subjects. So thought one of the wisest of our Governors, General Lord Hastings. After the reconquest of Calcutta by Clive, the President in Council, erected a lofty column over the Black Hole, at one of the corners of Writers' Buildings, with a slab and inscription detailing the atrocities of Suraj-adowlah. Lord Hastings thought it most unwise to perpetuate the remembrance of our humiliation, though amply avenged in our own Metropolis, and pulled it down.

One of the most important events of the day, though comparatively unnoticed, is the abolition of slavery on the Gold coast by Lord Carnarvon. England is thus fulfilling her glorious mission as the champion of personal freedom wherever her influence extends. The chiefs of the provinces which were delivered from the oppression of Ashantee by the success of Sir Garnet Wolsley's expedition, and which were taken under the protection of Great Britain, were assembled by the Governor, and told that the only return the Queen asked for the blessing conferred on them was that they would consent to the abolition of slavery. On that coast slavery appears to be more of a "domestic institution," than elsewhere, and to have emancipated all those held in bondage would have been to introduce universal confusion and break up the bonds of society. The Colonial Office has therefore adopted the plan which was introduced into India by one of the most benevolent and practical of its rulers, Lord William Bentinck. Instead of interfering with every household in which slaves were to be found, he simply enacted, as far as my memory goes, that any bondsman dissatisfied with his situation might apply to a court and obtain his liberty. Many of them preferred the easy servitude of the homestead and chose to remain, but the enactment ensured good treatment to the slaves, and at the same time prevented the increase of their number, and in the course of a few years, the importation and the purchase of slaves being prohibited, the institution died out.

The message of the President of the United States was delivered on Tuesday, and an epitome of it was received in London the same day. It is as longsome as any of its predecessors, but moderate in its tone, and well adapted to conciliate opponents. It is well suited to the singular position in which the President is placed by the late elections, which have given the ascendency to the party opposed to him in the House of Representatives. He, a Republican, has now to work two years with a Democratic Senate, and a Republican Lower House. But the most remarkable circumstance connected with this Message, and, we may say the most remarkable circumstance which has ever occurred in the history of the world, is the celerity which marked the transmission of it across the Atlantic, which almost takes away one's breath. While the President was delivering his message the printers were setting it up in Printing House Square! and it was circulating in England at the same hour that it was hawked about New York! Milton wrote the motto of the Telegraph, two centuries ago, "The speed of God's time counts not."

M.

THE ARMY LIST.

THE quarterly official Army List (No. LI. New Series) corrected to January 1st, has been sent out from the office of the Superintendent of Government printing, Calcutta, with the usual punctuality of that department. Beyond the mere fact of publication there is little to notice in connection with this List. We learn from it that there have been 19 deaths between October 1st 1874 and January 1st 1875; the only dismissals and resignations have been among the hospital apprentices of the Sub-medical department.

*REGISTRATION AND STAMP MANUAL.**

MR. BEVERLEY'S work being out of print it was found necessary a little time ago that there should be a new Manual. Mr. Bignold therefore undertook the task, and a glance at the volume he has compiled suffices to show the careful spirit in which he did so. With the exception of a few paragraphs in which Mr. Beverley's language has been retained, the Manual is entirely new. The Bengal Law Reports, the Weekly Reporters, and Cowell's Digest have been consulted, and abstracts of them are frequently given. The principal novelty introduced by Mr. Bignold is a General Index to both Registration and Stamp Acts and to the Registration Rules. In connection with this subject he tells us, "Two Indexes in one book are a great nuisance; and I have spent some labour in combining the official Indexes to both the Acts, and adding references to the other matter which the volume contains."

* *The Registration and Stamp Manual containing the Indian Registration Act, 1871; With Abstract of Decided Cases and Notes on Procedure; Table of Fees; Revised Rules framed under the Act for Bengal; Rules for Transliteration; List of Districts, Sub-Districts and Thanahs for Bengal; List of Districts and Sub-Districts, N. W. P.; Circulars on Rural Offices, &c. also the General Stamp Act, 1869, With Abstracts of all Notifications of the Government of India relating to Stamps, and a Full Index to the whole.* By T. F. BIGNOLD, B.A., of Caius College, Cambridge, officiating Inspector-General of Registration, Bengal. Printed and published by Thomas S. Smith, City Press, 12 & 72, Bentinck Street. Calcutta. 1874.

*THE URIYA LANGUAGE.**

IN the preface to his recently published Handbook Mr. Maltby tells us that with the exception of Dr. Sutton's Introduction to Uriya, which was published a generation ago, he knows of no book calculated to assist an Englishman in learning the Uriya language. The public have frequently good reason for smiling when an author professes to supply a "want;" but in Mr. Maltby's case it is a sober truth that he has done so. The wonder is that long ere this no one has addressed himself to meet a great need in Orissa. The Uriya population amounts to *eight millions*, and it is simply astonishing that Mr. Maltby should have been left to grapple with the difficulties of such a widely spoken language. He himself explains the circumstance by the wildness and inaccessibility of the greater part of the country in which the Uriyas live. We learn from him that they are a backward but very interesting people; their language has a resemblance in sound to Italian and Spanish; it presents few difficulties, and has an extensive literature mostly translated from the Sanskrit. The purest Uriya is spoken in Gumsoor. Mr. Maltby resides at *Berhampore, which is not distant from the places* where the language is used with the greatest accuracy, and so far as we can judge he has turned his advantages to good account in producing a truly useful Handbook.

TARRANT'S DIGEST.†

THE learned Clerk of the Crown and Crown Prosecutor, Madras, has done good service to the profession of which he is one of the ablest members in this country, by compiling with great care and accuracy a Digest of the decisions of the Judicial Committee of the Privy Council in those cases that have been reported at length in "Moore's Indian Appeal Cases." The valuable series of reports known by that name has apparently come to an end, so that the time has been judiciously chosen for the appearance of Mr. Tarrant's volume. There can be little doubt that the compilation will be acceptable to the profession generally, but it is certain to be found especially useful by Mofussil practitioners, who from the distance at which they reside from the libraries of the Presidency towns are unable at

* *Practical Handbook of the Uriya or Odiya Language*, by J. T. MALTBY, Madras Civil Service. Uriya.—Dhiri páni pothoro kâtoi Calcutta: Wyman & Co., Publishers, Hare Street. Calcutta 1874.

† *Digest of the decisions of the Judicial Committee and the Lords of Her Majesty's most Honourable Privy Council in cases on Appeal from Courts in the East Indies from* 1836 *to* 1872, *to be found reported at length in Moore's Indian Appeal Cases. Vols I to XIV.*, by H. J. TARRANT, Esq., of the Middle Temple, Barrister-at-law, Clerk of the Crown and Crown Prosecutor, Madras. Madras: Higginbotham and Co., 1874.

all times to obtain ready access to Moore's Reports. The work before us must have cost Mr. Tarrant great labour, and we are glad to say we have scarcely ever met with any thing better done, a circumstance to be accounted for by that gentleman's abundant experience. There is scarce ly any part of India in which he has not practised; familiar with Criminal and Nisi Prius business in Westminster Hall and on the Western Circuit, he has also held briefs in nearly every large city of the East where an English law-court is to be found, Mr. Tarrant was also for some time Acting Recorder of Rangoon. Under these circumstances it is not surprising that he has acquired a large amount of legal lore which has stood him in good stead, while employed in the difficult task of compressing into small compass the lengthy decisions of the Judicial Committee. It gives us great pleasure to be able to recommend Mr. Tarrant's book very strongly. The arrangement adopted throughout is uniformly lucid and serviceable, and without difficulty the most inexperienced practitioner can find cases in point. It is unnecessary to state that the Digest is for all India, and that its issue at Madras is a mere result of Mr. Tarrant holding office in that Presidency.

EPITOME OF NEWS.

Bengal and Calcutta.

— In Bengal the rice harvest progresses as before, and the spring crops are flourishing.

— A severe hail-storm occurred in Calcutta on Tuesday afternoon.

— Duplex telegraphy is to be introduced on the line between Calcutta and Burma.

— Mr. Grant-Duff has been on a visit to Umballa and Puttiala, where he was received with much ceremony by the Maharaja.

— Sir Jung Bahadoor, accompanied by Mr. Saunders, Resident at Hyderabad, was received by the Viceroy in Grand Durbar on Monday afternoon.

— The prospects of the crops in Assam continue excellent, and where reaping has begun the outturn is expected to be good.

— Lieutenant Colonel T. B. Harrison, Bengal Staff Corps, succeeds the late Colonel James as Controller of Military Accounts in Bengal.

— Mr. Cockerell, Commissioner of Dacca, has accepted the duty of investigating the Stevens' murder case.

— On Sunday week last the up-mail train ran into a vagrant truck on the Loop Line, near Balpore. The locomotive went over the bank, and several carriages off the line. No one, strange to say, was hurt.

—The Duffla Hills much resemble the Abyssinian; except that instead of being bare or clad with the everlasting prickly pear they are covered with thick tree jungle and timber-growth.

— From the middle of January or the 1st February the mail train will leave Bombay at six o'clock in the evening, arriving in Calcutta in the morning, thus saving a night's detention in Bombay, and a night's detention in Calcutta.

— The Burmese Embassy was received by Lord Northbrook on Saturday last. After a short stay in Calcutta the members intend to visit a certain Boodhist shrine in Gya, where extensive offerings, on the part of the King of Burma, will be made.

— Nearly all the Duffla Chiefs implicated in the Amtolla, or hooping-cough, raid, have come into the British camp. It looks as if our men would have no fighting after all. One of the female captives brought in bears marks showing that she has survived crucifixion—a favourite form of torture in the Duffla Country.

— The gardens of the Upper Assam Tea Company appear to have been particularly unfortunate as regards the loss of infants; the death-rate among them being 9·56 for the first half of the past year, and 15·96 for the second. In Hoogrejan eight died out of an average strength of 20, giving a death-rate of 40 per cent. In Tiphook the mortality was 25 per cent.

— The new Governor of Mauritius, Sir Arthur Phayre, arrived at Port Louis on the 21st November and was heartily received by the inhabitants. A local paper states that money "cannot be obtained on loan except at high rates of interest; commerce is greatly restricted; and agriculture is suffering. We are not disposed to take a very gloomy view of things; but that some planters and a larger number of retail dealers are very much embarrassed, is beyond doubt."

— For the current year, the grant for the Botanical Garden from Imperial Funds was Rs. 52,500, but this amount will be entirely absorbed in meeting ordinary expenses, and will leave nothing towards carrying out the improvements which it is desirable to undertake. Having regard to the special and detailed recommendations of the Superintendent, the Lieutenant-Governor has sanctioned for the year 1874-75 an appropriation of Rs. 10,000 to the Botanical Garden, the amount to be debited against savings under the head of Minor Departments. The outlay now sanctioned is to be expended in adding to the number of plant-houses; in levelling and turfing the eastern portion of the garden; in laying out and paving some of the new roads, of which the earthwork has been previously done; in removing the labourers' huts from their present position to the northern part of the garden, and in improving the condition of several pieces of water.

— Lord Lindsay, with the aid of his splendid instruments, was enabled successfully and completely to observe the second part of the transit of Venus at Belmont, Mauritius. Unfortunately, the important phase, the first contact, was not visible, and indeed about the time when this occurred a drizzling rain and cloudy sky seemed to exclude all hope of any observation being possible. At 6·47 a. m., the sun appeared for four minutes, when some successful photographs and Heliometer measures were obtained. At 7.38, the sun was again visible for four minutes, when nine photographs and Heliometer measures were obtained. From about 8 a. m. up to the end of the Transit, observations of all kinds were continued with occasional interruptions from passing clouds. The last contact was observed under very favourable circumstances. One of the photographs obtained shows the phenomenon of the "black drop" very beautifully.

— Six tea gardens in Kamroop and two in Nowgong are shewn in the returns for the first time this year. Of the net increase of 37 gardens, however, the greater part is due to the extension of tea cultivation in Upper Assam. The Inspector of Labourers states that in 1873 there were 205 gardens there against 174 in the previous year. These figures would, however, seem to require some explanation, as his detailed returns shew that at the close of the year there were, including saw mills and P. W. establishments, only 103 gardens in Seebsaugor and 85 in Luckimpore. A further examination of the returns shews that in Seebsaugor 14, and in Luckimpore 19 gardens, are entered for the first time as employing labourers under contract. To the rapid extension of tea cultivation in Upper Assam, of which this is an indication, is principally to be ascribed the large increase observable in the number of labourers employed in the province at the close of the past year compared with the previous one. This increase amounted to no fewer than 2,860 in Seebsaugor and to 2,489 in Luckimpore. The number of labourers employed in Nowgong similarly rose to 1,195, compared with 672 in the preceding year. For the whole province the figures were 30,676, against 24,002 in 1872.

—The directors of the P. and O. Company propose this year to make two calls of 5*l.* each upon the new shares, which will increase the paid-up capital to 2,900,000*l.*, leaving 600,000*l.* of capital unpaid. It is necessary to make these calls in order to continue the improvement of the company's fleet. The last call was made in April 1868, and, as the directors have repeatedly mentioned in their reports, the company's business has since that date undergone a complete revolution, entailing the necessity of an entirely new class of steamers for its work. Previous to 1869 the company's freight business consisted of carrying by the overland route small quantites of fine goods at high rates of freight, while the commoner description of cargo was sent by the Cape of Good Hope. In the present day the overland trade has almost ceased to exist, the general trade to the East being to a very great extent carried by the Suez Canal, and the company has to compete for its share of it at rates of carriage which are barely a fourth of what was earned before. Consequently, the steamers have to carry nearly four times as much cargo as they did in 1863 in order to earn the same amount of freight. For the purpose of meeting this radical change in the company's position the directors have, since the last call was paid by the proprietors, added to the fleet twenty two steamers, aggregating 66,000 tons, and costing upwards of 2,000,000*l.*, besides contracting for new engines, and the reconstruction of old steamers, at a cost of 400,000*l.*

— The Lieutenant-Governor has discussed with the Superintendent of the Botanical Gardens, Howrah, the proposals made by that officer for rendering the park more accessible to the public, more ornamental in its aspect, and better fitted to fulfil the objects for which it was established. The roads in the garden were planned at a time when visitors from Calcutta ordinarily came to the garden by water. But since the opening of the Hooghly Bridge, most of the visitors enter at the eastern end, from which there is at present no direct road to that part of the garden which lies to the west of the canal. The Lieutenant-Governor approves Dr. King's proposals for laying out new lines of road through the eastern portion, as well as for widening and paving the roads in the other part. The erection of another bridge over the canal would also be a desirable improvement, but this is not a matter of primary importance. Complaints have been made regarding the external appearance of the gardens, as public pleasure grounds, apart from their botanical and scientific interest. But, in justice to the Superintendent, it should be understood that the establishment which it is possible to entertain with the funds available for the purpose, hardly does more than suffice for the primary purposes (botanical); consequently it is not always practicable to provide for what may be termed ornamental uses. The area of the garden is 272 acres, and the amount of the grant allows the Superintendent to employ only 130 labourers, a considerable number of whom are women and boys.

— The establishment of a Government scale of marks or brands, a frequent change of seed, and greater care in the preparation of jute for the market, are three chief points to which the Dunkirk spinners have called the attention of the Indian Government. There is but one opinion with respect to the innumerable marks or brands employed in the jute trade. New ones appear almost every day, and the result is that even the most experienced persons are unacquainted with the half of those in use. The native merchants find their advantage in the present confusing practice, and tax their ingenuity to discover under how many different brands they can classify their crop. To obviate this difficulty, the Dunkirk spinners suggest that the Indian Government should establish a scale of marks which all the native traders should be forced to adopt. In the Russian flax trade this has already been done with success, and it is thought that a similar system applied to the jute trade would be equally

successful. The jute plant is said to be becoming impoverished from the bad system of cultivation pursued by the native cultivators. They appear to be entirely ignorant of the advantages which would result from a frequent change of seed. Again, the colour of the jute sent to market is growing worse and worse every year. This is owing to the careless treatment it receives at the hands of the growers. Apparently, the same water is used throughout the whole steeping process which the jute undergoes, and the result is the bad colour complained.

North India.

— The weather in the Derah Doon is described as "frosty and wintry cold."

— The Rev. E. Gulliver will succeed the Rev. S. Slater as Head-master of Bishop's School, Simla.

— Yakoob Khan arrived at Lahore on the 5th instant.

— Private Burney, of the 11th Hussars, lately tried by Court Martial on a charge of shooting a comrade, has, it is said, been released.

— A defalcation in Government stamps to the extent of Rs. 10,000 has taken place in the Roy Bareilly Treasury.

— A survey of the permanently settled districts of Benares, as they were at the time of Mr. Duncan, will soon take place.

— Gunner John Kane, of the 7th Battery 20th Brigade R. A., Lucknow, has been sentenced to five years' imprisonment for killing his wife.

—In the match for the Viceroy's Cup at the Northern India Rifle Association, Brigadier-General Hume scored the full number of points obtainable.

— It appears from his own account that the bandmaster recently carried over the frontier from Peshawur was seized while walking within the precincts of the cantonment.

— There were destroyed last year in Oudh 785 wolves and cubs. 21 hyenas, 4 tigers, 1,750 snakes, and 1,023 dogs; the reward given for all of which was Rs. 2,190.

— A number of ladies and gentlemen, on a two horse brake, "carroled" through Allahabad on Christmas Eve, with a view to giving the inmates of the Strangers' Home a Dinner on Christmas day. The result was, we are glad to hear, highly satisfactory.

— A correspondent of *Indian Opinion* asserts that the Ameer of Cabul has imprisoned Ibraheem Khan, his eldest son, for having plotted with Sirdars Yusuf Ali Khan and Hasham Khan, sons of the late Ameer Dost Mahomed Khan, and Arsulla Khan, the Gilzai Chief, to poison Abdoolla Jan, the heir-apparent.

— The *Pioneer* states that the Ameer of Cabul has acknowledged the message sent him by the Viceroy, through our Resident Agent, in conciliatory and becoming terms. He says that Yakoob Khan's rebellious conduct, and the general state of affairs in Afghanistan, rendered the arrest unavoidable. But the Ameer makes no allusion to any conditions or safe conduct having been promised his son previous to his starting for Cabul.

—M. Victor de Lesseps and Mr. Stuart have printed their report upon the journey they recently undertook for the purpose of tracing out a railway line between Toorkestan and India. It appears from the report that, baffled by the Hindoo Koosh, they turned east, and found Kashghur to be connected by open and very gradually ascending valleys and plateaus both with Khokand and Kashmeer. M. de Lesseps thinks that the most practicable road starts from Lahore, and, reaching Serinagapore by the Valley of the Jhelum, proceeds through the Sotchil and Karakorum Passes to Yarkund, Kashghur, Khokand, Tashkend, Orenburg, Ekaterinburg, and Moscow. The Russian Government are in no hurry to act upon this advice. They will for the present content themselves with constructing a line from Orenburg to Southern Siberia. From this trunk line another may eventually be branched off in the direction of Tashkend. At the same time, the project of a canal between the Caspian and Aral is still under discussion.

Bombay.

— Sir Phillip Wodehouse is now "doing" Kattywar.

— The yacht-owners in Bombay spent their Christmas at sea.

— Mr. Scoble, the Advocate General, has been sent by the local Government to Baroda, in connection, it is supposed, with the poisoning case.

— The delay in the arrival of the last Brindisi mails was owing to the *Hydaspes* having met with a collision. Her voyage from Suez to Bombay occupied thirteen days.

— A desperate engagement is reported to have taken place at Bre-kafeet between the Arabs and the Turks, when five thousand of the latter were killed.

— American sailors are becoming generally mutinous in the Bombay harbour, a ship called *Uncle Toby* having been boarded by sixteen drunken fellows and the Captain virtually imprisoned till he could get help from the police.

— The local Water Police have seized thirty-one match-locks, twenty-three swords and seventeen daggers on board a steam vessel and have sent them to the Commissioner of Police. The arms were intended to be taken to Shahur in Arabia by their consignees.

— The death of Moosa Yussuf, the Regent of Myjertaya country, is reported. It is not known who will succeed him during the minority of the present Sultan. Moosa Yussuf possessed considerable influence among his people, and treated ship-wrecked mariners with kindness.

— The *Rast Goftar* and *Times of India* are, says the local *Gazette*, jointly responsible for the circulation of the following "abominable lie." "We learn that Mr. Maclean, of the *Bombay Gazette*, lately went to Calcutta as agent from the Gaekwar, having undertaken to obtain the Viceroy's recognition of Luxmeebaee's son as His Highness' heir. Mr. Maclean has returned to Bombay but we know not what success attended his efforts at Calcutta. The *Gazette* denounced Mr. Hurrychund Chintamon, now in England, on behalf of the Gaekwar as a 'hired' or 'paid' agent. It would, therefore, be interesting to know on what footing Mr. Maclean went to Calcutta with the intention of getting a doubtful claim confirmed, and what the *Gazette* has to say about the matter."

— We gather from the "Last Journals of David Livingstone" that after crossing from Bombay to Zanzibar in 1865, the great traveller landed on the main near the River Rovuma. His caravan consisted of thirteen sepoys, ten Johanna men, and thirteen Africans, among whom were Chumah and Susi, who remained with him till he died, and brought his body and his journals to the coast. He went to Lake Nyassa, and soon afterwards his troubles began. The Johannas deserted; the sepoys behaved so badly, and were so utterly worthless, that he had to send them back; two of his negro followers ran away, carrying off his medicine chest and his whole stock of quinine. The animals fell victims to the climate, ill usage, and the tsetse. The natives of the country were friendly, but lived chiefly on mushrooms and orchids, flavoured on great occasions with sauce of putrid elephant. He suffered from continual hunger. On arriving at Lake Tanganyika (2nd of April, 1867) he had a severe attack of fever; sometimes he became insensible; the muscles of his back lost all power, and there was an incessant singing in his ears. He heard of Lake Moero, discovered and explored it, then went to the town of Casembe, a once famous kingdom, which had been visited in olden time by Portuguese travellers, both from Angola on the west and Mozambique on the east. Hearing of a new lake, Bangweolo, to the south, he made a journey to those shores, where afterwards he was to die. This was the fifth and last great lake which he discovered (July 18, 1868). The others were Ngami, Shirwa, Nyassa, and Moero. He went back to Lake Tanganyika, and then proceeded, for the first time, to Ujiji, the well-known Arab settlement, where Burton and Speke first looked on the waters of the lake.

— Before leaving Zanzibar, Dr. Livingstone had made arrangements with a Banian merchant to send goods and stores to Ujiji. In February, 1867, he had sent similar instructions to the Consul at Zanzibar. He hoped, therefore, to find a new outfit at Ujiji, and he did find a few goods, but nearly all had been made away with. It was now 1869. His health was seriously affected. He suffered not only from fever, but had also a severe attack of pneumonia, with spitting of blood. He thus describes his state: "Ideas flow through the mind with great rapidity and vividness, in groups of twos and threes; if I look at any piece of wood, the bark seems covered over with figures and faces of men, and they remain, though I look away and turn to the same spot again. I saw myself lying dead in the way to Ujiji, and all the letters I expected there useless." Yet, in spite of illness and disappointment, he joined a party of Arab traders, and explored the unknown country (Manyuema) lying west of the lake—a land resembling that of the Gaboon—a land of primeval forest, cannibal tribes, and great apes, there called the soko, which Livingstone supposed to be the gorilla but which (as Mr. Waller, suggests) is more probably a kind of chimpanzee. He reached the great river, Lualaba, flowing north, and believed it to be the Nile. It was not till October, 1871, that he returned to Ujiji. During this great exploration, he had read the Bible all through four times; he had obtained, as he thought, the clue to the problem of the Sources of the Nile; he had seen slave-hunting in all its horrors, and had narrowly escaped being speared (twice in one day) in an ambuscade, laid for a slave-hunting Arab, for whom he was mistaken. He had filled up his note books and finished his ink, and was obliged to write his diary on scraps of old newspaper with a substitute for ink made from the juice of a tree.

Madras.

— The coffee crop in the Wynaad is said to be smaller this season than it has ever been.

— The local Fine Arts Exhibition will be held in February. Lord Hobart gives two prizes, and Lady Hobart a similar number.

— Arrangements are being perfected for making another attempt to supply Colombo with a good hotel.

— The Madras Government has declined to accede to the request of the South-East Wynaad planters for annexation to the Neilgherry District.

— The ship *Northbrook*, with a cargo of coals, took fire in the Madras Roads lately. The flames were got under after six hours' pumping.

— Five thousand candidates will appear next month at the General Test Examination. This is, we believe, the largest number that has yet been under examination at one time in India.

— The Madras Chamber of Commerce will have Mr. Clement Simpson of the firm of Messrs. Sims & Co. as its chairman and Mr. P. Macfayden as vice-chairman for the present year.

— The Lawrence Asylum Press was enabled, by efficient management, to contribute ten thousand rupees last year, in aid of the Lawrence Asylum on the Neilgherry Hills.

— The *Cochin Argus* protests against the "Janivary" nuisance prevalent in that part of India. On New Year's day the police constables, peons of the Courts, and others go round from morning till night importuning people to give them money.

— Mr. Sydney Craven, late Agent of the O. B. C., Galle, has been finally committed for trial before the Supreme Court, in reference to the recent deficiency in the Bank at that place. Mr. Craven will be tried in Colombo.

— The number of Indian coolies who arrived at ports in the Northern Province of Ceylon during the eleven months ended the 30th November, was 89,086, and the departures during the same period 48,992, leaving a balance in favour of Island of 40,074.

Feudatory.

— Holkar intends to pay a return visit to Scindia.

— There is a report that the Secretary of State has decided against the claimant to the Jaitpore *guddee*, worth a lakh and a half yearly.

— Sir Jung Bahadoor, with seventy-one relations and officials, left Nepal on the 17th December, on his way to England.

— The Sanscrit College of the Princess of Tanjore holds ninety-nine pupils in the English and Tamil department, twenty-five in the Sanscrit, and fifteen in the Teloogoo.

— Luxmeebaee's husband has, it is said, made several ineffectual applications to Sir Lewis Pelly, the Resident of Baroda, for a warrant against the Geakwar, on a charge of unlawfully detaining his wife.

— Scindia held a grand field day on the 26th of last month. The force assembled comprised five batteries of artillery of five 9-pounders and one howitzer each, four regiments of infantry, and three regiments of cavalry.

— An ex-soldier in Holkar's Army was lately hanged at Indore for the murder of his commanding officer. The Maharaja himself addressed the troops on the occasion, advising them to "cultivate good feelings towards their superiors."

— On the 2nd instant the Prince of Arcot, accompanied by a military force provided by Government, and the surviving male relatives, friends, retainers and servants of the late Prince, went on foot to the tomb of the latter, in accordance with Mahomedan custom.

— A telegram in the *Bombay Gazette* states that although the strictest secrecy is enjoined by the Government of India, it has oozed out that satisfactory evidence has been obtained, implicating the Gaekwar in the attempt to poison Colonel Phayre. His Highness's old courtiers are also concerned in the plot. Malharrao's dethronement is considered imminent. Mr. Souter has fortunately succeeded in obtaining more evidence that it was at first anticipated would be forthcoming, towards unravelling the mystery that had shrouded the attempt to kill the late Resident by means of poison.

Burma and the East.

— In preserving discipline it was found necessary last year to discharge 387 men, including 22 subordinate officers, belonging to the Burma Police force.

— The third Dutch expedition to Achin, consisting of two battalions of troops, has passed through the Straits.

— During the recent expedition from Singapore against the rebels of Sunghie Ujong a petty officer of H. M. S. *Charybdis* received a fatal shot in the spine.

— The quantity of chincona bark collected in Java last year is estimated at about 25,000 kilogrammes, which would have been 30,000 had the weather not been extraordinarily rainy.

— A Borneo correspondent of the *Sarawak Gazette* says: In the village of Santubong, I fell in with a vagrant looking Hindoostanee, whose reasons for leaving his own country were unsatisfactory. His story was, that he had wandered over many islands in the Archipelago, and had travelled a great portion of Dutch Borneo, where after unsuccessfully attempting various trades, had met with no better luck as a diamond digger in Landak, nor whilst digging for gold elsewhere. At length he had discovered a means of keeping flesh and blood together, as a travelling tinkering silversmith, going the rounds of out-of-the-way Dyak houses, where he managed to pick up odd jobs, more or less belonging to his singular profession. The man's wild looks and haggard appearance strongly backed up his tale of woe and vagabondism. A relic of 1857 doubtless.

— Considerable excitement has, the *Straits Times* informs us, been awakened among the Chinese community of Singapore by reports of the kidnapping of coolies for service in Deli, Sumatra. As usual, the reports were greatly exaggerated, but a case which occurred in midday, where an attempt to drag off a coolie was frustrated and one of the assailants arrested, led to a revival of the stories and the posting of an inflammatory placard, accusing the police of complicity with the kidnappers; and during the excitement attendant on the trial of the case in the police court, a mob broke into several houses and liberated all the coolies therein confined. The excitement was, however, allayed so soon as the Chinese became convinced that the Government would lend no countenance to the employment of illegal means by the coolie employers or their agents. With respect to the coolie question, a petition has been sent in to Government by the European merchants and bankers, praying that the proposed Immigration law may not be further proceeded with, as its tendency would be to check the immigration of labourers, whereas the only danger to which they are exposed lies in their engagement for service outside the Colony under false pretences, which might be easily guarded against by supervision over their engagement and shipment for those places.

— The Manila *Comercio* in noticing the visit of H. M. S. *Challenger* to the Philippines, gives some particulars of her explorations on the voyage thither from New Zealand, derived from a member of the scientific corps. The promoters of the submarine telegraphic communication between Australia and New Zealand had to await the arrival of the *Challenger*, to ascertain the depths of the sea between those two countries; data as to which could not be obtained by other vessels, special instruments and a small steam engine for lifting the sounding apparatus being required. These sounding operations were accomplished notwithstanding the prevailing stormy weather; and from them it has been ascertained that the coast of Australia sinks very rapidly until it attains a depth of 2,600 fathoms. Afterwards lesser depths were met with; the coast of New Zealand, which is formed of rocks of volcanic origin, is of a gentler slope. After a short stay at Wellington, the vessel, shaping a northerly course arrived at the Friendly Islands, at the pleasant residing place of George Tubou, King of Tonga; without ceasing a moment to make soundings, she then visited the Fiji islands, which have just been annexed to Great Britain. After a stay of two weeks at these islands, the *Challenger* repaired to the port of Api in the New Hebrides, where dwell tribes of savages whose ferocity has increased since several vessels have been there in search of labourers for plantations in Queensland and Fiji. Britain had to interfere to check this traffic; the British parliament passed the Kidnapping Act, a law which has for its object to ensure a less painful passage for the unfortunates who leave their own country for foreign lands, to seek there three years of life. In reality, cruelties are not now committed on board labour vessels, and the labourers very regularly return to their own countries; the *Challenger* conveyed back to their island homes a number of them, a circumstance which contributed much to her being well received by the islanders.

Asia.

— Another rebellion is threatening in Kweichow.

— Two Chinese shopkeepers have been fined for selling spurious tea in Hong-Kong.

— The members of the Chinese Commission have returned from Cuba to Shanghai.

— Fresh negociations are reported to be in progress for the purchase by China of one or more iron-clads.

— The railroad between Shanghai and Wusung has been actually commenced.

— Nowroze Khan, Chief of Lalpoora, is preparing to oppose Shere Ali's forces, should the latter assail his territory.

— A report from Kioto states that the boiler of a Japanese steamer plying upon Lake Biwa has exploded, and that all the passengers and crew, numbering 100, were either killed or drowned.

— The telegraph line from Foochow to Amoy is being pushed forward, but the mandarins are withholding official protection. It remains to be seen if under these circumstances the work of construction can be carried out.

— Dr. Elmore, *Chargé d' Affaires* in Japan of the Government of Peru, has been received by His Imperial Majesty the Mikado, in private audience. Her Majesty the Empress, the Ladies of the Court, the High Officials of the Imperial Household and the Foreign Department, were also present.

— The surveys for the section of railway in Japan between Lake Biwa and Tsuruga, a port on the West coast, are being rapidly proceeded with, and the section between Osaka and Kioto is advancing rapidly. The department of Public Works is especially relieved by the recent success at Pekin, as the appropriations on which its progress depends were threatened by the exigencies of expected war.

— A native paper says the Chinamen in Japan swallow the humiliation their country has been subjected to in the best manner possible. One facetious "John" consoled himself by saying, "My country very rich, Japan very poor, my country very sorry, so give Japan some taels." Most of the Chinamen, however, have come to the conclusion that the Chinese Government was desirous for peace and therefore paid the indemnity in order to get rid of its troublesome neighbour.

— The dread of conscription is so general among the Tartars of the Russian Black Sea provinces that all the young men have secretly emigrated to Turkey in the last twelve months, and even old men are running away in numbers, the Turkish skippers of the Levant coast giving them every facility for a prompt and secret passage to Bulgaria and Asia Minor. Similar results being apprehended in the western or Polish and half-Polish provinces of the empire, the recruits levied in these districts are immediately placed in the ranks, while those "conscripted" in Russia proper will be summoned this month.

— Two outrages of an alarming kind have been committed in the Shanghai Settlements lately. In one case Captain Pike was struck a murderous blow by a Cantonese rowdy in Hongkew. Robbery is believed to have been the object. In the other, two Chinese policemen were brutally maltreated by a Chinese mob. Both cases were tried at the Mixed Court, Capt. Pike's assailant getting the most severe punishment the Court could inflict—300 blows, then and there administered, and three months' cangue. Of the ten men charged with the other offence only three were sentenced, one to 20 blows and a month's cangue, and the others to 100 blows and a fortnight's cangue each.

— A magnificent gilt carriage sent by the Emperor of Russia to Bokhara as a present to the Emeer has duly arrived there and been received with great ceremony. It arrived in the town of Bokhara on the 11th of October, when, in the absence of the Emeer, who had gone to Yarafshair, the Khoosh Begee went out to meet it. During its journey across the Bokhara country it was received at every stage by the notables and guards of honour, and on the third day after its arrival at Bokhara it was drawn by men through the principal streets of the city, so that the whole population might see it; after which it was finally deposited in a coach-house which had been specialy constructed for it, no carriage having ever before been seen in Bokhara. In short, no coach ever had such honour paid to it, and the Emperor

must be glad to find that his gift has been so highly appreciated.

— The number of Japanese soldiers who died from fever in Formosa was, up to the end of October, about a hundred and thirty. Of the labourers, another hundred had died. In addition to the calamities caused by disease, the Japanese in Formosa were twice visited by typhoons, the first of which destroyed twenty-five houses within the camp. No lives were lost, though several persons were injured. The sick soldiers who have arrived at Nagasaki at different periods have been sent to Kumamoto to recover. At the last advices, all the savage tribes of Formosa, both southern and western, were on perfectly friendly terms with the Japanese. Raikibun, the most powerful of the northern chiefs, visited General Saigo last month, and expressed a desire to put himself under Japanese protection. The Chinese port nearest the Japanese camp in Formosa is just to the south of Takao, about thirty miles away. It is maintained by only a few hundred poorly-armed and undisciplined men.

— Ayoob Khan is stated to have held a Council of Sirdars in Herat, when he spoke as follows:—"The chief object of my troubling you to attend this council is to take your opinion as to what is to be done about my brother, Sirdar Yakoob Khan, who without any cause has been put under surveillance by the Ameer. You all know very well that my brother never acted against the order of his father the Ameer, and (putting a large bundle of letters before them) that Yakoob Khan had been attending to these letters which had been received from the Ameer. Yakoob obeyed the order of the Ameer, went to Cabul alone, leaving all his troops, &c., in Herat, and there he has met with evil treatment. The matter is now before you, please let me know the measures I am to take. As for my going to Cabul, I would rather go to Mecca than to the Ameer." The chiefs conjointly made the following reply:—"You are now the master and governor of Herat; don't think of leaving Herat on any account; we are willing to sacrifice our lives for you. We can bring all we have, that is, our followers and wealth, and can put all at your command."

— The native community of Shanghai have, says the *North China Herald*, been much interested lately in a romantic case of abduction. A Chinese General who had achieved distinction in the suppression of the Mahomedan rebellion in Yunan, was passing through Shanghai on his way to have an audience at the capital, when he somehow had an opportunity of seeing a Celestial beauty of whose graces he became at once enamoured. The young lady was already betrothed, and the happy event of her marriage was within a few days of being consummated; but on his return from Pekin, the amorous General took steps to wrest the prize from the bridegroom expectant. By a liberal use of money he seems to have secured instruments ready enough to work his will. The maternal guardian of the young lady yielded to the influence of sycee, and gave the gallant suitor a preference over the gentleman who, by the sacredness of Chinese betrothal, had the right to the young lady's hand. A *tepao* who had been a detective in the Municipal service, and had become rich by blackmailing among the large class of unprotected Chinese females who live in the foreign Settlements, was bought by the General, and he, it is said, again tampered with one or more other detectives, whose eyes and mouths it was desirable to have closed. On the 11th of last Chinese moon, a carriage took the young lady to the the banks of a creek, when she was handed into a boat which at once set out for Soochow. Since then, however, the gallant General has regretted his ardent haste, paid handsomely for his trifling with the lady's feelings and his breach of Chinese etiquette, and given the betrothed an opportunity of recovering his *fiancée*.

— The following is an interesting document which marks the termination of the dispute between China and Japan: The Ministers of Great Tsing (China) charged with the General Superintendence of Foreign Affairs, namely, The Prince of Kung and nine Japanese Ministers have agreed together upon the following articles, and hereby execute the present instrument in proof of the arrangement determined on. As the people of all nations have a right to protection and to immunity from wrong, it becomes the duty of each State to take its own measures to ensure full protection (within itself) and it is incumbent on the state within which questions (as to protection) may occur, to take its own steps for the settlement of the same. The savage tribes of Formosa having wilfully inflicted injury upon people belonging to Japan, and Japan at first believing that responsibility rested with the said savages, despatched a force to the spot and punished them. Now, however, Japan has distinctly agreed with China to withdraw her troops, and to conclude the following supplementary arrangement in three Articles for the disposal of this question. (1) The proceedings of Japan on this occasion having originally been taken for the rightful object of protecting her people, China does not regard them as wrongful. (2) China shall pay consolation money to the families of the distressed (or shipwrecked) people who were injured on the former occasion, and as she wishes to retain for her own use the roads, houses and other works constructed by Japan at the said place, China first agrees to pay for the same. (3) The whole of the correspondence relating to this question which has passed between the two nations will be withdrawn and cancelled by both parties, and discussion thereon will cease for ever. As to the savage tribes of the said locality China ought of course to take measures for keeping them under proper control, in order that navigators may be for ever protected, and not again exposed to outrage or wrong.

Literary.

— A new weekly paper, called the *East Indian*, will shortly be published in Calcutta.

— The total amount paid by Government on account of Female Education in India during 1872-3 exceeded three lakhs of rupees.

— The journal kept by Mr. R. Bogle, the first Englishman who travelled in Tibet and Lhassa, Has been discovered in the British Museum, and will shortly be published by the India Office authorities.

— The Brahmos have begun the publication of a small monthly magazine called the *Liberal*. It is in English and Bengalee, and the authors aspire to make it "an impartial exponent of Theistic opinion."

— Messrs. Hamilton and Co., the well-known Indian jewellers, have started a little monthly publication, called the *Pearl*, which is to be distributed free. In the first number we find the following "gems of the months and their attributes":

JANUARY.	Garnet.—Constancy and fidelity.
FEBRUARY.	Amethyst.—Preserves against violent passions and drunkenness.
MARCH.	Bloodstone.—Wisdom and courage in danger. Firmness in affection.
APRIL.	Sapphire.—Denotes kindness of disposition and repentance. Frees from enchantment.
MAY.	Emerald.—Ensures happiness in love and domestic felicity. Discovers false witnesses.
JUNE.	Agate.—Gives long life, health and prosperity. Renders invincible in combat and all contests.
JULY.	Ruby.—Discovers poison. Cures all evils arising from unkindness.
AUGUST.	Sardonyx.—Ensures conjugal felicity.
SEPTEMBER.	Chrysolite.—Preserves from despair.
OCTOBER.	Opal.—Denotes misfortune and hope.
NOVEMBER.	Topaz.—Indicates passion and inconstancy.
DECEMBER.	Turquoise.—Prosperity in love.

— At times the Shah indulges in reflections in the Diary of his visit to England. Thus, after being much pleased with the exercises of the Fire Brigade, of which he remarks that the English have invented "a beautiful way of saving life," he adds, "But the wonder is in this, that, on the one hand, they take such trouble and originate such appliances for the salvation of man from death, when, on the other hand, in the armouries, arsenals, and work-shops of Woolwich, and of Krupp in Germany, they contrive fresh engines, such as cannons, muskets, projectiles and similar things. for the quicker and more multitudinous slaughter of the human race. He whose invention destroys man more surely and expeditiously prides himself thereon, and obtains decorations of honour." The valedictory reflections of His Persian Majesty are extremely complimentary to the English nation. "Well; had we the wish to write as they deserve all the particulars of the City of London, or of all England, we should have to write a voluminous history; but, during a stay of only eighteen days in London it really has not been possible to write more than we have done. In justice (we can but say that), the demeanour of the English, and everything of theirs, is extremely well regulated and governed, and admirable. In respect to populousness, the wealth of the people, the commerce, the arts, business, and *dolce far niente*, they are the chief of all nations."

— In connection with the Chinese system of bestowing Government employment only by competitive examination Mr. Thomson, the author of a new work on the East, says: Extraordinary is the honour which the Chinese attach to literary championship and to the achievement of the Chong-ün or Han-lin degree, which is conferred by the Pekin examiners. At the triennial examination of 1871 a man from Kwang-tung province carried off the Chong-ün. His family name was Leung. Now this literary distinction had been obtained by a Kwang-tung scholar some half-a-century before. Mr. Leung reached Canton in May, 1872, and was received there by the local authorities with the highest possible honours. All the families who bore the name of Leung (and who had the means to afford it) paid the Chong-ün enormous sums of money to be permitted to come and worship at his Ancestral Hall. By this means they established a spurious claim to relationship, and as soon as the ceremony was over were allowed to place tablets above the entrances of their own halls inscribed with the title Chong-un. An uncle of the successful Senior Wrangler, uniting an exalted sense of his duty to his family with a laudable desire to repair his own fortune, forestalled the happy Chongeün, and acted as his deputy before his arrival in visiting sundry halls. For such honourable service this obliging relative at times received a thousand dollars, and his nephew, for the sake of the family name, had to sanction the steps thus prematurely adopted to spread his fame abroad.

— It must be very gratifying to Colonel Tennant to know that his observations of the Transit of Venus at Roorkee were the best taken throughout the world. Roorkee was absolutely the finest of all the British northern stations. For though the Sandwich Isles were superior for early ingress, and the Egyptian stations nearly equal to Roorkee for late egress, yet the latter had the immense advantage of showing the whole transit. Nagasaki and Wladiwostock were both superior in value to Roorkee; but were not favoured with equally good weather. The "150 micrometric measures of cusp-separation of limb," and the "31 meridian-transits of both limbs," with the "18 micrometric measures of difference of declination of limbs," are all matters of great moment when rightly understood. They may be thus explained. As Venus is crossing the edge of the sun her edge forms, with his, two corners, which at first separate until half Venus *in* upon the sun, and then draw closer until she is just wholly upon the sun, when they meet. These corners are called cusps. Now, it was early proposed (first by Mr. Proctor, in 1869) to measure carefully the changing distance between these cusps with the telescopic measuring apparatus called the micrometer, and, thus to get rid to a great extent of the difficulty in-

troduced by what is called the "bla ck drop," or ligament, connecting the edge of Venus with the sun's at the moment of internal contact. The fact that 150 measurements of this kind were obtained at Nagasaki is full of promise; for if some of these belonged to ingress and others to egress, then the duration has been perfectly determined despite the apparently doubtful nature of the last internal contact.

— The 31 meridian or mid-day observations at Nagasaki are also of great value, though not so valuable as similar observations would be at a place where the middle of the transit occurred at mid-day. Transit began at Nagasaki late in the forenoon—the sun, with Venus upon his face, crossing the southern meridian, therefore, soon after ingress. The observers timed the moments when his foremost and rearmost edge or "limb" crossed the meridian (corresponding to the central spider line of the transit telescope), and also when the foremost and rearmost edge of Venus passed the meridian, and so learned the relative positions of Venus and the sun as respects east and west. The "18 measurements of difference of declination" are those by which the observers learned the relative positions of Venus and the sun as respects north and south. Thus her position on the sun's disc at the moment of his meridian passage at Nagasaki was perfectly determined, and this is a result not only of great value towards the determination of the sun's distance, but also as respects the motions of Venus in her orbit, a subsidiary matter on which the present transit will give very exact information. However, the observations reported from Kurrachee show that astronomers had already tolerably exact information as to the movements of Venus. From the projections of the transit published so far back as 1869, it can easily be seen that the times of ingress and egress were computed to within a minute; and this implies that the observations made on the present occasion have already justified the recent corrections in the sun's distance.

Ecclesiastical.

— The death, on the 21st. December, of the Rev. Behari Lal Sing is announced.

— A Hindoo lady of the Baidya caste has been admitted as a member into the Free Church, Wellesley Square.

— It is proposed to raise Rs. 5,000 as a fund "to perpetuate the memory of the Rev. J. Long in this country."

— Miss Bernard, a niece of Lord Lawrence, is expected at Bombay to take the position of Superintendent of the Zenana Mission in Poona.

— The Rev. A. N. Sommerville brought his evangelistic services in Calcutta to a close on Wednesday week last. He is now in the Upper Provinces.

— Another outrage on American missionaries, somewhat similar to that which took place at Hoochow lately, is reported from a town near Kiukiang, where the district magistrate appears to have very reluctantly and inefficiently exerted himself in behalf of the gentlemen attacked, and in fact ultimately left them to escape from the mob as they best could.

— On the afternoon of a recent Sunday there was a disturbance in the chapel of the Southern Presbyterian Mission at Soochow. The chapel is situated upon the Yang-Nyoh-Hang, one of the leading thoroughfares of the city; the Missionaries living above and in the rear of the building. A native minister from Hangchow was preaching to members of the church and a large number of women and children came in at the time, as they are accustomed to do, to visit the ladies of the house. Most of them were strangers, but they were brought by some who had been regular visitors. The men in the street, seeing such a number, there being thirty or forty women and children altogether, began to spread the common rumours that the foreigners were collecting children's eyes for medicine. It was too good an opportunity to see all the wonderful things about a foreigner's house, and numbers poured in from the street. The Rev. B. Helm, from Hangchow, who has some years' acquaintance with the language, was present, and all he could do was to go about and urge the people to be quiet and leave. Probably not more than 20 or 30 out of the 400 or 500 rioters were intent upon evil. Several times the rooms upstairs were cleared, but a whole stream would come up by another stairway. At length the police arrived and peace was restored.

— The camp of the Palestine Survey party is now at Yutta, about four miles south of Hebron, a place identified by Dr. Robinson with Juttah, one of the cities assigned to the priests. A few miles farther south is Semua, probably Eshtemoa, also a city of priests. Lieut. Conder has taken the opportunity of his proximity to these two sites to look for indications of the Levitical limits, similar to those found by M. Clermont Ganneau at Gezer. It may be remembered that the inscription found there pointed to the theory that the boundary square enjoined in Numbers xxxv. 4, 5, was to have its angles at the cardinal points. The first thing noticed by the Survey party with regard to both these towns is, that the cardinal points are all on hill-tops. Yutta furnished no inscriptions or other indications of boundary mark. Near Semua, however, a stone was found, which may prove of considerable importance. It is called by the people Hajrel Sakhain and at present forms the boundary between the lands of Semua and those of Yutta. Lieut. Conder describes it as a "soft rock, standing upright, about 3 ft. high"—he does not make it clear whether it occupies its natural position or not. It is a little more than 3,000 cubits of 16 inches each (the exact measurements have not arrived), north of the centre of the modern village, but is not due north, being a quarter of a mile east of the cardinal point. West of this stone there were found three others roughly in line, evidently marking the boundary. It is not stated whether the other sides of the supposed square have been examined. If the line of stones marks the ancient boundary of Eshtemoa then we have the curious fact that, while in staking out the limits of Gezer the ordinance of the Pentateuch was supposed to mean a square whose angles were at the cardinal points, at Eshtemoa it was interpreted to mean a square whose sides ran north, south, east, and west respectively.

We beg to acknowledge, with thanks, the following subscriptions to the *Friend of India*:—

TELEGRAMS.

FRIDAY, JANUARY 1ST.

A conference of leaders of parties in the Assembly which was convened by MacMahon, have agreed unanimously to discuss constitutional laws, but have come to no agreement respecting the transmission of power.

Count Arnim has appealed against his sentence.

An Alphonsist *pronunciamente* has been published, proclaiming Alphonso, son of Queen Isabella, King of Spain, which proclamation has received recognition from the armies.

Further particulars concerning the loss of the emigrant ship *Cospatrick* state had only two boats containing 64 persons left the ship; one of these still is missing; the mate and two sailors, the sole survivors in the other boat, were picked up at sea, having subsisted several days on the bodies of their comrades.

A Berlin telegram states that Yakoob Khan has been re-appointed Governor of Herat, on condition of his ruling in conjunction with three dignitaries devoted to the Ameer's interests. It is also reported that relations between Afghanistan and Persia are very hostile. The Russian Press fears that Yakoob intends attacking Persia.

A Chinese Imperial Government 8 per cent. loan of £627,675 sterling has been issued at 95 per cent.

through the Hongkong Bank under imperial authority, and secured by customs revenue of £300,000 sterling.

Inquest on Shipton Railway accident has opened; cause of accident proved to be breaking of tyre not axle; two more passengers have died.

Munguldass Mithoobhoy of Bombay has received the honour of Knighthood.

MONDAY, 4TH.

The Heavy Malis, *vi*a Southampton, which left Calcutta, 24th instant, were delivered on Saturday.

Latest advices report that Alphonso has gone to Spain. Marshal Serrano has acquiesced in the pronunciamento and gone to Madrid, where a liberal ministry has been formed.

50,000 miners in Wales have struck against a reduction of wages.

The supposed Nana Sahib has officially been declared an impostor.

Alphonso has been peaceably recognised everywhere; movement effected without bloodshed.

Obituary.—Ledru Rollin and the Duke of Montrose.

TUESDAY, 5TH.

The Homeward Mails of date Calcutta, 11th, *via* Brindisi, were delivered in London yesterday.

Heavy snowstorms reported from Scotland.

Three survivors of *Cospatrick* were picked-up by *British Sceptre*.

A Frigate will convey Alphonso from Marseilles to Valencia. Isabella remains in Paris. The Carlists have agreed to Amnesty, but are, however, determined to continue the struggle.

The German Government has already recognised Alphonso.

WEDNESDAY, 6TH.

The strike in Wales has partially terminated. The men are submitting.

Marshal Serrano and his family have retired into France.

The Pope has issued an Encyclical, proclaiming a Jubilee to be held in 1875.

General Richard Strachey has been appointed a member of the India Council.

THE DUFFLA EXPEDITION.

(Correspondent of Pioneer.)

—CAMP No. 6, 21ST *December*.

The whole of the Duffla Field Force, with the exception of the guards at the different stations on the line, marched into this place on Saturday December 19th, having come in from Harjuli with only one night's halt at the top of the hill, it being impossible to wait there longer owing to the absence of water: the only water we had there was what we brought up with us from Harjuli. Rather an amusing incident occurred in connection with this carrying up of water. The 44th Regiment having been at Harjuli for some days with the General and Staff, knew of course that they were to march on the morning of the 18th, and, with that precaution and forethought which has characterized their progress during the campaign, took care to send up plenty of water on the 17th; but when the 42nd and 43rd marched into Harjuli on that day, and, it having been considered advisable to hold the summit in case of an attack in the morning, the 43rd were ordered to proceed straight on to the top. Not having time to make the *chungás* for carrying the water, they were obliged to use the water that the 44th had so carefully stored there for themselves. Captain Evans, however, made the best recompense in his power by sending down his own men the next day to bring up water for the 44th, but owing to some caste differences this water was not so much appreciated as it might have been, and so the men of the 44th had rather a dry night of it on the 19th. The marches of the 18th and 19th, though not long, were very trying owing to the hill being very steep and the road narrow and bad, causing frequent blocks in front with consequent detention behind, so that it was getting late before the rear guard came in on each day; and when it is remembered that after their arrival the men had to build their own huts and collect wood and cook their food before they could turn in for the night, it can easily be understood that their task was not an easy one, and that they fully deserved the tot of rum that was served out to them on these days.

The order of march on the 19th was as follows: first of all the Head-quarter Staff with the 43rd and Sappers, then the 44th, then the Artillery, followed by the 16th and 42nd, after them the coolies carrying commissariat loads, and last of all the rear guard. As it was thought that an attack might be expected on this day perfect silence reigned throughout the entire line, and everything was in perfect readiness to resist attack and conduct a pursuit. The road used on this occasion was an old Duffla path leading down a spur of the mountain, and any obstructions placed here might have caused us some trouble, but none were met with. Through the trees occasional glimpses of the *jums* in the valley below could be seen. About 1 P. M. the advance guard reached the river's bank just in time to see three Dufflas, evidently scouts, running off into the jungle. These men might have been captured had they not been startled by the barking of a dog which ran in front of our men and gave the alarm. The result of this little piece of perfidy on the part of this ungrateful *pariah* is that a Duffla Field Force order has been issued to the effect, that dogs finding their way to the front of the advance on the line of march will be destroyed. A lot of dogs have followed the camp up from Narainpore, and as they are petted and abundantly fed they are much better off than in their own native villages. They rejoice in all sorts of charactertistic names, Dikrung, Harmuttee, Duffla, &c. With the exception of the evanescent scouts, the only signs of the enemy we saw on arrival here were the primitive cane ferry bridge, a couple of fishing weirs, and a bamboo *boska* or hut; the latter, being raised off the ground, was secured at once for the General's residence. Sites were apportioned to the different regiments, and the work of clearing the jungle and erecting huts commenced; and it was perfectly wonderful to see the transformation that took place before night-fall. Great trees were cut down, thick undergrowth cleared away, and what was in the morning a dense, almost impenetrable jungle, was turned into an open space with leafy huts, cheerful fires, and clusters of coolies and sepoys, busily cooking their food, smoking their *hukás* and chatting away to each other. Yesterday the General, taking the 42nd with him, marched to a village about three miles off, but found nothing except a few pigs. It had evidently been deserted only a short time before. In the afternoon Captains Heathcote and Home, taking a few of the Sappers, went across the river to reconnoitre, and got quite close to Pakfi's village; they found that it was only two miles from here with a very good road. Later on an ambassador came to the river's edge, and on being called over he stated that Pakfi had sent him to say that he, Pakfi, would come in to-morrow bringing with him his captives. So about midday to-day several of the Dufflas came over the river, and amongst them Pakfi's own son and another relative, both of them fine looking young fellows, bringing with them one captive, little boy, about six years old, a brother of one of the tame Dufflas who has been in the camp for some time past as guide and interpreter. The meeting between these two brothers, who had not seen each other for nearly two years, was quite affecting. The little fellow, who looked rather frightened at all the strange faces and clung to his captor's hand, as soon as his brother came up and called him by name, threw his arms round him and burst into tears. Pakfi's son said that the old man himself would come immediately, and two of the party remained on this side as securities, while the others went over to bring him; but the shades of evening came on and still he came not. Another man came over, however, to say that to-morrow he would surely come and with him the rest of the captives that he has. So, probably by to-morrow night his surrender will have been made, and then only Nana remains to be dealt with, for Gobind and Aka are minor Chiefs, and will do whatever Nana and Pakfi do. Pakfi's messenger said that not only was he willing to come in, but that he would also help us to make Nana give in, so that it looks very much as if the whole campaign were approaching towards a bloodless termination, but it is by no means certain that such will be the case It is perfectly well known to those officers who have had anything to do with these Dufflas and Abors that a more mendacious class of beings is seldom met with, and it was even predicted that in this expedition the course of conduct pursued by them would be that which has in part been carried out already, *viz.* to appear to submit at first, and then turn round and attack us when we are leaving the country. Time alone will show. Meanwhile the surveying operations are being rapidly pushed on. Major Austen has just completed a small sketchmap of the Duffla Hills with the course of the Dikrung and route of the Force so far, which has been forwarded to the Quartermaster-General to-day. The regiments engaged in this expedition cannot complain that any partiality is shown to any particular one, as all are equally brought to the front and each has its turn. Captain Home, with his Sappers and a party of the 43rd, constructed a very substantial bridge over the Dikrung to-day in five hours. It is built on four-legged trestles with bamboo-boarding, the whole lashed together with cane. Colonel Sherriff and a working-party of the 42nd also built another bridge lower down, where the river is narrower, but with a stronger current. He threw out abutments, and then spanned the river with large trunks of trees, boarding it over with bamboos. Captain Home intends building another bridge to-morrow of bamboo pontoons lashed to canes stretched across the river. When this is completed there will be four bridges in all across the river, counting the one left us by the Dufflas. This is a very simple affair. Two strong canes are stretched across the river, and a cradle made of bamboo and cane is suspended from this; a man gets into this cradle, is either drawn over with a rope by a man on the opposite bank, or draws himself over hand over hand.

Colonel Baigree has been taking a sketch of this station to send home to the *Illustrated London News*. He has already sent home two or three of different places on the way up. This is a very pretty place, but rather too damp to be healthy. Owing to the abundance of tall trees the sun can't get at the ground, and there is a mist from the river every morning. The thermometer here this morning was down to 35°. The cold seems to prevent that briskness of appetite amongst the finny denizens of the river that some of the officers expected to find, judging from the perseverance with which they pursue their fishing. The level of the Dikrung here is 1,000 feet above its level at Borpáni, so that the Force has done wisely to march straight across the hill instead of attempting to follow the course of the river. The river is 50 yards wide from this place. There will probably be a delay here for a few days more to permit of supplies being brought up. One half of the transport corps are employed between Harjuli and the top of the hill No. 5 station, and the remainder between No. 5 and this; at this rate about 250 maunds are daily landed here. The health of the Force still keeps good. There has been a slight increase, however, in the percentage of sick among the coolies, no doubt owing to the hard work they have had of late. Colonel Girdlestone, Commanding 16th N. I., was obliged to go back sick from Harjuli. The dampness of the climate had affected his lungs. He was recommended leave to Europe. Captain Salkeld, Commanding at Narainpore, comes up to take command of the Regiment here, and Captain Michell, from the outpost of Solapore, to command at Narainpore.

BARODA AFFAIRS.

(Bombay Gazette.)

The intelligence published by us within the last few days about Baroda affairs has made the bazaar ring with speculations regarding the fate of Mulharrao. Amid the crowd of people who apprehend, and justly, that the end of His Highness as sovereign of a miserable people is at hand, there are loving apologists for him who sagely shake their heads and prophesy that there is no truth in the intelligence about Baroda we published two days ago, and that all will yet be well with Mulharrao. We should be sorry to think these idle prophets were right, that oppression would still continue to be the portion of the Gaekwar's subjects, and that scandalous and outrageous wickedness would much longer grow rank round the Gaekwar's palace. It is seldom that a native Prince's people cry out to a foreign power for justice, and yet this is what has been taking place in Baroda almost since the day Mulharrao quitted his prison. Their "rights," however strong those of H. H. the Gaekwar may be, and however sensitive of the value of the latter a British Resident may be alleged to be, will yet, we are glad to say, be secured to them; for, notwithstanding the hopes and desires and prophecies of the afflicted friends and toadies of Mulharrao, we are confident that ere many weeks are over His Highness will be dragged off a throne which he should never have been allowed to ascend.

After all we are thankful that Mr. Souter went to Baroda. We believed that he had been put upon a cold scent, but thanks to the zeal of himself and his assistants it has turned out warm enough to suit the purposes of British justice. Those who busied themselves in disseminating the hint that Colonel Phayre had "got up" the case of attempting to poison him in order to cast a shadow upon the Gaekwar's reputation will soon be confounded, for even the boldest phase of native effrontery has its limits. We have every reason to believe in the correctness of the information we have published respecting the discoveries made by Mr. Souter, and the unbelievers may as well take warning in good time, for their refusal to look the worst in the face will not keep back the inevitable from running its course. Properly enough, great secrecy has been enjoined on the authorities concerned in the Baroda investigations; but, notwithstanding the vigilance they have consequently exercised, some facts have oozed out which point conclusively enough in one direction. *Ex pede Herculem.* When Mr. Souter received orders to proceed to Baroda, he took with him the two Khan Bahadoors in the detective service, who also took private agents of their own. He was also fortunate enough to secure the services of the Chief Inspector of Police in Ahmedabad—a Brahmin who did good service to Government during the Mutiny, and who, if we are not greatly mistaken, was actually present with Mr. Souter when he captured the chief of Nurgoond, the man who murdered Mr. Manson, the Political Agent in the Southern Maratha Country. Mr. Souter had a shrewd suspicion that as Ahmedabad and Baroda are closely connected, socially and commercially, the Inspector of Police of the former place would be a valuable man to help in the special work on hand in Baroda, and we believe his suspicion has been verified abundantly. Agents of the police were thrown out over Baroda, who made themselves familiar with all classes in the bazars. Success, we are told, did not seem probable for a time, but a romantic incident occurred which soon gave a clue to discoveries of an invaluable description. One of the agents got into conversation with a bullock-cartman, and the latter becoming garrulous told his new-found friend that he had on several occasions been employed to convey a passenger to the Gaekwar's Palace. Whom had he taken? Well, it was an ayah named so-and-so; in the service of Colonel Phayre. This was enough for the agent. Shortly afterwards the cartman and

the ayah (who has latterly been in the service of Mr. Crawley-Boevey) found themselves in charge of the police. The ayah was frightened, and, we are told, made astonishing confessions about certain interviews she had had directly with the Gaekwar. Large sums of money were found in her possession, or in that of her family; and, as the class of people to which she belongs do not generally possess wealth, doubtless she was indebted for it to the Gaekwar, who obviously must have been taking an astonishing amount of interest in the affairs of the Resident's family. This ayah is not the only important prisoner who has been secured. Two men have been captured by Mr. Souter, and one of them, at all events, must have proved invaluable as he was employed as a "go-between" between the Gaekwar and Colonel Phayre. The Resident had the greatest confidence in this person, whose name is Yeshwunt; and to all appearnce Yeshwunt was an honest man, the sole aim of whose life was to please the Resident and smooth away any little difficulties between him and the Gaekwar. No man could have appeared to be more disinterested than Yeshwunt. "Not for myself but for others" appeared to be his motto. If Mrs. Phayre or Colonel Phayre came to Bombay, Yeshwunt would also go to Bombay to inquire about Madame's health or the Resident's health. Yeshwunt, however, has turned out to be one of the greatest scamps of the whole fraternity of rogues in Baroda. For a long time past he has been nothing more nor less than a spy upon Colonel Phayre, and a tool in the hands of the Gaekwar. The last job he was employed in by the Gaekwar has turned out to be a very serious affair for his master, and so he has confessed a good many damaging facts against that personage. The other prisoner is, we believe, a Jemadar of peons who, we hear, played a more or less direct part in conveying the poison to Colonel Phayre's cup. He also has told some pretty tales about the Geakwar and the immediate associates of His Highness. Altogether we are inclined to think that Mr. Souter has obtained a mass of evidence sufficient to allow no loophole for the Gaekwar to escape from the charge of attempting to murder a representative of Her Majesty the Queen who had been deputed to his Court.

Information we have received from Baroda is to the effect that the Gaekwar already begins to feel uncomfortable upon his throne. But it is improbable that any decided action upon the result of Mr. Souter's investigations will be taken by the Government of India for at least a month yet. The usual formal process will have to be gone through—that is to say, Mr. Souter will have to prepare a report and send it to the Government of Bombay, and the latter will have to forward it to the Supreme Goverment. But, after all this is done, we cannot, believing thoroughly that Mr. Souter's report must be of such a nature as will prove the direct implication of the Gaekwar in an attempt to murder Colonel Phyre, see any room for hoping with the apologists of His Highness that his days as Sovereign of Baroda may be long upon the earth. Justice will yet be done to the multitude who cry for it in the streets of Baroda; and Colonel Pelly's assurance that the Gaekwar has rights will be seen to have a sinister meaning in the light of the British Government proceeding to award to a dethroned criminal that punishment which no one can deny he deserves.

EUROPE.

THE SUPPLY OF MISSIONARIES.

(Spectator.)

The Protestant Churches, Established and Nonconformist, are crying aloud that they cannot get men for Missionary work; and the cry, which was the common burden of all the addresses delivered on Monday, the Day of Intercession, is, we fear, but too well founded. It is not a cry which it is the interest of Missionary Societies to raise without grave cause. That there has been a positive falling-off in the number of men willing to devote themselves to Missionary labour, is as undoubted as the similar falling-off in the number of graduates willing to apply for Orders in the Church of England. The complaint is repeated by the Nonconformist as well as the Established Churches, and is supported by statistics which show that in some important districts of their work the agency employed by the Societies is visibly declining. The *Edinburgh Daily Review*, a journal which on such subjects has especial means of information, publishes the following table, which displays at a glance the gradual decline of the Protestant Societies in their first, though not their most promising field,—the British Indian Empire:—

	MISSIONARIES—	
SOCIETY.	In 1861.	In 1871.
Church Missionary	... 103	... 102
Propagation ...	... 43	... 40
London ...	... 46	... 44
Baptist ...	... 39	... 26
Wesleyan ...	... 31	... 22
Total...	... 262	... 234

Nor is this decline in quantity supplemented by any improvement in the quality of the men employed. It is the testimony of all who are acquainted with the subject that, allowing for an exception here and there—for example, Bishop Patteson will always rank among the greatest of English Missionaries—the Missionary of to-day is seldom quite the equal of the Missionary of a preceding generation; that he is either more of a professional man and less of an apostle; or if he displays equal zeal, has less of the intellectual gifts which make that zeal, effective. Worse educated, worse bred, and less eloquent candidates present themselves, and the Societies are so pressed that they can exercise but a nominal discrimination among applicants, can hardly, indeed, reject any of unblemished character and apparently sincere purpose,—two indispensable but very often insufficient qualifications. In India, in particular, there is a kind of Missionary to whom no Society can take exception at first sight,—zealous active, and fairly trained, who would at home make an excellent pastor, or in Canada a most valuable itinerant, but who, in India, as an evangelist preaching to Asiatics, is as nearly as useless as it is possible for a good man out of his place to be. Such men have been known to exert themselves to the uttermost of their light and strength for thirty years, and then break down, to be consoled with the merest hope that so much earnest and high-principled labour cannot have been spent in vain. It is spent in vain, nevertheless, as so much else is that is good, in the endless wastry of the world's advance. This class from the nature of things, tends to increase, until it may absorb whole Missions, and a body of fervent evangelists may degenerate into a numerous and most respectable, but unaggressive, body of country pastors.

On the causes of the decline in the number of candidates for Mission work we have not much to say. In our belief, that decline arises mainly from the decline in the propagandist enthusiasm which is an inevitable consequence of the prevailing anarchy of opinion, and will ultimately, and possibly after no long interval, with that anarchy pass away. There are subsidiary causes, no doubt, such as the immense growth of the dislike to secluded exile in tropical climates, the decay of imaginative illusion which accompanies the spread of geographical knowledge, and we fear—though the Societies will repudiate this statement—the distaste of old Societies dependent for revenue on very immovable electors for exceptional candidates, for men who are original, or who are suspected in any way of not being quite "safe." The reports of such men sometimes create a clamour, and their speeches, when at home, are not conducive to that steady and equable flowing-in of subscriptions which Missionary Committees approve, and which in honest truth it is their duty to desire. Something is due also, no doubt, to the diminished and diminishing attraction of Missionary work as a profession, to its perceptible fall in public estimation, to the comparative absence of the excitements which once attracted to it the adventurous, and it may even be to the new difficulty, arising from high prices, of providing against constant pecuniary worry; but all these causes, when examined, resolve themselves into one,—a temporary decline in the enthusiasm of the pious men competent for the work. It is the remedy for the falling-off in the supply of men which is important, and not an analysis of its cause, and we believe the former must be sought in a modification of the immediate object which the Societies set before themselves. They care a great deal too much about the "preaching of the Gospel in the market-place," that is, about the one method of evangelisation for which—in India at all events, in Turkey, in Egypt, and indeed everywhere except in Polynesia, where the native recognises his superior in race—foreigners must always form the most imperfect agency. It was quite natural, while men belived, as many of the early Missionaries undoubtedly did, that the heathen must go to hell simply for being heathen, that this form of teaching should be preferred, for one soul "saved" from torture was just as good as another; but now that this belief has died away, a little more attention may be paid to experience and reason. It is not the convert whom the Societies ought to seek to produce through European agency, but the man who can convert. One native of the right stamp, one man who could be for Asiatic Christianity what Gautama was for Asiatic morality, or even what Keshub Chunder Sen is for Asiatic Theism, would effect more than all the European Missionaries who ever preached, and it is for such a man that the Societies should seek. Their Missionaries are thrown away in the streets, where any native Christian, with an eloquent tongue and fervent zeal for the faith, can utterly surpass them, and their demand for an army of preachers of the present kind is a mere waste of power. They do not get many Whitfields, and what could even Whitfield have done if he had delivered to Staffordshire colliers, in the costume of a Turk, the thoughts of Bishop Tillotson, in the accent of a negro from the Southern States. That is the general position of a Missionary in India when not preaching to an aboriginal tribe. The *Times* chooses to say it is very easy to acquire Indian tongues, and the *Times* is right up to a point. But the *Times* should have added that this point is almost impassable, that there are not ten men recorded in the annals of the Empire who could speak any native tongue so as not to be detected, and that the fastidiousness of a Parisian about the English accent, of the Italian about the accent of the Tedeschi, of the English about the letter *h*, is tolerance compared with the fastidiousness of an ordinary Brahmin about the tongue, whichever it may be, in which he ordinarily speaks. The mere difficulty of the language, though not by any means the greatest of the difficulties in the way of the foreigner, is nearly insuperable, and cannot be overcome by any zeal, by any industry, or we might almost add, by any extent of learning. We question if a man like Dr. Wenger, who has preached for thirty years among the natives, to whom natives appeal as an authority on Sanscrit or Bengalee, and who would on those tongues be consulted with respect by Professor Müller or Mr. Cowell, could preach an extempore sermon in Bengalee without a "peculiarity" in every second sentence. Certainly a native of half his attainments, but with the native capacity for debate, narrative, repartee, and illustration, would beat him as preacher out of the field. It is waste to use such men so, and it is waste which involves a multiplication of agents who are to Dr. Wenger what an average High-Church curate is to Dr. Liddon. The Societies should be content with fewer men and fewer reports and fewer converts, if only by limiting their efforts and their inquiries and their resources—we do not mean in money—they can secure a few men of the kind at whose feet native disciples will sit as Oxford students sat or sit at the feet of Dr. Pusey, or Dr. Jowett, or Dr. Newman, or any other teacher of this generation with the genius for propagandism. We are not recommending a resumption of the old experiment of the Propagation Society. Their College produced many most worthy and excellent men, but they were none of them of the wood of which apostles and prophets are carved, and we may doubt whether the Christian teacher of the future can be made by the training which neither Loyola, nor Xavier, nor Carey, nor Ellis nor Judson underwent, and which has been utterly lacking to the dak, half-clad fanatics who in Eastern Bengal are spreading Mohammedanism at a rate which Christian Missionaries, if they could despair, might watch with envying admiration. It is from the leader of thought, and not from the College Don or the unlettered revivalist, that we expect results in India; and it is to men who can be leaders of thought, who can make followers and disciples as Socrates made them or Mr. Huxley makes them now, that the Societies should turn. Twenty men who could found in India five schools of Native evangelists would be worth all the Missionary body, greatly as we believe the work of that body to be temporarily under-rated at home. Such men must, if the quest takes years, be procurable in the end; but they will not be procured either by relaxing the rules about candidates, or by making Missionaries comfortable, or by follwoing the advice of the *Times*, and treating the Mission-field as a place where clergymen should seek an enlightening apprenticeship.

PUBLIC DECENCY AND THE LAW OF LIBEL.

(Pall Mall Gazette.)

The case of Fairlie *v.* Blenkinsop, decided on Tuesday in the Common pleas, raised two distinct questions of great importance. The first related to the limits within which it is lawful for a newspaper to criticise actors and musicians. The second turned on the truth or falsehood of charges which, though brought against a particular performance at a particular theatre, do, in fact, apply to a whole class of entertainments. That actors should be more sensitive to blame than other men is not wonderful. In no other profession is the workman brought into such close contact with the public for whom he works. The painter, the writer, or the politician may be as severely handled in a newspaper, but he does not see the unfavourable comment reflected in the faces of the audience whom he has nightly to confront. This special sensitiveness, however, is only an incident of the actor's calling. Like exposure to draughts or liability to accidents, it is one of the disadvantages which he ought to reckon upon when deciding whether to go on the stage. In the trial Serjeant Ballantine argued that the law ought to protect actors against a kind of criticism to which other professions that do their work in public are exposed as a matter of course. The article which formed the basis of the action described the plot of "Vert Vert" as "an insane jumble of unintelligible incident," and the music of it as "exasperating jingle," and in another part of the newspaper the same piece was said to introduce the "worst orchestra" and "some of the flattest singing" in London. If these remarks had been held to be libellous, it would have been difficult for future critics to express an opinion that any given music is badly played or badly sung. If criticism of other works of art were to be subjected to similar restrictions, it would be libellous to say that a painter did not know how to put on his colours, that a novelist was incapable of conceiving a natural character, or that such and such a bill before Parliament had been drawn by a man who did not understand the subject. There is hardly a week in which every independent journal does not say something of this kind of some incompetent person or other, and if the article in *Vanity Fair* had been held libellous on this ground, the logical consequence would have been that no artistic, literary, or political comments except of a favourable kind would henceforth have been admitted into any newspaper. The critic's function would be suspended for the simple reason that praise loses its value when it is no longer possible to compare it with blame. The productions of art would cease to be divided into good and bad. They would

all be reckoned as good—with some so superlatively excellent as to be deserving of special mention. The public taste would be *left to form* itself; but if the results of the process happened to be unfavourable, it would have to be kept strictly secret. If it had been held unlawful to say in a newspaper that a play is dull and unintelligible, or that a chorus sings flat, it must soon have been held unlawful to say the same thing in a public street or in a room where the statement could be overheard. Probably Mr. Fairlie would have been disposed, provided his own profession had been protected against censure, to leave all others to take their chance. But managers have not a monopoly of sensitiveness. Other people may dislike criticism quite as keenly, and have been just as ready to claim the protection of a jury. Fortunately, the verdict has for the present left newspapers free to say frankly what they think honestly.

The second question stands on a different footing. To say that a dance is indecent either because of the dress of the performers or because of the gestures and motions which they introduce into it is plainly libellous unless it be true. Mr. Fairlie would have been exceedingly ill-advised in bringing his action if the article complained of had related only to the quality of the piece or to the expertness of the performers. These are matters about which newspaper writers must form their own opinion at the risk, if that opinion is not confirmed by the public, of being set down as incompetent critics. But when the dresses and the dincing in an opera bouffe are called indecent, a manager is well within his rights when he calls upon the critic to justify his censure. Supposing, however, that the censure can be justified, it is of great moment to public morals that no obstacle should be thrown in the way of its publication. That at some London theatres indecent dresses have been worn and in decent dances danced is unfortunately indisputable, and there is no duty more incumbent upon the theatrical critic than to say plainly at what houses and in what plays these offences against public decorum are committed. It is true that there is a special officer charged with the supervision of the stage; but, however anxious the censor may be to do his part, it is almost impossible for him to be equal to all the evasions to which an ingenious manager may resort. The Lord Chamberlain may say that a dancer's petticoats are too short, and they may at once be lengthened by a certain number of inches. But at least as much depends on their material, their arrangement, and their management as upon their length, and while the letter of the censor's directions are punctiliously complied with their spirit may be ostentatiously set at defiance. A critic cannot so well be got rid of. He can say, That woman's dress decently exposed her person last week; and, though it has been made three inches longer, it indecently exposes her person this week. The stuff with which she is professedly covered is more transparent or the attitudes into which she throws herself are more shameless. It may be asked what is the good of saying this. It only serves as an advertisement, and there is nothing that some managers more value than publicity of this kind. At this very moment a statement which no decent woman would endure to here made about her is paraded by the manageress of a certain theatre as an inducement to visitors from the country to go and see her exhibit herself very nearly naked. Would it not be better to keep silence about such performances rather than thus play into the hands of persons of this class? The answer to this is that it is a distinct gain to morality if indecent exhibitions can be ticketed as such. The mischief of the present system is that theatres are lumped together in a common condemnation, and that people who do not want to support open indecency are either betrayed into doing it against their will, or have to keep away from the theatre altogether. If theatrical critics are sufficiently outspoken, a line will by degrees be drawn between houses to which ladies can go without their modesty being outraged and houses which are resorted to by persons whose sole desire is to see a number of more or less pretty faces surmounting more or less naked bodies. Even if the latter class of houses cannot be got rid of, it will be an advance to have them marked off from the rest. If decency cannot be enforced by law it is something to force those who defy decency to come forward in their true characters. The difficulty of drawing the line in criticism upon this subject is often greatly exaggerated. The offence is not committed by artists properly so called. Women who can dance really well are more anxious to obtain applause for their grace or their agility than for the shape of their legs or the beauty of their figure. The women who go as near as they can to stripping themselves in public are usually quite incompetent to do anything more than strip. They can array themselves from head to toot in flesh-coloured tights, wrap a small portion of silk or muslin round their hips, and then stand on the stage, with no pretence of doing more than go through the motions which are required to give the audience successive views of their backs, fronts, and sides. But these are not ballet dancers. They need not have even that minimum of intellect which is needed to perform a pose plastique, or that minimum of agility which would enable them to kick up the legs which they are hired to show, not to use. The more clearly it is understood what theatres pursue this class of business the better for public decency; and the verdict in Fairlie *v.* Blenkinsop will contribute to bring about this result.

THE OFFICIAL PRESSURE IN THE ARNIM CASE.

(Spectator.)

It is more like old times to read Prince Bismarck's frank and, from his point of view, thoroughly statesmanlike speeches on Alsace-Lorraine and its deliberative Assembly. The undisguised and even eager announcement that Alsace-Lorraine was conquered in the interests of Germany, and must be governed in the interests of Germany, let the inhabitants feel as they please, is prudent as well as frank. It is a very needless piece of weakness in such cases to affect that it is in the interest of the conquered provinces that the conqueror thwarts their wishes, and such statements only lead to all sorts of false positions and irritating disappointments, which are rendered impossible by keeping steadily before the minds of the inhabitants that they are not to have their own way at all, except so far as that is consistent with the interests of the Empire to which they are annexed. In all this matter, we have the firm, frank, imperious statesman who made Germany showing the very qualities by which he made Germany,—showing, indeed, the same qualities which are very cleverly reflected, if not personally illustrated, in some of the characteristic phrases attributed to the Prince in Mr. Julius Lang's "Revolution von oben." When, for instance, he makes Count Bismarck suggest to the Bavarian Minister Von der Pfordten before the war of 1866, that the beautiful region of 'Gastein' is a 'Paradise lost' at present to Bavaria, but a 'Paradise lost' which many be 'regained' if Bavaria will only side with Prussia against Austria, and when he makes the great Minister point out to the Bavarian Premier the defencelessness of the present frontier against Austria,—'Your fortresses are old, weather-beaten milestones and railway watchmen's cottages; it is lucky for you the people in Vienna never are prompted by ambitious longings to extend their frontiers, revengeful fancies, or indeed any great political ideas whatsoever, for what would become of Bavaria, if they were?'—we see the very qualities which spoke in the Prime Minister of the first comparatively humble days of his *ré ime*, when he declared that what Germany wanted, to make her great, was not fine talk and sentiment, but expenditure of blood and iron. No Minister has ever faced the blank, physical conditions either of national greatness or of diplomatic success with so unshrinking an eye at Prince Bismarck. The nastier the facts, the more steady his gaze upon them. He seems to handle things rather than words in his speeches on policy. For him, as for Luther, though in so different a region of thought, words appear to have "hands and feet" and motions of their own. He lives in no world of shadows. Indeed, the seeming shadows —the ideas that have no physical force behind them —have for him no real existence, and hence his chief weakness. He has something like a coarse contempt for the shades of feeling which bind other men, and deals with persona' rivals as he deals with political enemies, on the mere law of the mailed hand. Strike hard, and strike with all available weapons, is usually a good policy in war; but if adopted in the rivalries of political life, it indicates a sort of overbearingness, a loss of self-restraint, which is very apt to be the beginning of the end.

It seems to us that the efforts now made to crush Count Arnim by the straining of every conceivable political agency are unmistakable signs of this growing overbearingness of Prince Bismarck's. Unscrupulousness towards a natiotal enemy is not admirable, but it has often been the characteristic of great statesmen, who make of their country a more than second self. But the complete want of magnanimity towards a personal foe,—and Count Arnim is that mainly, for even if he has served his king or country badly, which is not yet shown, he certainly has never imperilled them,—is not characteristic of any greatness, though often, no doubt, of a will once grand in its imperiousness, but now indulging its vindictiveness against a rival, till it even becomes mean. No one can watch the development of the Arnim affair without being convinced that every nerve is strained, at the instance of some one or other, to crush that probably erring and rash, but certainly very unfortunate nobleman. The admirably moderate account by the *Daily Telegraph's* Correspondent at Berlin, in the paper of Tuesday last, of the threats and the pressure put upon him to make him reveal the origin of a statement confessedly attributed by the authorities to the Arnim family, is the last and most signal proof of the official intensity given to the attempt to crush him. What would the English Press say if the Home Office threatened a German Correspondent, (say) of the *National Zeitung*, with fine and imprisonment, because he would not reveal his authority for a telegraphic statement which appeared to attribute to our Government an animus against a disgraced diplomatic agent about to be put on his trial? A *Daily Telegraph* Correspondent had telegraphed home that the Commissioners despatched to Paris to inquire into the conduct of Count Arnim while in Paris, MM. Pascatore and Tessendorf, had attended at the Foreign Office before leaving Berlin for Paris. The Government professed to feel aggrieved at this telegram, but it came out in the discussion that they thought no one could have been the authors of it but the Arnim family, and that what they really cared for was, not to punish the sender of the telegram, but to extract fresh evidence against Count Arnim. And that, no doubt, was the true drift of the whole business. The *Daily Telegraph* Correspondent himself was treated in the most courteous fashion, but apparently pressed and cajoled by every conceivable argument, some persuasive, some alarming, to reveal the source of his information. He very steadily and honourably declined to do so, and was then summoned before the tribunal, and told he would be fined and imprisoned for refusing; and moreover, when, on the advice of a German barrister, he appealed to a higher Court against such an interpretation of the law, the lower Court sent him word that it could not allow its action to be delayed by such an appeal. On this the Correspondent very rightly appealed to Lord Odo Russell for the protection of the British Embassy, whereupon within forty-eight hours the persecuted journalist received notice that the summons was cancelled. But if ever an illegitimate screw was turned on to worm out a little more information against an official in disgrace it was in this case against Count Arnim.

But this is only the last and worst symptom of a system which has long been going on in Berlin for the deliberate poisoning of the German and European mind through the home and foreign Press on the Arnim Case. Of course we do *not* for a moment attribute the initiative in all these petty efforts to Prince Bismarck himself. But it is known that he is straining every nerve to crush Count Arnim, and the whole power of the Press Bureau has consequently been exerted to impress on the mind of Germany and the mind of Europe the heinousness of Count Arnim's guilt. The *very* official-minded Berlin Correspondent of the *Times*—so official, for instance, that he telegraphed to us in what sense the rebuke administered in the speech from the Throne to the accusers of Prussia, was to be understood,—has now become, of course quite unintentionally and involuntarily, but not the less completely, the instrument of putting the English papers on a totally false scent in this matter, and of convincing us that we ought to attribute to Count Arnim, by his friend's implied confession, before the trial comes off, the very crime which it is the object of the prosecution to prove,—a crime, moreover, the gravity or worthlessness of the evidence for which, if the trial should be secret and the judgment adverse, we shall never know. In the *Times'* Correspondent's Berlin letter of the 17th November will be found a most carefully arranged piece of evidence to prove that the "Memorandum" by Count Arnim as to the danger of the Papal policy and the need of resisting it, published in the Vienna *Presse* about eight months ago,—and the publication of which led to all that has followed,—was an official document, which the Count had no right to publish at all, and was, moreover, sent by him to the paper which published it. Every one in Germany who knows anything about the matter,—we do not *include* the *Times'* Correspondent, who obviously was not misleading, but misled, among that number, —knows perfectly that this Memorandum was a private and unofficial paper, which disclosed no political secret. It was written in June, 1870, during the sitting of the Vatican Council, and was sent with a letter of the Count's to a bishop of the Anti-infallibilist party, as representing his (Count Arnim's) views of the grave political results which the violence of the Papal party was likely to produce. It was not a document of the Embassy, and touched no ministerial question at all. Count Arnim probably did not wish to see it published while he was still in the service of the great Chancellor, for many reasons, one very important one being that it would irritate the Chancellor, as it did irritate him, for the world to see how much more anti-Papal Count Arnim at that time was than Prince Bismarck. But as soon as Arnim found himself thrown over by the Prince, and contemplated a political career which one day might have brought him into competition with the Prince, he may very well have been far from reluctant to see this private and completely unofficial evidence of his foresight published. It was *not*, we believe, sent by him to the Vienna *Presse*, but many copies were taken of it during the Council, and so soon as it was known that Count Arnim was dismissed, some one of these copies found its way into print. And with it, and the letter containing it, was also published a private letter to Dr. Döllinger, written six months earlier, at the very opening of the Vatican Council.—*i.e.*, in January, 1870, to something of the same effect. No sooner had these documents appeared last April, than, as our readers will remember, Prince Bismarck replied to them by publishing an official despatch of Count Arnim's written in the year before the Council met,—in May, 1869,—in which Arnim rather pooh-poohed the risk of any political danger to arise from declaring the Pope infallible, spoke lightly of Dr. Döllinger, whom he did not become acquainted with till some months later, and insisted that the only serious peril to be apprehended was from the attaching of any dogmatic authority to the Syllabus. This despatch was published, no doubt, partly to diminish Count Arnim's weight with the public by showing that he had at one time underrated the danger of proclaiming Infallibility, and partly to make bitterness between him and Döllinger, who was at that time spoken lightly of by him. Of course, on this publication, Count Arnim immediately wrote to Dr. Döllinger to say that when he drew up this despatch he was not personally acquainted with him, and it is Dr. Döllinger's reply to this letter which the *Times'* Correspon-

dent, obviously involuntarily and under more astute guidance, so manipulates, as to make the English public infer that his "Memorandum" published in the Vienna *Presse* was both an official document, taken from the archives of the Roman Embassy, and was published at Count Arnim's own invitation. Dr. Dollinger states that he had availed himself of Count Arnim's permission to publish his letter chiefly because it contained "a passage which proved the authenticity of the Memorandum" (*i.e.*, the Memorandum of 17th June, 1870, then only just published), —and because he thought that Memorandum a highly statesman-like document. And the *Times'* Correspondent remarks on this, that the chief interest of the letter is the evidence it affords that "Count Arnim authorised the publication of the Memorandum," as if this publication were one of the crimes attributed to him by the Foreign Office in relation to the missing despatches,—the fact being, as everybody knows, that though the publication of this private Memorandum was very irritating to Prince Bismarck, since it showed that Count Arnim was then much more disposed to fight the Vatican than he,—no one ever pretended that it was an official document, or that the proof of Count Arnim's authorisation for its publication, even if Dr. Döllinger's letter afforded such proof (which it did not), would implicate him in the least as an unfaithful official. The ignorance of the *Times'* Correspondent, and evidence, indeed, that he was the instrument of some more astute inspiration, is comes out also in his statement that Count Arnim's despatch, published by Bismarck's order, depreciating the danger of the dogma of Infallibility, was written "a few months *after* the Memorandum," instead of thirteen months *sooner*, a blunder tending to suggest that even after Count Arnim had come to fear the political results of the Vatican Council, he went back again and made light of those results. But the real virus of the *Times'* letter, a virus certainly not infused by its writer, was the elaborate way in which it led all casual readers to believe that Dr. Döllinger had furnished ample evidence that Arnim had betrayed to the Press an official document,—the very crime of which he is accused at Berlin, though Dr. Döllinger's letter is precisely as irrelevant to the charge, as if it had been written half a century ago.

The truth is becoming more and more evident that the sub-officials of the German Bureaucracy at Berlin are straining every nerve to obtain evidence against Count Arnim, and what is even worse, to convince the whole press of Europe that that evidence is already not merely in existence, but public, and virtually confirmed by Count Arnim's own friends. This seems to us, we confess, a sign of no insignificant importance that the great statesman who has made Germany is losing the equanimity as well as the wisdom by which he made it. The vindictiveness of the official feud with Count Arnim could hardly be what it is, without very stringent orders from headquarters. For ourselves, we care no more for Count Arnim than we care for any man in misfortune who is at once sick unto death and overpowered by a host of foes. But we do regret to see a really great statesman condescending to such a persecution; and we regret still more to see the ignorance of the English Press made the instrument of spreading against the accused man the false and most damaging impression that Dr. Döllinger has virtually proved his guilt. The Correspondent of the *Daily Telegraph* deserves great honour, not only for the firmness, but for the clearness of head which foiled a similar effort to turn him to the same account.

MR. GLADSTONE AND HIS CRITICS.

(English Independent.)

As the combat thickens, the importance of the service which Mr. Gladstone has rendered to the cause of freedom, not in this nation only, but throughout Europe, becomes more apparent. It is well enough to say—as some of his detractors among the ranks of Protestantism do say—that his pamphlet contains nothing that everybody did not understand before; that the opposition of Ultramontanism to modern civilisation was a fact so patent that there was no need either to call public attention or to insist upon the perils growing out of this antagonism; and that the Vatican Decrees were already regarded as a mere piece of priestly extravagance by all except the fanatics who submitted to them, and were not worth the serious examination of a great statesman. But every fresh contribution of importance to the controversy—and their number is already legion—only serves more fully to expose the injustice or weakness of a criticism which, under the prompting of personal or party hatred, would pooh-pooh the value of the grand manifesto on behalf of the rights of conscience, whose real value it is unable to understand. It is long since a more severe blow was struck at the insolent pretension of the Papacy, and the bitterness with which it is resented only shows us the keenness with which it is felt. Of course, the various exponents of the Ultramontane theory will, one after another, come forth to do battle on its behalf; but as Monsignor Capel added nothing to what Archbishop Manning had already asserted, so Dr. Ullathorne can only repeat their arguments. Monsignor Capel and Mr. Oakeley help to swell the chorus of asseverations. If it had been possible to deny the authenticity of the Decrees themselves, or to unsay any of the frank and outspoken expositions of their meaning which Dr. Manning himself has given to the world, or even to suggest some plausible interpretation which might modify some of their more repulsive features, the letters of these ecclesiastics would have been of some value. But the attempts to reconcile the irreconcilable; to show how it is possible to give the Pope absolute rule over all "Catholics" in matters within his jurisdiction, and reserving to him also to define the limits of that jurisdiction, and so far to confine that of the State, and yet to maintain loyalty to the Queen, have only confirmed all impartial men in the opinion that Mr. Gladstone is right. It is amazing to see how much mere *ad captandum* talk has been introduced into the discussion, and how constantly it has been sought to raise perfectly irrelevant issues. We are reminded, for example, that Roman Catholics have always shown themselves loyal to our Sovereign, that they have fought in our armies, served in our public bodies, and in various ways discharged the duties of good citizens. Their priests in Ireland, with the sanction and co-operation of the Pope himself, have set themselves against the Fenians, and their conspiracies. We admit it all; but we deny that this disproves the fact of Mr. Gladstone's allegations. It was never suggested that the present Pope had any deliberate purpose of stirring up disloyalty in these islands, or even that if he entered on such an unpromising project his adherents here would obey his commands. We as little suspected the Curia of such blindness to the interests of the Romish Church as to give it any credit for not being seduced into such insanity. What was said is, that if the interests of the Papal See should so cross those of the British Crown, the man who submits to the Vatican Decrees and is resolved to carry them into practice, must obey the Pope rather than the Queen. Possibly there may be very few even among the devoted members of the Romish Church who would thus sacrifice their loyalty; but even that does not touch the point, which simply is as to the force of the Decrees. If in relation to this, Mr. Gladstone was not prepared, as indeed, he might be, to rest his case upon the letters of the ecclesiastics, he may well be satisfied, not only that he is right, but that his work has been well done, when he reads the statements which his "Expostulation" has elicited from independent Romanists, and which have been increased since our last issue. Whether there is room in the Papal Church for those who have publicly repudiated the edicts of the Œcumenical Council remains to be seen; but if we are to judge from the tirades of abuse which have been directed against them, we may conclude that there is no unwillingness to cut them off from the communion of the faithful, even though it may be thought inexpendient to proceed to such extremities. There is, in fact, a general agreement as to the true significance of the Ultramontane pretensions, if we except a few such men as Sir George Bowyer, who is evidently unwilling to admit what is nevertheless sufficiently plain to all who are willing to see. It is curious enough to find a man of his well-known loyalty to Rome objecting to Monsignor Capel's thoroughgoing assertion, that the "ecclesiastical power is superior to the civil, and "defines and limits both the one and the other," but the Baronet is self-deceived, and the Monsignor is unquestionably right in his interpretation of the Papal theory; more indiscreet, but not an iota more pronounced than Archbishop Manning.

To say that no practical result is likely to come out of the controversy is to take a very superficial view indeed. We shall not, of course, repeal the Catholic Emancipation Act, or place any new pains and penalties on our fellow-subjects, because we hold that they cannot be logically consistent and remain loyal to the State, or even issue any Parliamentary manifesto against Ultramontanism, or bring out in this country a revised edition of the Falck laws of Germany. But in the absence of such measures, which, though they might be agreeable to the tastes of Orange Protestantism, would be calculated only to serve the interests of the religion against which they were directed, the "Expostulation" will not fail of its object if it awakens statesmen, only too ready to prophesy smooth things in relation to evils with which it is not absolutely necessary for them to deal, to a sense of the menacing character of the power which is so subtly spreading its net everywhere around us, and entangling so many in its meshes. If Romanism is able to extend its dominions; if among our English aristocracy and gentry there are any prepared to sacrifice their independence and manhood, and submit intellect, will, and conscience to the rule of the priest in that unqualified manner of which we have, in the very nick of time, had an example in the case of that young undergraduate who has given up his hope of collegiate distinction, and withdrawn from that University to which the spiritual despot to whose will he bows owes all his own culture, because the priest so wills it, be it so. We cannot interfere with freedom of conscience, even though some use that freedom to bind their souls with fetters of iron. But it is well that those who are tempted to seek rest for their souls in the assurances of Rome should clearly see what they are doing before they take the decisive step, and it is well also that the country should see what they have done when they have actually taken it. As yet they are not required to renounce their allegiance to the Queen, though, as Lord Camoys well suggested, there is no saying how soon Pio Nono may demand even this, for Protestants certainly can place no limits to the possible extravagances of an old dotard, whose flatterers have taught him to regard himself as a Vice-God; and there are evidently intelligent Catholics who have much the same idea. But even if this madness be avoided, it is impossible not to anticipate that a collision may occur between different European powers, and in which this country may be involved, and in which the Pope may favour her enemies, because of an offer of the restoration of his temporal power. In that case the faithful son of the Church could not be a loyal subject of the Queen. But apart from any such contingency, which is much more than a possibility, it is of the last importance that the clouds of sophistry in which men like Archbishop Manning envelop plain facts should be cleared away, and that it should be seen that he who bends his neck to the yoke of Rome ceases to be a free man; that the priest becomes his guide and ruler in all the practical business of life, for all is included in the region of faith and morals; that he claims to dictate as to his intellectual training, his social intercourse, his political opinions; and that his one duty is submission. If there are those who prefer that condition to one of freedom, we must suffer them to gratify their taste, except, indeed, when their obedience to the priest inspires attempts to interfere with the liberty of others; but a full exposition of the real character of this bondage may deter some who have been fascinated by the serenity and peace which it promises without having duly weighed the price at which they are to be purchased from selling themselves into this spiritual slavery.

It will be a further gain if Protestants, in their dealings with Roman Catholics, are more alive to the spirit by which they are actuated. We cannot do them injustice in taking Mr. Oakeley as a truthful expositor of their views, and it is only necessary to read his letter, in order to learn the need of extreme caution and wariness in watching their political movements. What Englishmen most prize, the Romish Church condemns; what Englishmen bless, that Church curses with bitterest anathemas. There is infinite *naïveté* in Mr. Oakeley's statements. "As to liberty of conscience, we are thankful even to avail ourselves of it" (of course, and to demand a liberty which means the oppression of other people), "although none the less convinced that it is abstractedly opposed to the Catholic theory. As relates again to education, on which subject, more perhaps than any, we are out of time with the maxims of the hour, we act in concert with the Government, and even send our candidates to try for seats on the School Board." Wonderful condescension! They actually consent to use the hands or manipulate the influence of the State, for the purpose of "diffusing principles fatal to the peace and unity of the State." But what is to be said of the Government which put such weapons in their hands? They have got a measure admirably fitted to their work in the Education Act, but it is not surprising when we remember who was the President of the Council, and how ready even good Protestants were to invoke the aid of this priestly power against their own friends, whose one fault was that they believed in the self-propagating force of Christian truth, and the capacity of the Churches to do their own work.

CANADA AND THE RECIPROCITY TREATY.

(Economist.)

We hope the difficulties experienced in negotiating a Commercial Treaty between Canada and the United States will draw some attention to the disadvantageous side of the connection between Canada and this country, in which some of these difficulties originate. The interest of Canada clearly is to have as close a commercial intercourse as possible with its sole neighbour. The frontiers of the two countries are conterminous for thousands of miles, and the highways of communication between them are naturally so close that a large part of the United States finds its best outlet to the sea through Canada, and through Canada also lie several of the best routes of communication between New England and the western parts of the United States. Not only is the closest connection desirable between two such countries, but it is a barbarism that they have not complete Free-trade with each other. The hindrance to trade from the existence of custom-houses along such frontiers is incessant, and the evil is precisely of the same sort as the existence of custom-houses *within* a particular territory, and interrupting the trade between province and province, which have been universally abandoned in all civilised countries. Probably if the United States tariff were not so bad, the desire of Canada to have Free-trade with its great neighbour would be strongly shown. But Canada it appears cannot even make a partial arrangement to increase the extent of its intercourse with the United States, without raising the question of its connection with the British Empire. At present there is a treaty before the United States Senate for ratification, as to which the complaint is made by British manufacturers, that it will create differential duties in favour of the admission of United States manufactures into Canada. Unless Canada by voluntary legislation corrects the difference, the ratification of the Treaty will admit United States goods into Canada at a lower duty than the same goods from England. A deputation which waited upon Lord Derby and Lord Carnarvon last week, was assured that Canada contemplated making no such difference, and that when the Treaty was agreed to, the Canadian

tariff generally would be altered so as to give a preference to no particular country. But the mere fact of complaint shows that the Canadians are fettered in negotiation. If they thought it to their advantage to purchase closer intercourse with the United States by admitting goods from it at lower rates than they are prepared to admit them from all the world, they would find the opinion of the mother country opposed to their wish. It is quite manifest that if we are to take all the risk of the Canadian connection, we may fairly ask Canada to put us on the most favoured nation footing in regard to our trade. Logically we might even ask more as the fair price of our protection. But by so doing we impose a burden on Canada which in turn raises the question whether the disadvantage and loss to it are not greater than any possible gain from its connection with us. Canada itself has been exposed by that connection to many dangers from which it would otherwise be free, and could urge the argument that this additional risk more than balances the protection at any time afforded. Why then should it be hindered in its natural development and freedom of intercourse with a near neighbour for the sake of maintaining a connection of doubtful value at best with a distant country?

Such are the questions naturally raised by the present state of the reciprocity negotiations. The tendency of them clearly is to sever the connection beween England and Canada. It is impossible that any people can go on long as the Canadians have done, desirous of close commercial intercourse with their next neighbour, but forced to consider in their arrangements the requirements of a third country which has a peculiar political claim to be placed on the most favoured footing. Sooner or later the existence of the burden must be felt, and will create the desire to break through it. The position of England with reference to Canada must also tend to make the United States more exacting on some points, and so hamper Canada in obtaining a satisfactory arrangement. The United States has to consider its own tariff, and it must always have in view that if it stipulates for low duties on its own goods going into Canada, and Canada in deference to its connection with England admits English goods at the same duties, the result may be a new encouragement to smuggling along the frontier between it and Canada. English goods may thus find their way indirectly into the United States through the very clauses of the Reciprocity Treaty which the United States negotiators might otherwise think most to their advantage. The whole subject is complicated by the high United States tariff, and by the obsolete Protectionist views which prevail both there and in Canada, but in some way or other, it is clear, the burden of the English connection is felt in Canada at every point.

We cannot say that we regret the fact of these topics being forced into notice. It will be a good thing in the long run if the inconvenience we describe continues to be felt, and stimulates the Canadians to desire independence or actual incorporation with the United States. The present arrangement is so unnatural and prejudicial to both Canada and England that the gradual demonstration of its evils is only a cause for satisfaction. Were Canada independent we should not noly be free of a great political risk, just as Canada itself would, but the absence of any special relationship between this country and Canada would facilitate closer intercourse of every kind between it and the United States, which is a far more important matter to us than colser intercourse with Canada. It is important therefore in every way to give full weight to the lesson read to us by the difficulty which has just occurred.

LITERARY GOSSIP.

(Athenæum.)

In our number for December 26 we shall publish a series of articles on the Literature of Continental Countries during 1874. Among them will be Belgium, Bohemia, Denmark, France, Germany, Greece, Holland. Hungary, Italy, Norway, Portugal, Russia, and Spain.

Socialism, an essay left by Mr. Mill in an unfinished state, will be published next year.

Lieut. Payer will issue a volume describing the recent Arctic Expeditions, in each of which he has taken part. It will be published by Messrs. Macmillan.

Prof. Willis's 'Architectural History of the University of Cambridge' will soon be in the printer's hands. The editing of the book has been entrusted to Mr. John Willis Clarke, a nephew of the author's who will be materially assisted by some of the most competent archæologists at Cambridge. The work represents the labour of twenty years.

Early in next year will be published a work by Mr. G. H. Chubb, upon the subject of security of property from fire and thieves. Much practical information has, we learn, been communicated to the author by Capt. Shaw, of the Fire Brigade. The volume will be dedicated to Lord Henry Lennox.

The Rev. David Hogg, of Kirkmahoe, is preparing for publication a 'Life of Allan Cunningham.

A Complete edition, to form, we believe, fifteen volumes, of the works of Mr. B. Brierley, is in preparation. Mr. Brierley is one of the most prolific of the prose and song writers of Lancashire, and many of his works, which are popular in the County Palatine, have long been out of print.

Mr. Thomas Parkinson, one of the masters of the Grammar School at Bolton, is preparing for the press 'The Life and Martyrdom of George Marsh.' It is a reprint of an old book, dated 1785, with additions and notes by Mr. Parkinson, and will contain photograph-illustrations printed by the Woodbury process. Marsh was adjudged to the stake, for, as it was termed, heretical opinions, and was burnt at Chester, on April 24th, 1555.

The Ayuntamiento of Granada has, it is said, applied to the Madrid Government for permission to remove the body of Gonzalo Fernandez de Córdova, the Great Captain, to the monastery of San Jeronimo, in that city.

A New American Cyclopædia is, we learn, in the course of preparation. It was projected by the late Mr. Horace Greeley, and begun by him. Since his death, the editorship of the work has passed into the hands of President Barnard, of Columbia College, New York, and of Prof. A. Guyot. It is intended to be in three stout volumes, the first of which will be out next month, and it numbers amongst its contributors many scholars of eminence in the United States. A novel feature in the work will be found to be the numerous articles furnished by literary and scientific Englishmen.

M. Odysse Barot, author of the French work on English Literature lately reviewed by us, is engaged on a volume on the social state of England.

Mrs. Lynn Linton will contribute a complete story of considerable length to the forthcoming number of the *New Quarterly Magazine*, which will also contain a supplementary and final chapter of Mr. John Latouche's 'Travels in Portugal.'

M. de Villemessant, of the *Figaro*, has made a display of an amount of enterprise seldom, if ever before, seen in the Paris press, though in the case of American or English papers it would not be worth the naming:—he has sent one of his best leader-writers to India to attend the trial of Nana Sahib. What is more, he has not—so far as we have seen—named it in his paper; a singular exception to the usual puffery of the *Figaro*.

M. G. Freytag has in the press the third part of 'Die Ahnen.' Its title is 'Die Brüder vom deutschen Hause.'

The Right Hon. W. E. Baxter, M. P., has revised for the press the lecture he recently delivered to his constituents on "Free Italy." It will be published by Messrs. Cassell, Petter & Galpin.

The English colony in Smyrna is now in revolt, as the Consul, without regard to his subjects, has announced for sale the English cemetery in the city. This classic ground contains the tombs of many well-known men, consuls, chaplains, travellers, numismatists, who have contributed by their works to our knowledge of Asia Minor. The subjects of His Mightiness, considering the desecration an act of vandalism, "interviewed" him, and put up one of their *literati*, Mr. Turrell, of the Bournabat College, to deliver an oration, from which, says the *Impartial*, the Consul dissented. They have, therefore, small hope, except in the intervention of the Foreign Office, or, of what is more active, the press and home opinion.

PUNCH.

A CHANGE FOR THE BETTER.

Greengrocer. "Want a Penn'orth o' coals, do yer? You won't be able to 'ave a Penn'orth much longer. They 're a going up. Coals is Coals now, I can tell yer!"

Boy. "Ah, well, Mother 'll be glad o' that, 'cause she says the last Coals she had o' you was all Slates! !"

HEINOUS ATROCITY.

FROM a statement in the *Times* it appears that poachers and pot-hunters are actually in the habit of using salmon roe for bait, insomuch as to have created so great a demand for it that it fetches from five to six shillings a pound—truly "a most demoralising premium for cutting off the river supplies at the fountain head, and killing the Salmon heavy with spawn." Atrocious! "Yet the preponderance of Border opinion is in favour of repealing the clause" in the Fisheries Act relative to salmon-spawn, "which forbids its employment." This is one phase of the demoralisation prevalent in the North, of which that manifest in the Lancashire kicking and wife-beating is another. Something must be done to check it; and at any rate there can be no doubt as to the preventive that ought to be resorted to for putting a stop to the abuse and destruction of salmon roe. It is obviously the Lash.

ALL ONE.

THE following correction appeared the other day in the *Times*:—

"The Vatican Decrees.—In Canon Oakley's letter in the *Times* of Saturday, for 'according to the recent theology of the Church,' read 'received theology of the Church.'"

Received and recent, if we are to accept the admissions of Canon Oakley and the declarations of Dr. Manning, come to the same thing.

SEASONABLE REMEDY.

THE surest cure for a Wife in London, who is in a fever to go to Brighton, is to order her to pack up.

POLITESSE DE BISMARCK.

SCENE—*The German Premier's Bureau. Enter a Deputation from the Inhabitants of Alsace and Lorraine.*

Deputation. Your Petitioners humbly pray your Royal Highness's Excellency that they may be allowed the use of umbrellas during wet weather.

Prince Bismarck. Umbrellas! *Himmel! Ach Gott!* Make the people weak, luxurious, effeminate! No. Not another word. Brrr—— [*Rushes at them. Exeunt Deputies precipitately.*

Enter by another door a Deputation from the Old Rhenish Noblesse.

Second Deputation. Your Highness, we, your Petitioners, pray, on behalf chiefly of the poor peasantry, our tenants, that they may be allowed to bring up their children——

Prince Bismarck (furiously). No. I know what you're going to say. I won't have it. They shall go to *my* schools. Get out!

Second Deputation. But your Highness will remember——

Prince Bismarck. No, I won't. You're all against me. I know. Hang your old Rhenish Nobility. I can make better noblemen than you any day. Boo! [*Exeunt Deputies silently.*

Enter a young Gentleman in Deep Mourning, and very Pale.

Young Gentleman. Your Highness, my poor father has just been imprisoned by your Highness's order. His offence has not been mentioned. Will you allow him, during his imprisonment——

Prince Bismarck (angrily.) Nothing. Go!

Youny Gentleman (imploringly.) But——

Prince Bismarck. Go!!! (*Stamps his foot.*) Go! *will* you?

[*Young Man staggers from his presence.*

Mild Secretary (who has been sitting quietly at side-table.) Does not your Highness think——

Prince Bismarck (savagely). Not when *you're* talking. Here, pull off my boots. Give me my slippers. My pipe. *Potztausend! Himmel!*

[*Sits and thinks about Schleswig-Holstein, the Sea-Board, Russia, Ultramontanism, &c., and finally goes off to sleep with his left eye, keeping his right fixed on the Secretary. Secretary trembles. Scene closes.*

IGNORANCE *V.* IRONY.

MR. PUNCH recently printed some lines on one Wallace, who at Kilmarnock dashed out his wretched baby's brains, and was let off with twenty years' penal servitude. These lines contained an allusion to the Wallace wight,

"Who chased from Falkirk's field the English foe."

A well-informed and sapient reader sends *Mr. Punch* the lines, annotated in the margin, "What wretched ignorace! The English beat the Scotch at Falkirk."

So did the English beat the French at Waterloo. But some Frenchmen take the liberty to doubt the fact, and still describe the Prussians as coming up to save the English from defeat and destruction. Let us assure our kind critic that if there be such a thing as ignorance, there is also such a thing as irony, as when we apply the epithet, "well-informed" to an ass, or "sapient" to a numskull.

SIR WILFRID AT HOME.

ON Tuesday last week, Sir Wilfrid Lawson gave an entertainment to the Whitehaven branch of the West Cumberland Liberal Association by the delivery of an address in support of a resolution, with a digression, as usual, on the subject of his fixed idea. According to report:—

"He said it had been stated that the present Government was a Government of three I's. They had passed a measure lowering the standard of education of poor children: they had passed a Factory Bill professing to benefit female hands, but really to oblige certain men who thought they would get increased wages; and they had passed a measure for increasing the hours of sale in public-houses. They were, therefore, a Government devoted to ignorance, idleness, and intemperance."

These, though spoken, of course, in fun, are the words of truth and soberness. What a contrast between the intemperance which Mr. Disraeli and his colleagues are devoted to and the temperance of Sir Wilfrid Lawson!

LANCASHIRE LADS.

First Lad. Oi say, Tom, what's come o' Bill? Heard he was dead.

Second Lad. Na, na, lad; Bill's alive and kickin'.

BROTHERS IN ART.

Playful R. A. (to his Model, who has been expatiating on the dignity of the Working Man). "I am pleased to perceive, Jakes, that you are content with your humble condition, and do not envy the lot of the Superior Classes!"

Jakes. "Henvy 'em! Why, bless yer, them as belongs to them Classes as you allludes to ain't 'alf so much to be henvied as them as belongs to the Class as *Me* and You belongs to."

NATIVE RACES.—The Oyster Fisheries.

PARIS TRANQUIL.

THE following telegram arrived the other day from Paris :—

"The School of Medicine was opened yesterday.

"No disturbances occurred."

What a wonder! Order must indeed reign in Paris if any event of even the slightest importance has passed off quietly.

IRISH HUNTING TIPPLE.

Englishman (having partaken of his Friend's Flask, feels as if he had swallowed melted lead.) "Terribly strong! Pure Whiskey, is it not?" *Irishman.* "Faith! not at all! It's greatly diluted with Gin!"

INJUSTICE TO IRELAND.

SIR,

I have jist come into contact (accidentally) wid a big lump av silver called a Crown-piece of Victoria; and what do I find on the face av it? Why, av coorse, an insult and an injustice to mee unhappy counthry! The glorious harp of Ould Ireland is stuck away down in the lift-hand corner—like a dirty gossoon that has misbehaved himself, wid the Lion of Scotland put over its head. As the discindant of a race of Kings, I'd scorn to be put below the best Scotchman that ever walked, and I protist agin' the insult. When we git Home Rule we'll put Saxon and Scot both in their proper places, for it 's sorra a cross of either we 'll show on our Crown-pieces—at all, at all.

I am, *Mr. Punch*, yours as you use him,

AN INJURED IRISHMAN.

TO A CORRESPONDENT.

YOU are quite *right* in your supposition that executions in ancient Babylon took place in its famous "Hanging" Gardens.

VENUS AND VESTMENTS.

A large party of Ritualists are going out to see the Transit of Venus. They will on this occasion be vested in Teles-copes.

PRECAUTIONS.

Farmer Lavender (starting for London with Mrs. L. for the Cattle-Show Week). "My Dear" *(solemnly)*, "I hope you haven't forgotten the Insecticide!!"

MORE FREE THAN EASY.—The Proposed Library at Bethnal Green.

HANDSOME ACKNOWLEDGMENT.

WHAT shall we say of the four magnificent volumes of "National homage to England" presented the other day at Windsor, on behalf of France, by M. d'Agiout and the *Comte* Serrurier, to the Queen? That we are delighted to find ourselves, for once, in the French good books.

A BAKER'S DOZEN.—The thirteen rolls made by the *Devastation* last week at Portsmouth.—*Vide "Times" of 1st inst.*

The European Peace Assurance Society.

President—PRINCE BISMARCK.

Secretary—RIGHT HON. B. DISRAELI.

Offices of the Society—The Treasury, Whitehall.

N. B.—Arbitrations conducted on the most reasonable terms, from Ten to Four daily. No extra charge for telegraphing to Berlin. Ring the right-hand bell. No Irish need apply.

BRITISH INDIA STEAM NAVIGATION COMPANY,

"LIMITED."

The following are the movements of the Company's steamers during January 1875.

From Calcutta.

For *Chittagong*, *Akyab* and *Kyouk Phyoo*, 11th and 25th January.

„ *Akyab* and *Rangoon*, 18th January.

„ *Rangoon* and *Moulmein*, 18th January.

„ *Singapore*, calling at *Rangoon*, *Moulmein*, *Penang* and *Malacca*, 11th and 25th January.

„ *Port Blair* and *Camorta*, 27th January.

„ *Bombay*, calling at *False Point*, *Gopalpore*, *Bimlipatam*, *Vizagapatam*, *Coconada*, *Madras*, *Pondicherry*, *Negapatam*, *Galle*, *Colombo*, *Tuticorin*, *Alleppey*, *Cochin*, *Beypore*, *Calicut*, *Tellicherry*, *Cannanore*, *Mangalore* and *Carwar*, 7th, 14th, 21st and 28th January, receiving cargo for *Kurrachee*, *Guador*, *Muscat*, *Bunder Abbas*, *Linga*, *Bushire*, *Fao*, *Bussorah* and *Baghdad*, to be transshipped at *Bombay* to steamer leaving for the *Persian Gulf* immediately after arrival of steamer from Calcutta. *Baghdad* cargo transferred at *Bussorah* to steamers of the Euphrates and Tigris Steam Navigation Company.

From Madras.

For *Rangoon*, calling at *Masulipatam*, *Coconada*, *Vizagapatam* and *Bimlipatam*, returning to *Madras viâ* same ports, 20th January.

From Bombay.

„ *Kurrachee* only, 11th, 18th and 25th January.

„ *Kurrachee*, *Guador*, *Muscat*, *Bunder Abbas*, *Linga*, *Bushire*, *Fao* and *Bussorah*, receiving cargo for *Baghdad*; 8th, 15th, 22nd and 29th January.

„ *Calcutta*, calling at same ports as the steamers from Calcutta, 9th, 16th, 23rd and 30th January.

From Aden.

For *Zanzibar*, 29th January.

From Zanzibar.

For *Aden*, 14th January.

„ *Mayotte* and *Nossi Bé*, 9th January, arriving at *Zanzibar* on the return trip 24 hours before the departure of the steamer for *Aden*.

From London.

GRATEFUL—COMFORTING.

EPPS'S COCOA.

BREAKFAST.

"By a thorough knowledge of the natural laws which govern the operation of digestion and nutrition, and by a careful application of the fine properties of well-selected cocoa, Mr. Epps has provided our breakfast tables with a delicately flavoured beverage which may save us many heavy doctor's bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—*Civil Service Gazette.*

MANUFACTURE OF COCOA.—"We will now give an account of the process adopted by Messrs. James Epps and Co., manufacturers of dietetic articles, at their works in the Euston-road, London."—See article in *Cassell's Household Guide.*

Made simply with boiling water or milk.

Sold only in ½-lb. and 1-lb. tins, labelled thus:—

JAMES EPPS & CO.,

HOMŒOPATHIC CHEMISTS,

48, THREADNEEDLE STREET, AND 170, PICCADILLY.

Works—EUSTON ROAD and CAMDEN TOWN.

Makers of Epps's Milky Cocoa (Cocoa & Condensed Milk).

BORRADAILE, SCHILLER & CO.,

(F) 3, Fairlie Place, Calcutta.

THE DECAY OF THE TEETH

Arises from neglect, and the use of tooth powders, pastes and washes, which containing mineral and other deleterious acids utterly ruin the enamel.

ROWLANDS' ODONTO

Is entirely free from all injurious elements, whitens and preserves the teeth, prevents and arrests their decay, strengthens the gums, and gives a pleasing fragrance to the breath.

ROWLANDS' MACASSAR OIL

Prevents the hair falling off or turning grey, strengthens weak hair, causes it to grow on bald patches, and makes it beautifully soft, pliable and glossy.

ROWLANDS' KALYDOR

Removes all freckles, spots, and cutaneous eruptions, and realizes a healthy purity of complexion.

ROWLANDS' ESSENCE OF TYRE

Produces immediately a perfect change in red or grey hair, whiskers and eyebrows, to a glossy and permanent brown or black, which colour neither washing or perspiration will remove. **GREAT CARE** must be taken to ask for Rowlands' Articles, of 20, Hatton Garden, London, and to see that their signature, A. ROWLAND & SONS, is in RED ink on the wrapper of each, no others being genuine. Sold by all Chemists, Perfumers, Druggists, and at all Bazaars throughout India.

LEA & PERRINS'

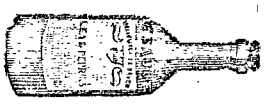
CELEBRATED

WORCESTERSHIRE SAUCE,

DECLARED BY CONNOISSEURS

TO BE

THE ONLY GOOD SAUCE.



CAUTION AGAINST FRAUD.

The success of this most delicious and unrivalled Condiment having caused certain dealers to apply the name of "Worcestershire Sauce" to their own inferior compounds, the Public is hereby informed that the only way to secure the genuine is to

ASK FOR LEA & PERRINS' SAUCE,

and to see that their names are upon the *wrapper, labels, stopper,* and *bottle.*

Some of the foreign markets having been supplied with a spurious Worcestershire Sauce, upon the wrapper and labels of which the names of Lea and Perrins have been forged, L. and P. give notice that they have furnished their correspondents with power of attorney to take instant proceedings against *Manufacturers* and *Vendors* of such, or any other imitations by which their right may be infringed.

Ask for LEA & PERRINS' Sauce, and see Name on Wrapper, Label, Bottle, and Stopper.

Wholesale and for Export by the Proprietors, Worcester: Crosse and Blackwell, London, &c., &c.; and by Grocers and Oilmen universally.

To be obtained of

BISSONAUTH LAW & CO.,

(999) *Calcutta.*

ROYAL INSURANCE COMPANY.

The Annual Meeting of the Company was held on August 6th.

THE FOLLOWING IS FROM THE REPORT ON THE

LIFE DEPARTMENT.

During the past year 1,406 new Proposals were made to the Company. Of these 1,099 were accepted and completed for 514,638*l.*, the new Premiums thereon being 17,271*l.* 2*s.* 9*d.* The total income from Premiums, after deducting re-assurances, amounted to 237,415*l.* 10*s.* 8*d.*, and the interest received from investments (exclusive of that on the annuity funds) was 64,990*l.* 9*s.* 10*d.* The claims during the year were:—

By Death: Original sums assured	£117,228	17	6
Bonus additions thereon	7,423	11	2
By Matured Policies (including Children's Endowments): Original sums assured	1,750	0	0
Bonus additions thereon	134	15	0
	£126,537	3	8

The result of the operations for the year is that, after payment of all claims, annuities, and expenses of every description, 158,547*l.* 0*s.* 4*d.* has been added of the Life Funds, making the total accumulations of the Life Branch of the Company,

£1,761,523-11-11.

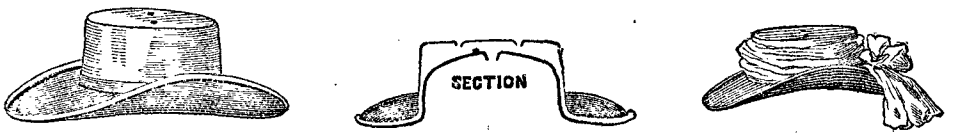
THE "TERAI" HAT,

FOR LADIES AND GENTLEMEN.

A SOFT DOUBLE HAT FOR WARM CLIMATES.

Can be folded and closely packed without damage. Especially adapted for travelling purposes.



ANDRE AND CO., HATTERS,

127, NEW BOND STREET, LONDON,

Direct the attention of Ladies and Gentlemen to their New "TERAI" Hat, now much worn in all the northern provinces of India, and highly recommended. FORWARDED RETAIL POST FREE TO ANY PART OF INDIA, PRICE 23s. 6d. THE DOUBLE HAT.

SIR,—I am happy to be able to speak in the highest terms of your Terai Hat for EASE, COMFORT, CONVENIENCE OF PACKING AND DURABILITY. Although the Hat is hardly a sufficient protection for the head in the extreme heat of the Plains of India YET FOR ALL WORK IN THE HILLS AT ALL SEASONS, FOR JOURNEYS, AND FOR GENERAL WEAR IN THE COOLER WEATHER IN THE PLAINS, it is admirably adapted. The late Earl of Mayo constantly wore your Terai Hat, which was recommended to him by Colonel Ramsay. I remain, yours faithfully,

O. T. BURNE, late Secretary to his Excellency the late Earl Mayo.—16*th July*, 1873.

Gentlemen,—I have found your Terai Hat a first-rate Hat. I never wear anything else when in the district. It is a wonderful protection from the sun, and is, in my opinion, not ONLY FITTED FOR THE COOL SLOPES OF THE HIMALAYAS, BUT FOR THE SEVERE HEAT OF THE PLAINS OF INDIA. I wear it in May, at Poona, the hottest season of the year, and find it preferable to the ordinary felt Helmet. The Lady's HAT IS PRONOUNCED TO BE PERFECTION AS A RIDING HAT.

I am, Gentlemen, yours faithfully,

AYRTON PULLAN, Capt. Dept.-Supt. G. T. Survey of India.
4*th June*, 1874.

ANDRE'S NEW PATENT PITH AND FELT SOLAR HATS,

(*Known as Beake's Patent,*) WELL VENTILATED, SUN AND WATERPROOF.

These new Hats are remarkable for their superiority in respect of quality, finish, lightness and comfort, are made in various shapes for Ladies and Gentlemen, and are likely to supersede the plain felt Air Chamber Hat hitherto worn.

TRADE ORDERS PROMPTLY ATTENDED TO.

READING SCHOOL.

HEAD MASTER:

THE REV. T. H. STOKOE, D. D.,

LINCOLN COLLEGE: OXFORD.

ASSISTED by eleven Masters, Graduates of Oxford, Cambridge, or Dublin.

The school has nine exhibitions of between £20 and £30 a year, tenable at any English University, and also three Exhibitions of £10, £20, and £30 a year, tenable in the school. It has also the reversion of two Scholarships of £100, at Oxford.

The Upper School is divided into classical and modern sides. The classical side prepares pupils for the Universities, and for the Indian Service; the modern side for the Army, Navy, and Mercantile Life. Both sides work together in the ordinary Divinity, English, Latin, French, Mathematic, and Natural Science lessons.

JUNIOR SCHOOL.

HEAD MASTER:

THE REV. L. J. PROCTER, M. A.,

WITH ASSISTANTS.

THE Junior School has separate class rooms, Boarding House, Play grounds, &c. The same elementary books and methods of instruction are used as in the Senior School. Parents of boys in the Junior School obtain from the supervision of Dr. Stokoe the guarantee of efficient instruction; and from the constant attention of Mrs. Procter the assurance that due care is paid to the comfort and gentlemanly habits of their children. Every boarder has a warm bath at least twice a week, unless exempted by the medical attendant.

One Exhibition of £20 for boarders, and one of £10 for day-scholars, and day-boarders have been given by a friend to the school and are awarded in July. In accordance with the wish of the Donor, three-fourths of the marks are given for school work including French, Drawing, and Drilling; and one-fourth for industry and good conduct.

TERMS.—School fee £10 per annum (paid over to the Funds of the whole school.) £30, for day-boarders; and £55 for Boarders, including the school fee.

VACATIONS:—Spring, three weeks; Summer, seven weeks, commencing the last week of July; Christmas, four weeks. Boarders may remain during the vacations on payment of vacation Fees. If a sufficient number of parents desire it, their children will be taken in the summer vacation to the Continent to improve them in French or German conversation.

REFERENCE concerning the Junior School may be made by parents in India to H. WOODROW, Esq., Inspector of Schools, Calcutta, now residing at Queen Street, Norwich.

PROSPECTUSES may be obtained from Messrs. J. H. FERGUSSON & Co., 4, Clive Street, Calcutta.

(294)

EASTERN BENGAL RAILWAY.

NOTICE.

WEEKLY Communication by Railway and Steamer between Calcutta, Dacca and Naraingunge for Sylhet, Cachar, Tipperah and Eastern Districts.

This Company's Steamers leave Goalundo for Dacca and Naraingunge every Sunday morning, returning from Dacca and Naraingunge every Wednesday, reaching Goalundo on the Friday.

Passengers should leave Sealdah by the 7-30 A. M. or 8 P. M. Train on the Saturday preceding the departure of the Steamer and goods for despatch should be delivered at the Sealdah Terminus before 3 P. M. on the Thursday previous.

Further particulars can be obtained on application to the Company's Enquiry Officer, Sealdah, or the Company's Local Agent at Dacca and Naraingunge.

E. B. Railway, Agent's Office, 17th November, 1873. } FRANKLIN PRESTAGE. *Agent.*

(218)

EASTERN BENGAL RAILWAY CO.

Fortnightly service to Chuttuck for Sylhet and Cachar.

A Steamer and Flats plying in conjunction with this Railway, will, until further notice, perform the service to Chuttuck for Sylhet and Cachar regularly every fortnight, instead of every third week as formerly commencing as from Sealdah on Saturday the 17th instant.

Goods for despatch by this route will be received at the Sealdah Terminus.

Full particulars as to the dates of departure, rates and fares, &c., may be obtained of the Enquiry Officer, Sealdah Terminus, or of the District Agent at Dacca and Naraingunge.

Agent's Office, 6th October, 1874. } (Sd.) FRANKLIN PRESTAGE. *Agent*

WHITMORE'S

Compound Liniment of Arnica.

A specific for the cure of

Rheumatism, Lumbago, Sciatica, Sprains, Confusions, Weakness of the Joints,

Chilblains, &c.

It is also an excellent remedy as a stimulating application to the surface of the Chest and Back in Bronchitis, Inflammation of the Lungs, Pulmonary Consumption, and Hooping Cough. When the Liver is inactive, rubbed over it, its stimulating properties have a beneficial effect, and in all cases where counter-irritation is desirable, it will be found invaluable.

In bottles, small, medium and large.

WHITMORE'S

Stomachic and Liver Pills.

No Pill is so efficacious in promoting DIGESTION, strengthening the STOMACH, correcting ACIDITY, preventing or removing HEADACHE, GIDDINESS, &c., arising from a COSTIVE HABIT, DEBILITATED STOMACH, or TORPID LIVER.

They require no change of DIET, and those of the MOST DELICATE CONSTITUTION may take them with safety.

Taken as an adjunct with WILKINSON'S SARSAPARILLA with the greatest success.

THOS. WILKINSON, 270, Regent St., London.

THE FOLLOWING

IS AN

Extract from a Letter,

dated 15th May, 1872, from an old inhabitant of Horningsham, near Warminister, Wilts:—

"I must also beg to say that your Pills are an excellent medicine for me, and I certainly do enjoy good health, sound sleep and a good appetite; this is owing to taking your Pills I am 78 years old.

"Remaining, Gentlemen, yours very respectfully, L. S."

To the Proprietors of

NORTON'S CAMOMILE PILLS, London.

(379½)

COLT'S NEW GOVERNMENT ARMY

REVOLVER,

as recently adopted for the United States Cavalry, takes the ·450 central fire service Boxer Cartridge. It equals a rifle in range and in accuracy of fire, and is unequalled for durability of construction. It can be easily loaded and unloaded when dark, and can be carried with perfect safety when loaded. It far surpasses in efficiency and quality of make the numerous cheap pistols of various make which now flood the market.

COLT'S LARGE BORE BREECH-LOADING

DERINGER,

waistcoat pocket, shoots hard and straight.

COLT'S DERINGER REVOLVER,

for personal and house defence, fires a larger ball than any other Revolver of the same weight and size.

To be had through any respectable Gunmaker or Dealer in Arms, or from

Colt's Fire Arms Manufacturing Company,

14, PALL MALL, LONDON, S. W.

THE WEEK.

THE Fine Arts Exhibition of Calcutta continues to be a great attraction. We would call attention to an advertisement in the latter part of this issue informing the public that the Exhibition will close on the 16th instant. During the last three days it will be open from 8·30 A. M. to 1·30 P. M., and from 3·30 P. M. to sunset. The rate of admission has been fixed at the low sum of four annas; but for schools special tickets can be obtained which will admit 12 pupils of the same school, with one teacher or other person in charge, at the price of one rupee. These arrangements are so considerate that the Exhibition will probably be thronged to-day, to-morrow, and Saturday. The whole affair has been most creditable to Bengal, and we are sure that the valuable services of the Honorary Secretary, Mr. H H. Locke, deserve warm recognition.

THE Northern State Railway from Lahore to Wuzeerabad is said to be ready for traffic, but is not being worked because the line is a single one, and the telegraph has not yet been completed. If the fact is as represented, we must regard the whole affair as very discreditable. In the first place, a telegraph is so easy of construction that one ought long since to have been ready in anticipation of the completion of the line; and in the second place a telegraph is by no means necessary to the proper working of a short single line; the system known as "the train staff system" is far safer than an electric telegraph, and can be organized in an hour or two. It would certainly seem that some one is blundering.

A correspondent who is possessed of much experience in regard to the administration of Oudh has obligingly called our attention to some remarks in the *Indian Observer* having reference to that province. Our contemporary is always particularly well informed on matters connected with the N. W. Provinces and Oudh, and in the opinion of our correspondent has hit the right nail on the head in these and other observations: "The one point in which the Oudh administration has hitherto shown its most lamentable weakness is the Revenue Department." "The Oudh Land Revenue Bill is now at a stand still; the settlement of the Revenue in half-a dozen districts needs revision, and year by year fresh arrears of uncollected land-tax are accumulating." The *Pioneer* has recently exposed the *fiasco* to which Land Revenue affairs have been brought in Oudh, and looking to the consensus of opinion on the point, it is to be hoped that the Government of Oudh may be speedily amalgamated with that of Allahabad.

MR. BAYNES, Secretary to the Bombay Baroda and Central India Railway, has had printed a comparative statement of the expenditure and earnings of the Guaranteed and State Indian Railways in 1873. From it we learn the gross receipts of each Company; the one that has done best is the Eastern Bengal which has obtained *s*11.5 per train mile; the next best is Mr. Baynes's own Line whose earnings were *s*11·4 per train mile. The East Indian earned *s*9·1 on the main Line, and *s*7·9 on the Jubbulpore Branch. The Great Indian Peninsula did not do badly, having received *s*9·4 per train mile. The Madras Line appears with an earning of *s*6·2, and the Great Southern with *s*6·4. The average gross earning per train mile in India was *s*8·52, while that in England was *s*5·85.

IT seems from Mr. Baynes's figures that the passenger traffic is greater in the United Kingdom *in* proportion to goods traffic, than it is in India. Taking the total traffic in each country as 100. the following is the apportionment of the receipts: Indian passengers 32·8 and British passengers 41·4; Indian Goods traffic 63·3 and British Goods traffic 55·1. The miscellaneous traffic in each country is strangely on a par, the figures being for India 3·9 and for the United Kingdom 3·5.

Coming to *net* earnings per train mile we find the East Indian Main Line *s*5·9, East Indian Jubbulpore Line *s*3·4, the Eastern Bengal *s*5·6., the Bombay and Baroda Line *s*5·1, the G. I. P. Railway *s*3·3, the Great Southern of India s3 3, and the Madras Railway *s*2·7.

WE learn from the local press that an important meeting of the Chamber of Commerce, Bombay, has been held to consider a new tariff list, and the question of abolishing or retaining import duties. The chairman, Mr. Watson of Messrs. Watson Bogle & Co., submitted the following resolutions.

"I.—That this Chamber would urge upon the Government of India the abolition of the following duties:—

1. The import duty on Cotton Goods and Yarns.
2. The import duties on Sugar and Dates—articles which are only imported into the Presidency of Bombay and which really are a necessary of life with large portions of the population.
3. The import duty on all articles for which Bombay acts more as a depôt than as a place of consumption,—the gain to Government being small, and the trouble both to them and the merchant, and the hinderance to trade, great.
4. The import duty on many small articles which give little return to the Revenue.
5. The export duties on all articles except those on Rice, Indigo, Lac and Seeds.

"II.—That the Chamber is aware that all these reductions can only be made subject to the needs of the public revenue, but would suggest that the loss be made good from the following sources:—

1. Increased economy in public expenditure.
2. Diminished expenditure for a time on Public Works.
3. The institution of an excise tax on Tobacco, in addition to the import duty,—or, if more practicable, the establishment of a Government monopoly in the articles.
4. All imports on tobacco, as well as on Spirits and Liquors, including licences to sell, to be taken out of the hands of Municipal and local bodies, and carried to the general revenues of the country.'

The chairman proceeded to make an able speech in the course of which he observed that there were nearly half a million spindles at work in Bombay, and that a hundred thousand more were working in country districts, while nearly a hundred thousand more will shortly be in working condition. He contended that the abolition of an import duty on cotton goods would not do harm to native manufacturers; he said "remove protection and they will find that they can compete with England in all those manufactures for which their mills and appliances are specially adopted."

A most animated and protracted discussion ensued, and was continued on the following day. Mr. Kittredge was especially pertinacious in opposing the will of the Chamber, but was unsuccessful. There is only one ground on which the import duty on manufactured goods into Bombay can be justified, and that is, the exigencies of taxation.

IT has been arranged that the morning mail train on the North East Line of the G. I. P. Railway is to be discontinued in favour of a train which will leave Bombay at 5·30 p. m. Bombay grumbles at this, as it wanted a night mail starting at about 10 or 11 p. m. Calcutta will be to some extent a gainer since letters will be delivered immediately on their arrival in the morning, instead of being detained through the night in the General Post Office. It is said that the G. I. P. Company must slacken the speed of the mail train in consequence of its going up the Thull Ghaut at night. The E. I. Company will run between Jubbulpore and Calcutta at higher speed.

CAPTAIN George Bain, late a manager of the P. and O Company, has issued a pamphlet entitled "False Statements in the Accounts of the Peninsula and Oriental Steam Navigation Company." Captain Bain urges that dividends are paid out of Capital, and he tells us the crucial test between the Board of Directors on one side, and the proprietors and himself on the other side, is the valuation of the fleet. His idea is that the fleet is over-valued a million and a half to three quarters sterling.

AN "Indian Disestablishment Society" has been formed in Calcutta, of which the Rev. James Ross has been appointed Secretary. The objects are thus stated—

1. The abolition of all laws, regulations and usages, which may inflict disability or confer privilege, on ecclesiastical grounds, on any subject of the empire.
2. The discontinuance by the Government of India of all payments from the public funds for ecclesiastical purposes.

The Society's proposed modes of action are thus defined.

The Society shall seek to attain its objects—
By collecting and diffusing information illustrative of the tendency and results of supporting Ecclesiastical Establishments by public funds.
By making use of the press, holding public meetings, and delivering lectures on all questions within the scope of the aims of the Society.
By organising the friends of the Society in such a manner as will best enable them to exert their combined influence on the public mind, and on the Legislature.

THE *Indian Charivari* has greatly improved. The first issue for January is accompanied by a lithographic sketch of His Excellency the Viceroy, concerning which we are glad to say that we had no idea India could turn out anything so well done. This cartoon is accompanied by the following letter-press:

Believers in Mr. Galton's theory of hereditary talent may find "confirmation strong" of their doctrine in the present Viceroy of India. The family of Barings made their money and reputation by business-habits and talents, and the present head of the family is true to the family traditions. Lord Northbrook is essentially a business man, his most ardent admirers would never venture to call him a brilliant man or a genius. With great capacity for work himself, he also possesses the tact of being able to get a great deal of work out of those with whom he comes in contact, and on whose brains he must to a certain extent rely for information. By no means a fluent speaker, he generally manages to convey what he has to say in well-chosen words, and the matter of his speeches is better than the manner. The management of our Finances is, perhaps, his strongest point. Naturally of a quiet and retiring disposition, he succeeded in the Viceroyalty a nobleman distinguished for his genial habits and unbounded hospitality, and this at first produced an unfavourable impression on those who are most about our petty Court. But when the famine threatened, and real hard work and responsibility in prompt action were necessary, the true worth of the Viceroy was better appreciated, and all are now willing to admit that in a time of trial India has never had a more sagacious ruler. Foreign affairs are now the most engrossing subject of the consideration of our rulers, and His Lordship seems disposed to show equal firmness and judgment in the administration of, what must be to him, almost unknown problems.

A pamphlet has been printed in Bombay proving to the satisfaction of the author that "famines are mainly the result of the existence of the British people in India." Moral and material prosperity have been lost, we are distinctly told, owing to the connection of India with England. We cannot for one moment agree with these radically erroneous notions, and are sorry they should be entertained; but their refutation is a task on which there is not space now to enter, and we feel assured our readers would scarcely thank us for doing so. The *brochure* is no contemptible production; on the contrary, it is a very elaborate affair. Should any pamphleteer or article writer at any time attempt to cope with our theorist, it would be well to adopt a temperate tone.

A correspondent writing from Azimgurh tells us "the Commissioner of the fifth division, Benares, is about to come here on a tour of inspection; he is an intelligent officer, and it is to be hoped he will direct his attention to checking the corruption now prevalent." Our informant draws a sad picture of the state of affairs in his town generally, and if he is not taking too gloomy a view of the situation, there is a strong *prima facie* necessity for every branch of the local administration undergoing a thorough over-hauling.

A gentleman interested in Coolie emigration tells us "there is a return coolie re-emigrant by the *St James*; he has paid his own and his wife's passage, and that of four of his relatives who have not yet been to the West Indies. He also takes bills on the Colonial Government for Rs. 1500 and has deposited in an iron chest a box containing gold and silver ornaments which he values at Rs. 1000. He returned from Trinidad in 1872 by the ship *Pandora* with savings as follows, 18 sovereigns, 380 gold dollars, and 5,956 rupees, the total amount being equal to 6.902 rupees." We conclude the coolie went into trade on the expiration of his first term of indenture, but in whatever way he got his money, it is certain India could not have afforded such a man any avenue to a like success.

THE London *Spectator* makes the following observations in regard to the alleged falling off in the number and quality of the Missionaries now sent from Great Britain to India.

The Wesleyan and Church Missionary Societies question the accuracy of the figures we quoted last week from the *Edinburgh Daily Review*, but the gentlemen who write on their behalf appear to miss our point. Dr. Boyce writes that the Wesleyans had indeed 31 Missionaries in India and Ceylon in 1861, but had 30 in 1871 *instead of 22*, the number we quoted; but he omits to say whether they were all Europeans. We purposely excluded both Americans and Natives—including Eurasians—as beside our point, which was to discuss the main thesis of the Intercession Day, the supply of more men from this country. The Rev. T. D. Harford Battersby, again, affirms, that the European Missionaries connected with the Church Missionary Society in British India increased from 116 in 1861 to 126 in 1871,—a statement to which, we doubt not, the paper we gave as our authority will reply, as if correct it entirely vitiates the figures. We suspect the corrected figures include men absent on leave or for health. Mr. Battersby's statistics of native missionaries, however, have nothing to do with the question, which is not the energy or success of the Societies, but the number of competent Englishmen who now volunteer for mission-work. The dispute as to the comparative capacity of the elder and younger Missionaries, which Dr. Boyce also raises, is one of opinion chiefly, though we admit that historians are apt to remember only the captains and forget the rank and file, while observers of to-day see chiefly the latter.

THE *Englishman* published the following startling telegram on Saturday: "Mr. Souter, with all the detectives, returned to Bombay last night from Baroda, and left for Calcutta this morning, having been telegraphed for by the Government of India. He took the depositions and papers connected with the poisoning enquiry. The troops in different parts of the Presidency have received orders to keep ready to move on Baroda, if needed. Four hundred Europeans and one battery of Artillery have arrived in Bombay from Poona, and are reported to be going to Baroda. More are expected. Considerable excitement prevails. The rumoured insubordination amongst native troops produced by the Gaekwar's agents is contradicted by the Military authorities. It is not apprehended that the Gaekwar will attempt resistance; but the Government consider precautionary measures necessary.

THE tournament at Belvedere seems to have been decidedly successful. In a letter to the Director of Public Instruction Mr. Reynolds tells him that the Lieutenant Governor hopes that another tournament will be held next year, and that should it be determined on, certain *suggestions which have* been made by the Tournament Committee will be adopted. Mr. Reynolds continues: "In conclusion Sir Richard Temple desires to congratulate the winners of the prizes, and those who have obtained honourable mention for their proficiency. He trusts that the young men of these provinces will more and more recognize the advantage of exercising the body as well as the mind, and of making it their object to maintain both in a condition of vigour, health, and activity." Mr. Buckland last week read to the prize-winners the following remarks which His Honour was unfortunately unable to make on the spot.

"YOUNG MEN, "I regret I am prevented from giving you the prizes in person. I congratulate you on your success. You may be sure that the efforts made by my predecessor, Sir George Campbell, for the encouragement of gymnasic exercises will prove permanently beneficial. As a proof of my desire to continue that encouragement. I have arranged this meeting, and have offered some of the prizes which have now been distributed. These exercises improve that physical vigour which will prove so useful to you in your mental duties, and will confirm you in strength of will and purpose. Moreover, aptitude and activity of body will be of the utmost service to you in whatever career you enter, whether official or non-official, whether public or private. And lastly, the instruction of Bengali youth in calisthenic skill and power will add to the capacity of the nation. I hope that this important subject will receive more and more of your attention."

THE Tournament Committee's suggestions, which Sir Richard Temple has intimated his intention of acting upon, are all of a practical kind. We are glad to notice that, in future, competition will not be limited to the boys of Government Schools, but will be thrown open to the students of all schools in which gymnastics are practised. There can be little doubt that the encouragement given to physical training will in this way be greatly increased. In future there will be preliminary meetings for the purpose of selecting representative champions, so that an embarrassing number of candidates for the final competition need not be expected.

AT a recent meeting of the members of the Bengal Chamber of Commerce the President, Mr. J. C. Murray, referred to the fixing of the terminus of the new railway in Eastern Bengal, at Julpigoree, instead of Silicooree, a distance of about 30 miles from the proposed site. The extension of the line for this short distance will give the large and growing tea-planting interest in Darjeeling and the Terai the benefit of railway communication, from which it would be practically debarred if the present proposed terminus is maintained.

SOME of the inhabitants of Calcutta are not pleased with the fact that the bridge over the Hooghly is officially called "the Howrah bridge." The structure is certainly quite as much a "Calcutta bridge" as it is a Howrah one. The nomenclature seems to be definitively fixed, however, for a Legislative enactment speaks of "the Howrah bridge," and there we suppose the matter must rest.

THE NEW CHIEF COMMISSIONERSHIP ON OUR NORTH-EASTERN FRONTIER.

A recent *Gazette of India* contains a Government Notification prescribing the scheme of administration decided on for the newly formed chief Commissionership of Assam. We have perused it with interest as the proposal for forming the outlying districts on the Eastern and North-Eastern Frontier into a separate administration was strongly urged by us many years ago, and received our persistent advocacy until it became an established fact about the early part of last year.

We are not satisfied that in assigning the limits of the new Chief Commissionership the Government of India have gone far enough. There seem no valid reasons why any of the Cooch Behar Non-Regulation Districts should have been retained in Bengal. The supervision of the semi-independent state of Cooch Behar formed in former years a portion of the charge of the Governor-General's Agent on the North-Eastern Frontier, whose office has now merged into the Chief Commissionership just formed. Sound policy would indicate that the required supervision could be more effectually carried out by a strong Government in proximity to the State than by the distant administration of Calcutta. The Western Dooars and Darjeeling are also essentially political charges intimately connected with our relations with the Bhootias and Thibetans, a fair intercourse with whom is most desirable in order to develope the resources of Assam. On the south bank of the Berhampooter, also, there are portions of Mymensingh which might advantageously have been divided between the Garo Hills and Sylhet districts to avoid future complications, and to assimilate their administration to that of the districts of the new Government to whom by population, geographical position and conditions they properly belong.

A glance at the Map of Bengal will show what ought to have been the territorial limits of the New Chief Commissionership. They would include the amphitheatre of hills, terais and vallies which form our Eastern and North-Eastern Frontier. These tracts are inhabited by races towards whom a common policy is desirable and they appear marked out naturally for a separate Government. It might have remained an open question whether, after a few years' experience of the new Government, Hill Tipperah and Chittagong should not be added to it, thereby prolonging the Southern end of the semicircle above described to the seashore, and maintaining a strong administration all along our frontier with Burmah.

But if the boundaries of the New Chief Commissionership have been unnecessarily restricted, the scale of establishment sanctioned for its administration appears still more so. The new scheme makes no material difference in the strength of the Staff which was formerly maintained. It merely changes the designations of Commissioner and Agent to the Governor-General, North-Eastern Frontier, which hitherto belonged to the head of the Province to that of Chief Commissioner. His office establishment has been strengthened by the appointment of a Secretary in place of a Personal Assistant. And an Assistant Secretaryship has been added. No provision has been made for a superior officer to administer the Police force of a charge which on three sides passes along tracts inhabited by turbulent and savage hill tribes No staff has been appointed to introduce an efficient Revenue system into a country which of all others in British India is most in need of it. The Judicial Administration is left with the defects which hitherto existed. A single Sessions Judge is retained for seven districts scattered over a length of 500 miles of territory. No special scheme for fostering immigration, the great want of the Province, has been even referred to. Altogether the notification (which in parts is singularly ill-worded and wanting in clearness) takes some pains to show that Assam is not in need of any change. It is described as a "province with little revenue, a scanty population and light general work." The departments of *Jails, Education and Registration* are spoken of as undeserving notice. The important Tea interest in which so vast an amount of British Capital and enterprize is now embarked does not claim even a passing remark, and as we read the Notification it seems strange that even the comparatively nominal changes which have been made should have been deemed necessary.

We think, however, that the Government of India has greatly under-rated the importance of the newly formed administration. Its population, scanty as it is said to be, is nevertheless (including Sylhet and Cachar) considerably more than double that of British Burmah. The revenue certainly is not much now, but is susceptible of being greatly improved, and has shown itself to be marvellously elastic, as it was doubled without any trouble in 1868 merely by an order of the Bengal Government. There can be no doubt also that a proper Settlement of the Lakheraj question, which has now been pending for an interminable length of years, would add materially to the Revenue, and would relieve Lakhirajdars from a perpetual source of worry and litigation. The alleged backwardness of education and insufficiency of Jail accommodation are legitimate grounds for endeavouring to promote the one and improve the other, but they can scarcely be accepted as justifying indifference on these important subjects.

As regards public works the allotment to the newly formed Government for last year was absolutely less than that which used ordinarily to be assigned in former years to Assam, when it was under the Bengal Government. We are afraid that this ill-timed parsimony is calculated to retard materially the interests of the province, as of all its wants the most pressing is caused by the present absence of proper internal communications.

In only one respect can we congratulate the Supreme Government in its scheme for the administration of Assam, and that is in the admirable selection it has made of the officer who is now the head of the Province. Colonel Keatinge. The new chief Commissioner possessed already a well-deserved reputation for administrative capacity earned in a similar position elsewhere, and he has during his short tenure of office in Assam introduced many useful changes and reforms. He has shown a laudable desire to make himself personally acquainted with the wants of his charge, and in order to do so thoroughly has consented for a time to work without the intervention of Commissioners, but the readiness which he has evinced to undertake subordinate duties at a saving of cost to the State was deserving of adequate and voluntary recognition. His Secretariat Staff might have been strengthend on a liberal scale, and he might have been allowed at least one senior officer of the rank of Commissioner to be utilized, for the present, in the administration of Jails and Police. When Colonel Keatinge has secured the knowledge of his charge which he desires to obtain, there appear no legitimate grounds why the original scheme of appointing subordinate Commissioners should be delayed, and the additional staff meanwhile allowed him could be absorbed on the introduction of the permanent scheme.

We have been induced to make these remarks merely with the view of drawing attention to points in the new scheme, which, unless they are more carefully considered, appear likely to prove material defects in the administration of a province possessed of very strong claims to the fostering care of Government. We are sensible that the late famine renders it most necessary that the Imperial Government should study strict economy but we think that it need not descend to parsimony, especially in supplying a want which has been long felt, and which intimately concerns an interest that is daily assuming more important proportions. We are satisfied that Lord Northbrook is not likely to allow departmental considerations, however pressing they may be, to interfere with the original design of giving Assam and the Eastern and North-Eastern Districts a really vigorous administration.

A FRENCH COLONY.

Not very long ago we gave a historical sketch of Chandernagore, the little colony of the French on the right bank of the Hooghly. This interesting town which has a population of 24,000 souls is 20 miles North of Calcutta, and the level of the railway passing near it is 46 feet above the sea, whereas, according to an authority open before us, the plain on which Calcutta is built is only 18 feet above it; the situation of Chandernagore for this and other reasons may be regarded as a good one for Bengal. The river makes a bold sweep in front of the French settlement, describing what the inhabitants call an "arc." and as the town is on the indented bank there is a fine view in two directions, viz down the stream and up it. On the opposite shore, which is a sort of promontory, there are few houses, but a good many brick kilns, yet these latter objects are sufficiently distant to be picturesque, and are backed by a dense wall of green vegetation. Along the stream, at a distance of two miles or so, the eye can detect the upper portion of a stately pile. This building is the far famed Hooghly College; it stands in the southern quarter of Chinsurah, north of which lies the "Hooghly town." The two places, Chinsurah and Hooghly, are so close together that they are practically one. Chinsurah, which is a neat open place, was made in 1675 the seat of a Dutch factory, but the Hollanders being defeated at Bidera, four miles to the West, in an engagement with the English, were compelled to quit Bengal. In exchange they received Java in 1815, and, it must be confessed, did not do badly. Hooghly was the first English settlement in Bengal; but it was not a suitable position, inasmuch as every

ship coming up from the sea had to pass Danish, French, and Dutch towns. The removal of the English head-quarters to Calcutta was a change for the worse so far as salubrity of site went, but was much for the better in this, that rivals could no longer obstruct or supervise the English trade. Hooghly is still the chief town of a district, a collector (Mr. F. H. Pellew) having his cutcherry there.

Chandernagore is rather a handsome place, the streets being laid out at right angles, and some of the principal houses being ornamented with little towers or turrets that break the roof-line as seen from the water; but the chief glory of the colony is the fine promenade on the bank of the river. This walk follows the natural curvature of the situation, and has been adorned, and at the same time protected from any encroachment of the stream, by masonry. The foot-path is broad; on one side of it are massive pillars of granite breast-high supporting a stout railing; and on the other side of it is a good road running in front of the best houses. Among these buildings is to be found the Governor's residence; it is honoured with a "tricolor" floating from a flag-staff, and is protected by a sepoy in a showy French uniform. In line with Government House stands the convent; it is no gloomy looking edifice, but has open doors, as if all restraint were out of the question, and it is, notwithstanding its name, a cheerful home for many young ladies who are being carefully educated in English and other accomplishments. Whatever nunneries may be elsewhere, that at Chandernagore is no prison-house. The pupils are invariably to be met with at all respectable social gatherings, of which there are many, the town being decidedly lively; in this respect it is said to be more truly French than Pondicherry. English is, however, more generally spoken in Chandernagore than at the other settlement, as the French residing on the Hooghly naturally feel the proximity of Calcutta a powerful incentive to the study of a language which is the most widely useful of all the tongues now employed in India. It is something remarkable, the correctness of accent and idiom with which the French of Chandernagore, for the most part, speak English.

Along the river road the visitor will find the arsenal, the court-house, the public offices, and a note-worthy building called the Hotel Courjean, an abode which has been rendered unique by the care and taste bestowed on the grounds. The promenade terminates towards the south with two Hotels, one under English management, the other under French; the former is named the Strand Hotel, the latter the Sans Souci; each establishment has its merits, but to our mind the French hostelry has by far the better *cuisine*; indeed so well does the proprietor cater that people stay for days together simply from the temptation of a good table. Among the advantages of the English Hotel are its larger size, and the possession of a billiard-table: a chance visitor is also more likely to obtain good rooms in it, for the smaller French Hotel is, as a rule, rather closely packed. The table at the Strand Hotel is purely Anglo-Indian; you have chops and steaks, and heavy *pieces de resistance*; everything is good of its kind, but an Englishman does not obtain any change of cookery from the old-established routine which has now become firmly rooted from one end of the country to the other. It would pay, we are inclined to think, were it feasible for the French Hotel to be enlarged. There must be many business-men in Calcutta who would be delighted to reside occasionally in the little French town, if they could find a truly excellent table, supplemented by cool and spacious sleeping rooms with bathing accommodation attached.

There is almost a superabundance of trains morning and night on the East Indian Line, and they are largely patronized by Frenchmen and Hindoos whose daily occupations take them to Calcutta. We have seen a statement thus worded, "nearly all the native population is employed in Calcutta or elsewhere, either in trade or in English Government and Agency offices," and our idea is that improved Hotel accommodation would bring occasionally, for temporary sojourn in Chandernagore, many men of greater standing than those referred to. If subordinates find that the train service is suitably arranged, as it is clear they must do, their principals could probably make use of the railway without practical inconvenience. The returns of the East Indian Railway Company show that 1320 trains arrive at and leave Chandernagore monthly, and that about 11,000 passengers *per mensem* go to and fro between Calcutta and Chandernagore. This speaks well for the facilities afforded by the East Indian Railway, but if we are correctly informed the Eastern Bengal Company contemplates offering advantages to the public in connection with the Calcutta and Chandernagore traffic. It will not be long, we are told, before there is a special station for Chandernagore, not very far from that now existing at Echapore. If in addition to stopping the Eastern Bengal trains opposite Chandernagore, the management could provide a light tramway to the water's edge, it would perhaps be an improvement; we have not been over the ground, and do not therefore suggest the idea with any great confidence. There should, however, certainly be a little steamer on the river in modest imitation of the great vessels plying between Howrah and Calcutta, since many people would prefer crossing the river at Chandernagore to doing so at the Armenian Ghaut, and, for some folks, alighting at the Sealdah terminus would be preferable to being set down in the Calcutta Strand. There is an expectation that, considering the distance of the present Chandernagore Railway station from the town itself, the journey to Calcutta viâ Sealdah will be cheaper than that viâ Howrah. However that may be, since the Eastern Bengal is such a popular Line it will inevitably share the Calcutta traffic of Chandernagore with the East Indian Railway, when once the management has fairly made up its mind to compete with the leviathan Company.

It is unnecessary to dwell on the advantages likely to accrue from a friendly competition between the railways on the two banks of the Hooghly river. There is, it is true, little to complain of in connection with the East Indian Company; and were not a neighbouring line already in existence we should deprecate any effort to provide the public with an alternative route. The people of Chandernagore have a few grievances, but not weighty ones; they feel themselves, for example, badly treated in not having an over-bridge from one platform to the other. At present there is a tunnel under the line; but it is such a tunnel! At Serampore a similar sub-way has been made, and it is for some part of the year comfortable, but there are times in the rainy season when it is a receptacle for pools of water. A tunnel in this country is not equal in utility to a roofed bridge, but as a sub-way has been made at Serampore the public are not, we are inclined to think, much disposed to grumble. But at Chandernagore the case is different; there the sub-way during the rains is converted into a deep water-cistern, and it is impassable except in a carriage. An attempt is now being made to prevent, by a corrugated iron lining, the dripping of water from the roof, but this proceeding only attacks a minor grievance and leaves the greater untouched. Rain collects on the path of the sub-way, not only from the roof, but by the natural lowness of the ground, which renders the place a trough for water to flow into. There cannot well be any other suitable remedy for this unfortunate state of things than to supplement the sub-way with a bridge.

It is much to be regretted that the French Government does not lay down a tramway from the town to the railway station, as unfortunately for the inhabitants the railway has been taken completely out of French territory. Who is responsible for this we do not happen to know. It is no new thing to hear of engineers avoiding the towns their railways ought properly to serve. Chandernagore, though sinned against in this respect, is not nearly so badly off as some British towns; but still the railway goes so far from it that there should be a tramway from the line to a central point on the river; the construction of such a tramway would properly rest with the local French authorities, but looking at their position in regard to Pondicherry and France one can scarcely expect them to be active in promoting such a scheme. The fact is either the colony is not well treated, or at all events it fancies it is not. Every year it has to transmit money to Pondicherry, and this is, not unnaturally, a perennial grievance. The inhabitants are always sighing over the deficiencies of their town which might, they think, possess far greater municipal vigour did not Pondicherry drain its life-blood. The cleanliness, the prettiness, the Parisian air of Pondicherry are not admirable in the eyes of a good Frenchman of Chandernagore, inasmuch as one town is embellished at the expense of the other. In a future article we will return to this subject, as it is in our power to show how Chandernagore has suffered from the present system in a variety of ways; education has been neglected, the necessities of the sick and dying have been ignored, the ministrations of religion have been impaired, sanitation has been allowed to take care of itself, in fine all sorts of evils have resulted to Chandernagore from the financial relation in which it stands to Pondicherry.

THE TAMRAPARNI IRRIGATION SCHEME.

A few weeks ago we discussed Mr. Markham's project for turning a certain river of South Western India (the Periyar) across a mountain ridge lying between

it and the Madura Zillah on the Eastern side of the peninsula. It was shown how practicable the idea was, how small the expense would be, and how enormous a gain might be anticipated to a district which sadly needs a better water-supply. We have now to call attention to a second scheme which has been promoted by the editor of the *Geographical Magazine*, who takes great interest in the utilisation of rivers. In the December No. of his periodical he has entered upon the necessities of an adjoining district to that of Madura, viz. Tinnevelly. The latter Zillah is better off than the former, for there is no need in Tinnevelly to cut through a mountain. Tinnevelly, which is the Southernmost of all British collectorates, is sufficiently blessed with rain, and the question, to which Mr. Clements Markham has been addressing himself, is the preservation of the advantages given by the South West monsoon. The mountains that intervene between Travancore and Madura arrest the clouds brought by this monsoon, and turn the down-pour from them into the well-watered plains of the Native State; but between Travancore and Tinnevelly the hills are not so high, their peaks are not so numerous, and their superficial area is not so large, so that it is not unusual for heavy clouds to be carried over them, and the fatness dropped by them is bestowed on the Eastern side of the water-shed, or rather on a part of it, for some *talooks bordering on* Madura have all the aridity of the latter district.

The area of Tinnevelly is 5,176 square miles, and the population is 1,693,959 souls. The fertility and prosperity of this part of British India is dependent on the rivers Tam*raparni and Chittar, which fortunately never* cease to pour their magnificent cataracts down the slopes of Paupanasum and Kurtallum. These rivers unite in the neighbourhood of Palamcottah, some forty miles from the mountains. From their junction the two rivers go under the name of the Chindinthoray, and some thirty miles from Palamcottah that stream disembogues into the Gulf of Manaar.

What Mr. Markham asks is that Government should prevent the mountains near the Tamraparni and the Chittar from being denuded of their forests. While the water-supply of Travancore is so abundant that any amount of felling and clearing may be judiciously allowed to go forward, the case is otherwise on the Eastern slopes of the ghauts. It is true that the planters of Travancore are very busy; not a year ago they were clearing 10,000 acres; but there is no occasion to check them, for they are doing the country good in every way. In Tinnevelly, however, since not a drop of water can be spared, it is necessary to bid the woodman withhold his axe. This is what Mr. Markham says:

> Indiscriminate felling on these eastern slopes would lead to most deplorable results, and the evil has already been partially felt. As long ago as in 1865 it was urged that too much felling must lessen the rainfall; and that, in clearing for coffee or other cultivation, 50 yards of forest at least should be left on the margins of streams. The work of destruction went on. The forests were thrown open to charcoal-burners and firewood-cutters, and any one who obtained a license might cut and hack as he pleased. People stripped certain trees of their bark, and cut down others to get the honey that might hang on the branches. The net annual forest revenue in Tinnevelli is only 340*l.*; a sum which, even from the lowest point of view, can scarcely be put in comparison with 100,000*l.* of revenue derived from the water supply that depends upon the due conservancy of the forests.

It would seem that Mr. Puckle, the Collector of Tinnevelly, has been actively repressing the tendency on the part of villagers and other to destroy timber wastefully. The way in which he has proceeded has been to mark out certain tracts from which firewood might be freely obtained, but it was strictly forbidden to fell trees in the heart of the forests. Owing to this judicious firmness there is a prospect of the water supply yielded by the Tamraparna and Chittar remaining undiminished. Mr. Markham well observes, "there can be no more short-sighted policy than to allow villagers to waste and destroy forests on the preservation of which not only the prosperity but the very existence of the population of a whole district may be involved. It is perfectly true that the forests are the property of the people; but for the very reason that they are the property of the whole people, and not of the few villagers and wanderers who happen to live in or near them, it is right and just that they should be preserved and protected from waste and destruction." It seems to us that this is sound philosophy, and though, looking to Mr. Puckle's proceedings in regard to the forest-lands of Tinnevelly, there is no special necessity to urge Mr. Markham's views in connection with that district, we have reason to be glad that he has spoken as he has done, as there are other parts of India in which the lesson he has given may well be put in practice.

Mr. Markham tells us that in the forest where the Tamraparni rises there is a rainfall of 200 and 300 inches. In the plains near the foot of the hills the rain-fall is only 30 inches, and near the mouth of the river the quantity is lessened to 18 and 20 inches. The infant stream flows rapidly for eleven miles, when it falls suddenly 100 feet; thence by minor falls it descends 200 feet in 4½ miles to the Vanathirtam cataract which is 150 feet high. The final cataract is that at Paupanasum which we have already mentioned; the drop is here 250 feet into a basin. The Chittar is rendered famous by the great repute of its waterfall at Kurtallum. The Hindoos of Tinnevelly regard the stream as holy, and they bathe in it under the impression that by doing so they become purified from the taint of original sin. But not only is the romantic glen into which the Chittar comes pouring downward—one mass of foam—a favourite resort of natives; it is also frequented largely by the Europeans of the District. From time to time many picturesque descriptions of the Kurtallum falls have appeared in the *Madras Mail*, and they are clearly well worth going a long way to see. We may soon expect to hear that they are accessible with comparative little difficulty. The South India Railway is being rapidly pushed forward into the Tinnevelly district, and it will not be a great while before the beautiful mountain scenery of the Pulnies and neighbouring hills is within easy reach of Madras.

In 1801 Mr. Casamajor formed a garden at Kurtallum in which he planted coffee, nutmegs, and other trees, and Mr. Markham tells us that the lovely scenery at this spot has been delineated by Thomas Daniell, an artist of uncommon merit. We would ask whether *Thomas* is not a misprint for *William*. William Daniell R. A. came to India when a lad of 14 with his uncle Samuel Daniell; this was in the year 1783 or thereabouts; and from that time his great work, "Oriental Scenery", was expedited with the most persevering ardour until its publication in 1808. Daniell was one of the most gifted of the many gifted men who have set foot in this country; his ocean pieces were the work of no ordinary pencil and his landscapes were simply splendid. Yet we find no record of him in "Higginbotham's Men whom India has known." This is an omission which should be repaired in the next edition of that useful work; we merely call attention to the oversight in the hope that it may be so.

"SPEED THE PLOUGH."

MADRAS manages its affairs so quietly that the rest of India is frequently in the dark as to what is being done in the South. During the past year Mr. Robertson, the Superintendent of the Government Farms there, has been carrying on a series of singularly novel experiments in relation to native agriculture, and yet beyond his own immediate neighbourhood the world has known little of them.

At Sydapet a body of Hindoo and Eurasian young men are being educated as farmers. The latter are generally the sons of old soldiers who have taken up their residence at St. Thomas' Mount or Palaveram; and the youths are active and intelligent. A few lads, of a similar class, were obtained from the Military Orphan Asylum in Madras, but with the exception of one, they remained at the farm only a short time. This result is attributed rather to the injudicious interference and advice of their relatives than to any defects in the capabilities of the boys themselves. The Hindoo youths are obtained from the villages in the neighbourhood of Sydapet, and in most instances are sons of ryots. In selecting young men for employment as Sydapet Farm Apprentices, it is usual to choose those who appear to possess the best physique, and who produce the most favourable testimonials as regards character, and then to subject them to a competitive examination, in writing from dictation and elementary arithmetic. All the youths in this class are regularly employed in the ordinary work of the farm. During the first and second year they are engaged in manual employment in the same way as the regular field hand; but if before the expiration of the second year, any lad is found to possess the necessary qualifications, his services are at once utilized. Those who have thus been in the class for two years, and those who are found competent, are employed each with a gang of field labourers, over whom they exercise limited control under an overseer. A second and somewhat different class was begun about twelve months ago, it being intended to provide the necessary agency for carrying on the District Farms. Four apprenticeships were at first established, but the number was shortly afterwards increased to six; to each apprenticeship is attached a salary of Rs. 40 monthly, with a free residence. The Government Order directed that the youths were to be selected from Coimbatore, Bellary, and Tinnevelly in which collectorates it was then intended to begin the first District Farms; it further directed that the youths should be chosen from among the peasantry, or from some other class connected with the land; that they

should be between 18 and 20 years old, strong and healthy, possess a colloquial knowledge of English, and be willing to enter into an engagement to serve in the Agricultural Department. Some difficulty was experienced in meeting with young men of the necessary qualifications. The salary offered was sufficiently attractive; but it was found that there were only a few youths of the ryot class sufficiently well educated, in the districts from which they were to be selected. Had there been no limit as to place, there would have been no difficulty in securing a large number of suitable young men for the appointments, even at a smaller salary. At the close of the year the class numbered six. Though the students are not put to the same work as the Sydapet Farm apprentices, they are expected to take part in what is going on; to work any of the implements and machines used, and to keep a Farm Journal, in which is entered daily all the various employments on which the men and cattle are engaged. Examinations are occasionally held; and the result, altogether, is satisfactory.

To test the qualifications of the youths a ploughing match was recently held on the Experimental Farm. As it was the first public competition of the kind ever held in the South, it created a large amount of interest, especially amongst cultivators living in the neighbourhood of Sydapet. These visited the farm in great numbers during the competition, and seemed to be much interested in what was going forward. Only iron ploughs were allowed to compete in Class A; ploughs made partly of wood and patly of iron and all descriptions of native ploughs competed in Class B; and Class C was open only to ploughs worked by Farm Apprentices. The competitors had each a plot of ground measuring 600 square yards, the soil being a free sandy loam. Four prizes were offered for competition in each class, and were awarded for (1) depth, (2) regularity and straightness of furrow, and (3) speed. The best man showed himself equal to ploughing nearly two acres in eight hours, and the others did their work fairly. The winners of the first, the second, and the third prizes worked ploughs made by Messrs. Ransomes and Sims, of Ipswich; the man who gained the fourth prize also worked a plough of a similar kind, made, however, in this country; and the fifth and sixth men used instruments manufactured by Messrs. Howard and Co., of Bedford. The average depth of the ploughing was about six inches. A large number of ryots competed in class B: but the result was generally poor in comparison with that performed by the iron ploughs; and neither was it completed so rapidly, half the number of iron ploughs having ended their allotted task before a single plough in this class had finished. Three of the prizes were carried off by men who used combined ploughs made in the Implement Workshops at the Farm. The third prize, was awarded to a cultivator, who used a country made implement. The competitors in class C. were put to a harder test than the rest. Till the men were on the field none knew what cattle or instrument would be used, this being decided by lot; but the judges and spectators expressed themselves highly pleased with the result.

Mr. Robertson has come to the conclusion that the best plough for general use is one constructed entirely of iron. It is true, he says, that an iron plough must always cost more than one made partly of iron and partly of wood, or than one made of wood; but in its extra durability and greater efficiency, the iron plough possesses advantages which are cheaply purchased at a little expense. "The combined plough we make up in our workshops is certainly a good and useful implement, and one of these will cost only a little more than half the sum that an iron plough would cost; but, if I was engaged in farming on my own account, I shou'd certainly much prefer to pay Rs. 33 for an iron plough, than to pay Rs. 18 only for a combined plough. I have recommended these combined ploughs, and would still recommend them; they are good ploughs, and perform their work much more efficiently than any ordinary plough now used by the ryot, while they do the work at a less cost; and, as they are more like the country plough in shape, the ryot takes to them more readily than he does to the iron plough." The question for the consideration of the ryot when about to buy a plough is not so much the price that must be paid for it, as the cost of the work that the implement will perform: thus, if he can with an iron plough—making allowance for labour, keep of cattle, and for wear and tear—turn over his soil at the rate of sixty cubic yards an anna, while with a country plough the cost of doing the same work would not be less than two annas, it is evident that the extra cost will be recovered in a very little time on a farm of moderate size, indeed, the ryot who cultivates a holding with but twenty acres of arable land can, by substituting an iron plough for his native plough, save, in a single season, a sum equal to its first cost, and it will, with ordinary care, last many years. But there are a vast number of poor peasants who cannot afford a good plough; and Mr. Robertson, we are glad to find, has during the past year devoted some attention to the improvement of the ordinary native plough, chiefly with the view of lessening its draught, since, although its weight is less than that of any other, its draught is exceedingly heavy from the very defective plan on which it is constructed. The following are some of the experiments made:—

1. An ordinary native plough, the dead weight of which was only 32 pounds, needed a force equal to 309 pounds to drag it through the soil when working.
2. An ordinary native plough, with some slight improvements, the chief of which was the removal of the upright flat surface behind the share by cutting down both sides. The dead weight of the plough was 36½ pounds, and the force needed to drag it when working was 336 pounds.
3. An ordinary native plough, improved as in No. 2 experiment, and fitted with a wooden mould-broad. The dead weight of this plough was 57 pounds, but for dragging it when working a force equal to 280 pounds only was required.

In these experiments the three ploughs performed the same amount of work, and were all dragged by coolies. The improvement made materially lessened the draught, and it is also worthy of notice that the heaviest plough did its work with an expenditure of nearly thirty per cent. less force than a far lighter instrument.

The efforts made by Mr. Robinson are deserving of much praise. We trust that he will continue his experiments and that good will come out of them.

EDUCATION IN OUDH.

FROM the Administration Report of the Province of Oudh for the year 1873 74 it appears that in twelve months the number of schools has risen from 1290 to 1326, and the number of scholars attending (reckoning only the average daily attendance, not the average enrolment,) from 39,826 to 43,651. The average daily attendance per school increased from 31 to 33. We are sorry to say, however, that there has been a falling off in female schools and primary town schools. In addition to the Government schools, and to establishments which, though unaided, are connected more or less closely with the Educational Department, there are in Oudh somewhere about 553 indigenous schools, numbering 4,865 scholars, with an average attendance per school of 9. The quality of the teaching in these 553 schools is very inferior. The boys have no other instruction than a daily religious course consisting of recitations from the Koran or from the Sanskrit Shastras. In this part of India, as in other parts, an unsupervised native teacher concerns himself very little with a pupil's understanding; it suffices that a lesson has been said, and that the exercise was religious. There are, however, here and there, a few *patshalas* in which arithmetic is taught for bazaar purposes in addition to a little reading and writing. A scheme for aiding and inspecting these schools was under the consideration of the local Government last year, but the Administration Report tells us that, owing to a change of Director, the scheme has been laid aside. The whole subject is now being re-investigated. The most advanced districts of Oudh in an educational point of view are Lucknow, Bara Bunkee, and Unao; the most advanced of all is Lucknow, and the most backward is Kheree.

The total sum spent on education by the educational department or under its supervision in 1873-74 was Rs. 5,25,614; the sum spent in the previous year was Rs. 5,43,392; so that there is a decrease of Rs. 17,778. In this expenditure that on account of the Martiniére College has been included on the ground that, though unaided by Government, the institution is open to inspection, and is managed by a Committee every member of which, except the Principal himself, is a Government official. Female Schools have had expended on them Rs. 29,445 or 5 72 per cent. of the sum above mentioned. There were 100 such schools altogether, of which 81 belonged to Government, 16 were aided, and 3 unaided. The curriculum of studies is, we are told, nominally much the same as that pursued in boys' schools, but the only subjects in which the girls take any interest is reading and writing; arithmetic, it appears, is studied to some extent, but geography is found absolutely repulsive. The writer of the Report regards

this distaste for geography as natural in those who have no opportunities of seeing anything beyond the four walls of their houses. He observes, "The demand for female schools among the natives seems to be almost *nil*; they remove their daughters on the most trivial grounds, and contribute nothing towards the expense of educating them."

What must be regarded as the chief feature in the history of education in Oudh during the past year was the opening of the Bulrampore Medical School, the attempt being the first of the kind to provide medical instruction in this part of India. The new school, which is not connected with the Educational Department, was instituted on the 14th April 1873, under an annual endowment from the Maharajah of Bulrampore of Rs. 10,000. Concerning this interesting institution the Report speaks as follows:

The staff consists of a Principal and 3 Sub-Assistant Surgeons. It was at one time proposed that instruction should be given in the Vernacular; but it was finally decided by the managing committee that the English language should be adopted, and that no candidate should be admitted who could not pass a preliminary examination in English, Urdu, and arithmetic. The curriculum will extend over three years, and new admissions will be made every year on 1st July (when the new session commences), should any stipends be vacant. At the end of the course the final examination for the diploma will be held by medical officers selected from the Oudh commission. The first preliminary examination was held in March 1873; out of 42 candidates, 37 were elected, but of these 10 changed their minds soon after, and thus the school opened on 14th May with only 27 students. The number of scholars gradually fell from 27 to 15; 11 resigned and 1 was dismissed. Of 10 Brahmins who joined the school, only 1 remained. The remaining students have, however, made fair progress. Considering that the school has been barely open for a year, and that an institution of this kind has always to encounter at first a good deal of prejudice on the part of those for whose benefit it is intended, the results are not discouraging. According to the scheme of the school, the stipends of the students are paid from local funds in each district, and every district is expected to send as many candidates as it can. The object of this system is to extend the benefits of improved medical skill as widely as possible throughout the province; but in selecting candidates it is generally found that those who are taken from large cities, such as Lucknow, are the least prejudiced.

It is to be hoped that the munificence of the Maharajah of Bulrampore will find many imitators over the whole of India. The extension of medical schools cannot fail to be productive of a great deal of good. It is a trite observation to make, that sound medical knowledge must necessarily carry with it the emancipation of the Hindoo mind from many superstitions. The great cause of sanitation must at the same time be furthered; while the means of relieving suffering will be placed within easier reach of the masses.

THE CIVIL SERVICE IN 1750.—II.

BEFORE 1702, when the two establishments of the East India Company united, the General Government was at Bombay, the Governor of Madras was a Lieutenant-General, and the Bengal factories were subordinate to Madras. The affairs of the Company were then arranged by the President and Council at each settlement. The members were summoned by their chief from time to time, whenever he wanted their advice or co-operation; but, by the Company's standing orders, a Council should have been held every Monday. These orders comprised all the rules laid down by the Court of Directors for the conduct of the administration. A secretary, who was sometimes also a member, usually attended the Council to take minutes of the proceedings. When the President desired the help of his colleagues in any important matter he first obtained the opinions of the youngest of them, the question being settled by the majority of votes. All correspondence with the native powers was carried on by the President alone. The Council, as a rule, comprised the Governor and ten others. The chief military officer on the Madras establishment, long after Mr. Dalrymple's arrival in India, was only a Major, and commonly placed third in rank. But the Governor was in reality the Commander-in-Chief, he alone being able to grant commissions to subaltern officers.

Naturally, the members of council held the principal appointments. The Governor was cash-keeper and mint-master. Very frequently, however, the duties of the latter office were performed in the Governor's name by the assay-master; but this, saith Dalrymple, was "very improper, the assay-master being intended as a check on the mint-master." Samples of the money coined were periodically sent to England to be assayed, for in those days the highest English official was not exempt from suspicion. The cash-chest, the key of which always remained with the Governor, could contain only a certain sum. When that was exceeded the money was lodged in the Treasury under three keys. The Governor and the two senior members of his council formed the Committee of Treasury, with a junior servant as clerk. The other offices belonging to members were that of export-ware-house keeper, who had particular charge of the Company's investments for Europe; accountant, whose deputy was entitled after balancing three sets of the General Books to choose any vacant appointment not pertaining to the lot of a Member of Council; import ware-house keeper, who had charge of the woollens, lead and copper from England; store-keeper; sea-customer, as he was termed; land-customer; grain-keeper, who had charge of the rice laid in stock for the garrison when the rates were low, the remains at the end of the year being sold and the amount of profit and loss entered in the books; rental-general and scavenger; paymaster; and commissary. Sometimes the same individual filled two or three offices at once. The President and Council were Justices of Oyer and Terminer at the Quarter Sessions, and the secretary usually was Clerk of the Peace; the President and Council were also judges in the Court of Appeals on civil suits, and the Members acted by rotation as Choultry Justices to superintend the Police, and in turn visited the Hospital weekly to see that the sick were properly tended. The monthly accounts in every department were laid before the Council in the beginning of the ensuing month, when the balance in hand was reported by the Head of each Department, and regularly minuted in consultation: if greater than the current demand the overplus was paid into the Treasury; and if the expenses were likely to be more than the sum in hand, an advance was requested. The Governor's account of receipts and disbursements, called the cash-account, was not only read monthly, but entered on consultation, as was also the treasury account, the mint-master's account of coinage, and the Paymaster's monthly account of extraordinary disbursements. The balance in the cash-chest was compared with the account monthly. Besides the book of consultations, letters received, letters sent, and country correspondence, there was another book kept in the Secretary's office of cowls (or contracts and grants) and commissions; and a ship book, or register, of all vessels arriving at, or sailing from, the port. A copy of each was sent to the Court of Directors annually, in addition to lists of the covenanted servants, inhabitants, and the amount of revenue received. Yearly, also, each subordinate settlement sent to Madras an "Annual Letter," giving an account of every important transaction that had occurred. The letters and papers from England were pasted into a book—"a much safer way" writes Dalrymple, "than that practised at home, of tying them up in bundles whereby papers are liable to be mislaid or lost."

When Clive had obtained for the Company the Dewanee of Bengal, in 1765, Parliament interested itself in the welfare of the Great Corporation. In 1766 it was agreed that the Legislature should be allowed time "to enable them, on so important a concern, to form such resolutions, as became the guardians of the public welfare: unfortunately an annual sum was exacted from the Company, which satisfied Ministers so long as they could get that; and no competent resolutions were ever taken; had the dividend to the proprietors been restrained on the one hand, and the Government taken nothing, but directed the whole of the surplus, after paying the usual dividend, to be applied to discharge all the Company's debts, at home and abroad, probably the Company's affairs would have then been put on a stable footing, equally beneficial to them, and to the public." Knowing that the Dewanee would rapidly improve Lord Clive and his friends made extensive purchases of Indian stock. In 1769 Clive sold out at an enormous profit, thus giving the credit of the Company a staggering blow which he followed up by a report that "our army was going to Delhi." The fall threatened ruin to those who had entered into the unequal contest with his Lordship, and drove them to desperation. To silence all insinuations which might keep down the stock, the General Court were unanimous in opinion "that the Company's affairs were in a flourishing situation." However, this declaration not having the expected effect, Mr. Vansittart, Mr. Scrafton, and Colonel Forde were sent to India as "supervisors," on a Commission of Inquiry. Whether their action would have improved things is a problem which can never be solved as the *Aurora*, the ship in which they embarked, was not heard of after leaving the Cape of Good Hope. Anyway, the Company was in such distress a few years later that Parliament had to be appealed to, the outcome being Lord North's Regulating Bill or Anarchy Bill, as Mr. Dalrymple terms the measure which, he says, threw all things into confusion. "The Anarchy Bill was the Offspring of Folly and Injustice. During a Whig Administration, the East India Company was left to administer its own affairs; and flourished to the astonishment of the World! A minister never interfered, but to protect or assist them: and, with pleasure, saw a source of employment for the younger sons of the middle ranks of the community, uninfluenced by the Crown: and consequently saw a rising Column of Independence in the Kingdom, essentially necessary to preserve

Publick Liberty, by limiting to just bounds the influence of the Crown, and tending to secure the independence of Parliament." The Anarchy Bill "sent everything running to ruin" and introduced "play houses, horse-racing and other dissipation within the Company's Settlements."

Mr. Dalrymple seeing all this attempted to provide a remedy, and his suggestions, looked at under the light of a hundred years, are most interesting. He was "perfectly convinced, that any Attempt, to introduce a Code of Laws for the Indians, will be ruinous: The Indians are so devoted to their own customs, which they enjoyed many ages before we, in this Island, had even painted Ancestors, that the English Laws are not suited to them: and although in criminal cases, they may, in general, be introduced, they are not by any means applicable to common government, and will tend naturally to destroy that principle of benevolence, which is the link of Society amongst them; every conqueror of India must follow the example of former conquerors, and leave the Indians to themselves, who have existed, as a civilized and polished people, many thousand years, without any laws but religious, and without one lawyer by trade amongst them: so long as the Natives continue to be governed by manners and not by Laws, India may easily be preserved under our Dominion; if the Hand of Superintending Power is made strong to punish delinquents. We have therefore nothing to do but to see that they are protected; and encourage the introduction of the English Language, which will establish our Empire for ever." Mr. Dalrymple was of opinion that the "number of servants to be sent abroad should always be regulated by the requisition from the Company's Administrations in India. I remember when I was a boy at Madras, to have read, in the old records, with a glow of pleasure, a letter from the Court of Directors. When they appointed Mr. Higginson a Factor, they said 'They hoped none of their Servants would take this amiss; for that his Father had been a good and faithful Servant, and that they considered the Son, as a child of the Company's.' This is engaging the virtuous passions on their side, and virtuous passions will do more than all the penal laws which can be conceived: it will be highly proper to establish it as a fundamental rule, that the son of any man who has served the Company with integrity for twenty years, or died in their service, shall be entitled to an appointment in that Service." And now the sons of Anglo-Indians are debarred from earning a living in the East, simply because of their parentage!

INDIAN MISSIONS.

THE learned agent in Tinnevelly of the Society for the Propagation of the Gospel, the Revd. Dr. Caldwell, read not long ago a valuable paper before the Church Congress, in which he discussed the subject of Foreign Missions in relation to Oriental systems of Religion. His reason for doing so was that at the International Congress of Orientalists an obnoxious view had been expressed by one of the most distinguished scholars and men of letters of the time—a view which in Dr. Caldwell's opinion was bound to lead to the abandonment of Missions altogether, or to their being left exclusively in the hands of people possessing "a zeal for God, but not according to knowledge." Dr. Caldwell is impressed with the conviction that should Christianity come to be regarded not as a divine gift to mankind, not as a divinely ordained remedy for human sin and sorrow, but virtually as a human invention, and as springing, equally with other religions, from what is termed "the sacred soil of the human heart," the result must be that missionary zeal will decay, and that where there are ten missionaries now it will be difficult to retain one. In combating the view of the distinguished Orientalist to whom he referred, Dr. Caldwell made the following pointed observations.

> The amount of what is good in Hinduism, as in the character of the Indian people and the structure of Indian society, is often at present exaggerated; and we are called upon, not only to respect that which is good, which is perfectly fair and right, but also to ignore that which is evil, or to forget that the evil is greatly in excess of the good. We seem sometimes, also, to be called upon to regard evil not as evil, but as goodness of a grotesque or unusual type. A very misleading impression might be produced by a series of extracts taken skilfully from the sacred books of the Hindus. It would be easy to select—say from that great storehouse of Indian traditions, the Maha-Bharata—a series of extracts which should contain moral and religious teaching of a very high order; but if it were desired that a perfectly fair estimate should be formed, it would be necessary to explain that such extracts represented only an exceedingly small proportion of the contents of the book, and that much that it contained was so bad—so deeply tinctured with low, tricky morality and indecency—that it has been found to be a practical difficulty—as is the case also with many other similar books—to select any consecutive portions suitable in length, and not morally unsuitable, for the Indian University examinations. I recognise in Hinduism three elements which have contributed in various degrees to make it what it is. First, there is the merely human element, which manifests itself in principles, sentiments, and practices, which appear to be the legitimate outcome of Indian human nature. Our estimate of this, the preponderating element in Hinduism, will depend very much on the estimate of human nature we are accustomed to form. One estimate of the heart, man's moral nature, is that it is "a sacred soil" from which everything that is good and lovely, including the Christian religion itself, naturally springs. Another estimate of the heart is that "it is deceitful above all things, and desperately wicked," and may I not add that if we look around us and look within, this is the estimate which we shall find to be correct? As water, therefore, cannot rise above the level of its source, so we may reasonably conclude that the merely human element in Hinduism will not be found to rise above the characteristics—good in part, but evil in the main—of the source from which it emanates. I recognise also in Hinduism a higher element, an element which I cannot but regard as divine, struggling with what is earthly and evil in it, and frequently overborne, though never entirely destroyed. I trace the operation of this divine element in the religiousness—the habit of seeing God in all things, and all things in God—which has formed so marked a characteristic of the people of India during every period of their history. I trace it in the conviction that there is a God, however erroneously His attributes may be conceived, in or through whom all things have their being; in the conviction that a religion is possible, desirable, necessary; in the conviction that men are somehow separated from God, and need somehow to be united to Him; but especially in the idea I have found universally entertained, that a remedy for the ills of life, an explanation of its difficulties and mysteries, and an appointment of a system of means for seeking God's favour and rising to a higher life—that is, a revelation—is to be expected; nay more, that such a revelation has been given, the only doubt being as to which of the existing revelations is the true one, or the more directly divine. Nor need we hesitate to recognise in such ideas a divine origin, seeing that in human society, and especially in the domain of morals, we may always and everywhere see a Divine Purpose working itself into shape. But irrespective of such considerations, I am persuaded that much of what I have referred to may be traced to a distinctively Christian source. When I look at some of the secondary developments of Hinduism, as, for example, the doctrine of incarnations, the incarnation especially of Krishna, which is so evidently founded on a distorted version of the gospel history of Christ, the doctrine of faith, of grace, of the relation of faith to works, of the relation of divine grace to the human will in salvation—it appears to me in the highest degree probable that we have before us a result of the contact of the Indian mind with the Christianity of the West at some period commencement of modern missions, though when and how this contact took place is at present uncertain.

Dr. Caldwell proceeded to tell the Congress that missionaries have long used extracts from Indian books of authority, not merely for the purpose of showing that those books in many important particulars contradict one another, but also for the much higher purpose of showing that Christianity is not, as Hindoos are apt to fancy, an outlandish novelty, but is in reality in accordance with the best sentiments of India's best minds. In the learned missionary's opinion the late author of that interesting book, "Dravidian Folk Song", fell into the error of over-estimating the proportion of what was good in Hindoo writings; Dr. Caldwell appears to be convinced that evil preponderates in them, and under that persuasion he has not the least objection to the application of the comparative method to the study of religions. He is convinced that whatever religion may suffer Christianity will not do so, but will gain. The objectionable way in which the comparative method may be used is to prove the absence of essential differences between the things compared, by the easy process of omitting essential differences. A comparison of religions cannot be fairly conducted when Christianity is denuded of its most important features.

Dr. Caldwell's idea seems to be that the best way of spreading Christianity is to use its internal evidences. Whatever a missionary may know of philosophy, whether Eastern or Western, the sooner he sets philosophical questions aside and grapples with the conscience the better. This opinion coming from so distinguished a scholar carries with it much greater weight than if it had been advanced by one ignorant of Hindoo systems. It has been found that evidences and arguments from history fall flat on the ear of the masses in this country. The people of India are not, and never have been, fond of fact as such, and they care little about the history of the Church, or the history of the Bible and Christianity. In connection with this topic Dr. Caldwell says:

> It requires no acquaintance with Hindu philosophy on our part, or of history on the part of the Hindus, to enable us to make use of some of the internal evidences of Christianity. It will be possible to show that Christianity is the most reasonable religion in the world, the religion which is most conducive to enlightenment, progress, order, and peace, the religion which is professed by the most cultivated nations in the world, so that civilisation and Christianity are almost conterminous. We get upon higher ground when we show that Christianity is the only religion which is suited to every country, race, and class; that it aims at the peaceful conquest of the whole earth; and that now, nineteen centuries after its first appearance in the world, it is as full of missionary zeal as it was during any previous period of its history. We may dwell with still greater advantage on the high moral teaching contained in the Holy Scriptures—the zeal for righteousness which breathes and burns in every portion of the Old Testament; and which, instead of waxing cold in the New, burns therein with an intenser fervour and with a radiance which is all the lovelier because it seeks to save, not to destroy. Never perhaps is the immense superiority of Christianity to Hinduism more distinctly apparent than when we compare the Hindu incarnations—the best of them incarnations of manly courage, the worst of them incarnations of lasciviousness—with the incarnation of moral goodness, the incarnation of truth and purity, the incarnation of self-sacrificing love, exhibited to the world in Christ. We are on safe ground also, as well as on high ground, when we show that Christian teaching is the only moral and religious teaching in the world which rises above the level of ordinary human nature. It does not swim with the stream of human ideas and inclinations, but firmly resists that stream. It gives us a higher purpose of life and higher motives, and sets itself thereby to raise us to a higher level. It is so much higher than anything we suppose to be high in ourselves, and so

much better than anything we suppose to be good in ourselves, that we cannot but conclude that it must have proceeded from Him from whom we ourselves proceeded, and to whom we have to prepare to return.

Eclecticism has its good features, but missionary zeal would be sadly impaired were those whose business it is to proclaim "glad tidings of great joy" to allow the eclectic spirit to be their animating one. Dr. Caldwell has uttered a timely warning—a warning which becomes his missionary character, for narrow is the path of safety; it is the broad way that leads to destruction.

EPITOME OF NEWS.

Bengal and Calcutta.

— The Assam harvest is expected to be satisfactory.

— Sir Richard Temple left Calcutta for Chittagong on Monday.

— A Commission is now inquiring into the excessive mortality in the Behar jails.

— The Fine Arts Exhibition will close on Saturday next.

— Sir Salar Jung and the Maharaja of Joudhpore left the Metropolis on Sunday night.

— Mr. Grant-Duff is expected to visit Calcutta in a fortnight.

— Admiral Cumming has arrived in the flag-ship *Glasgow*, on a visit to the Viceroy.

— Dancing in Calcutta is said to be fast becoming a vice, there being only half-a-dozen rosy faces in the place!

— Two Duffla Chiefs, named Nanang and Gobind, have confessed to General Stafford that they were the authors of the Amtolla raid.

— Mr. Levien, late Judge of Rungpore, will be allowed to draw Rs. 400 a month, till his time for pension.

— Mr. E. Lethbridge, M. A., Principal of the Krishnaghur College, has been appointed Inspector of Schools in the Behar Division.

— The Bank of Bengal has declared a dividend at the rate of 7½ per cent. per annum for the past half-year.

— The death of Mr. M. L. Beebee, Professor of Natural Philosophy in the Presidency College, is announced.

— The total number of cow-hides exported from Calcutta last year was 5,346,306, as compared with 5,162,713 in 1873.

— A student of the Dacca College carried off the first prize at the gymnastic tournament held lately at Belvedere. The Hooghly College was well represented.

— Later intelligence informs us that of the forty-five captives taken during the Amtolla raid by the Dufflas, thirty-one, and not twenty-seven, have been recovered.

— During the blowing-up of the *Calcutta* near Baboo Ghaut lately, the houses close at hand are said to have been visibly shaken. At first the concussion was ascribed to an earthquake.

— The total demand of land revenue for the past year, in all the territories administered by the Government of Bengal, was Rs. 3,95,43,642, from 2,36,355 estates.

—It is rumoured that the Government intend to demolish the block of buildings known as Spences' Hotel, and to erect new public offices of a permanent character on the site.

— Five-and-twenty years ago, Calcutta boasted of the best race-meeting in India; now, says the *Englishman*, we have a dozen spectators in the race-stand, and races that are worthy of the numbers that come to see them.

— A large number of natives have already been fined by the Magistrate of Howrah for attempting to cross the Hooghly Bridge without paying the toll. A hackney carriage driver has been fined so much as Rs. 50 and also sentenced to two weeks' imprisonment.

— The Money Order Offices in active operation decreased during the past year from 300 to 293. The reduction is due to closure of offices where the business was insignificant, or where proper facilities could not conveniently be arranged. The number of orders issued (245,879) fell below the number issued last year by 23,556 and the amount (Rs. 1,07,20,240) by Rs. 22,01,393.

— The sub-divisions of Durbhunga, Mudhoobunnee, and Tajpore, in the district of Tirhoot, have been formed into a new district, to be styled East Tirhoot, with head-quarters at Durbhunga. The remainder of the present district of Tirhoot, comprising the sub-divisions of Mozufferpore, Hajeepore, and Seetamurhee, will formed into a district, to be styled West Tirhoot, with head-quarters at the station of Mozufferpore.

— There has been a very brisk trade going on between the Dafflas of Pakfi's village, and the sepoys and followers of the camp, ever since the amicable settlement was come to. The Dafflas bring in Indian-corn, or *bhootas*, sweet potatoes, green ginger, and squashes, and barter them for salt or pice. They are also glad to get cloth and rum. Men and women come in alike. The men do the bartering, and the women carry the loads.

— The total revenue from postage stamps in Bengal is a little over fifteen lakhs; but though this is not a very large total for the population and size of the province, the increase for years past has been steady, and the percentage of increase is now larger than has previously been the case. Telegraph stamps amount to Rs. 14,30,620—an increase of Rs. 1,32,000 over last year's receipts, which is attributable to the new telegraph offices that were opened in the famine districts.

— The Governor General has received information that the Secretary of State has invited tenders for bills upon India to the amount of seventy lakhs of rupees, to be opened at the Bank of England on Wednesday, the 20th instant. It is the present intention of the Secretary of State to invite tenders for the same amount (seventy lakhs of rupees) on the first and third Wednesdays of each succeeding calendar month. But he reserves to himself full liberty to make any change in the arrangement thus notified that he may consider expedient in the interests of the public service.

— The transfer of rent suits to the Civil Courts has, throughout the greater portion of the Lower Provinces, withdrawn this important class of cases from the direct supervision of the Revenue authorities. The Lieutenant-Governor has been sorry to find that there is much difference of opinion both among our officers and the people as to whether this transfer is proving satisfactory in its effects. Notices of enhancement and relinquishment are still served through the district Collector, and the number of these affords some index of the state of the relations between landlords and tenants. The Commissioner of Dacca has remarked that in those districts of his Division in which rents are highest, notices of enhancement have been most numerous, and he attributes this to the fact that the royts are more inclined than others to resist the payment of irregular cesses, and that consequently landlords are driven to raise their rents. But the facts appear to admit of a simpler explanation. Where rents are low, it is probable that there is much unoccupied land, and landlords are ready to bid down to the terms which the ryot will accept; but in a thickly populated district the competition for land is keen, and the ryot is forced to bid up to the terms which the landlord may demand.

— The year just closed will occupy a position of some importance in our financial history. The Bank's rate of discount fluctuated between the extremes of 3½ and 11 per cent., having touched the highest point in March and the lowest in July. Only in times of severe monetary pressure, almost allied to panic, has the change been so marked and rapid. In 1857, when the first thunderclap of the Mutiny broke forth, the rate reached no higher limit, and in 1866, in the great commercial panic, the more powerful remedy of 12 to 13 per cent. was applied for a short period only. The year 1874 opened with signs of ease and prosperity in the financial world. Before the 15th of January, however, a great change was manifest, the famine pressure was keenly felt, the market became agitated, securities of all kinds drooped, and in the space of a month or six weeks the Bank's rate rose from 4½ to 11 per cent. The announcement of a new loan had a marked effect on Government paper, which fell from Rs. 104-8 to Rs. 102; speculators subsequently stepped in, and the rate advanced to Rs. 105-6 in July, the highest quotation ever known for Indian 4 per cents. With the rise in Government paper, sterling exchange exhibited a marked depression, and in the same month (July) the demand rate was 1-9¾ involving a loss to remitters of 11 per cent.

— In 1868, the number of lunatics in Bengal was 652 only. The average of the five years 1868-72 amounted to 739; while at the close of the past year it amounted to 1,093, compared with 972 at its commencement. Of the 394 males and 120 females who were admitted to the Dullanda asylum, the majority were drawn from the cultivating and labouring classes, or were beggars, shop-keepers, or domestic servants. 70·6 per cent. of the whole were Hindoos; 26·1 per cent. Mahomedans, and the rest Christians or other castes. It is remarked that the districts where the asylums are situated are those which contribute the most insanes, because probably the residents of remote districts are unaware that provision is made by Government for the custody of lunatics. It is to be remembered, however, that the asylums are all situated in large towns, where cases of insanity are likely to attract more attention than among an agricultural population. Of the exciting causes of insanity, ganjah-smoking is still shown in the returns for the whole of the Lower Provinces as one of the most frequent; and it is observable that in many cases of re-admission the patients are said to have been confirmed smokers. The Lieutenant-Governor is giving special attention to the best means for further augmenting the check (which has been imposed of late years apparently with some success) on the consumption of this most deleterious drug.

North India.

— Sir John Strachey has decided to take measures for the preservation of the Taj Mahal.

— The Yarkund Envoy will stay at Agra for a few days.

— There are now in Lucknow eight barristers, four European pleaders and about 100 native vakeels.

— The Hon'ble Mr. Turner, Judge of the High Court, Allahabad, has accepted the office of vice-president of the Amalgamated Society of Railway Servants in India.

— The reason said to have been given by the Afreedees for abducting the Peshawur bandmaster is, that the Deputy Commissioner would not receive certain petitions which they had sent in.

— The Northern State Railway is at last ready for traffic from Lahore to Wuzeerabad; but there will be a further delay before the line is opened to the public, as the telegraph is not yet completed, and the single line cannot be worked without it.

—A *fakeer* lately visited Aboo, attended by a score of disciples dressed in pieces of wood suspended by chains from their waists. Their chief is reported to take his repose upon a couch studded with three-inch nails.

— There have been slight falls of rain in Satara, Chota Nagpore, the Patna Division, and several districts of the North-Western Province and Oudh. In the Punjab the showers were confined to Umballa

and the Delhi Division, and to only one or two districts in the Central Province.

— The quantity of coal at Warora, where a colliery is worked by a Government establishment of trained European engineers and workmen, has been estimated at 20 million tons, which, at an output of 500 tons a day, sufficient for all probable demands, will last 130 years. This is independent of the fields further north where by borings sunk at a place called 'Bundur" a coal field of considerable extent has been proved, one of the seams being 18 feet in thickness.

— Comparing the results of the month of October, in the year 1873 and 1874, the public health of the Punjab appears to have been strikingly better in the latter. In October 1873 the total deaths registered were 42,749; in October 1874 they were only 32,919. The death-rates of the large towns deserving notice are in Mooltan suburbs, 106; Palwal, 60; Dera Ismail Khan, 60; Umballa, 58; Delhi, 57; and Umritsur, 53.

— The *Simla Gazette* believes that the desire of many residents in India to revisit England for a brief period of twenty-one days, may be rendered perfectly feasible by a little arrangement and concerted action on the part of those whose co-operation is necessary to its accomplishment, without detriment or loss to the State, the Railway Companies or the P. and O. Company. The journey from London to Bombay is now frequently performed in twenty-one days, and, vice versa, the transit from Bombay to London can be accomplished in the like number of days. But it is possible that the distance to and fro may be accomplished by *special arrangements* in thirty-eight days: this would admit of a stay in London of twenty-two days by officers and others to whom sixty days' privilege leave is available in the year.

— A European private has nearly died at Subathoo from the effects of eating a telini fly. When questioned by the doctor he could not, or would not, give any account of himself, but inquiry among the men of his company elicited the information that he had been drinking the previous evening; that before going to bed he went to his box, in which he had a collection of insects (soldiers when located in the hills are in the habit of making such collections), and took out two and ate them. Specimens of what he had eaten were produced and recognised as the telini-fly. The patient, himself, subsequently, made the following statement:—"When I have a pint or two of beer I would eat anything. I have done strange things that way before. It must have been between 8 and 9 p. m. when I ate the beetles." The *Mylabris cichorii* (telee tellenee of the Bazaars) is well known throughout India as a substitute for cantharides.

— The Lieutenant-Governor of the Punjab considers that the recent foundation by the District Committee of Peshawur of some scholarships at the Lahore College for the maintenance of Pathan students indicates a dawning appreciation of the value of modern instruction. It will, however, it is almost needless to say, be necessary to proceed in this matter with extreme circumspection. In the indigenous schools of the Peshawur district, of 2,570 pupils 2,016 are under instruction in Arabic,—a proof, otherwise abundantly corroborated, of the general reverence accorded to the teaching and literature of Islam. In the Government schools of the lower class the number of pupils is only 752, and among these there are very few Pathans, Sayads, or Mullazadas. There is indeed a strong religious prejudice against the Government scheme of education. On other grounds, the Khans object to their tenants going to school, and parents of the agricultural class desire no instruction of children already useful in the fields. In the presence of such obstacles the most cautious and conciliatory mode of action is required. But inquiries personally instituted by the Lieutenant-Governor lead him to believe that some of the existing teachers are willing to accept grants-in-aid on the departmental terms; to those—and there are several—who teach Persian well, rewards might be given; and by others presents of Persian and Arabic school books would be willingly received. The exertions of leading men in the promotion of education should always be liberally acknowledged.

— The experimental opening of schools in Oudh has resulted in the discovery that fathers do not object to send their daughters to school, provided the strictest precautions are used in the management of the school and the custody of the girls, and provided they (the fathers) do not contribute one pie toward the expense. If, however, the schools can do little or no good after all, as some imply, it seems to Mr. Nesfield that there is not much value in the above discovery. It has been proved that Female schools are possible; but it has not been proved that they are useful. The education of girls or women, who are kept in the strictest seclusion after their schooling is finished, and who cannot even go to the school-house except in a doolee paid for by Government, or under the closest escort, is scarcely a matter in which the State is called upon to interfere. In Burma, where all girls and women, from the highest to the lowest, are perfectly free, and have threefourths, or more of the bazaar trade entirely under their control, and therefore exercise great influence for good or evil upon the material prosperity of the province, the education of women becomes a public question, and the State is justified in taking steps to promote the cause as far as it is able. But in Oudh, where women are not free, and where they have nothing whatever to do with the progress of trade, or, in fact, with any other pursuits, except what are purely domestic and secluded, the education of women remains a strictly private and domestic question, and should therefore be settled, not by the State, which has no interest in the matter, but by fathers, husbands and guardians. As long as the men keep entire control over the thoughts and actions of women, it is for them, and not for the State, to decide what education, if any, their women shall receive.

Bombay.

— An officer has accidentally shot a native dead at Lanowlee. Deceased was mistaken for a pig.

— The monthly Rubattino service between Genoa and Bombay will in future be fortnightly.

— The Great Indian Peninsula Railway Company has notified the abolition of the carting agency from the 1st of February.

— The excessive duty on salt is driving shipmasters to load vessels in Portuguese territory.

— At a recent show in India, a broken-down old Arab, of no particular breeding, took the first prize for stallions!

— The Government of India has sanctioned a pension of Rs. 2,000 to Mr. J. C. Hall, who, while labouring under temporary insanity, shot several natives in Goozrat last year.

— The continued drought is causing serious apprehension at Bushire, and it is feared that, should the fall of rain be much longer deferred, another famine may ensue.

— Some excitement was caused at Matheran lately by the statement that a gentleman staying there was missing. He was subsequently found in the jungle, having lost his way while on a shooting expedition.

— Another "Coram-street murder case" has occurred in Bombay. Fortunately, the poor woman is recovering from the wounds she received, but the would-be murderer, a Mussalman, has not been discovered.

— Dr. MacGregor, of the P. and O. steamer *Australia*, has accidentally shot an Egyptian nautch girl in a Suez *café*. Fortunately the wounds were only flesh ones, and the sufferer was content to receive compensation in cash.

— Sir Munguldas Nathoobhoy, who has recently received the honour of knighthood, is, says a native paper, a "self-made and self-taught" man. He is one of the largest landholders in Bombay and, at different periods, has given away about two lakhs of rupees for charitable and other purposes.

— H. M. S. *Vulture* returned to Aden on the 19th December. While in the bay of Rasal Shurmah, ten war dhows belonging to the Nukeeb of Maculla and seven in the service of the Jemadar of Shuhur arrived and anchored on either side of the *Vulture*, both parties appealing to the commander to decide their claims to the above named bay. The dhows of the Jemadar stood out to sea on the departure of the *Vulture*.

— It appears that the Bombay City Missionary, Mr. Kobke, who interested himself in the case of fifteen men belonging to the ship American *Sagamore* did so on good grounds. While on the high seas the captain and his officers treated the men with the utmost cruelty, and on arrival in Bombay harbour they were confined in a veritable "black hole", because they desired to go on shore and lay their complaints before a magistrate. Unfortunately for the poor fellows, their case cannot be recognised as the *Sagamore* is an American ship. Mr. Kobke deserves all praise for the kindness he has shown the miserables.

— A special meeting of the local Chamber of Commerce has been held to consider the propriety of memorialising the Government of India to abolish the import duty on cotton goods and yarns and other articles. The chairman advanced the argument that if the import duty were abolished local mills, by the extra zeal competition would rouse in them, would be able to compete with Manchester in the Levant and elsewhere, and that outside of Bombay was really the field which the local mill-owners would be compelled to enter if they wished to thrive; urged the right of the consumer to have all the benefits derivable from free trade competition; called attention to the evils inflicted upon trade in India by Municipalities being permitted to levy taxes on goods upon which the Government of India alone should have a claim; and contended that the Government of India would act more wisely if instead of having import duties it abolished these and raised its revenue from articles produced in India.

— The *Gazette* of the 9th instant says: The pitching of tents on the general Parade Ground yesterday morning excited a good deal of curiosity in Bombay, and it soon became known that orders had been sent to Poona late on Thursday night for a wing of a European Infantry Regiment, and a battery of artillery (guns and horses), to be despatched without delay by special trains to Bombay. In the evening the Head Quarters wing of the 7th Fusiliers arrived at Boree Bunder station, and marched to the Parade Ground, where an immense crowd of natives assembled round the camp. The battery of artillery was expected to arrive in the course of the night. Speculation of course is busy with the cause of this movement of troops, which was so sudden that we understand the Fusiliers only received orders to march at half-past four yesterday morning. One rumour is that the reinforcement of the garrison of Bombay has been made with a view to the approach of the Mohurrum. If this opinion be correct, the Bombay Government is evidently determined to take time by the forelock, for it is still a month till the Mohurrum begins, and all was so quiet yesterday that the 100 men of the 20th kept under arms as is now usual on Fridays, were sent off duty at an earlier hour than usual. Certainly, if the troops had only been sent for to prevent the outbreak of fresh disturbances between Parsees and Mussulmans, there could have been no need for sending to Poona for them in such a violent hurry. There are other rumours about the state of affairs in Bombay which we do not think it advisable to repeat. Our own impression is that these troops have been brought down to Bombay as a precautionary measure, in case their services should be required elsewhere, possibly in Goozerat. We called attention a day or two ago to

the fact that Ahmedabad is at present left without artillery; and perhaps the battery from Kirkee may be ordered to move on from Bombay in that direction.

Madras.

— The local Bank has declared a dividend for the half-year at the rate of six per cent. per annum.

— The Comptoir d'Escompte de Paris is about to open a branch at Madras.

— The Vizagapatam District is said to be swarming with man-eating tigers.

— While fighting with a polonga snake a cobra, resident at Paliagoda, Ceylon, managed to swallow its opponent's head and five inches of the body.

— It is proposed to establish a Company in Madras to be called the Napier Foundry Company, for extracting iron from the ores which abound in the neighbourhood of the city.

— A European adventurer, calling himself "Mr. Colebrook Rutherford," and passing himself off as a capitalist interested in tea planting, has been arrested by the Ceylon police for fraud.

— A peculiarity about the Colombo Christmas is the immense amount of drinking carried on by the lower classes of the native community—not the moderate enjoyment which should characterize a great festival, but drinking with a resolute intention to become drunk as soon as possible.

— A few months ago the Madras University prescribed a portion of an erotic poem for the Matriculation Examination in 1875, viz., "Yousuff Zalikha—from the Dastan-i-Shama-i-Jamal-i-Yûsuff to the Chapter Dar chah, and Aklitam Yousuff-ra, inclusive." Dr. Murdoch tells us that the very subject is sufficient to condemn the selection. It is a long Mahomedan poem on Joseph and Potiphar's Wife, and the story is so ardent in its descriptions as to make the Song of Solomon seem like snow in summer. It is true that the love and sufferings of Zulaikha are intended to represent not alone an earthly passion for a lover, but the aspiration of a human soul after its Maker. Still, this "deep mystic meaning" will not be caught by young men, and its effects can only be corrupting. We believe that the poem has been changed for another.

— On Saturday week last a grand procession went on foot to the tomb of the late Prince of Arcot. According to the *Mail* five Government camels, with handsome furniture and trappings went in front; a number of native musicians, in red uniform, followed amid a roll of drums and braying of horns; a gilded "punjab" (the image of an outstretched hand) was borne after, by mounted men; His Highness's battery of three brass guns, with ammunition came next, drawn by bullocks; then came three troops of the Governor's Body-guard, under the orders of the Commandant, the Commander-in-Chief's Native Aide-de-Camp, with the Prince of Arcot's troopers, followed by the band of the 17th. N. I., playing a march; eight Companies of the Regiment, under command of a Field Officer; a long retinue of men bearing coloured flags followed by four led horses, richly caparisoned, and protected from the heat of the sun by silk umbrellas and sun shades, accompanied by swordsmen with shields; a number of *fakeers* dancing and shouting and blowing horns; a camel with a silken covering for the grave, and lastly the Prince of Arcot and other chief mourners marching on foot. These, including His Highness, carried a silver pot containing sandal-wood powder, on their heads by turns. On arriving at the tomb, the procession was reversed, the troops facing inwards. The Prince and mourners marched to the grave, which they anointed with sandal-wood paste, besides performing other ceremonies. The silk covering was then thrown over the tomb, and the concourse feasted with sweetmeats.

— A singular custom prevails throughout Southern India. If a young woman does not become a mother for several years after the consummation of her marriage, some matron interested in her sets about ascertaining the future prospects of the young lady by the following method:—On a given lucky day, early in the morning, the mother or other relation, having a husband living at the time (for widows cannot take part in any auspicious ceremonies), takes kunku (red powder with which Hindoo females mark their foreheads), powdered turmeric, betel leaves and nut, with an offering of jagery or a couple of plantains, to the plant called *Unmatti* in Kanarese (*Datura fastuosa*). Sweeping the spot on which the shrub stands, and spreading thereon cowdung and water, the stem of the plant is rubbed with the coloured powders, and betel, with a couple of fruits or a piece of jaggery, as the case may be, is offered to it; and it is invited to attend the house of the hostess for meals, as if it was a sentient being or human guest capable of responding to the call. After this preliminary, a few raw fruits of the plant are plucked and brought home with all possible haste. One or more of the fruits are cut with a knife. The right halves are thrown away as unlucky, and a small quantity of the seeds of the left halves, say a teaspoonful, is taken out and ground with fresh milk. This is then strained in a clean cloth, and kept ready to be swallowed off in a draught.

— The woman or girl to be operated upon anoints herself and takes a warm bath, and before her system has cooled down from the effects she is made to sit on the threshold, and in that posture to drink off the draught prepared for her, the female friend taking care to pour it down her throat, and to put a betel-leaf over her tongue, lest it should be hardened by the touch of the draught. This done, the patient is served with *kichadi* without salt or milk, and also saltless brinjal curry, and is immediately put to bed. Her sleep does not last long, and, the preparation having by this time operated on the system, she gets up and begins to rave and play the pranks of an insane person, using, however, only words peculiar to her sex. Her hair is combed, she is dressed with a fresh *sádi*, and is decked with ornaments as on a festive occasion. Female relations successively mount guard over her, lest she should run about mad. She catches hold of anything, often a doll placed at her disposal by sight-seers, and calls it her child, and often plays the part of a mimic mother, not unaccompanied with incoherent expressions. If the actions of the patient are so directed, they are taken for a propitious sign of her becoming a prolific mother eventually, but if, on the other hand, she weeps, as some often do, or performs other inconsistent actions, they are taken to augur ill. In this state of mind the patient is consulted as an oracle by credulous and ignorant neighbours, who assemble on the occasion, as to whether they will obtain the object of their wishes. Any replies the patient gives are often regarded as a prophecy.

Feudatory.

— Holkar's State Railway is said to be insufficiently ballasted.

— Sir Philip Wodehouse formally opened the High School at Rajcote on the 9th instant. All the chiefs and officials were present.

— Sir Salar Jung has contributed Rs. 500 to the fund of the Female Normal School of the India Reform Association.

— The Resident at Hyderabad has issued orders for the assemblage of a small Camp of Exercise at Aurungabad. The troops will be wholly contingent.

— Mr. Dadabhoy Nowrojee has resolutely declined to resume office as Dewan of the Gaekwar. No new Dewan has been appointed.

— Mr. Souter and his detectives have again visited Baroda. In addition to the evidence already obtained, some fresh documents have been discovered, still further compromising the Gaekwar.

— A native of Travancore asserts boldly that, if an honest and liberal observer "comes to the conclusion that the present state of affairs in Travancore is such as to necessitate the appointment of a Commission of Enquiry, all the Native States in India—not one excepted—are not worth two hours' existence. I fear that some of the rulers in Central India and Rajpootana deserve a greater puishment than mere dethronement."

Burma and the East.

— The chaplain of Rangoon has been fined Rs. 40 for assaulting a petty native official.

— A native of Moulmein has been sentenced to seven years' rigorous imprisonment for cutting off his wife's ears.

— The total prison population of Burma during the past year was 13,043, excluding civil, under-trial, insane and transferred prisoners, and consisted of 4,554 in jail at the close of 1872, and 8,494 imprisoned during the year. In 1872 the number sent to jail was 7,488, so that the number in 1873 increased by 1,006.

— We lately gave particulars of the seizure of the French steamer *Avenir* by the Spaniards, for alleged breach of blockade in the Sooloo Sea. In the Batavia journals appears an extract from a Macassar paper, which states that a month after being made a prize, along with her cargo, and sent up to Manila under the command of a Spanish naval officer and crew, the vessel was released by a junta, but her cargo was detained. Captain Bachelerie, who considers that he has been treated extremely illegally and arbitrarily, has complained to the French consul at Manila, and has made a considerable claim for compensation, which claim the consul will endeavour to lay before the Court at Madrid, by means of the French Government.

— There were six cases of murder in the Akyab district last year. In a dispute about an old debt of four annas, a man was cut down and died in two days; the accused was found to be insane by the Sessions' Court. A man who had an intrigue with a woman, was murdered by the husband, wife, and two men, and all of whom were sentenced to death; the two latter were acquitted on appeal and the former executed. In a quarrel at the funeral of a priest, one man killed another with a stick, absconded, and has not been since heard of. A thief, on being discovered in a house, stabbed a woman who had seized him; her son on coming to her assistance was also stabbed; the woman died immediately; the murderer was not recognized and has absconded. A man who had come from a neighbouring village to look after land, was speared to death on his bed; an arrest was made, but the evidence was insufficient. In November, a man way-laid and beat another who had given evidence against him in court, death ensued in a few days, the accused was arrested and the case is now pending. Thus, two cases have been detected; in one the accused was acquitted as insane; in one the accused persons have been convicted; in a third the accused is under trial; in a fourth the accused has been discharged; and in two cases the murderers have absconded. Of the six cases, one was committed by an insane person, one from causes in connection with women, three from causes arising in enmity, and one for plunder.

— British Burma generally was in a prosperous state during the past twelve months. The rainfall of 1873 was heavy, yet well spread over the wet season, so that there was but little inundation; and the rice harvest was the largest ever known, yielding not only an ample supply of food for the inhabitants of the province, but also upwards of 800,000 tons for export, of which about 290,000 tons were shipped to Calcutta for the famine districts of Bengal, while the European markets were amply supplied, and several thousand tons forwarded to Upper Burma. Cattle disease, one of the greatest drawbacks to agriculture, still prevails, and in some districts of the province, especially in Henzada, whole herds of ploughcattle were swept off during the year under report. Steps have been taken to alleviate the losses from this cause by the employment of a Veterinary Surgeon, who is deputed from time to time to places where

disease breaks out, and endeavours to show the people how to adopt remedial measures, and who is also instructing in veterinary practice a number of young men selected from the various districts and sent up with scholarships to Rangoon with a view to their being ultimately employed as district cattle doctors. The chief causes of the disease are, no doubt, want of shelter and bad water. The latter is being remedied in some parts of the country by the reservation of tanks and other small sources of water-supply which have hitherto been let as fisheries, and the cultivators are encouraged to join together and form small reservoirs of water. In course of time they will no doubt see that it is to their advantage to provide shelter for, and take better care of, their cattle than they do at present.

— The authoritities are agreed in estimating the construction of the Rangoon and Irrawaddy State Railway at someting less than £5,000 a mile, or at £800,000 altogether, on which latter sum interest at 4 per cent. would amount to £32,000. The highest estimate for annual expenses of maintenance and working is £85,000, and consequently the total annual charge will not exceed £117,000. Against this is to be set an estimated gross revenue of £126.000, made up of passengers' fares, rates for rice, and rates for through traffic of miscellaneous goods, in regard to each of which components, very commendable care has evidently been taken to avoid over-calculation. The passenger traffic, reckoned at £42,000, annually, represents 900 daily journeys each way, averaging 16 miles, and charged at one penny a mile, and since, even now, as has been ascertained by actual enumeration, 1,800 passengers on an average pass daily between 6 a.m. and 6 p.m., over a bridge 60 miles from Rangoon, it seems moderate to assume that not less than the same number will, at different places on a line of 160 miles in length, be prepared to avail themselves daily of the railway for journeys of so short an average as 16 miles. That the railway would obtain the whole of the through miscellaneous goods traffic can scarcely be doubted, and that traffic, even though it should remain stationary at the present quantities of 35,000 tons up, and 13,000 tons down, would, at the rate of three farthings a ton for the former, and three half-farthings a ton for the latter, represent the total assumed, viz. £41,500. There remains the estimate of £43,000, for conveyance of rice. Mr. Molesworth, who previously had been entirely sceptical on the point, since going in person over the ground, and seeing what amazing progress rice cultivation has made within the last two or three years, no longer questions that the railway would obtain at least 130,000 tons, the quantity required to pay £43,000. The calculations furnished by Mr. Eden and Colonel Oliphant fully justify this estimate.

Asia.

— The Shah of Persia is said to have offered pecuniary help to Ayoob Khan, of Herat.

— The Russian campaign against the Toorcomans has begun. While the Tchikishlor columns are marching up the Attreck, the Petrolovsk force has crossed the Amoo Darya and is operating in Khiva.

— It is rumoured in Cabul that Khan Aka, of the Emak tribe, and father-in-law to Yakoob Khan, has attacked Furrah with 3,000 sowars, and taken it after three days' fighting.

— The Japanese Government has issued a proclamation requesting the provinces to give information of all important events that have happened within their limits since the revolution, in order that they may be recorded in the History of Japan, now being compiled.

— Yakoob Beg, the Ameer of Kashghur, appears to be quite convinced that it will be advantageous to his interests to assume a friendly attitude towards Russia. He is preparing an Embassy to General Kaufmann at Tashkend, and a letter from that place states that the 12,000 roubles claimed by the Russian merchant Somoff as compensation for his losses at Kashghur, last year, are to be paid to him without deduction by the Ambassadors.

—An insurrection in the native city of Foochow has been averted only at the eleventh hour by a timely concession on the part of the authorities. The Toutai had by proclamation prohibited a monster Joss procession, at which the people became very excited, and threatened to close their shops and resist the Mandarins to the uttermost unless the procession was allowed. Troops were called out, but the people were firm, and ultimately carried their point.

— The master of the British barque *Corinne* reports that on his passage from Port May to Chefoo on 10th October, when in the West Corean Straits, he passed close to two small islands about three quarters of a mile apart and about seventy feet high, and as large as little Green Island. Sentinel Island at the time bore S. S. W., distant eight miles or there-abouts. As these islands are not marked on the Admiralty charts corrected to 1870, the captain thought their existence should be made known.

— The Ameer of Cabul is said to have received the following urzee from Mohamed Ayoob Khan, brother of Yakoob Khan: "When you sent for Yakoob Khan, you gave your word and took an oath on the Koran that you would not ill-treat him, but you did not keep your word: you imprisoned him. Yakoob Khan is your son, you should not have rewarded him by putting him to the sword. As for your thinking to take Herat, I warn you beforehand that if thousands of men are killed and wounded under the fort, you will not be able to take Herat."

— While in the time of Iyeyas the Japanese state records gave the rice crop of the entire country as 28,900,000 *kokus*, the present estimate for an average year is under 30,000,000—and this notwithstanding an increase in population and acreage under cultivation of far greater ratio. With nearly nine millions of acres in tillage the country supports only 3½ persons to the acre, while Belgium, which contains 25 per cent. more inhabitants to the square mile than England, not only supports in comfort and independence five millions and a-half, but actually exports more food than she imports.

— General Kaufmann's elaborate scheme for the reorganization of the whole military and civil administration of Russian Toorkestan is now before the Council of the Empire, where it is being examined by special committees. It is notorious that this outlying Province by no means pays its way at present, but it is very improbable that any change in the administration will ever effect an alteration in this respect. The expenses in Toorkestan as a frontier Province are to a great extent of an Imperial nature, and the outlay there will bear ample fruit in extending the civilizing influence of Russia among the Central Asian tribes.

— The Finance Department of Japan has been making up the accounts of the Formosan Expedition, and it appears that very nearly ten millions of dollars have been expended from first to last, less the three-quarters of a million which China has engaged to refund, subject to a payment of 100,000 taels to the surviving families of the massacred Lewchewans. Of the total expenditure, less than one-half remains in the shape of transports, arms, and miscellaneous supplies deemed essential for the prosecution of the campaign. Altogether, it would be within bounds to say that the sum spent, for which there is nothing whatever to see, is more than six millions of dollars.

— The news of the settlement of the difficulty between Japan and China has as yet had no apparent effect on the warlike preparations that have been the rule for some time past. In the North and South Chinese Camps the troops are undergoing daily drills with occasional field days. In the latter camp a body of five hundred picked men are being put into shape according to western ideas, and already make a very good show. Were it not for their being badly armed, they would form a tolerably efficient battalion. As it is, however brilliant an appearance they may put in on the Parade Ground, a hundred breech-loaders would, it is to be feared, mow them down by scores.

Literary.

— The Duff scholarship for languages has been, for the third time, carried off by a student of the La Martiniere College, Calcutta.

— The graduates of the Calcutta University intend starting a College Reunion, on the principle of that at Oxford. The first was held on New Year's Day and was very successful.

— The *Indian Railway Service Gazette*, of which only two numbers have yet been published, reflects much praise on its originators and editor. Its articles are eminently suited to the class for whom the journal is intended, and the "get-up" of the whole is equal to that of a district paper in London. We hope that the *Gazette* will prosper, as it certainly will do if the care bestowed in the issues we have seen is continued.

— Some waggish individual lately sent the *Deccan Times* Tom Moore's "Minstrel Boy" as his (the waggish individual's) own production. This is what the Secunderabad paper says about the poem:—

"We have just received the following feeble production from the pen of a would-be-poet. He styles it an Irish Melody, the idea evidently being taken from the charming Nigger Melodies of the Great American War songster, and with a refreshing confidence in his own abilities he asks us to look it over, and publish a critique on it. It is not pleasant to have to dim the brightness of this rising star, but we cannot conscientiously pursue any other course:—

"The Minstrel Boy to war is gone.
"In the ranks of death you'll find him."

Shall we?—We think not—Reckless, dare-devil fellows as we doubtless are, we should scarcely venture into such imminent peril in search of the corpse of an idiot boy. We use the expression "idiot boy" advisedly; for who but a youth of weak mind would, having previously slung a *wild* harp behind him, supply the term, "Land of Song" to a country which has been notably deficient in the production of musical genius, and in whose metropolis, a few month ago, a well-known Prima Donna was during the performance of "Il Trovatore" interrupted in the middle of the Miserere scene by loud groans and cries for the "Last Rose of Summer;" an air which would never have been known to the musical world had it not been taken in hand, refined and improved upon by a second-rate Italian composer. Passing over the wonderful self sufficiency with which he hints at the possibility of *the whole world* being interested either one way or the other in his potato field of an island, we come to the melancholy truism at the beginning of the second verse—

"The minstrel *fell!*"

Of course he fell!—Let any one of our readers sling behind him an ordinary sized harp, (either a tame or wild one,) and then try and run away, as the idiot boy probably did, and we don't mind laying him odds that he'll fall—

"But the *foeman's chain*
Could not bring his *proud soul* under."

Who said it could? Who would ever suspect a foeman's chain of either bringing a proud soul under, or of subduing a harp?—But to proceed

"The harp he loved ne'er spoke again
"For he tore its chords asunder."

The meaning of these two lines is veiled in mystery. Does the writer mean that the idiot boy struck a chord on his instrument? Or does he mean that; having like a modern prize-fighter strengthened his body at the expense of his intellect, he seized all the chords or strings of his harp, and by a gigantic muscular effort broke them? We incline to the latter reading, and if this was all that he did, the first intelligent foeman who picked it up probably had it restrung at a trifling cost. But why say more?"

— The following are selections from a series of religious and moral sentiments freely translated from Indian writers, by Dr. J. Muir, and published in the *Indian Antiquary*:—

Mahabh. XII., 12084, and 9. "*Lay up for yourselves treasures in heaven, where thieves do not break through and steal.*"

Before decay thy body wears,
And with it strength and beauty bears;
Before disease, stern charioteer,
Thy frame's dissolver, death, brings near.
Those noblest treasures hoard in haste
Which neither time nor chance can waste.
With ceaseless care amass that wealth
Which neither thieves can filch by stealth,
Nor greedy tyrants snatch away,—
Which even in death shall with thee stay.

Sanitisataka, 3, 5. *Remember thy mortality.*

Thou hear'st that from thy neighbour's stores
Some goods by theft have vanished; so,
That none of thine by stealth may go,
Thou sett'st a watch, and barr'st thy doors.
'Tis well: but know'st thou never fear,
When thou dost learn that every day
Stern death from many a dwelling near
A helpless victim tears away?
Deluded mortals, warning take,
From such insensate slumber wake!

Chanakya, 5. *Knowledge a treasure which cannot be lost.*

With knowledge, say, what other wealth
Can vie, which neither thieves by stealth
Can take, nor greedy kinsmen seize,
Which, lavished, suffers no decrease?

Mahabh. V. 1474. *Never do what would distress thee on a sick-bed.*

Such deeds as thou with fear and grief
Would'st on a sick-bed laid, recall,
In youth and health eschew them all,
Remembering life is frail and brief.

Mahabh. XIII. 5572. "*Do to others as ye would that they should do to you.*"
Whene'er thy acts the source must be
Of good or ill to other men,
Mete out to them the measure then
Which thou would'st have them mete to thee.
Mahabh. XII. 5528. "*If thine enemy hunger, feed him.*"
That foe repel not with a frown
Who claims thy hospitable aid;
A tree refuses not its shade
To him who comes to hew it down.
Pref. to Halhed's 'Gentoo Code.' *Forgiveness of injuries.*
A hero hates not even the foe
Whose deadly bow is 'gainst him bent;
The sandal-tree with fragrant scent
Imbues the axe which lays it low.
Drishtanta Sataka, 76. "*A prophet has no honour in his own country.*"
A man in whom his kindred see
One like themselves, of common mould,
May yet by thoughtful strangers be
Among the great and wise enrolled.
While herds a herd in Vishnoo saw,
Gods viewed the lord of all with awe.

— The Rev. T. P. Hughes tells us that prayer (Arabic *Sula*, Persian and Hindostanee *Namaz*, Pushtoo *Nmuz*) is the second of the five foundations of Islam. He translates the words *Sula* and *Namaz* by the English word *prayer*, although this "second foundation" of the religion of Mahomed is something quite distinct from that prayer which the Christian poet so well describes as the "soul's sincere desire uttered or unexpressed." It would be more correct to speak of the Mahomedan *Namaz* as a service; "prayer" being more correctly rendered by the Arabic *du'a*. In Islam, prayer is reduced to a mechanical act, as distinct from a mental act, and in judging of the spiritual character of Islamism, we must take into careful consideration the precise character of that devotional service which every Muslim is required to render to God at least five times a day, and which, undoubtedly, exercises so great an influence upon the character of the followers of Mahomed. It is absolutely necessary that the service should be performed in Arabic; that the clothes and body of the worshipper should be clean, and that the praying place should be free from all impurity. It may be said either privately, or in a company, or in a mosque—although services said in a mosque are more meritorious than those said elsewhere. In addition to the daily prayers, the following are special services for special occasions: *Sālat-i-Juma'*.—"The Friday Prayer." It consists of two rikats after the daily meridian prayer. *Salāt-i-Musāfir*.—"Prayers for a traveller." Two rikats instead of the usual number at the meridian, afternoon, and night prayers. *Salāt-i-Khauf*.—"The prayers of fear." Said in time of war. They are two rikats recited first by one regiment or company and then by the other. *Salāt-i-Tarāwih*.—Twenty rikats recited every evening during the Ramazan, immediately after the fifth daily prayer. *Salāt-i-Istikhāra*.—Prayers for success or guidance. The person who is about to undertake any special business performs two rikat prayers and then goes to sleep. During his slumbers he may expect to have "*ilhām*" (*lit* inspiration) as to the undertaking for which he seeks guidance! The *Azan*, is the summons to prayer proclaimed by the *Muezzan* (or crier), in small mosques from the door or side, but in large mosques it ought to be given from the minaret. The following is a translation, "God is great! God is great! God is great! God is great! I bear witness that there is no God but God! (repeated twice) I bear witness that Mahomed is the Apostle of God! (repeated twice) Come to prayers! Come to prayers! Come to salvation! Come to salvation! God is great! There is no other God but God!" In the early morning the following sentence is added: "Prayers are better than sleep." The Wahabee *Azān* is just half the length of that commonly used. The sentences generally said four times they say only twice, and those repeated twice, they recite only once. The summons to prayer was at first the simple cry, "Come to prayer." In this, as in most of his ritual, Mahomed has not much claim to originality, for Bingham tells us that a similar custom existed at Jerusalem (*vide* Antiquities, Vol. II., p. 489)—"In the monastery of virgins which Paula, the famous Roman lady, set up, and governed at Jerusalem the signal was given by one going about and singing *hallelujа*," for that was their call to church, as St. Jerome inform us.

Ecclesiastical.

— Speaking of the visit of the Rev. A. N. Somerville to Calcutta, the *Christian Intelligencer* says: Mr. Somerville's energy has taken the inhabitants of Calcutta by surprise, and has in itself produced an effect on some who would otherwise scarcely have been much affected by his teaching. We hear that some of the native pastors have been much affected by the earnestness and zeal displayed by him, and have been led to ask themselves whether they too cannot do more in their Divine Master's cause. Mr. Somerville's advanced age, combined with his wonderful activity, cannot fail to impress all who hear and see him preach. His manner and his gesture is sometimes most vehement, so much so indeed, that it has given offence in some quarters: but it is, at the same time, so manifestly the result of an earnest heart, that most of those who hear him, though there may be certain things about his style which are not quite in accordance with their taste, are constrained to overlook such minor defects, feeling, as they cannot but feel, the power of his solemn and earnest appeals. His meetings have been carried on with sustained good attendance, and there has not been wanting evidence of the presence of the Holy Spirit, accomplishing a true work of grace in many hearts. Perhaps great and striking effects such as would make a fine figure in a report cannot be said to have been yet produced, but we believe the work is none the less real on this account, and will probably be found to be none the less permanent.

— Dr. Mullens and Mr. Pillans have written marvellous histories of success, with prospects of yet greater prosperity, in Madagascar. As a specimen of what they saw we give Mr. Pillans' account of a visit to a town called Trabonjy:—After crossing the desert we came to a line of country near the coast, where there were large towns and some exceedingly interesting churches. One of these towns, Trabonjy, is about five or six miles from the junction of the Ikiopa and the Betsiboka rivers. We went in the evening to the chapel—a large building capable of holding 1,200 or 1,500 persons. The people began to flock in, and a short time afterwards the Governor came in; after shaking hands with myself and Dr. Mullens, he said, "Let us pray," and offered thanksgiving to God for having brought us there, saying that it was not by our own guidance we came, but by God's good guidance. Next morning the governor, the pastor, and a great many elderly matrons, came and asked some of us to stay, as they wanted to hear a missionary. I do not know if ever they had seen an English lady before, but they pressed my wife very much to stay. My brethren and myself had a good deal of talk with them as to the need there was for prayer, but they said, "We do pray." The governor said that every evening he had worship in his house, and the people outside were invited to come in. Here there is no Christian missionary. All this is the outcome of the spontaneous action of the people, who are constantly pleading for some one to guide them.

— A Missionary whose home is in Gonda writes as follows to the *Lucknow Witness* from the farther side of the Nepal boundary:—"In company with a Native helper I have been spending several days here on the border of Sir Jung Bahadoor's territory. The country is dotted with villages, in all of which we find attentive hearers, and hundreds who have never heard of Christ. Lately we visited Nepalgunge at the foot of the Nepal Hills, perhaps the most important station along the Oudh portion of the boundary. The Nepal Government is represented here by a captain, with whom we had an interview. We stated that we had come merely to see his city and preach in the bazar: but frightened perhaps at the sight of a missionary, he was not willing that we should preach. As we came back from his residence the people flocked around us beseeching us to stop and explain our religion to them. Our mouths were closed, however, as we did not deem it best under the circumstances to provoke hostility. Nepalgunge is a large trading town, and during January is crowded with Oudh merchants and the mountain people bringing ores, birds, spices, &c. I trust it and the passes beyond will soon be open to the missionary, and meanwhile have arranged to have a colporteur and Native preacher labour in it during a part of this cold season. From what I have seen of the people of this and the higher regions, I am convinced that they will readily be reached by the Gospel message. So may it prove."

— The *Mission Field*, the organ of the Society for the Propagation of the Gospel in Foreign Parts, gives the following interesting account of a Chinese church in Guiana: From the time of the first introduction of a small body of Christians sent to the colony in 1863, under the auspices of the Rev. Mr. Lobschied, there seems to have been a quiet work going on, mainly through the energy of the converts themselves. At first the work was confined to the Skeldon estate in Berbice, where Mr. Lobschied's people were located, but after serving the term of their indentures, these people gradually migrated to other parts of the colony, and carried with them the desire to impart to their countrymen the knowledge they had themselves gained. In this way alone can we account for the considerable progress already made among these people. The Chinese converts recently announced their wish to provide themselves with a small church in which services might be held in their own tongue. The governor took at once a lively interest in the project. It was arranged that the laying of the foundation stone should be preceded by a solemn service in the church of St. Philip. Long before the hour appointed this spacious building was filled; and certainly a strange sight it was to see in a Christian congregation nearly 300 Chinese faces. The Bishop expressed the great pleasure it had given him years ago to receive from China the first Christian immigrants, who came with letters of recommendation to himself. From that time he had been in constant communication with the different Christian settlements that had been formed, and could bear testimony to the steadiness and high conduct of the converts. He expressed a hope that this was the commencement of a larger ingathering of the heathen of all races, and that native ministers would, in a few years, rise up to spread the Gospel throughout the land. A procession was then formed, consisting of the choir and a large number of clergy, with the whole body of Chinese, accompanied by their catechists, from the church to the *site of* old St. Philip's, where the foundation stone was laid.

TELEGRAMS.

FRIDAY, JANUARY 8TH.

MacMahon has addressed a message to the Assembly asking them to vote for the bill in favour of a first and second chamber. The Assembly rejected the proposal by 420 against 250 votes. The ministry consequently resigns. Relative to the petition of 62 Frenchmen resident in Egypt the Duc Decazes has announced in the Assembly that Government will shortly introduce a convention relative to jurisdiction in Egypt, which will be submitted for the approval of the Assembly. The yellow book, he stated, would be shortly issued, and will contain documents relative to this affair. The Assembly will decide the matter. The Duc Decazes at the same sitting referring to the petition of three French merchants of Alexandria who complained of acts against them by the Egyptian Government said that the matter should be one of constant attention on the part of the Government.

Advices from Rome state that the Italian Chamber have decided upon making a national donation to Garibaldi.

It is reported that the Carlists have fired on a Mechlinburg vessel, which had taken shelter at Guetaria.

Mr. Bristowe, Secretary to the American Treasury, has suspended monthly sales of gold, owing to the limited amount in the Treasury.

An embroglio has taken place in connection with the New-Orleans Ministry. General Sheridan intervened. The conservatives have constituted a separate legislature. Sheridan recommends that the white leaguers be declared banditti.

The Grand Opera at Paris was opened yesterday. The Lord Mayor and Sheriffs of London attended the ceremony in the English state carriages and official robes, and were received with the greatest honour by Marshal MacMahon in the Champs Elysees.

Another colliery explosion, causing the loss of seven lives, has happened near Rotherham.

Don Alphonse starts from Marseilles to-day for Spain.

Obituary—Colonel Milward.

SATURDAY, 9TH.

Marshal Macmahon has requested the Ministry provisionally to remain in office.

The *Lord Strathnairn*, homeward bound from Calcutta, has stranded on the Goodwin Sands, and is discharging her cargo.

MONDAY, 11TH.

British exports for December amount to £17,875,000 sterling, showing a decrease of £1,375,000 sterling.; imports for the same month £28,625,000 sterling, showing a decrease of £4,500,000 sterling.

M. Magne, Minister of Finance, has produced his budget for 1876, according to which the revenue will be 2,528 millions francs and expenditure 2,616 millions. The deficiency will be covered by a revision of existing taxes. The Ministerial crisis continues, and great difficulty is experienced in the formation of a new ministry.

TUESDAY, 12TH.

The next biddings for Government Bills on India will be for £700,000.

Marshal MacMahon's endeavours to obtain a new ministry have failed; the present cabinet have agreed to remain in office provisionally.

Don Alphonso landed at Barcelona yesterday amid great enthusiasm; a most imposing religious procession was formed; Prussia, Germany, and Austria have agreed to recognize Alphonso.

The intervention of General Sheridan at New-Orleans has caused great indignation throughout America; the Senate have requested President Grant to furnish a full explanation.

WEDNESDAY, 13TH.

The Homeward Mails, *via* Brindisi, which left Calcutta, 18th December, were delivered yesterday.

The statement that Germany had recognised Alphonso is premature. Germany defers her recognition until decrees suspending two Protestant Journals and closing the Cadiz Chapel have been rescinded. The German gunboats have returned to Santander.

A disruption of the Cabinet is threatened in consequence of President Grant's policy regarding Louisiana.

The ship *Lord Strathnairn* from Calcutta has been towed into the Downs disabled.

The steamer *Surat*, in dock at Malta fitting propeller, will be detained five days.

LETTER TO THE EDITOR.

CONNUBIAL REFORMATION.

SIR,—Such formed the subject of a communication by a Hindoo, which appeared in your last issue. The writer seems to be the advocate of the body therein represented as the "liberal and well educated portion" of the Sett and Bysack families of Calcutta. I wish it were so. But what connection have education and liberalism with a class or sect of people, according to Hindoo ideas and customs? I would fain ask the writer for a reply. I think it needs no demonstration from me to prove, according to the Indian point of veiw, that to do a deed and pass it off as that of the whole class or sect, must inevitably be with the consent and confirmation of the class, whose deed it is intended to be. Anything falling short of it, can never be designated as done by a class, but by a small fractional part of the class, who have either been excommunicated or otherwise debarred from the privileges of the class. Education and liberalism with all its catholic phases, such as are known in England and in other lands, are of no avail when a question connected with an Indian caste or sect is at issue, according, as I have already said, to the Hindoo point of view. Such may very properly be said of those Setts and Bysacks who unjustly designate the "reformation" as one of the whole class, when the members forming such class can be counted on the fingers' end.

I do not for a moment hesitate in admitting that the "connubial" rites among Setts and Bysacks do require reformation, but would to Heaven! the reformation such as the writer speaks of would ever take place. The miscalled reform does not meet with our wants and will, I apprehend, take us a thousand paces backward in the scale of advancement. The celebration of marriages with the people of Maldah will do us no good: on the contrary, it is feared, it would take away from us what we have established our claims to, by more than a century's residence in the metropolis. The thoughts, ideas and wants of the two people are so varying that it would not be quite amiss if I say that there can be no mutual understanding between the two; the happiness and welfare of families where there is no mutual understanding can be more easily conceived than described. I would therefore entreat the so-called "liberal and well educated" band to desist from the temptation of achieving a great work when in reality it is not so. As for the causes that are alleged to give rise to the "reformation" the writer speaks of with his trumpet tongue, I would repeat the well known adage here that "examples are stronger than precepts." and if these engaged in making the "reformation" would screw somewhat less the parents of brides at their sons' wedding, then on no distant day the evils so loudly talked of, would, I dare say, want a name.

Calcutta, 9th *January*, 1875. } Yours, A CANDID CRITIC.

MARRIAGES.

December 26. At Kennet House, by the Rev. D. T. K. Drummond, of St. Thomas' Episcopal Church, Edinburgh, assisted by the Rev. Robert Gandell, M. A., Oxford, Mr. CLAUD H. HAMILTON, Preston Hall, Mid-Lothian, to the Hon. Henrietta Anne Bruce, only daughter of the late Mr. ROBERT BRUCE, of Kennet, and sister to Alexander Hugh, sixth Lord Balfour of Burleigh.

28. At the Methodist Episcopal Church, Poona, by the Rev. D. O. Fox, Mr. G. WALTER WINCKLER, Mysore State Railway, to Fanny Ruth Anding.

29. At Calcutta, by the Rev. W. C. Bromehead, M. A., Mr. REGINALD JAMES, to Elizabeth Alice, eldest daughter of Mr. G. BURNETT, of Mynanuggur Factory, Purneah.

30. At All Saints Church, Coonoor, by the Rev. Geo. English, Mr. CHARLES JOHN CROSTHWAITE, Madras Civil Service, to Marie-Eugenie Emma Baber, only daughter of the late Mr. HENRY FEARON BABER.

January 2. At the Catholic Church, in Serampore, by the Rev. Father Cavalieri, S. J., Mr JOHN JAMES DOYLE, of Moorshedabad, to Miss Catherine Jane Holguette, daughter of Mr. and Mrs. E. W. HOLGUETTE.

6. At St. Paul's Cathedral, Calcutta, by the Right Rev. the Lord Bishop of Calcutta, the Rev. ROBERT MUCKLESTON STEWART, M. A., of Worcester College, Oxford, to Millie, youngest daughter of the Rev. K. M. BANERJEA.

At St. Andrews's Church, Calcutta, by the Rev. J. Macalister Thomson, M. A., Mr. WILLIAM HAY, of Glasgow, to Elizabeth Mary Ann, third daughter of Mr. PETER MORTON KILGOUR, of Edinburgh and Calcutta.

BIRTHS.

December 11. At Mozufferpore, the wife of Mr T. A. LAMB, Beylah, of a son.

28. At Belmont, Rangoon, the wife of Mr. J. M. LEISHMAN, of a son.

29. At Burtoll, Cachar, the wife of Mr. JAMES L. FORBES, Tea Planter, of a son.

At Kohat, the wife of Captain J. R. CAMPBELL, 2nd Punjab Cavalry, of a daughter.

30. At Tanjore, the wife of Lieut. T. GREENAWAY, S. C., of a son.

January 2. At Dacca, the wife of the Rev. R. BION, of a daughter.

3. At Lucknow, the wife of Mr. C. W. KINLOCH, of Bholee Factory, Etawah, of a daughter.

At Deolalee, the wife of Captain WETHERALL, Adjt. Depot Deolalee, of a son.

4. At Benares, the wife of the Rev. M. A. SHERRING, of a son.

At Neelgunge Factory, Purneah, the wife of Mr. R. S. PYNE, of a daughter.

7. At No. 3/1, Old Court House Lane, Calcutta, the wife of Mr. JOSEPH P. YAKCHEE, of a son.

8. At No. 93, Clive Street, the wife of Mr. H. H. GOWENLOCH, of a daughter.

10. At No. 10, Middleton Row, the wife of Mr. R. S. T. MACEWEN, of a son.

DEATHS.

December 8. At Edinburgh, Elizabeth Lindsay, widow of the late Mr. W. M. DIROM, B. C. S., and daughter of the late Mr. W. A. PRINGLE, B. C. S.

30. At Shapore, Tirhoot, the infant son of Mr. JAMES SMITH, aged three months.

January 6. At Maldah, Ann, the beloved wife of Mr. FREDERICK WYER.

At Byculla Club, Mr. A. C. HALL, Resident Engineer, Bombay and Baroda Railway.

At Rampart Row, Dr. A. FITZPATRICK, Surgeon Dentist, aged 67 years.

10. At Cachar, Mr. G. J. OLIVER, Attorney-at-Law.

ARRIVALS OF PASSENGERS.

BOMBAY.

Per P and O Co's S S *Sumatra*:—

From Venice.—Mr and Mrs Mannel, Mr and Mrs H B Goch, child, and European female servant, Mr C J Schjoth, Mr and Mrs Payne Mr E W Ravenscroft, Capt and Mrs Cruickshank, Dr G A Watson, Mr Dumbell, Mr O'Hadelbauer, and Mr G W Goddard.

From Brindisi.—Captain Ridgway, Captain and Mrs O Harris, Mr and Mrs J S Campbell and servant, Mr Micrunchi, Mr Robertson, Mr J Watson's native male servant, Major O B C St John, Lieutenant Ingersole, and Mr and Mrs Whyte.

From Southampton.—Mr S Carver.

Per S S *Mirzapore*:—

From Southampton.—Mr and Mrs Carrington, two children, infant and ayah, Mr A Gladstone, Mr H Butcher, Mr J Melville Mr C Edward, Miss Haband, Miss Cartwright, Mr B Schofield, and Mr Woodward.

From Brindisi.—Miss Brittain, Miss Marston Miss Kimball, Miss Woodford, and Mrs A C Littlefield.

From Venice.—Mr Davidson, Sister J Cerny, Sister J Barsonzie, and Sister H Sivraga.

From Galle.—Sir B Seeton, Mr and Mrs B Smith, and Mr G L Reid.

From Madras.—Mr J Smith, Mr R Sturt, Mr Colmitz, Miss F Walker, and a native maid servant, Mr Oliver, Mr Maltby, Mr J Higby. Mr Sturt's native servants, Mr Mangles, and Mr A C Mahomed.

DEPARTURES OF PASSENGERS.

BOMBAY

Per P and O Co's S S *Geelong*:—

For Southampton.—Mr and Mrs J B Hennessey and child, Mr, Mrs and two Misses Young, Mr A Ledgard, Surg G Lloyd, Mr J J H Gibbins, Mr A Young, Mr A MacIntyre, Mr J Crossan, Mr J Thompson, Mr F Street, Mr J H Grant, Mr W C Dibblin, Mr P McDougal, Mr G Wilkins, Mr H Peacocke, Mr F M Smith, Mr E Slight, Mr E Craske, Colonel Combe, Master Beale, Mr and Mrs Thompson and child, and Mr T Tomlinson, Mr A C Anderson, Mr. Farrar, Lieut Col Purvis, Mr W G Gibb, Dr Roberts, Mr Macdonald, Mr Billington, Lieut Morgan, R E, Mr and Mrs Magrath, and four children, Miss Pocock, and Mrs Smith and two infants.

For Brindisi.—Mr W B Jones, and Captain T T Carter.

For Venice.—Mr B T Ffinch, Colonel F E Francis, Mr T E Hill, and Mr J Morgan.

Per S S King *Arthur*:—

For Liverpool, *via* the Suez Canal, with a general cargo, and the following passengers.—Mr and Miss Watling, Mr Shortland, Major and Mrs Bynd, two children, an ayah, Mr James, and Mr Brooke.

CALCUTTA.

Per S S *Dacca*:—

For Rangoon, Moulmein and Straits.—Mr John F Ogilvy, Rev and Mrs W McCarthy, Mr G Janiin, Mr B Ribbentrope, Mr E Chrestien, and Mr T Kingsley.

EUROPE.

PRINCE BISMARCK'S DIPLOMACY.

(*Pall Mall Gazette.*)

The Teutonic races have always had an especial admiration for frankness of speech. Such popularity as it is open to a diplomatist to attain in England has always been gained in this way. The expert is more

Journal, and whole masses of Baron Stockmar's letters, disposed to admire the dexterity with which an awkward question is evaded, or an assurance which means nothing made to do the work of a binding promise. But the English Foreign Minister who was most in favour with his countrymen was Lord Palmerston with his bluff declarations and his unmistakable warnings. It is natural that this tendency to set the outspoken man above the diplomatic man, even in matters which are supposed peculiarly to belong to the latter's province, should be more marked in Germany than even in England. Germany is a young Power, and there is something specially delightful in the first stials of a new faculty. She is for the time an unassailable Power. She may say what she likes without running any risk of being called upon to make good her words. And then her principal statesman has developed the art of plain speaking to an extent never dreamed of before. Putting these things together—Prince Bismark's extraordinary skill in this particular direction, and the keen appreciation of it likely to be felt by a nation which has not had time to grow weary of self-assertion or to discover that it may some times prove a dangerous pastime—there is nothing surprising in the popularity which the publication of Prince Bismarck's despatches have gained him in Germany. "The country," cries the Berlin *National Zeitung*, "has reason to be proud of this disclosure. . . . It was a glorious fact that these despatches, which by enemies were expected to betray secret schemes and plots, displayed nothing but the triple armour of German policy—truth, candour, and judgment." Probably this criticism has been echoed in hundreds of other journals throughout the empire, and we can easily believe that for once the Government has been able to leave the press to speak its mind without inspiration. The audacity of the despatches and the infinitely greater audacity of making them public have for the time won all hearts. Even Englishmen cannot refrain from paying something of the same tribute to the great German hero. They are not excited by these revelations as the Germans are, and their breath is consequently taken away by the suddenness with which the innermost secrets of Prince Bismarck's counsels have been laid bare, and all the world has been allowed to see the man as he is. But their astonishment is mixed with a good deal of wondering admiration. It is startling to see the German Chancellor touch successively the shields of every Continental Power, and then proclaim to Europe that he has done so. But they cannot help feeling a certain sympathy with so bold a combatant. His conduct must strike a chord which is common to the two nations, and while the politicians of other countries may be wondering at his imprudence or taking offence at his total disregard of all Ministerial proprieties, Englishmen envy as well as wonder, and are half inclined to think that one hour of such glorious self-abandonment is worth a life-time of polite and smirking diplomacy.

As the breath that has been so suddenly taken away returns, other considerations arising out of the despatches read at the Arnim trial begin to present themselves. And here two distinct questions at once arise—Prince Bismarck's policy in publishing his despatches to Count Arnim, and his policy in originally writing them. To take the latter first, it is impossible not to feel that a nation whose forces are at the disposal of the author of these despatches can never be a good neighbour. Prince Bismarck's attitude is one of universal suspicion, and we all know that nothing is so well calculated to breed suspicion in others. The best way to make men do what you wish, often is to behave yourself towards them as though you believed that they were going to do it. It is impossible to accomplish this if you are always reminding yourself and your servants of the certainty that they will do nothing of the kind. It is this latter course which Prince Bismarck takes throughout the Arnim correspondence. He cares for nobody, no, not he, and nobody cares for him. France is going to begin a war of revenge the first moment that she can. Austria would like to see Germany lose some of the milliards she has so suddenly gained. Russia is not to be trusted an inch beyond the point up to which it is her interest to keep faith. This is the moral of Prince Bismarck's letters. Every man's hand is against Germany, and therefore her hand must be against every man. To wish to see France prosperous and tranquil is high treason in a German. He is bound to desire, so far as his native philanthropy will allow, that France should go on convincing Germany of the blessing of Monarchical government by herself reproducing the Commune at the earliest and at every succeeding opportunity. So long as these views were confined to a confidential circle of German ministers abroad they only influenced Prince Bismarck's own policy. But when these views are made public without necessity and without provocation we are led to ask what end the Prince can possibly propose to himself by thus taking Europe into his confidence. It is intelligible that he should feel a conviction that the unsleeping watchfulness guarantee against any dangerous supineness on the part of Germany. But why should the fact be forced on the notice of Europe in this unprovoked manner? There has been no disposition on the part of any other Power to presume on the pacific intentions of Germany. The increase of the army has prevented any fear on this head. There is not the least danger that any Power will be betrayed into war with Germany as the Emperor Nicholas was betrayed into war with England. Still, however assured foreign Powers may be of Germany's resolve to remain fully prepared against attack as the surest means of warding off the attack when it comes, they can hardly help being unpleasantly impressed by this public proclamation of it. Announcements of this kind always excite alarm, and when an Austrian or a Russian Minister finds a statesman of Prince Bismark's eminence suggesting that attempts will probably be made "at no distant future" to bring about a grouping of Powers which may be very inconvenient to Germany, they will almost necessarily be set meditating upon the possible forms which such a grouping might take, and upon the amount of inconvenience which it would inflict upon Germany. It must be remembered that both Austria and Russia have been at great pains since these despatches were written to convince Germany that no grouping which could under any circumstances annoy her is in contemplation. It is not encouraging to the statesmen who have been working towards this end to find that all their labours have been thrown away, that Prince Bismarck's reply is, in effect. Thank you for nothing; so long as it suits your own purposes I know you will keep on good terms with us, and so soon as it ceases to answer your own purpose you will break with us. It may be said that these despatches were written three years ago, and that the foreign relations of Germany have greatly changed during that time. The meeting of the Emperors at Berlin has taken place since then, and the jealousy with which Austria and Russia may have regarded the German victories in the first instance has now been replaced by a clear understanding of the importance of German greatness to the maintenance of order in Europe. But the unprovoked publication of a despatch makes it do the work of a commentary upon what has happened since it was framed. By telling the world what he thought of his neighbours in 1871 he as good as says, What I thought in 1871 I think in 1874. These despatches have not come out by accident. It was not the least necessary to the conduct of the Arnim trial that they should be read at a public sitting of the court. When despatches which Prince Bismarck wished to keep secret had to be laid before the court the public were excluded, and it was notified that, if any report of what was read appeared, the newspaper printing it would be subject to the penalties of high treason. The same course might have been taken with all the documents concerned If they were suffered to appear in the journals of every European country, it was because Prince Bismarck wished them so to appear. Their publication is as much his own deliberate act as though he had laid them on the table of the German Parliament.

Those who are most ready to admire the magnificent audacity of this proceeding must acknowledge that it has its disadvantages. For many years the supremacy of the French Empire in Europe was maintained by a somewhat similar policy. Napoleon III. deliberately assumed an arrogant tone in speaking of other powers which impressed both his own subjects and foreigners with a sense of the strength which lay behind these boasts. We know how ill this policy paid in the end, how completely it alienated those who might have been friends and exasperated those who might not have been enemies. Prince Bismarck's despatches are a far more striking exhibition of the same temper. What can be the motive that has led so shrewd and far-seeing a statesman to overlook the obvious lesson of his fallen adversary's errors?

THE LIFE OF THE PRINCE CONSORT.*

(*Spectator.*)

Mr. Theodore Martin was entrusted by Her Majesty with the task of writing the Life of the Prince Consort and the first portion of the work—the life of the Prince from childhood to 1848—has been completed, has been given to the public, and excites a strong and justifiable hope that the next portion will fill a volume of most unusual interest. The first portion, a few pages towards the close excepted, does not. Mr. Martin has in many respects performed his task exceptionally well. He writes with dignity and grace, he values his subject, and treats him with a certain courtly reverence, yet never once sinks into the panegyrist, and while apparently most frank—so frank, that the reticent English people, may feel the intimacy of his domestic narratives almost painful—he is never once betrayed into a momentary indiscretion. The almost idyllic beauty of the relation between the Prince Consort, and the Queen comes out as fully as in all previous histories of that relation,—and we have now had three,—as does also a good deal of evidence as to the Queen's own character, hitherto always kept down and, as it were, self-effaced in publications written or sanctioned by herself; but Mr. Martin has either been reluctant to use, or failed to use, the great mass of material in his hands for the elucidation of the inner character of the Prince. The stream of the narrative flows on unbrokenly. We see something of the child at Rosenau, with his abiding love for his elder brother, his habit of study, and his self-restrained, cautious, and high-purposed temperament; we read long extracts from the Queen's most of them lectures somewhat in the Sandford-and-Merton style, their pedagogic tone relieved only by their courage in advice or admonition; but of Prince Albert as a man, an individual with separate tastes, habits, and ways of thought we see, till the end of the long, and we fear we must add, somewhat tedious volume, next to nothing, or at all events, nothing to be considered in any degree new. We perceive that he was fond of his brother; that he was penetrated through life by the idea of duty; that he had a full sense of his responsibility as virtual King Consort, that his position, at first an irksome and hampered one, was gradually made easy to him by his complete conquest of his wife—one may say this, for the Queen herself says it much more energetically and frankly than we do—and that though a bold rider, he was by nature a melancholy, low-strung man, with a feeble pulse, prompt at the call of duty, but inclined to weariness of duty; given by taste to art studies, to country solitude, and to reflection on somewhat abstract politics;— we see all this, but of the intellectual man, of his opinions, or purposes, even of his artistic character, we see, till the end of the volume, far too little. No one with any idea of Prince Albert will gain from the first three-fourths of this volume any further idea of his personality, unless, indeed, it be from the fact that it gradually inspired most English statesmen—the exception seems to have been Lord Palmerston, though that is never clearly stated—with a very unusual confidence and regard. That Prince Albert did in some way win this regard is now certain, and that he won it by his capacity and character may be taken as fully proved; but of the way in which he showed this capacity we have, in the first portion of the "Life," little evidence, less than in Baron Stockmar's book, where the Prince's plan for reforming the preposterous abuses in the Royal household is given much more clearly and ably than in this, which adds to that account only the name of the *gouvernante* with whom it was, years before the reform was fully accomplished, necessary for the Prince to contend:—

"A mistake, it was soon found, had also been committed in not establishing the Prince from the first as Private Secretary of the Queen, and placing the internal arrangements of the Royal household under his immediate control. These functions had, since the Queen's accession, been to a great extent discharged by the Baroness Lehzen, her Majesty's former governess, and they invested her with powers which, however discreetly used, were calculated to bring her into collision with the natural head of the household. It is due to this lady to say, that genuine affection for her Majesty, who for so many years had been the object of her care, and who was attached to her by ties of gratitude and regard for kindness and counsel in her girlhood, when they were most needed, very probably blinded her to the obvious truths, that her former influence must, in the natural course of things, give way before that of a husband, especially of a husband so able and so deeply loved, and that, in the true interests of her Royal pupil, she should herself have been the first to desire that the offices she had hitherto filled should be transferred to the Prince. The painful situation in which he found himself through this not having been done is indicated by a passage, quoted in *The Early Years*, from one of his letters to Prince von Lowenstein so early as May, 1840:—'In my home life I am very happy and contented; but the difficulty in filling my place with the proper dignity is, that I am only the husband and not the master in the house.'"

We weary a little, we confess, of the Court record of journeys, and visits, and readings, and long for evidence to prove, what we have always maintained, that Prince Albert was something besides the husband and lover of the Queen,—a singularly thoughtful and studious politician.

There is some evidence, however, on this point in the volume before us. There is no question in English politics so difficult or so much debated as the position which England should assume in Europe if she intervenes at all in Continental affairs, and none upon which the Prince Consort has given so clear, or in our judgment so wisely moderate an opinion. This letter, addressed to Lord John Russell on September 5, 1847, is the letter of a statesman, and a statesman of the first class:—

"Our policy towards Italy has hitherto been a passive or negative one, on general principles of European policy, preferring Austrian supremacy to French supremacy. We now enter upon an independent line, and one which will not admit of our remaining passive any longer. It is therefore desirable that the first step, which will give the impulse and direction to the rest for times to come should be the right one; I mean one based upon the principles of justice and moderation, and intelligible to all Europe. I think further, that *this* is the right moment and opportunity for correcting a great many misapprehensions existing about the object of English policy in general, and of setting this in its true light before the world as an explanation of the past, and a declaration for the future which will enable all Governments and nations to understand what they have to expect from us. My notion is this:—England has, by her own energies and the fortunate circumstances in which she has been placed, acquired a start in civilisation, liberty, and prosperity over all other countries. Her popular institutions are most developed and perfected, and she has run through a development which the other countries will yet in succession have to pass through. England's mission, duty, and interest is, to put herself at the head of the diffusion of civilisation and the attainment of liberty. Let her mode of acting, however, be that of fostering and protecting every effort made by a state to advance in that direction, but not of pressing upon any State an advance which is not the result of its own impulse. Civilisation and liberal institutions must be of organic growth, and of national development, if they are to prosper and lead to the happiness of a people. Any stage in that development missed, any jump made in it, is sure to lead to confusion, and to retard that very development which we desire. Institutions not answering the state of society for which they are intended *must work ill*, even if these institutions should be better than the state that society is in. Let England, therefore, be careful (in her zeal for progress) not to push any nation beyond its own march, and not to *impose* upon any nation what that nation does not itself *produce*; but let her declare herself the protector and friend of all states engaged in progress, and let them acquire that confidence in England, that she will, if necessary, defend them at her own risk and expense. This will give her the most powerful moral position that any country ever maintained."

The Prince held this opinion, be it remembered, not as a mere counsel of perfection, but as one on which

* *The Life of H. R. H. the Prince Consort.* By Theodore Martin Vol. I. London Smith, Elder, and Co. 1875.

England should be prepared to act, and wrote on August 29, 1847, when Austria was threatening Italy with occupation, these words to Lord John Russell :—

"What is it we apprehend? That Austria might be tempted to commit an open assault upon her neighbour, in order to prevent her carrying out her political changes, should advice and remonstrance not succeed in stopping them. Is it the right remedy on our part for preventing this palpable breach of the laws of nations and the complications arising out of it, to urge the Pope to defy Austria and not to let himself be intimidated? Or will it not be more to the purpose, and certainly more honest and friendly, to address ourselves to her, and to say:—'We have no hand in what is going on in Italy; though we think the Italians are acting wisely, we have not lent them any assistance. But we consider that every independent State has a perfect right to manage its own internal affairs, and that if Sovereign and people in a State are united in their determination to introduce certain reforms, and another State attempts an armed invasion to stop these reforms, merely because it considers them dangerous to the maintenance of its own established system of government, we shall look upon that act as an act of aggression upon the independence of the other State, which Europe and the Powers who signed the Treaty of Vienna cannot look upon with indifference.'"

Nor can we agree with the popular judgment on the Prince's plan for the revival of Germany. He drew up in 1847 a Memorandum for submission to the King of Prussia, which lacked merit only in this, that he had underrated the pride and obstinacy of the reigning German Houses. He advised that every German Prince should grant a Constitution—advice fulfilled last week by the vote of the Reichstag, compelling the Mecklenburg dynasty, the only absolute one, to establish a Parliament—that Austria, if she could not be expelled from the Bund, should be neutralised within it; and that a Parliament should be called at Frankfort, with control over commerce and inter-State affairs and foreign affairs, and with the charge of slowly building up a central Administration—advice which, if we substitute Berlin for Frankfort, and Bismarck plus Parliament for Parliament alone, has been exactly followed. The Prince's idea did not approve itself to Stockmar, who had not seen the Memorandum, and who had, like all men deep in the confidence of Kings, a contempt and hatred for the caste, though he loved individuals in it; but the correspondence brings out perhaps the finest trait yet observed in the character of the Prince Consort. He was supposed, while alive, to be very tenacious of etiquette, and somewhat frigid in his intercourse with inferiors; and Mr. Martin hints that he was a little wanting in personal attention to those about him, especially towards women of high rank. But when he was sure of his correspondent's good faith he could stand advice. The Earl of Portland never was ruder to William III. than Baron Stockmar was on this occasion to his "beloved Prince," whom he told, without circumlocution, that he knew nothing about the matter, and that he was too much of a Prince to understand it, and with some circumlocution that the German people wanted to be rid of their dynasties :—

"The question arises, Does your Royal Highness possess the requisite knowledge for dealing with the subject thoroughly and to purpose; and also such a standing-point as will enable you to give a practical application to your theoretical views? To speak frankly, I feel bound to answer both these questions in the negative. You left the Fatherland eight years since, and when you were very young. How could you have gained a thorough insight into things as they are, or into the country's present and immediately pressing wants? The bare possibility of such knowledge was denied you; and conversations with Prince Charles (Leiningen) could furnish you with only very limited, and probably very one sided results. Not that, in my doubts as to your qualifications for this task, I am likely to overlook the fact that, with the great advances you have already made in the knowledge of the general political condition of Europe, you would be in a position to form a correct judgment on German affairs both at home and abroad (for my opinion is precisely the reverse). All I doubt is the existence of an intimate knowledge of these affairs, while at the same time I dread your committing the mistake, which you might easily do, of applying to Germany the standard (a just one, in its place) with which your intimate acquaintance with Anglo European relations has made you familiar, without due regard to the peculiar characteristics of the German people. With this doubt as to your proper qualification, on the score of intimate knowledge of the facts, goes the further apprehension that the standing-point which, as a German Prince, you cannot fail to adopt in considering it will present the subject to you in a cross light, and thereby lead you to distorted views and conclusions. In dealing with the German question, your Royal Highness can scarcely look at it from any other point of view than that of a German Prince; and however acute and accurate your observation of all details may be, still they cannot possibly be seen by you but in the colours of German dynastic interests. And it is just this colouring which makes me believe it improbable your Royal Highness should rightly grasp and appreciate the actual present condition and wants of the German people; and still less that you are able to frame any practicable scheme which will meet the exigencies of the case."

The Prince sent back a reply cordially thanking the Baron for his letter, and acknowledging "the weight of his reasons as to his own [the Prince's] qualifications for calling such a plan into existence," and *requested Herr Bunsen*, then Prussian Ambassador, *to recall the courier who carried the Memorandum.* The request arrived too late, but the fact that it was made is conclusive evidence of the Prince's readiness to consider advice, even when offered in the frankest, not to say the bluntest possible tone. We expect fortitude of that kind in Premiers, but in Princes. The following will be less clearly understood, but it shows great breadth of view. The reigning Grand Duke of Coburgh had complained of his peasantry for marking their liberation by giving up their distinctive costume, and the Prince writes :—

"My uncle is right in his regret that Radical tendencies and modern reforms bring all things to one level (*Alles nivelliren*) destroy much national and local individuality would everything upon one last (*alles über einen Leist schlagen*) and thereby prepare the way for French absorption against which a national character is the strongest safe-guard. But he forgets that epochs have a physiognomy, as well as countries and peoples, and that the transition from one epoch to another, though it may destroy what we formerly regarded as individual and essential, does not at the same time necessarily destroy nationality. It is so even with the matter of dress. The alteration of the Coburg peasant's dress (the men's, for example) will seem, as far as feelings go, to be a decline of individuality, but what gave that costume individuality was only the fact, that it dates from the last century; then however, it was *universal*, and simply a copy of the dress of the upper classes, and this dress of the upper classes is what the peasantry of the present day are bent on assuming *at once*."

There is great keenness and a good deal of *bonhomie* and humour in the Prince's sketch of the late King of Prussia, the weak Prince who rejected the Crown of Germany offered him at Frankfort :—

"The King lets himself be misled by similes which captivate his fancy, which he carries out only so far as they suit his purpose, and which frequently by no means reflect the true state of things, but satisfy because they are clever and suggestive (*geistreich*). This makes close discussion with him impossible. . . . . Then the King runs another risk in this, that he adopts *subjective feelings* and opinions as the motive principle of his actions, and then not only acts upon them, but also desires that, as these feelings and opinions are dear and sacred to him, they should be the same to everybody else, no matter whether they are not even affected by them in the slightest degree or not, nay, although to carry them into effect would operate a probable injustice. To this class belong those feelings of piety towards the late King, which only the son can feel, and those favourite maxims, which have a special truth for *him*, springing as they do out of certain favourite studies and lines of thought. Herein is to be found the key to his strange address from the throne. It is a purely subjective Bradenburg, Hohenzollern, Frederick-Wilhelmish opinion."

His religious belief is not so distinctly outlined as it must be whenever a complete history of the Prince's life comes to be written, but it is evident that the Prince was a Broad Churchman of the Hampden type; that bigotry was the one thing which made him bitter; that he disbelieved in the utility of dogma, but that he did not, as so many Germans do, replace it by a mere religion of goodness. His faith appears to have been—subject always to further revelations—that the religious emotion is essential to elicit the only true Cult, that of goodness based upon the persistent sacrifice of self.

It is curious to trace in these letters perhaps the first authentic hints the British public has yet had of the character of the Queen, which, except as regards her domestic affections, is not known, as it will be one day, to the bulk of her people. The terrible explosion of the year 1848 overwhelmed the Prince, and found the Queen just recovering from a confinement, yet her Majesty writes on April 4, 1848, to King King Leopold of Belgium, a curious little morsel of self-criticism. "From the first, I heard all that passed; and my only thoughts and talk were politics. But I never was calmer and quieter, or less nervous. Great events make me calm; it is only trifles that irritate my nerves." There is keennes, too, and a trace of sub-humour in the Queen's sketches of the Emperor Nicholas of Russia, who seems to have been nearly as formidable a personage to her Majesty as to the majority of mankind :—

"I will now (having told all that has passed) give you my opinions and feelings on the subject, which I may say are Albert's also. I was extremely against the visit, fearing the gene and bustle, and ever at first I did not feel at all to like it; but by living in the same house together quietly and unrestrainedly (and this Albert, and with great truth, says, in the great advantage of these visits, that I not only *see* these great people, but *know* them), I got to know the Emperor and he to know me. There is much about him which I cannot help liking, and I think his character is one which should be understood, and looked upon for once as it is. He is stern and severe, with strict principles of *duty* which nothing on earth will make him change. Very clever I do not think him, and his mind is not a cultivated one. His education has been neglected. Politics and military concerns are the only things he takes great interest in; the arts and all softer occupations he does not care for; but he is sincere, I am certain sincere even in his most despotic acts—from a sense that it is the only way to govern. He is not, I am sure, aware of the dreadful cases of individual misery which he so often causes; for I can see by various instances that he is kept in utter ignorance of many things which his people carry out in most corrupt ways, while he thinks he is extremely just. He thinks of general measures, but does not look into details; and I am sure much never reaches his ears, and, as you observe, how can it? . . . . . He is not happy, and that melancholy which is visible in the countenance made us sad at times." ["I dont know why," says Her Majesty's *Journal*, "but I can't help pitying him; I think his immense power weighs heavily on his head."] "The sternness of the eyes goes very much off when you know him and changes according to his being put out (and he can be much embarrassed) or not, and also from his being heated, as he suffers from congestion in the head. He never takes a drop of wine, and eats extremely little. Albert thinks he is a man inclined to give way too much to impulse and feeling, which makes him act wrongly often. His admiration for beauty is very great. . . . . But he remains very faithful to those he admired twenty-eight years ago."

Elsewhere her Majesty says that the anxiety of the Emperor to be believed was "very great," an anxiety habitual with men so *rusés*, and comments on his eyes, which had a trick of showing the whites, and were anything but the "mild eyes" which took in poor Mr. Sturges and the Quaker deputation. And, finally, even if the Queen did not herself entirely frame her letter to the Queen of the Belgians, daughter of Louis Philippe, upon the Spanish Marriages, her acceptance of its tenor is no slight evidence of mature political judgment. The King of the French had broken his word, personally pledged to her Majesty, and his daughter, of course, sought to explain away his perfidy. The Queen replied on 27th September, 1846, eighteen months before the fall of the Royal intriguant, in terms of which the cool hauteur and even menace will not escape attention :—

"My dear Louise,—I have read and re-read with the greatest attention the King's explanation of the recent events, and his statement of the motives which have governed the course of the French Government in regard to this unhappy Spanish affair, and I am deeply pained to have to declare that the perusal of his letter has in no way altered the opinion which I had previously formed, nor the pain I feel that these events should have occurred to trouble our cordial understanding—an understanding which was so useful and so precious. . . . . The one simple fact which governs this whole affair, is that the King declared that he would not give one of his sons to the Queen of Spain and that on this declaration he based the right to limit the Queen's choice to the family of the Bourbons descendants of Philip V. We disputed and denied this right; still we consented to the choice being so restricted, and even promised to recommend it to Spain; and to this we have most scrupulously and religiously adhered, without swerving one hair's breadth. What the King desired has taken place; the Queen married a descendent of Philip V, and of his descendant's just that one whom he knew we regarded as the least eligible. The same day the King gives his son to the heire s presumptive to the Crown, not only without previous concert with us, but contrary to the pledge which he gave me at Eu last autumn, when with the question of the marriage of the Queen he for the first time mixed up that of the marriage of the Infanta. This pledge was, 'that he would not think of this marriage, so long as it was a political question, and not until the Queen was married and *had children*.' . . . . 'I have then, thoroughly considered the whole matter by myself, and looking at it with eyes but my own, and I *cannot* possibly admit that the King is released from his pledge. Nothing more painful could possibly have befallen me than this unhappy difference, both because it has a character so personal, and because it imposes upon me the duty of opposing the marriage of a prince, for whom, as well as for all his family, I entertain so warm a friendship. My only consolation is, that as what is proposed cannot be carried out without producing grave complications, and *without even* exposing to many dangers a family whom I hold in high regard, they may even yet retrace their steps, before it is too late.'"

Everything in this volume tends to raise the character of the Prince, and if in the next Mr. Martin will be a little less and a little more reticent—will give us more of the Prince's mind and less of his domestic affections—he will make of the whole what the Queen desires, a monument of her husband which will help to secure him in English history a place that cannot be finally secured until that place has been scanned, as it never has been yet, by an inexorably just, but nevertheless slightly hostile eye. Mr. Martin says, and we fully believe, that such an eye would discover nothing to the Prince's discredit, but at least it would ascertain why up to the hour of his death the Prince was so deeply distrusted not only by the English aristocracy—which was merely offended by a pride of caste visible even to Baron Stockmar—but by the masses of the English people, who, as they show in the case of the Princess of Wales, are not instinctively hostile to the "foreigner." Was the cause mere insularity, or was it as in the case of William III., a well-founded suspicion that the man who served them so well never loved or liked them, that outside his own household, his heart was with his own people, that Windsor was no more a compensation for Rosenau than it had been for Loo, and that everything except the welfare of England was subordinate to a desire for the prosperity of the House of Coburg? It would be no discredit to the Prince if such were the case, for there can be no question of his utter fidelity to England, but it would explain much that has always puzzled those who, like ourselves, hold him to have been the *greatest*, except William III., acquisition ever made by the British Court.

THE SHAH ON ENGLAND *

(Athenæum.)

It is no disparagement to Mr. Redhouse if we say that, in spite of his linguistic attainments, we regret very much that the task of translating this book was imposed upon him. One would have thought that it would have been obvious that something more than a knowledge of the Persian language was requisite for discharging the duty of presenting this work to the English public, and that an editor should have been sought out who knew Persia as well as Persian, and, what was vastly more important, also knew the Shah. Had that been done, there would have been a clearer recognition of the royal author's true character, and we should have heard less about "the odd mingling of childishness" in it, and more about the "sound sense." But, first, as to the expediency of selecting an editor well acquainted with Persia; let us begin by establishing that point. The first stage of the journey is said to be "the village of Kan," and this word so written occurs six times in the second and third pages; but any one who has been to Tehran will know that the name of the place is *Kand*, and if he looks on the map will see it written with a slight change of the vowel, Kend. But if he will turn to page 420 of this very translation, he will find the word twice written correctly in the following sentence, "It much resembles the village of Kand, near Tehran; but the gardens of Kand are more numerous and extensive than these." Kand is, in short, a well-known spot, about eight miles from Tehran, where the Shah has not "a royal palace," but a small shooting-box, and where, as the hills near are well looked after, he often shoots *mouflons* and other game. The Anisu'd daulah, who, we are told, came to Kand, is, we believe, the lady who accompanied the Shah to Russia. "Familiar of Royalty" is a strange translation of her title, and is certainly rather indifferent English. Prince Wajihu'l-tah's name, which occurs first after the mention of Kand, is written once correctly, once incorrectly; and to render Murad Bey, Na'ib; Lieut. Murad, a Bey; and Ikbal Mahdi-kuli Khan; Gentleman of the Chamber, Mahdi-kuli, a Khan, is really too absurd. At p. 5 we have Dfaugiana for Drangiana; and we ought to have, but have not, a note to explain that the palace at Karj is

* *The Diary of H. M. the Shah of Persia, during his Tour through Europe, in* A. D. 1873. By J. W. Redhouse. A Verbatim Translation, with Portrait. (Murray.)

really a palace, and not a shooting-box, built by Fath Ali Shah in 1808, and containing two very interesting pictures of great size, one of the Court of that monarch, and the other of the Court of Agha Muhammad. There are other places on the road to the Caspian which deserved a foot-note. But passing over these, we would ask why is no explanation given of the long list of titles and names at pp. 18, 19, and which to the English reader must be utterly unmeaning? Why again is" (uncle to the Shah)" written after the title Nusratu-'d-Dawla, and not after Husamu's Sultana, and why is nothing said of the remarkable man who bears the latter title, the only man in Persia (the Shah himself always excepted) who has carved out for himself a place in history, the captor of Marv and Hirat, the worthy son of a noble father, whose name was once dear to Englishmen, Abbas Mirza. The eldest brother of the Husamu's Sultana, Bahman Mirza, is mentioned at p. 411, but all that is said of him is " a fugitive uncle of the Shah, though State papers have been written about him, and though but for his age he might even yet play an important *role.*" It would surely have made the work more interesting to Europeans had a brief account been given of the principal Persians mentioned in it. Again, who that has been at Sultaniyyah would speak of it only as a village half-way between Tehran and Tabriz, or have any doubt about the rat mentioned at p. 160, which with its burrowing has made the vast plain of that well-known place so treacherous to the rider? As to the very natural mistakes which occur here and there in these pages in writing European names and in recording European matters, we quite agree that it was right to leave them, and that they add piquancy to the text. We should be sorry to part with Prince Linoge, Lord Choseby, and the gallant Admiral Fibbs Hurubi; and we are willing that Charlemagne should be credited with the brevet-rank of "Emperor of the whole of Firingistan"; but if quotations are introduced, they ought to be correct, and we think that the defeat of Crecy should not be referred to the time of a prince who had been for more than thirty years in his grave when it took place. At p. 147, the statement about the Nuwab Nazim being a grandson of the renowned Tipu Sahib should have been omitted, or, at all events, corrected in a note; and as the word Sahib is correctly written, it was quite unnecessary to invite the English reader to pronounce it incorrectly, as Sa'eb. At p. 348, the reader ought not to be left in ignorance as to who Qastigar Khan is, but should be told that he is the Austrian officer, H. Gasteiger, who did such good service to us in putting up the telegraph under Col. Goldsmid. To put "hole" for "tunnel" once might have been endured as a small joke; but the incessant repetition of it throughout the book is, without an equivoque, a continuous bore.

But all this is unimportant compared with the real injury that has been done by not confiding the work to some one, like Sir Henry Rawlinson, really acquainted with the Shah. Such a person would, we think, have availed himself of the opportunity to remove a false impression which we regret to observe has been made in some quarters, as to the want of seriousness of purpose in undertaking the journey, and the improbability of real advantages being derived from it. The Preface should have pointed out that for a Shah of Persia to leave his country in order to visit foreign courts, was not only an unprecedented event, but one that required great moral courage and most careful forethought. It is the strongest possible argument as to the moderation and popularity of the Shah's rule that he could quit his kingdom and be absent from it from the 12th of May to the 6th of September without one breath of sedition disturbing the political calm that reigned there. Elements of danger are never wanting in Muhammadan States, and the simple fact of their prince going to visit the courts of unbelievers and conforming, in some degree, to their customs, would in itself be most repugnant to the feelings of the orthodox professors of Islam. Then it must not be forgotten that, not to mention other royal princes, Abbas Mirza, the Shah's brother, who would probably have succeeded to the throne had his father, Muhammad Shah, lived, is residing on the south-western frontier of Persia, and that Bahman Mirza, the Shah's paternal uncle, a prince of great ability, great wealth, and at one time, perhaps, of ambitious views, is an exile, living not far from the north-western border. We may be quite sure that had there been any real disaffection in Persia, there would have been mutterings of a storm, if not an actual outbreak, before the Shah's return; and that there was nothing of the sort is the best possible refutation of the calumnies which have been sometimes uttered against the Government of Persia, as against all governments. In the next place, it must not be supposed that the Shah's journey could be lightly undertaken, nor must the long and anxious preparation for it, which issued in complete success, be under-valued. First of all, the ways and means were to be provided, without incurring debt, for t[illegible] Shah is one of the few princes who have avoide[illegible] rowing. The sum expended on the journ[illegible] appear small to those accustomed to t[illegible] bursements of European States, but it [illegible] large one for Persia. We do not p[illegible] sufficient data for calculating [illegible] think that, including prese[illegible] bably exceeded 150,000[illegible] which had to be solve[illegible]

whom to leave behind, and the care of the splendid jewels and the large sum of money the Shah had with him, say 100,000 tumans; besides. the jewels and cash brought by the princes and nobles were in themselves no slight matter; and it speaks well for the carefulness and integrity of the household that no such accident occurred as that which has just befallen an English nobleman, on a much shorter and easier journey. Again, we see proofs of the Shah's forethought in the way that he worked up to what has been one of the great designs of his life. He began by visiting all the important places in his own dominions, or on the frontier, Khurasan, the Caspian provinces, and above all the Holy Places of the followers of 'Ali at Kerbela and Najaf. It could not be said that he postponed the claims of his own people, or of his own religion, to the allurements of the voluptuous capitals of European States. He had also to acquire some knowledge of French and of European history, and he neglected neither. He at all events knew French well enough to make a pointed reply in it, as when a noble statesman was making excuses for the smallness of his house, the Shah said, " Petite maison, grande ame." The journey itself was well conceived and well carried out; the time was judiciously apportioned, and every effort was made to derive as much advantage as possible from the visits to the different countries. In four months the Shah crossed the Caspian to Astrakhan, ascended the Volga, visited Moscow and St. Petersburg, crossed by rail to Berlin and Cologne, ascended by rail to Wiesbaden and Frankfort, Heidelberg, Carlsruhe and Baden, turned northward to Biberich, descended the Rhine to Bonn, took the rail to Spa, where His Majesty had the only illness he suffered during his tour, and that a brief one; went on to Brussels, crossed from Ostend to Dover, visited London. Portsmouth, Liverpool, Trentham, Manchester, Windsor, Woolwich and Richmond: crossed to Cherbourg, visited Paris, Geneva, Turin, Milan (which the Shah found hotter than Tehran), and Verona; crossed the Brenner to Salzburg and Vienna, returned to Italy, crossed from Brindisi to Constantinople, and from Constantinople to Poti, took rail to Teflis and carriage to Baku, and thence returned by steamer to Enzeli, the Persian port at which His Majesty had first embarked in May. During the whole of those four months the Shah might truly have said of himself, *Nulla dies sine linea;* and perhaps no one ever saw so much in so short a time, for few that have the will have the same facilities, and still fewer that [illegible] facilities have the will. From the game of [illegible] to the magnificent array of embattled hosts, nothing failed to interest the royal traveller. Dukes plied the labouring oar to please him; and even the gravest of assemblies executed one of its cumbrous movements to gratify his curiosity. And what has been the result of all this earnest inquiry and all this wealth of information? It would be a mistake to suppose that it is totalled up in these pages. A statement had to be made in the *Tehran Gazette*, the *Court Circular* had to be written up to date, and it was requisite to do it in a way to give offence to no one. There is first of all, a bouquet of compliments for the Foreign States. The Emperor of Russia is majestic and stately, and the Heir Apparent is graceful; the Russian troopers are handsome, with choice and beautiful uniforms. "All passed off, in Russia, very pleasantly." The Emperor of Germany is perfect in health and strength; his great officers are very celebrated, and much spoken of; and his troops are well armed and beautifully clothed. France is "the most powerful of States." "Austria, in point of beauty and engagedness, is the queen of all lands." "The position and site of the city of Constantinople are without rivals in the world." The sovereign of Italy has similar tastes to those of the author of this book: "He told me that he held the town and palace in detestation; that he always wished to be in the hunting-grounds on the mountains." "It is some time since the death of the sovereign's royal consort, and he has not again married a royally contracted State-wife, having taken a privately wedded consort (an Anisu 'd daulah), in like way with myself." As to England, there is, in addition to other descriptive sentences, the following: "the demeanour of the English and everything of theirs is extremely well regulated and governed, and admirable. In respect to populousness, the wealth of the people, the commerce, the arts, business and *dolce far niente*, they are the chief of all nations." But, "after compliments," there is a word of consolation for Tehran readers very subtilely administered. "The Gobelin tapestry is fine, but it has a defect, the sun causes the dyes of the tissues to fade; whereas the dyes of Persian carpets are not easily deteriorated by the sun." The Alps are high, "but the Persian mountain of Damavand is considerably more lofty and more picturesque." The tour had bee[illegible] pleasant one; but the Persians were all e[illegible] to their native country, love for [illegible] the European reader migh[illegible] nite satisfactory t[illegible]

if it could contain the thousands which would, in that case, assemble there. The cannon exhibited to the Shah "had newly arrived from India, and were to return thither," and, consequently, it might be inferred that the forces of Great Britain were astonishingly few and her military equipment not very alarming. The Shah is much too shrewd to be under any such delusion. No one knows better than His Majesty what the military strength of England is, if for no other reason than simply because no one has more cause to be interested about it. "We have not seen the American navy, and, therefore, we can give no opinion about that, but, with that exception, England has the greatest naval force in the world. The English army is most excellent, but in point of numbers it is so immensely exceeded by the Russian, that, single-handed, it could have no chance against it in Asia." That, we believe, would be found to be the real view of the matter held by the Shah; and if these pages seem to disclose a different opinion, there is no difficulty in finding the explanation.

But passing from these grave matters, and waiving all conjectures as to the purport of the serious discussions which, we may be quite sure, were held by the Shah with the ministers of the states whose capitals he visited, and more especially with our own, we must invite attention to the kindly spirit which shines throughout this volume, to the zeal for knowledge of all kinds which it exhibits, and the quiet way in which disapprobation of unbecoming things is evinced, without any unnecessary strictures on those who indulge in them. "It was a great piece of folly" is the strongest expression used in the book, and that of a thing which must have been odious to an Oriental. The judgment of the writer is one

Which oft rejects, but never once offends.

The Shah's journey was, in every sense, we believe, a successful and a satisfactory one, but, as if to stamp *vanitas vanitatum* upon it, as upon all human undertakings, it ended disagreeably. He was about to disembark once more on the shore of his own beloved Iran. The anniversary of the Prince of Believers, 'Ali, was at hand, a Russian man-of-war had come to do him honour, and he and his staff had donned their State uniforms:—

"Well, we reached the anchorage, and the man-of-war with great difficulty fired a few guns. The Tower of Enzeli and the people on the beach were all visible; but as large ships cannot go closer in, and enter into Enzeli itself, it was a matter of necessity for lighters and our own small steam yacht to come out and carry us in. With this storm that was not practicable, and we, therefore, despondingly left the deck of the steamer, where we could no longer stand upright, went into our cabin, took off our state clothes, and resigning ourselves to God's decree, sat down. The others, who had put on all their orders, in like manner threw off their finery in the midst of heavings and vomitings, casting themselves down in the first corner, from whence they had no power to move. It was now two hours to sunset, and heavy rain began to pour. The waves rose so that we could not bear to look at them, and the ship rolled to that degree that the yard-arms touched the water each way. The sea broke over the vessel, and she heaved over so fearfully that we thought she would capsize and shoot us all overboard. At each roll, the chairs, tables, and other furniture of the cabin were upset with frightful clatter; and the hull of the ship, with straining, groaned again. Little did it want for her to go to pieces. Thus with fierce rain from above, and a raging sea below, the ship became full of water; and it was impossible to walk about, by reason of her violent movements, and also because the planks were so wet that one's feet slipped and could not retain their hold. 'Such is the end of our tour in Europe! To be so near home—for our Tower of Enzeli to be within sight, at a distance to be measured by feet, and for one to be in this condition! Should this go on for three days, we shall surely drag our anchor, and then there is no port except at Langaran! All these servants, and others who have come to Enzeli, what will they do?' Such were our thoughts; and so much bitterness did they engender that I cannot describe it. I also felt indisposed; I perspired from agitation and t[illegible] the wind struck to my chest [illegible] I cough[illegible] was there a chance of sle[illegible] by reason of the storm. Th[illegible]

"*Saturday, 6th S*[illegible] storm and motion o[illegible] worse. The othe[illegible] had also co[illegible] went on th[illegible] about tw[illegible] boat [illegible]

distance. They then brought our barge alongside, and somehow or other I got into her, pulled to the yacht, and then I was hauled on board by hand. Once on deck, I felt safe; and, immediately offering up my thanks to the Creator, whose name be glorified, arrived at Enzeli. Those who had come from Tehran were admitted to an audience; after which we went to our tower, mounted to our apartments, and there again poured out our hearts in thanks to God. At night there was a general illumination, and we slept in peace. Praise be unto God Most High!" Amen!

LITERARY GOSSIP.

(Athenæum.)

In the next number of the *Fortnightly Review* will appear the first of two articles by Prof. Cairnes on Mr. Herbert Spencer's Theory of Social Evolution, and also a reply, by the author of 'Supernatural Religion,' to the criticisms of Canon Lightfoot. 'Supernatural Religion' is now said to be by Mr. Pusey, a nephew of Dr. Pusey's.

The English version of the 'Biography of Michel Angelo,' by Mr. Charles Heath Wilson, will be published by Messrs. Blackwood & Sons, simultaneously with the publication of Signor Gatti's work in Italian, and with the French and German translations.

The monthly issue of Parliamentary Papers for November has sunk, not quite to zero, but to a minimum. The Reports and papers are fourteen in number, and include a Return of all Joint-Stock Companies formed from June 1, 1872, to December 31, 1873; and a Report on the rule of the road at sea, and the proceedings of the French Conseil d'Amirauté. The Papers by Command are thirteen; including a Return of Wrecks, Casualties, and Collisions during the Year 1873; the Report of the Army Medical Department for the Year 1872; and the General Report by Cap. Tyler on the Share and Loan Capital, Traffic, Working Expenditure, &c., of the Railway Companies of the United Kingdom for the Year 1873.

The literature of the Church Disestablishment question in Scotland bids fair to assume as large dimensions as did that of the memorable disruption struggle. About a dozen pamphlets have, within the past few weeks, been published on the subject, and fresh ones are being almost daily announced.

We have much pleasure in announcing that Mr. V. Fausböll, of Copenhagen, well known by his edition of the 'Dhammapada,' is engaged upon a collected edition of the Pali text of the entire Buddhist Jâtaka, to be completed in five volumes. A first instalment of 224 pages, containing the Nidâna (or introduction) and the first thirty-eight Jâtaka tales, will be ready shortly. A translation, uniform with the above, by Prof. R. C. Childers, is in progress, and will be published in the course of the coming year.

In an article on French biographical dictionary, a contemporary seems to express wonder at Mr. W. E. Baxter, M.P., and Mr. Henry Cole being described, among other things, as literary men. Mr. Baxter has published enough to give him, we think, a claim to the title, and Mr. Cole, under the name of Felix Summerley, wrote, in his early years, a number of works full of charm.

Mr. W. de G. Birch is engaged upon an English translation of the 'Commentarios do Grande Afonso Dalboquerque' for the Hakluyt Society.

The new French Congress, that of the Americanists, to be held at Nancy, has been so well supported, that already seven hundred members are enrolled. Mr. William Bollaert, the writer on Peruvian antiquities, is a delegate for England.

The Congress of Orientalists has so far been fortunate, that Mr. Trübner has devoted to its proceedings a special number of his *Literary Record*, or rather a small volume, for it is published in a separate form. This compact memoir, which contains a great mass of matter compressed together, will probably be sought for in India and the East, for it will give information much earlier than will be obtained from the volume to be issued to members. The magnificent first part or volume of the Paris Congress has only just appeared with profuse Chinese and Japanese illustrations; a second volume is in the press.

Gotha. which appeared on amusing misprint. The il of India appears as "Sir

in the Lancashire les, of Rochdale, Mr. Scholes ces which l form. his

was well known in society. An excellent *raconteur* and mimic, the memory of Peter Fraser will not soon die in his native city. He who, as a contemporary of Wilson and his two sons-in-law, Aytoun and Gordon, and of Lord Robertson (all great Table-Talkers), could make himself the centre of attraction in whatever company he appeared, must have had no ordinary powers."

The little fairy romance, called 'Prince Perindo's Wish,' just published, is from the pen of Mr. Thomas Constable, the printer, and the son of Sir Walter Scott's "Prince of Booksellers," and is illustrated by his son and partner, Mr. Archibald Constable.

A posthumous contribution by the late Tom Hood will appear next month in *Belgravia*, and his sister, Mrs. Broderip, has supplied materials for a notice of him, which is to be published in the *Gentleman's Magazine*.

PUNCH'S ALMANACK FOR 1875.

THE RAILWAY CLASSES.

First Passenger (affable Parson, who always travels Third Class). "O yes, I've noticed lately a great many Respectable People in these Carriages."

Second Passenger (a dirty chimney sweep). "Yes, Sir; so many people yer see, Sir, whose position in Society ain't so well defined as yours an' mine are, can't afford to travel Third Class without loss o' Respectability!"

WARNING TO THE NEWLY-MARRIED.

(Benedict) "WHOSE plump 'ickle Partridge is 'oo?" *(Wife)* "Oors!—Hubby's!"

[*Our Bachelor Friend in the Ulster coat, who overhears this fragment of dialogue as he awakes from his slumbers, is much interested to learn the kind of talk new-married folk indulge in when they think themselves unheard.*

A DISAPPOINTMENT.

(Little Girl) "IT's a lovely Doll, dear Grandpa and Grandma—but—but—I'd been hoping it would be *Twins!*"

THE SWELL'S STORY.

Little Hornblow (of the W. X. T. Y. C., who had been to Norway in his Yacht.) "It blew a Hu[illegible]ane. Ladies, from the Sou'-West! Sea mountain[illegible]. But, lashed to the Mast, I seized the helm, and broached her to beautifully, and away she flew before the wind down the North Sea, and brought up here Last Night at Six Bells all standing!"

THE SAILOR'S VERSION.

Old Sailing Master. "'Urricane'?! We 'ad a light air o' Wind off Yarmouth. 'Lashed to the Mast'? Well, all I know is, when I went below to ast for the Brandy Bottle, the Gov'nor he only p'inted!"

ACUTE CHINAMANIA.

May. "Mamma! Mamma! *Don't* go on like this, *Pray!*"

Mamma (who has smashed a favourite pot). "What have I got left to Live for?"

May. "Haven't you got *me*, Mamma?"

Mamma. "*You*, Child! *You're* not Unique!! There are Six of you—a Complete Set!!"

CHRONIC CHINAMANIA (INCURABLE).

Pale Enthusiast. "This is the Cream of my Collection, Ladies and Gentlemen. It is quite Unique. It was made by the Fallowbrook Pottery that was started in 1870. It took them Three Years to produce this Plate, their only one, and then—and then——"

Ruddy Philistine. "And then they shut up, I suppose?" *Pale Enthusiast.* "Er—yes!"

Ruddy Philistine. "And I don't wonder!!"

AN ALARMING INTRUDER.

Little Boldwig (he had been dining with his Company, and had let himself in with his latchkey—to Gigantic Stranger he finds in his hall). "Come on. I'll fight you!" *(Furiously.)* "Put your Shtick down!!"

[*But his imaginary foe was only the new Umbrella-Stand—a present from Mrs. B.!*

BABY WORSHIP.

Military Adonis (to Clerical Apollo). "Haw! Stwikes me wather forcibly that [illegible] tter hide our diminished H[illegible] hed fwom the Scene!"

PUNCH.

AN APOLOGY.

MR. PUNCH has to apologise for having, with too much trust in the good faith of a Correspondent, accepted as original the subject of one of his last week's illustrations, which had already appeared in the columns of a contemporary. Homer sometimes sleeps, and even *Punch* cannot be always on his guard against such dishonest palming off of old jokes for new ones.

PROPER ACCOMPANIMENTS.

A Book about the Table is announced. May we dare to ask whether it has clean plates and good cuts?

A MAN'S REVENGE.

OUR Gallant, though middle-aged, Friend, has great pleasure in introducing his *Second Love* (whom he is going to Marry next Week) to his *First* (who jilted him just a quarter of a century ago).

AS EASY AS LYING.

THE *Times* asks if any man can pronounce the word "Eupion." On behalf of those concerned, *Punch* would reply "U" "P" *on* a large scale.

ENGLAND'S HEART DISEASE.

LONDON is the heart of England. The bigness of London is the cause of the stoppages of the circulation on London Bridge. They thus arise from hypertrophy of the heart of England. London is getting bigger and bigger every day. England has got increasing hypertrophy of the heart. If that goes on, what must it end in? Could nothing be done to check the growing hypertrophy which England's heart is labouring under? Unless that is managed, it will be merely administering a temporary palliative to take any measure for doctoring London Bridge, in order to relieve it from stoppages of the circulation.

UNCONSIDERED TRIFLES.

"Consignee wanted for two Elephants, arrived in S. S. *Queen Anne*, from Calcutta."

It is incredibly reported that a few unclaimed rhinoceroses are also lying in the Docks; and an authority, whom we have no reason to believe, has offered to escort us to a warehouse, where a steam-launch, a lighthouse, a temporary iron church, and a pack of fox hounds, are all anxiously awaiting their owners.

VERY SPECIAL CORRESPONDENCE.—We look for the fullest accounts of the Transit of Venus in the *Sun* and *Observer*.

"FAHRENHEIT."

Rector (looking at the thermometer). "Ah, we shall be comfortable this morning, Gruffles, I see you 've got the Temperature up nicely. Sixty, I declare!"

Clerk. "Yes, Sir, I allus hev a trouble to get that thing up. I took and Warmed it jest this minute!"

THE COMING EDUCATIONAL ESTABLISHMENT (EUROPEAN).—The "Woolwich Infant" school.

QUITE IMPOSSIBLE.

THE Jesuits disloyal? Why they can challenge any community, however loyal its principle, to deny that their Society is founded upon Loyola!

STALL-FED, BUT NOT STALL-CLAD.

Box-Keeper (to Country Visitor, who, on removing his Overcoat, reveals the glories of his Vest). "Beg pardon, Sir, but I 'm afraid your Waistcoat ain't quite the thing for the Stalls."

Country Visitor (with indignant surprise). "Not good enough for a Theyater! Why, I had that Waistcoat made o' purpose for Cattle Show week!"

ROYAL AND LOYAL STOCK.

AT the great Cattle Show the champion Short-horn Cow was the property of the Prince of Wales. Another feather this in the Prince's cap!

SEASONABLE ENTERTAINMENT.—Waits playing [illegible]cales.

FOR VENUS IN TRANSITU.—"The observed [illegible]rs."

[illegible] SINEWS OF SPORT.

[illegible]d Keeper). "Now, Grandi-[illegible]l be tired of waiting, why [illegible]"

Head Keeper (aotto voce). "Beg pardon, My Lord, the London Train's late this Morning with the Pheasants—we must have Half an Hour to get 'en into the Coverts!"

SWEEPING THE STAGE. ("NEW BROOMS.")

BOX BOOK-KEEPER. "Stalls, Madam? Well.—Really,—The Fact is, the Lord Chamberlain,—That is—Ahem!—We 're just now *Cleaning the Stage*, Madam, and hope to have the Theatre quite fit for Ladies by Christmas."

"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley, for the above named Pills, for wind in the stomach, from which I suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted. —I am, Sir, yours truly, HENRY ALLPASS.—To the Proprietors of NORTON'S CAMOMILE PILLS."

(165)

COLT'S NEW GOVERNMENT ARMY REVOLVER,

as recently adopted for the United States Cavalry, takes the ·450 central fire service Boxer Cartridge. It equals a rifle in range and in accuracy of fire, and is unequalled for durability of construction. It can be easily loaded and unloaded when dark, and can be carried with perfect safety when loaded. It far surpasses in efficiency and quality of make the numerous cheap pistols of various make which now flood the market.

COLT'S LARGE BORE BREECH-LOADING DERINGER,

for the waistcoat pocket, shoots hard and straight.

COLT'S DERINGER REVOLVER,

for personal and house defence, fires a larger ball than any other Revolver of the same weight and size.

To be had through any respectable Gunmaker or Dealer in Arms, or from

Colt's Fire Arms Manufacturing Company,

14, PALL MALL, LONDON, S. W.

(335)

BRITISH INDIA STEAM NAVIGATION COMPANY,

"LIMITED."

The following are the movements of the Company's steamers during January and February 1875.

From Calcutta.

For *Chittagong*, *Akyab* and *Kyouk Phyoo*, 25th January, 8th and 22nd February.

" *Akyab* and *Rangoon*, 18th January, 1st and 15th February.

" *Rangoon* and *Moulmein*, 18th January, 1st and 15th February.

" *Singapore*, calling at *Rangoon*, *Moulmein*, *Penang* and *Malacca*, 25th January, 8th and 22nd February.

" *Port Blair* and *Camorta*, 27th January, and 24th February.

" *Bombay*, calling at *False Point*, *Gopaulpore*, *Bimlipatam*, *Vizagapatam*, *Coconada*, *Madras*, *Pondicherry*, *Negapatam*, *Galle*, *Colombo*, *Tuticorin*, *Alleppey*, *Cochin*, *Beypore*, *Calicut*, *Tellicherry*, *Cannanore*, *Mangalore* and *Carwar*, 14th, 21st and 28th January, 4th, 11th, 18th and 25th February receiving cargo for *Kurrachee*, *Guador*, *Muscat*, *Bunder Abbas*, *Linga*, *Bushire*, *Fao*, *Bussorah* and *Baghdad*, to be transshipped at *Bombay* to steamer leaving for the *Persian Gulf* immediately after arrival of steamer from Calcutta. *Baghdad* cargo transferred at *Bussorah* to steamers of the Euphrates and Tigris Steam Navigation Company.

From Madras.

For *Rangoon*, calling at *Masulipatam*, *Coconada*, *Vizagapatam* and *Bimlipatam*, returning to *Madras viâ* same ports; 20th January, 3rd and 17th February.

From Bombay.

" *Kurrachee* only, 18th and 25th January, 1st 8th, 15th and 22nd February.

" *Kurrachee*, *Guador*, *Muscat*, *Bunder Abbas*, *Linga*, *Bushire*, *Fao* and *Bussorah*, receiving cargo for *Baghdad*; 15th, 22nd and 29th January, 5th, 12th, 19th and 25th February.

" *Calcutta*, calling at same ports as the steamers from Calcutta; 16th, 23rd and 30th January, 6th, 13th, 20th and 27th February.

From Aden.

(455) Calcutta.

ESTABLISHED IN 1820.

C. LAZARUS AND CO.

(Incorporated with Shearwood & Co.,)

CABINET MAKERS, UPHOLSTERERS,

Billiard Table Manufacturers,

BY APPOINTMENT

To His Excellency the Viceroy and Governor-General of India,

AND

His Royal Highness the Duke of Edinburgh

CALCUTTA.

THE NEW PATENT

ELECTRIC BILLIARD MARKER.

C. LAZARUS & Co. beg to draw the attention of Clubs, Messes, *and the public in general, to this* wonderful and very ingenious adaptation of the great principle of

ELECTRICITY

As applied to the noble recreation of

BILLIARDS.

One of the greatest inconveniences attendant on this scientific game and the one most felt by players, is the interruption to play by having continually to run to the wall marking board to mark the score, and the liability to mistakes in so marking. By this new invention mistakes are impossible, and annoyances and inconveniences are done away with, and the interest in the game is doubled. *Every player can now mark his score without leaving the table and from the cushion he is standing near.*

The apparatus itself is so simple in construction, that an Amateur can put it together in half an hour, without the assistance of an Electrician. The Battery will last for months, without being refilled, and when it needs to be renewed can be done at any time, for a few annas.

The extreme simplicity of the ELECTRIC MARKER and the low charge for the same will, C. L. & Co., are satisfied, make it as popular with the Billiard-playing community of India and the East, as it has already become in England and on the Continent. C. L. & Co. have at present only a very limited supply of the ELECTRIC MARKERS, but are expecting fresh consignments shortly. Meanwhile all orders will be registered for execution.

The MARKERS can be seen in full work, and all particulars may be ascertained from C. L. & Co., who have been appointed by the Patentees sole Agents for India and the East. They cannot therefore be procured elsewhere.

MIRRORS.

THE Mirror has undoubtedly, in this Country, long been esteemed and sought after as a beautiful and Appropriate Embellishment to the Indian Mansion. Knowing that Mirrors hold such an important position in Decorative Art, C. Lazarus & Co. have made arrangements for the supply of Mirrors from the most celebrated manufacturers. They have just received, and have now on view at their show rooms,

A Magnificent and most varied Assortment of

Plate Glass Mirrors,

Of every design and size, by far

THE HANDSOMEST AND LARGEST

Ever imported into this Country, and which for brilliancy of reflective power, truthfulness of reproduction, and Style of Mounting have never been surpassed. The Silvering also of these Plates is on a new and most approved principle, not so liable to deterioration as the old method of Mercurial Silvering.

C. L. & Co. earnestly and respectfully solicit an inspection, satisfied that, what they would here desire to pronounce, *viz.*,—An opinion on the Intrinsic Excellence of the Mirrors, will be better done by those who may favour them with a visit than by any description in a trade Advertisement, which must of necessity fail to convey to the mind an adequate idea of these really superb works of Decorative Art.

In order to effect a speedy sale with a view to further importations, C. L. & Co. are prepared to offer these Mirrors to the Public at exceptionally low rates, being in fact very little over manufacturer's prices.

Billiard Tables.

The numerous flattering testimonials received by C. LAZARUS & Co. from all parts of India, China, Burma, Persia, Java, Ceylon and the Straits, prove that their tables are now considered the best manufactured and are the only ones appreciated in the places enumerated.

(213)

DR. J. COLLIS BROWNE'S CHLORODYNE.

THE ORIGINAL AND ONLY GENUINE.

ADVICE TO INVALIDS.—If you wish to obtain quiet, refreshing sleep, free from headache, relief from pain and anguish, to calm and assuage the weary aching of protracted disease, invigorate the nervous media, and regulate the circulating systems of the body, you will provide yourself with that marvellous remedy discovered by Dr. J. COLLIS BROWNE (late Army Medical Staff, Member of the College of Physicians, London,) to which he gave the name of

CHLORODYNE,

And which is admitted by the Profession to be the Most Wonderful and Valuable Remedy ever discovered.

CHLORODYNE is the best remedy known for Coughs, Consumption, Bronchitis, Asthma.
CHLORODYNE effectually checks and arrests those too often fatal diseases—Diptheria, Fever, Croup, Ague.
CHLORODYNE acts like a charm in Diarrhœa, and is the only specific in Cholera and Dysentery.
CHLORODYNE effectually cuts short all attacks of Epilepsy, Hysteria, Palpitation, and Spasms.
CHLORODYNE is the only palliative in Neuralgia, Rheumatism, Gout, Cancer, Toothache, Meningitis, &c.

CAUTION.—BEWARE OF PIRACY AND IMITATIONS.

From LORD FRANCIS CONYNGHAM, Mount Charles, Donegal, Dec. 11th, 1868 :—"Lord Francis Conyngham, who this time last year bought some of Dr. J. Collis Browne's CHLORODYNE from Mr. Davenport, and has found it a most wonderful medicine, will be glad to have half-a-dozen bottles sent at once to the above address."

*** EARL RUSSELL *Communicated to the College of Physicians that he had received a despatch from Her Majesty's Consul at Manilla, to the effect that Cholera has been raging fearfully, and that the* ONLY REMEDY *of any service was* CHLORODYNE.—*See Lancet, Dec.* 31, 1864.

J. LOWE, M. R. C. S. E., Missionary in India, states—"In nearly every case of Cholera in which Dr. J. Collis Browne's CHLORODYNE has been administered in the earlier stages of the attack the patient has recovered. Every traveller in India should carry a supply."

Extracts from the GENERAL BOARD OF HEALTH, LONDON, as to its efficacy in Cholera :—"First Stage or Premonitory. In this stage the remedy acts as a *charm*. One dose is generally sufficient.

From DR. THOMAS SANDIFORD, Passage West Cork :—"I will thank you to send me a further supply of CHLORODYNE. It was the most efficacious remedy I ever used, affording relief in violent attacks of Spasms within a minute after being taken. One patient in particular, who has suffered for years with periodical attacks of Spasms of a most painful nature, and unable to obtain relief from other remedies, such as opium, &c., finds nothing so prompt and efficacious as CHLORODYNE."

DR. M. MILLMAN, of New Galloway, Scotland :—"I consider it the most valuable medicine known."

DR. GIBBON, Army Medical Staff, Calcutta :—"Two doses completely cured me of Diarrhœa."

From DR. B. J. BOULTON & CO., Horncastle :—"We have made pretty extensive use of CHLORODYNE in our practice lately, and look upon it as an excellent Sedative and Anti-spasmodic. It seems to allay pain and irritation in whatever organ, and from whatever cause. It induces a feeling of comfort and quietude not obtainable by any other remedy, and it seems to possess this great advantage over all other Sedatives, that it leaves no unpleasant after-effects.

CAUTION.—VICE-CHANCELLOR SIR W. PAGE WOOD stated that Dr. J. COLLIS BROWNE was, undoubtedly, the Inventor of CHLORODYNE; that the story of the defendant, FREEMAN, was deliberately untrue, which, he regretted to say, had been sworn to—See *Times*; July 13, 1864.

Sold in Bottles, at 1*s.* 1½*d.*, 2*s.* 9*d.*, 4*s.* 6*d.*, and 11*s.* each. None is genuine without the words "Dr. J. COLLIS BROWNE'S CHLORODYNE" on the Government Stamp. Overwhelming Medical Testimony accompanies each bottle.

Deyrah Doon.

(443)

ALL BILIOUS COMPLAINTS

And every Disorder depending on either *Functional Derangement* of the LIVER or *Obstruction of the Hepatic* or *Biliary Ducts*, such as INDIGESTION, JAUNDICE, HEARTBURN, DYSPEPSIA, PAIN IN THE RIGHT SIDE AND SHOULDER, BLOTCHES, HABITUAL COSTIVENESS, OFFENSIVE BREATH, DEPRESSION OF SPIRITS, OPPRESSION AFTER MEALS, NERVOUS AND GENERAL DEBILITY, RESTLESSNESS, WASTING, &c., &c., &c., have their appropriate Remedy in

Dr. E. J. LAZARUS'S

ESSENCE OF CHIRETTA.

That it is the only Preparation that has a *really beneficial* influence on the LIVER has already been proved, *beyond all doubt*, by the 97,500 CASES in which it has been tried. It has already saved *thousands* of valuable lives [*see the numberless Testimonials in the Pamphlet of Directions that is wrapped round each bottle*], and has enabled very many thousands more to continue their residence in India in the enjoyment of perfect health and comfort; hence it has, with all truth, been generally styled

THE GREAT INDIAN REMEDY.

Prepared only by Messrs. E. J. LAZARUS & Co., at the MEDICAL HALL, BENARES, from the Original Receipt of E. J. LAZARUS, M.D., and sold by all Medicine Vendors at 4 Rs. each bottle.

CAUTION.—We have a host of unscrupulous imitators—*an indubitable proof of its value*—against whom the Public are warned. Please observe that every bottle is capsuled, and bears on its labels the facsimile of our signature.

THE DECAY OF THE TEETH

Arises from neglect, and the use of tooth powders, pastes and washes, which containing mineral and other deleterious acids utterly ruin the enamel.

ROWLANDS' ODONTO

Is entirely free from all injurious elements, whitens and preserves the teeth, prevents and arrests their decay, strengthens the gums, and gives a pleasing fragrance to the breath.

ROWLANDS' MACASSAR OIL

Prevents the hair falling off or turning grey, strengthens weak hair, causes it to grow on bald patches, and makes it beautifully soft, pliable and glossy.

ROWLANDS' KALYDOR

Removes all freckles, spots, and cutaneous eruptions, and realizes a healthy purity of complexion.

ROWLANDS' ESSENCE OF TYRE

Produces immediately a perfect change in red or grey hair, whiskers and eyebrows, to a glossy and permanent brown or black, which colour neither washing or perspiration will remove. **GREAT CARE** must be taken to ask for Rowlands' Articles, of 20, Hatton Garden, London, and to see that their signature, A. ROWLAND & SONS, is in RED ink on the wrapper of each, no others being genuine. Sold by all Chemists, Perfumers, Druggists, and at all Bazaars throughout India.

William Forbes Skene, Esq., W. S., LL. D.
Herbert Taylor, Esq.
William Gordon Thomson, Esq.
The Rev. Richard Wood, B. D.
John Ralph Engledue, Esq.
Secretary.—Andrew Francis, Esq.

The financial position of the Institution on 31st December 1873, was as follows:—

Proprietary Capital		...	£1,000,000-0-0
Annual Life Income	Premia	...	£76,900-0-0
	Interest	...	£24,300-0-0
Realized and Invested Funds		...	£561,332-0-0

RETIRING PROVISIONS.

Policies are issued by which these may be secured, and at the same time a surviving family be protected in the event of premature death.

ASSURANCES BY TERMINATING RATES OF PREMIUM.

Under this system, Assurances can be effected for the whole term of life, the annual premia for which cease after a given number of years.

FREE POLICIES.

Assurances by this system can never altogether be forfeited by non-payment of Premia.

CLERGY FUND.

One-tenth of the Proprietors' Profits is periodically set aside for the purpose of aiding Clergymen and Ministers to assure their lives for the benefit of their families.

UNIVERSAL LIFE ASSURANCE SOCIETY.

ESTABLISHED IN THE YEAR 1834.

Head Office, 1, *King William Street, London.*

Insurances effected with or without participation in profits.

ASSURERS under the participating scale share in the Society's profits after six years' premia have been paid, and thus receive back each and every year thereafter, either in the form of an addition to the original sum assured, or of a reduction of the next year's premium, at their option, a Bonus, the amount of which is governed by the annual valuation of the Society's Assets and Liabilities.

This principle was adopted on the establishment of the Society in 1834, and it is manifest that on a business where *stability* is the first necessity, an undeviating rule which limits the distribution of all profits to the existing condition of the Society's affairs in each year, is the true and *only principle on which stability can be guaranteed*, whilst the assured are relieved from the payment of any higher premium than is absolutely necessary from year to year to maintain that stability.

During the past eleven years, Policy-holders so assured in the Universal Life Assurance Society have been thus relieved to the extent of 50 *per cent. of their yearly Premia*, the sum allotted for Bonuses this year being £34,065.

The Invested Funds of the Society now amount to £971,942.

Reduction to English Rates during residence in Europe.

Premiums payable Annually, Half-yearly, Quarterly or Monthly at the option of the Assured.

Medical Officer:

Dr. T. E. CHARLES, 10, Harrington Street.

Hour of attendance, 10 A.M.

Copies of the last Report, Proposal Papers, &c., on application to the Society's Sub-Agents in the Mofussil, or to

(269½)

LEA & PERRINS'

CELEBRATED

WORCESTERSHIRE SAUCE,

DECLARED BY CONNOISSEURS TO BE

THE ONLY GOOD SAUCE.

CAUTION AGAINST FRAUD.

The success of this most delicious and unrivalled Condiment having caused certain dealers to apply the name of "Worcestershire Sauce" to their own inferior compounds, the Public is hereby informed that the only way to secure the genuine is to

ASK FOR LEA & PERRINS' SAUCE,

and to see that their names are upon the *wrapper, labels, stopper*, and *bottle*.

Some of the foreign markets having been supplied with a spurious Worcestershire Sauce, upon the wrapper and labels of which the names of Lea and Perrins have been forged, L. and P. give notice that they have furnished their correspondents with power of attorney to take instant proceedings against *Manufacturers* and *Vendors* of such, or any other imitations by which their right may be infringed.

Ask for LEA & PERRINS' Sauce, and see Name on Wrapper, Label, Bottle, and Stopper.

Wholesale and for Export by the Proprietors, Worcester: Crosse and Blackwell, London, &c., &c.; and by Grocers and Oilmen universally.

To be obtained of

BISSONAUTH LAW & CO.,
Calcutta.

(339)

ROYAL INSURANCE COMPANY.

The Annual Meeting of the Company was held on August 6th.

THE FOLLOWING IS FROM THE REPORT ON THE

LIFE DEPARTMENT.

During the past year 1,406 new Proposals were made to the Company. Of these 1,099 were accepted and completed for 514,638*l.*, the new Premiums thereon being 17,271*l.* 2*s.* 9*d.* The total income from Premiums, after deducting re-assurances, amounted to 237,415*l.* 10*s.* 8*d.*, and the interest received from investments (exclusive of that on the annuity funds) was 64,990*l.* 9*s.* 10*d.* The claims during the year were:—

By Death: Original sums assured	£117,228	17	6
Bonus additions thereon	7,423	11	2
By Matured Policies (including Children's Endowments): Original sums assured	1,750	0	0
Bonus additions thereon	134	15	0
	£126,537	3	8

The result of the operations for the year is that, after payment of all claims, annuities, and expenses of every description, 158,547*l.* 0*s.* 4*d.* has been added of the Life Funds, making the total accumulations of the Life Branch of the Company,

£1,761,523-11-11.

GRATEFUL—COMFORTING.

EPPS'S COCOA.

BREAKFAST.

"By a thorough knowledge of the natural laws which govern the operation of digestion and nutrition, and by a careful application of the fine properties of well-selected cocoa, Mr. Epps has provided our breakfast tables with a delicately flavoured beverage which may save us many heavy doctor's bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—*Civil Service Gazette.*

MANUFACTURE OF COCOA.—"We will now give an account of the process adopted by Messrs. James Epps and Co., manufacturers of dietetic articles, at their works in the Euston-road, London."—See article in *Cassell's Household Guide.*

Made simply with boiling water or milk.

Sold only in ¼-lb. and 1-lb. tins, labelled thus:—

JAMES EPPS & CO.,

HOMŒOPATHIC CHEMISTS,

48, THREADNEEDLE STREET, AND 170, PICCADILLY.

Works—EUSTON ROAD and CAMDEN TOWN.

Makers of Epps's Milky Cocoa (Cocoa & Condensed Milk).

DR. DE JONGH'S

KNIGHT OF THE ORDER OF LEOPOLD OF BELGIUM

LIGHT-BROWN COD LIVER OIL

The only real test—universal medical experience during twenty-five years—has conclusively proved DR. DE JONGH'S COD LIVER OIL to be, beyond all comparison, the purest, the most palatable, the most easily digested, and the most rapidly efficacious of all kinds.

SELECT MEDICAL OPINIONS.

SIR G. DUNCAN GIBB, Bart., M.D., LL.D.,
Physician and Lecturer on Forensic Medicine, Westminster Hospital.

"The experience of many years has abundantly proved the truth of every word said in favour of DR. DE JONGH'S Cod Liver Oil by many of our first Physicians and Chemists, thus stamping him as a high authority and an able Chemist whose investigations have remained unquestioned."

DR. EDWARD SMITH, F.R.S.,
Medical Officer to the Poor Law Board of Great Britain.

"We think it a great advantage that there is one kind of Cod Liver Oil which is universally admitted to be genuine—the Light-Brown Oil supplied by DR. DE JONGH."

DR. EDGAR SHEPPARD,
Professor of Psychological Medicine, King's College.

"DR. DE JONGH'S Light-Brown Cod Liver Oil has the rare excellence of being well borne and assimilated by stomachs which reject the ordinary Oils."

SIR HENRY MARSH, Bart., M.D., T.C.D.,
Physician in Ordinary to the Queen in Ireland.

"I have frequently prescribed DR. DE JONGH'S Light-Brown Cod Liver Oil. I consider it to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

DR. LETHEBY.
Medical Officer of Health and Chief Analyst to the City of London.

"In all cases I have found DR. DE JONGH'S Cod Liver Oil possessing the same set of properties, among which the presence of cholaic compounds, and of iodine in a state of organic combination, are the most remarkable."

DR. GRANVILLE, F.R.S.,
Author of the "Spas of Germany."

"DR. DE JONGH'S Light-Brown Cod Liver Oil produces the desired effect in a shorter time than other kinds, and it does not cause the nausea and indigestion too often consequent on the administration of the Pale Oils."

General Debility and Emaciation.

In cases of EXHAUSTION and PROSTRATION produced by exposure to the debilitating influence of tropical and unhealthy climates, DE JONGH'S OIL is much more safe and useful than the ordinary stimulating tonics, and it has been resorted to with the most beneficial effect after the whole range of these had been tried in vain. By its administration the natural appetite is revived, and the functions of digestion and assimilation are improved, reanimated, and regulated; the muscular power and activity are sensibly and rapidly increased; and, when its use has been steadily persevered in, its peculiar nutritive and reparative properties have entirely restored health and strength to the most feeble and deteriorated constitutions.

BENJAMIN CLARKE, Esq., M.R.C.S., F.L.S., *Author of "Notes and Suggestions on Cod Liver Oil and its Uses,"* writes:—

"Having myself taken both the Pale and Light-Brown Cod Liver Oils for debility, I am able, from my own experience, to remark upon their effects and comparative usefulness as remedial agents. After the Pale Oil and all other remedies that I could think of had failed. I tried, merely as a last resort, DR. DE JONGH'S Light-Brown Cod Liver Oil. I received immediate relief, and its use was the means of my restoration to health. In their sensible properties and chemical constituents, the Pale Oil and DR. DE JONGH'S Light-Brown Oil are distinct medicines; and, from my observation of their mode of action and effects. I must believe that I have seen many patients die, both in hospital and private practice, some of them of juvenile years, and others in the prime of life, who, in all probability, would have been cured, if the medical properties of DR. DE JONGH'S Light-Brown Cod Liver Oil had been known as they are now, and its use prescribed."

ROWLAND DALTON, M.R.C.S., L.S.A., Esq., *District Medical Officer at Bury St. Edmund's,* writes:—

"In giving my opinion of DR. DE JONGH'S Light-Brown Cod Liver Oil, I have no hesitation in saying that I have not the slightest confidence in any other kind. The effects of DR. DE JONGH'S Light-Brown Cod Liver Oil are sure and most remarkable, especially in that broken down state of health and strength which usually precedes and favours tubercular deposit; and I never recommend any other sort. The Oil I have had from you was for my own use, and it has certainly been the only means of saving my life on two occasions, and even now, when I feel 'out of condition,' I take it, and like it, unmixed with anything, as the most agreeable way. I could wish that DR. DE JONGH'S Oil would become into general use, and entirely supersede the Pale and other worthless preparations."

The Wasting Diseases of Infancy and Childhood.

In those severe disorders, *Infantile Wasting and Rickets,* from which children suffer so extensively, and which destroy so many infants, the good effects of this Oil are incontestably established, its operation being oftentimes so very remarkable as to cure the disease when every other remedy had failed, and all hope of saving life had been abandoned.

In cases of languid and imperfect nutrition, often observed in children, where the appetite is capricious, and digestion slow and painful, and the body becomes weak and wasted, without any apparent disease, this Oil, after a few weeks, and sometimes in a few days, has produced the most extraordinary transition to a state of normal health.

THOMAS HUNT Esq., F.R.C.S., *Surgeon to the Western Dispensary for Diseases of the Skin,* writes:—

"In badly nourished infants, DR. DE JONGH'S Light-Brown Cod Liver Oil is invaluable. The rapidity with which two or three teaspoonfuls a day will fatten a young child is astonishing. The weight gained is three times the weight of the Oil swallowed, or more; and, as children generally like the taste of DR. DE JONGH'S Oil, and when it is given them, often cry for more, it appears as though there were some prospect of deliverance for the appalling multitude of children who figure in the weekly bills of mortality issued from the office of the Registrar-General."

DR. ROBERT C. CROFT, *Author of "A Handbook for the Nursery,"* writes:—

"I have tried DR. DE JONGH'S Light-Brown Cod Liver Oil, and find that it contains all the properties which render the Oil so efficacious. I find, moreover, that many patients prefer it to the Pale Oils, and are able to retain it more comfortably. It is almost a specific in many of the diseases peculiar to infancy and childhood, and I have seen marked benefit produced by its use."

*** DR. DE JONGH'S LIGHT-BROWN COD-LIVER OIL is sold ONLY in bottles sealed with a metallic capsule impressed with his stamp, and bearing beneath the pink outside wrapper a label with his stamp and signature, and the signature of his Sole Consignees, ANSAR, HARFORD, and CO. A sixteen-page pamphlet, with stamp and signatures, accompanies each bottle. To this capsule, and to these marks on label and pamphlet, purchasers are earnestly requested to pay particular attention.

WITHOUT THESE NONE CAN POSSIBLY BE GENUINE.

IMPERIAL Half-Pints, 2s. 6d.; Pints, 4s. 9d.; Quarts, 9s.

Sole Consignees—ANSAR, HARFORD, and Co., 77, STRAND, LONDON.

SOLD BY ALL RESPECTABLE CHEMISTS, DRUGGISTS, AND STORE-KEEPERS THROUGHOUT THE WORLD.

CAUTION.—*Purchasers are earnestly cautioned against mercenary attempts frequently made to substitute other inferior kinds of Cod Liver Oil when* DR. DE JONGH'S *is applied for. All offers of other Oil should therefore be firmly rejected.*

THE WEEK.

ON the 13th inst. the following Extraordinary Gazette was issued by the Government of India, stating that evidence had been adduced to the effect that the Guikwar had instigated the attempt to poison Colonel Phayre, and that the Guikwar was suspended from the exercise of his power, in order to give him every opportunity to clear himself, and to enable the British Government to enquire into the truth of the charge.

Be it known that *Whereas* an attempt has been made at Baroda to poison Colonel R. Phayre, C. B., the late British Resident at the Court of His Highness the Guikwar, and evidence has been adduced to the effect, that His Highness Mulhar Rao Guikwar instigated the said attempt to administer poison to Colonel Phayre;

And Whereas to instigate such attempt would be a high crime against Her Majesty the Queen and a breach of the condition of loyalty to the Crown under which Mulhar Rao Guikwar is recognized as ruler of the Baroda State, and moreover such an attempt would be an act of hostility against the British Government, and it is necessary fully and publicly to enquire into the truth of the charge and to afford His Highness Mulhar Rao Guikwar every opportunity of freeing himself from the grave suspicion which attaches to him;

And Whereas in consequence thereof it is necessary to suspend Mulhar Rao Guikwar from the exercise of power and to make other arrangements for the administration of the Baroda State:

It is hereby notified that from this date the Viceroy and Governor General of India in Council temporarily assumes the administration of the Baroda State, and delegates all the powers necessary for the conduct of the administration to the Agent to the Governor General and Special Commissioner at Baroda. The administration will be conducted as far as possible in accordance with the usages, customs, and laws of the country.

All Sirdars, Inamdars, Zemindars, and inhabitants of the Baroda territories, and all officers and persons whatsoever in the civil and military service of the Baroda State, or liable to be called upon for such service, are hereby required to submit to the authority of and render obedience to the said Agent to the Governor General and Special Commissioner during such time as the State may be under the administration of the British Government.

In accordance with the gracious intimation made to the Princes and Chiefs of India that it is the desire of Her Majesty the Queen that their Governments should be perpetuated, and the Representation and Dignity of their Houses should be continued, a Native Administration will be re-established in such manner as may be determined upon after the conclusion of the enquiry and after consideration of the results which such enquiry may elicit.

By Order of the Viceroy and Governor General of India in Council,

FORT WILLIAM, 15*th January*, 1875. } C. U. AITCHISON, *Secy. to the Govt. of India.*

THE following business was transacted at the Meeting of the Governor General's Council for making Laws and Regulations, held on Tuesday, the 19th instant. The Hon'ble Mr. Hobhouse moved that the Reports of the Select Committee on the Bill to regulate Distresses for Rent in the Presidency Towns be taken into consideration, and also that the *Bill* as amended be passed. The motions were agreed to. The Report of the Select Committee on the Bill to diminish the multitude and improve the quality of Law Reports, and to extend the area of their authority, was then taken into consideration, Mr. Hobhouse moving that the Bill as amended be passed; which was agreed to. The Report of the Select Committee on the Bill for the further amendment of Act I of 1859 (*for the Amendment of the law relating to Merchant Seamen*) and for other purposes, was presented, after which the Hon'ble Mr. Ellis represented that he would postpone making his contemplated motion for leave to introduce a Bill to secure the repayment of a loan by the Government of India to Sir Jamsetjee Jeejeebhoy, Baronet.

THE arrest of the Guikwar has been contrived with considerable skill and executed with remarkable celerity; so excellent have been all Sir Lewis Pelly's plans and proceedings that Mulhar Rao has been made a state-prisoner without the least public disturbance, and with scarcely any excitement. The Guikwar had issued invitations for a large hunting expedition to Etola, eighteen miles south of Baroda, to take place on the 14th inst. Colonel Pelly had himself been invited; but it is by no means certain that the expedition had not some more important object in view than mere sport. However that may be, on the morning of that day a very different scene took place. Troops having been collected and massed, the cantonment of Baroda was quite animated; at a very early hour Sir Lewis Pelly intimated to General Devine, commander of the Guikwar's forces, that he had taken over the administration of affairs in the Baroda State on behalf of the Governor General. This announcement was received without protest. At a quarter past 8 o'clock the Guikwar arrived at the Residency and surrendered himself a prisoner. He is now carefully guarded pending his trial. A correspondent of the *Bombay Gazette* thus describes the prince as he appeared at the moment of his arrest. "The Gaekwar is a man about five feet nine inches high, and thin. His eyes are large and afflicted with strabismus. His mouth also is large, and filled with a set of black teeth which have a startling effect when His Highness essays a smile. The first impression you receive of his character is that he is a fool, but a closer acquaintance with him shows you that his eyes can be bent upon an object in more ways than one—that in fact His Highness is a man of great cunning, but wanting in breadth of judgment or decision. He wore his Mahratta turban of yellow intertwisted ropes which was thrown well back upon his forehead; a large cloak like a dressing gown with green flowers upon a dirty white ground, and fastened with thread of gold; and long white cotton gloves."

THE *Englishman* is of opinion that the enormous accumulations of the Guikwar, currently stated at £600,000, stowed away in various Banks and investments in British India, will enable him to secure such a force of legal talent on his side as has never yet been arrayed in an Indian state trial. In anticipation of the catastrophe that has now happened, the Guikwar has withdrawn large sums from the banks, and lodged them in secret and official hands. Our contemporary, as will be seen from the following extract, is in no way uneasy in regard to the condition of the political horizon. We heartily coincide that the presence of Mr. A. C. Lyall in Rajpootana is a guarantee for the good behaviour of the Native States in that part of India. At a conjuncture like the present it would be impossible for the interests of those States to be confided to better hands.

There seems very little chance of anything like an attempt at political resistance on behalf of the deposed Prince. The Rajputana States to the north have abundant historical grounds for antipathy to the representative of the Peishwa's power, and a few months ago they were placed under the firm hand of the very ablest civilian on this side of India. The Kathiawar States, once the hereditary territory of the Gaikwar, and still guarded by his Contingent, were in like manner placed last year under the strongest Political Officer on the Bombay side. With Mr. Alfred Lyall in Rajputana, and Mr. Peile in Kathiawar, the good behaviour of these two great sets of Native States may be considered as secure. The interests of Holkar and Sindhia would array them on the British side in any struggle on behalf of the Guikwar. His own subjects in his capital and the surrounding territory have had sufficient ground to hate and detest his Government, and will welcome the change of rulers.

THE *Hindoo Patriot* in a judicious article expresses confidence in the straight-forward character of Lord Northbrook's administration, and feels assured that the integrity of the Baroda State is perfectly safe in his hands. The *Patriot* remarks:

Of course the British Government as the Paramount Authority ought to keep the power of regulating the Raj in its own hands, but one thing seems to be certain that there shall be a Native Raj. This assurance ought to allay all apprehensions as to the revival of the annexation policy. So long as Lord Northbrook holds the sway we need entertain no such apprehension. We have been reminded of the struggle made to keep the Fort of Gwalior and the Assigned districts of Berar in the hands of the British Government, but on the other hand we may point to the restoration of Dhar and the resolution to restore also Mysore. We feel confident that Lord Northbrook will not destroy the integrity of the Native Government of Baroda, whatever the safeguards and restrictions he may put upon it, which we need hardly say he would be perfectly justified to impose after the discreditable disclosures made.

It is truly satisfactory to find the Native Press so thoroughly loyal at this conjuncture. Nothing could indicate more plainly the condemnation the attempt to poison Colonel Phayre has excited throughout the whole of India, than the fact that the strong measures which have been taken by the Supreme Government are concurred in by all classes of the community.

THE *Pioneer* regards applause of the step taken by the Viceroy as quite unnecessary, there being nothing else for him to do. Our contemporary tells us:

The only criticism on our past relations with Baroda which their present aspect suggests is that we might just as well have taken over the State much sooner. Mulhar Rao's recognition was perhaps a mistake from the first. He was under a cloud, the shadow of which recent events will not serve to lighten, when his brother Khunder Rao died, and the proclamation we publish this morning would not have required a very different wording if put forward in 1870. The people of the Gaekwar's dominions have been the only sufferers by the delay, however; and

as they do not complain, we need not grudge the Government the satisfaction of reflecting that all the expedients which could possibly have averted the necessity for a temporary annexation were tried in turn before that final remedy was applied.

WE have made quotations from the Calcutta, the Bombay and the Allahabad press to show our readers the unanimity which prevails in regard to the necessity for deposing the Guikwar. Our own opinion is that every thoughtful person ought to be convinced by the whole *modus operandi* in this important affair, that Lord Northbrook is following a safe policy in the Foreign Department of his Government. He has under him in Sir Lewis Pelly, Mr. Aitchison, Mr. A. C. Lyall, and other officers connected with that Department, a remarkable body of men whose efficiency has never been surpassed by any of their predecessors during the whole period of British rule.

ON Monday last at 11 A. M., His Excellency the Viceroy received the Yarkund Envoy in the Throne Room of Government House, Calcutta. Mr. Henvey, the officiating Under Secretary in the Foreign Department, accompanied the Envoy in a carriage to the entrance door, where Mr. Aitchison, the Foreign Secretary, was in readiness to welcome the visitor. A procession was then formed, and the party proceeded to the presence chamber. Lord Northbrook stood on the dais while the Envoy saluted him, and submitted the letter with which he had been entrusted. When the letter had been read there was a presentation of some handsome gifts, after which the Envoy retired under a salute of fifteen guns.

LAST week we noticed the discontent in Bombay in reference to the unsatisfactory manner in which the change in the departure of the Mail train for Calcutta had been carried out. The *Bombay Gazette* is continuing the discussion; in its issue of Tuesday it says:

In a country in which the Railways were independent, they would know better in their own interest than to make changes in the time of starting their trains without having assured themselves beforehand that these changes would command public approval. But a guaranteed Railway is quite independent of public support. All that the heads of Departments need care about is to organize the working of the line in such a way as to satisfy the Government officials; and the testimony borne by Mr. Ormiston, at the G. I. P. meeting in London, to the admirable way in which that line is worked, is well deserved. Nothing, in fact, could be better than all the arrangements for the conduct of such traffic as comes to the line. But, as for showing any enterprize in attracting either passengers or goods, that is a different affair. Unguaranteed Companies can attend to such vulgar considerations; but a Company supported by the State naturally cares only to please great officials.

Too true; and yet there are people who want the guaranteed railways to be handed over to officialdom entirely.

FEW letters to *The Times* have excited so much attention as that from Calcutta dated the 27th November. The writer reviews our military position in India most unfavourably, and he is especially strong in his condemnation of the staff corps. The Native Army is described as being in a deplorable state of inefficiency. *The Times'* correspondent asks concerning it:

Is there any other army or institution in the world in which a service of three years (that is the period of probation a young officer must pass through) enables the neophyte to rise, without further effort or participation in its duties, to the highest grades and largest pensions? Another result of the present state of the Native Army is that in Bengal alone there are no less then 51 Field Officers, Lieutenant-Colonels, and Majors doing nothing whatever. They are entered in the Army List as "doing general duty," which means that they are doing nothing beyond drawing their pay, and waiting to be bought out. Every year sees them decrease in military efficiency, and increase in their money value. A Major "doing general duty," who might consent at present to retire on £400 a year, six years hence would not sell his valuable services under double that sum. It is generally supposed that the wretched men who have been consigned to this Slough of Despond owe their fate to some marked inefficiency on their part. This is an error. It is the natural working of the present system. It is a doom that may fall upon any officer holding an appointment on a tenure of five years, and, as a matter of fact, has fallen upon many most efficient officers. A young officer, for example, gets an appointment in the Quarter-master-General's Department. At the end of five years his time of service terminates. He has no regiment to return to, and unless he has interest to press his claims at Army Head-Quarters, he sinks, as a matter of course, into an officer doing general duty. There is no doubt that the process of deterioration becomes, then, fearfully rapid. But what wonder? Every incentive to zeal and energy has been taken away from the luckless victim. There is for him no career in life more. All that he has to wish for is to live until he becomes ripe for a pension.

WE have the pleasure to take the following extract from the *Spectator*, and are glad to find that the figures given in the *Edinburgh Daily Review* in relation to the present position of Indian Missions have been proved to be accurate.

As we expected, the figures we quoted from the *Edinburgh Daily Review* as to the decrease of English Missionaries in India turn out to be official, and the correspondents who impugned them are in the wrong. They have no doubt unintentionally, included the returns from Ceylon, which is a Crown colony, and has no more to do with India than Hong Kong has, in the Indian returns. The figures we quoted are confirmed by the "Statistical Tables of Protestant Missions in India, Ceylon, and Burmah for 1871," and by the "Report of the General Missionary Conference held at Allahabad, 1872-73." The returns for the Church Missionary Society submitted there were prepared by the Rev. H. W. Shackell, of Benares, formerly a Fellow of St. John's; and were supervised for the general report by the Rev. Mr. Sherring, of the London Missionary Society. The only question on which there is some doubt is whether our figures are not too favourable, as Eurasians are considered Europeans, and their number may be slightly increasing.

WE are glad to learn that the bonds of the Indian Guarantee and Surety Association (Limited) are being accepted by Her Majesty's Government, the Bombay Municipality, the Bombay Baroda and Central India Railway Company, the Holkar State Railway, and the Indus Valley State Railway. The funds of the Association are lodged in Government securities only, and its head quarters are in Bombay. Since the commencement of this undertaking in 1872 the average dividend has been 9 per cent. after making payments to the reserve fund.

THE *Pall Mall Gazette* does not think the recent changes in connection with the Irish legal advisers of Mr. Disraeli's Government at all surprising. The new Attorney General for Ireland is an uncle of Dr. Ormsby, Judge of the Native State of Travancore. Looking to the high character and attainments of Dr. Ormsby, we should be glad if his relative's distinguished position should prove potential in inducing the British Government to employ his talents and Indian experience to greater advantage than they can well be turned to in the narrow sphere at present assigned them.

WE are indeed glad to be able to praise the recent action of the Supreme Government in relation to Foreign affairs, but when we turn to the Legislative Department the case is greatly altered, for in the conduct of that branch of the public business there is much to condemn. Mr. Whitley Stokes draws with great ability all the Bills entrusted to him, but those Bills from time to time contain much perilous stuff for which his chief, and his chief alone, can be held responsible; and further, not only is there a want of consideration on the part of Mr. Hobhouse for the feelings of the public, in the subject-matter of his enactments, there *is also something indescribably offensive to the public* in the tone used by him when addressing the Legislative Council; there is a *littleness*, a selfishness, and a dogmatism which are most unpleasant. We have given above an outline of the Legislative business transacted on Tuesday, an outline sadly too meagre to satisfy ourselves, or to enable our readers to understand the pass to which legislation has come. Mr. Dalyell made, that day, an able and courageous speech opposing the adoption of the Bill for diminishing the multitude of Law reports; and he is, we think, entitled to the thanks of all interested in the proper administration of justice for the spirited endeavour made by him to gain attention to the representations of the High Court judges; but he was most improperly treated by Mr. Hobhouse, who could think of nothing else but the value of his own time. Lord Northbrook backed his legal adviser, and the proceedings of the day were characterised by an amount of unfairness that must necessarily tend to bring the machinery of our legislation in this country into serious disrepute.

THE Chief Justice and Judges of the Bombay High Court wrote to Government on the 16th July, "We agree in the opinion of the Government of India that it is desirable to diminish the quantity and improve the quality of the reports published for forensic use in British India; but while perfectly satisfied of the excellence of the intentions and single mindedness of the Government of India in the matter, we think that the proposed legislation is unnecessary, objectionable in principle, and unprecedented." In another part of the same letter it is stated, "A proposition more completely contrary to sound principle than that the reporters should be either under the influence or control of Government, it is difficult to conceive. It is most undesirable to leave room for the belief that the Government has secured to itself or its nominees, the power of preparing or suppressing the reports of decisions which it may suppose to be hostile to its influence or policy. It may be said that it is not to be supposed that Government would stoop to make an improper use of such opportunities. We ardently hope that would be so; but if there be any part of the British Empire in which such a power would be objectionable, it is in India, where the Government is more completely despotic than in any other country under British rule, and where it has not always the most favourable construction placed upon its acts."

THE letter from the Bombay High Court, from which we have quoted, passes on to the use of arguments of great solidity and weight; but not only is that letter full of important considerations for delaying the progress of Mr. Hobhouse's bill, the other letters, which have been received from various parts of India by the Supreme Government, are also full of equally influential reasoning. Under any circumstances there was no need for haste in dealing with Mr. Hobhouse's measure; it could very well have been allowed to stand over for months or years; yet it was hurried forward on Tuesday in the most unseemly way possible, merely to give that gentleman perfect leisure for dealing with other matters of business, he being unable to think of two things at a time, or to give his attention to other Government measures until old ones have been passed into law.

WHEELER'S HISTORY OF INDIA.

THE time has come when we are called upon to notice the third volume of Mr. Talboys Wheeler's great historical work, concerning which we may truly say that any thing equally comprehensive has rarely been attempted. When we consider the vast range of the subject, not only in relation to the epochs it embraces but also in regard to territorial extent, when we remember the endless varieties of religions and races that have occupied the field surveyed by Mr. Wheeler, when we count the numerous languages that have been and still are spoken in India, and when we reflect upon the intricate and labyrinthine character of all historical investigation among the Aryans of Asia, we can only wonder at the great success that has attended Mr. Wheeler's attempt to evolve light and order from darkness and chaos. Turning over the pages of his last and greatest work we are reminded of the professor spoken of in Disraeli's "Contarini Fleming" who discoursed on an early portion of history "entirely unknown." Contarini Fleming says "I was astonished at the fulness of his knowledge. That which to a common student appears but an inexplicable or barren tradition became in his magical mould, a record teeming with deep knowledge and picturesque interest. Hordes, who hitherto were only dimly distinguished wandering over the deserts of antiquity, now figured as great nations, multiplying in beautiful cities, and moving in the grand and progressive march of civilization; and I listened to animated narratives of their creeds, their manners, their philosophy, and their arts. I was deeply impressed with this mystical creation of a critical spirit. **** The curtain was removed from the sacred shrine of antique ages."

Mr. Wheeler broke ground in his first volume with a philosophical analysis of the Vedic period and the Maha Bharata. In his second volume he subjected the Ramayana and the Laws of Manu to a similar process; and now, in his third volume which is dedicated to the memory of Lord Mayo, Sir Henry Durand, and Professor Goldstücker, he takes a complete survey of India from a Hindoo, Boodhist, and Brahmanical point of view, as the country existed prior to the arrival of the British. In some subsequent volume we shall be introduced to the Mahratta, Mahomedan, and English dynasties; at present Mr. Wheeler has been clearing the way for them, by showing the nature of the country and the character of the people. The third volume, with which alone we have now to do, has been made by a happy arrangement perfect in itself; it can be read alone, or in connection with the preceding volumes, as the reader pleases; if he passes them by he will miss much that is of value; he will probably fail to realise the shadowy yet magnificent proportions of the dim poetical traditions that possess such a powerful charm for the Hindoo mind; he will thus be unable to understand as fully as he might the imaginative character of the population, and that passionate feeling of patriotism which finds its expression among them in ardent admiration for the heroic achievements of ancient demi-gods who were purely Indian in origin and stand-point; but though the reader must lose all this by passing over the Maha Bharata and the Ramayana, an acquaintance with which is the proper prelude to Mr. Wheeler's third book, he will find that book so constructed as to be a harmonious and rounded compilation; and no mere literary fragment. It starts with a retrospect of the Vedic period, and assigns the years 623—543 B. C. as the first chronological stand-point in Indian history. Beginning with that epoch the historian discusses the fortunes of dynasty after dynasty, until finally the prowess of the Portuguese and their great successes in Asia have been fully told.

Mr. Wheeler's idea is that though the history of India may be fairly mapped out into three eras, viz. Hindoo, Mussulman, and British, the first era in reality overlaps the two subsequent ones, while the second era overlaps the third. The Hindoo era is synchronous with every other, and the Mussulman with the British. This principle having been carefully acted on, the History has thus far been made a Hindoo one, though it has been brought down to the seventeenth century. In describing the theatre in which the Hindoos have lived and moved, Mr. Wheeler speaks of it as a triangular tract bounded on two sides by the sea, and on the third side by the Himalayan wall. Between the mountains and the sea there are two entrances into the plains, viz., from the North East and the North West respectively. Mr. Wheeler calls one of these passes the Aryan gate and the other the Turanian gate. The latter is formed by the valley of the river Brahmaputra, which is poetically described as coiling round the Himalayas like a huge [illegible] from a period long prior to the [illegible] the Aryans in the opposite direction [illegible] Turanians from high Asia followed [illegible] course of the Bramahputra into Ben[illegible] is easy to conceive that the ear[illegible] of immigration followed the two m[illegible]. The two streams met in the plains of Central India, and after many years of conflict the Aryans became the paramount power. The Turanians, however, never fell into total insignificance. In the present day they cover an area corresponding pretty closely with the limits of the Madras presidency. Known to philologists as the Dravidians of India, they comprise the Telugu, the Tamil, the Kanarese, and the Malayalum speaking people of the peninsula. Mr. Wheeler thus hopefully regards them: "The Dravidian people are endowed with a latent vitality which stands out in marked contrast to the lassitude of the Bengalee; and when they have thrown off the Brahmans, and subordinated their caste-system to the interests of the common weal, they will begin to play an important part in the regeneration of the Indian world."

Mr. Wheeler gives his readers a graphic picture of Hindoo modes of life in every part of the country, not only as they now are, but as we have reason to believe they formerly were; as an illustration of this we would say that the extinct rite of suttee is described in powerful language. "It elevated," we are told, "the helpless concubine into a self-sacrificing heroine; the distracted widow into a joyful and triumphant bride." We are inclined to object to the use of the word "concubine" in this connection, for if we do not mistake, suttee was peculiarly the privilege of a wife. Goethe, in his beautiful poem entitled "The God and the Bayadere", represents the concubine of Mahadeva as having been refused the rite; the Brahmans tell her:

> "To thy priests' commands give ear!
> This one was thy husband never.
> * * * * * * * * * * *
> To death's silent realms from life
> None but shades attend man's frame,
> With the husband none but wife,"
> That is duty, that is fame."

Mr. Wheeler has done well to extract from Dr. Pope's edition of the "Description of India by the Abbé Dubois (Madras, Higginbotham & Co.)" the beautiful song of Pattanatta Pillie, which runs thus;

1. In which future birth shall I see Her, who for ten moons, burdened, bore me, and when she heard the word Son, lovingly took me up in her rosy hands and fed me from her golden breast?
2. Shall I kindle the flame to consume Her, who for three hundred days of weariness and longing, morn and evening imploring Siva's grace, was borne down by me a burden?
3. Shall I place her on the pile and kindle it,—Her who in the cradle, on her bosom, on her shoulder, caressed me, fanned me, singing soothing lullabies?
4. Shall I put the rice into that mouth, my mother's, with which she was wont to call me her honey, nectar, her only wealth, her boy?
5. Shall I heap up rice on the head of Her, and place the firebrand, with unflinching hand and steady eye: who softly raised me, pressed her face to mine, and called me oft her son?
6. Formerly the fire was kindled, in the three towns, then it was kindled in Lanka's isle? Sorrow for my mother kindles the fire, deep within, and I too have kindled the fire! See it burns! it burns!
7. It burns! It burns to ashes—Alas!—the hand which soothed me, and reared me, and led me so tenderly that its touch would not have frightened away the timid bird!
8. Is she ashes now? Hath she come already to thy feet, O wondrous Lord of Sona's hill? Hath she, evermore gazing on thee, rejoicing, forgotten me, her son?
9. She was erewhile! She walked in the way! She was here but yesterday! To-day burned, become ashes! Come all, unlamenting, sprinkle milk, all is in Siva's power!

Mr. Wheeler speaks of these verses as expressing the feelings of a "son whilst firing the funeral pile of his living parent," and he says they "furnish a powerful illustration of the inhumanity of the practice." We may be wrong, but a careful scrutiny of the verses fails to convey to our mind an impression that the disconsolate poet was performing suttee.

In the preface to the volume under notice Mr. Wheeler represents it as opening with retrospects of the Vedic and Brahmanic ages by the light of the materials already brought under review in the two former volumes; it then brings every other available authority, excepting that of the Mussulman historians, to bear upon the general subject. Mr. Wheeler thus proceeds;

> The life and teachings of Gotama Buddha, the evidence of Greek and Roman writers, the edicts of Priyadarsi or Asoka, the Buddhist chronicles, the recorded travels of the Chinese pilgrims in the fifth and seventh centuries, the Hindu drama, the traditions of the Rajpoots down to the seventeenth century, the travels of Marco Polo and others between the thirteenth and sixteenth centuries, and Faria y Sousa's history of Portuguese Asia during the sixteenth and greater part of the seventeenth centuries, have all been laid under contribution for every variety of information, and have been further illustrated by the experience derived during fifteen years' official residence in India and Burma. In this manner the attempt has been made to throw every light upon the history, the religion, and the civilization of the people of India before the coming of the English upon the scene.

We have already hinted that in the next volume of Mr. Wheeler's History of India he will relate the Mahomedan conquest; the forthcoming volume will also be devoted to the history of Mahratta and British India. In mentioning the importance of the Mussulman annals Mr. Wheeler tells us it is increasing day by day, "for few impartial observers will deny the fact that to all appear.

ance the people of India are drifting slowly but surely towards the religion of the prophet of Arabia, rather than towards that Christianity which is freely offered, but which they are not prepared to accept." We were unprepared for such a discouraging anticipation as that which we are sorry to find has been adopted. It would not have surprised us to be told that the people of India are drifting from polytheism to a recognition of the divine obligation "Thou shalt have none other gods but Me;" yet we did not expect an impression to be entertained that the Koran was destined to become the sacred volume of the greater portion of the Indian people. Mr. Wheeler's next volume will probably contain an endeavour to make good his position; that there has already been a large Mahomedan conversion cannot be denied, and we shall be sure to find process, which has become historical, lucidly developed; the doctrines of the Koran and the accretions derived from various commentators will certainly be set forth in graceful and fluent periods, and we may confidently rely on a further instalment of that patient research which has placed Mr. Wheeler in the front rank of philosophical historians; but we hope and trust he will succeed in finding little justification for his gloomy vaticination.

To recur to the volume under notice, we cannot do otherwise than commend very heartily the third chapter which sketches the life and teachings of Gotama Boodha. Mr. Wheeler, as Secretary to the Chief Commissioner of British Burma, has seen not a little of Boodhist communities; and we are inclined to think that contact with the followers of Sakya Mooni must have left an agreeable impression on his mind. The following description of the scene, which takes place when a Boodhist priest is made, is probably the more graphic from the circumstance that the learned author must have seen many such initiations:

> The admission of a convert into the priesthood is to this day one of the most striking ceremonies in the Buddhist religion. The neophyte is dressed in his gayest attire, and carried to the monastery in a procession of friends and relatives in festal array, accompanied by a band of musicians playing all the way. This is done in commemoration of the procession which accompanied Gotama, when he drove in his chariot from his garden to his palace on the evening before he entered upon his religious career. The moment the neophyte enters the doorway of the monastery his secular life is brought to a close. His hair and beard are shaved completely away. His fine clothes are taken off, and he is invested with the three yellow robes,—the shirt, the petticoat, and the mantle. He then prostrates himself before the elder priest who is about to admit him, and assumes the attitude of worship, and exclaims aloud three times:—"I adore Buddha, the Law, and the Assembly." Finally he takes the vows of poverty and celibacy, and henceforth conforms to monastic rule. Every young man is supposed to be admitted at least once into a monastery; it may be for a short time, as a matter of form, or for only a year or two to finish his education; or, if he has completed his twentieth year, it may be for life. But however this may be, so long as he wears a yellow robe, he is invested with a sacred character. A minor offence might be expiated by confession and penance; but for any of the capital sins, such as murder, theft, or unchastity, the vile apostate is expelled from the monastery, and regarded with general horror and detestation.

The conquest of the Punjab by Alexander the Great is briefly but accurately told. Here again Mr. Wheeler's Indian experience has stood him in good stead. The interview between the Macedonian, Onesikritos, and the Brahmans is realised with great vividness. We seem to see the whole party and to hear the haughty language of Kalanos as he thus addresses the Greek warrior, "Your clothing is contrary to nature and offensive to the deity; by such pride and luxury, want and misery have been brought upon mankind. In former days grain was as abundant as the dust, and milk and honey, wine and oil, flowed as freely as water; but the deity grew angry at the luxury of the human race, and withdrew the abundance, and if such luxury continues, famine and drought will follow. If therefore you would learn wisdom, you must return to a state of nature, and lie down upon these stones." This speech shows us how very old are the doctrines of Rousseau, and how prone to fallacy is the human mind in every age and clime. Political Economy has probably done more than any other branch of philosophy to overthrow the ancient superstition that a state of nature is the proper end of man.

It is high time that we should now conclude a notice which has already become too lengthy; in bringing to an end this reference to Mr. Wheeler's great historical work, we cannot but regret that want of space compels us to refrain from all allusion to the very interesting chapters connected with Portuguese India; this is a highly entertaining section of Indian history, and we cannot do better than recommend our readers to peruse it as given in Mr. Wheeler's own pages.

ASIATIC CHOLERA.

WHILE in Scotland last year Surgeon Major Pringle read a valuable paper on Asiatic Cholera. Few men have had more experience of that disease than himself; he has in his own person suffered from it, and has witnessed its ravages in nearly every [illegible] as it has developed itself among p[illegible]ed pilgrims, among well fed Bri[illegible]diers on the march, and among the [illegible]ably situated occupiers of bungalows [illegible]cks in military cantonments. Dr. [illegible] has also seen outbreaks of the disease [illegible]ations, as well as in the plains; and as he has undoubtedly been a cautious observer his conclusions generally must be regarded as of no slight importance. As a case in point we would cite his view that seventy-two hours is the limit between exposure to cholera poison and the first symptoms of the disease. From personal observations at Mussoorie and Landour in the Himalayas, over a period of seven years, during which two cholera epidemics occurred, he is quite satisfied that he has discovered the exact time necessary to develop the full force of the noxious agent. In making this statement Dr. Pringle has guarded himself against implying that the period he has adopted would suffice for the quarantine of a ship from an infected port, unless there have been no cases of disease on board during the voyage. Should such cases occur, three days should be spent where, as far as can be ascertained, no cholera poison is believed to exist.

While Dr. Pringle was in the Himalayas not a single case of cholera was met with either in the civil sanitarium of Mussoorie, or the military convalescent depôt of Landour, in which a visit to the cholera infected plains could not be traced to within a period of three days. Dr. Pringle says, "I can write with some confidence on this important point, as I made particular inquiries into these cases of cholera, and indeed attended some of them. In the cholera epidemic of 1872, it was thought that an exception had been found to this rule, and a case of true cholera originating in Mussoorie was believed to have been met with. The man was a cow-feeder, living in the centre of Mussoorie, who was stated never to have left the station; on making close enquiry, however, I found this man had gone to his village in the plains, where cholera was present, with some cows which had gone out of milk, to be replaced by others in full milk; this the man did without, however, even staying a night in his village, but returning at once to Mussoorie. Within three days of this visit to an infected locality, the poor man was seized with cholera and died."

In bringing to notice his theory as to the time necessary for the cholera-poison to take firm hold of the human frame, Dr. Pringle has earned the thanks of the public. His lecture, however, contains many other suggestive ideas; for instance he submits several good reasons why what is called the premonitary stage of cholera should no longer be regarded as such. His argument is, a certain poison has found its way into a human being, and purging and vomiting ensue in consequence of the system making an effort to get rid of the poison; how then can such symptoms be termed premonitary when they really appear subsequent to the beginning of a diseased condition, which of course began with the admission of the poison? This would seem to be an irresistible blow at the nomenclature found fault with; yet we imagine the term *premonitary* will endure; it is convenient, if not accurate, and further on, in the course of his lecture, Dr. Pringle makes use of it in the most natural way, as if he had never condemned it. We find him speaking of "cases of true Asiatic cholera cured in the premonitary stage by narcotic and astringent remedies." Nor is this the only case of inconsistency noticeable in the lecture; Dr. Pringle shows good reason why the phrase "British cholera" should be abandoned. British cholera is only ordinary cholera attributable to over-indulgence in unripe or unwholesome fruit or vegetables. If there be such a disease as British Cholera then Dr. Pringle has met with it among the natives of India. Unwholesome fruit and vegetables are among the most active agents in the spread of cholera at the great temple of Juggernath, by producing diarrhœa and bowel complaints. The "holy food" of the shrine is chiefly a sort of melon in various stages of decomposition; this dangerous fare is carried by ignorant pilgrims over the whole of India; in some cases the decaying vegetable is weeks in arriving at its destination, and in this way cholera is widely spread. Independently of its own intrinsic defects the "holy food" probably contains at times the germs of the cholera poison introduced into it by the impurity of the water in which it has been cooked in Pooree. Although British cholera is a phrase which ought to die out, yet we find Dr. Pringle using it throughout his lecture; indeed the subject of the lecture, "Asiatic Cholera," inferentially implies other types; our objection may possibly be regarded as hypercriticism, and indeed we are ready to admit that the true value of Dr. Pringle's lecture is not impaired by his want of adhesion to his own canons.

When a person is attacked with cholera, common-sense would suggest the elimina-

tion of the poison; this result may be aided by the use of warm-water as an emetic and as an enemata; in rare cases castor-oil may be used; but Dr. Pringle points out the risk of promoting natural elimination when it reaches an excessive degree; nature too frequently causes death by the energy of her own efforts, and it would be gross folly to promote the mischief she may be doing. One thing, however, is clear, according to Dr. Pringle, viz. that all medicines which tend to check vomiting and purging, and which are of the nature of narcotics, such as opium, together with all remedies which act like ice, are injurious. Dr. Pringle is further strongly opposed to the administration of spirituous stimulants, until convalescence has set in; yet cholera-patients certainly stand in need of a fillip. Many have been the victims to neglect after the worst stages of the disease have been surmounted; when the battle has apparently been won, it is the right time to guard against the effects of exhaustion. Dr. Pringle thus expresses himself: "Nature has, so to speak, thrown off the poison, but the struggle has nearly ended in death, and we are now called upon to aid nature in rallying from the fight. And how is this to be done? Mainly by restoring heat to the body and tone to the circulation by means of warm application, and frictions, and sinapisms, with, if necessary, large turpentine poultices, in the hope of acting on the capillary circulation; by the cautious administration of food in the form of soups; and if any stimulant is required, carbonate of ammonia with sulphuric acid and nitric ether in camphor-mixture." In nothing that Dr. Pringle has advanced is there any wildness or extravagance; all *his conclusions bear the impress of close thought and careful observation; and* it is with a belief that his lecture is a public benefit, that we have felt called upon to refer to it.

BURMESE BRUTALITY.

THERE is something fearfully attractive in the criminal annals of British Burma. Murder there seems to have been reduced to a pastime, being apparently committed with the sole view of enlivening the hum-drum existence of the inhabitants of the rural districts. A woman, say, bids a male neighbour good-morning, and before nightfall her husband has chopped into mincemeat the unfortunate object of her civility. A sulky son, a hard landlord, an importunate beggar, are all liable to similar annihilation, without a moment's warning, thanks to the omnipresent *dao*.

Look at the *following long list*, pertaining to one year only. In Kyouk-Phyoo a thief, who had recently returned home from prison entered a house for the purpose of robbery, and the owner happening to bar the way, the burglar made his exit as a murderer. In the same district a quarrel took place at a toddy sale, and a man died from the effects of the blows he received; a gambling party, also, broke up with a like result. In Pegu a "petty trader with his nephew had engaged boatmen for a trip; suddenly these boatmen, natives of Upper Burma, seized and murdered their employers. Some days after, two constables proceeding on duty up the Prome road in search of two men in another case, got into conversation with three men whose conduct roused their suspicion, being questioned they showed signs of alarm and one was seen to be getting rid of something; this article, a knife, was picked up and the three men secured; the property found with them proved to be that of the murdered men: they were convicted and executed." A Chinaman, named Koo-Wun, "formerly of the Topai-Kong sect, latterly of the Ghe-hins, took to himself a wife who had been married to a member of the Hosa-ings allies of the Topai-Kongs. Nine men of these sects came to the house he, Koo-Wun, was staying in at night, and, dragging him out, beat him to death. This was on 7th March; on the 9th information reached the police, but not till the 22nd March was the body found. It was then discovered buried in a small nullah. Five men—all Chinese—were tried and transported for life for the crime. The police had great difficulty in bringing this case, where secret society influence was at work, to a successful issue." The third case in the same district was connected with a dacoity. The police having obtained information of the intended crime surrounded the house where the robbers were concealed, and in the *melee* a constable was cut down; in the fourth case a farmer while pursuing a cattle-lifter was stabbed; in the fifth the body of a man was found in a nullah near his home, owing to an intriguing disposition; in the sixth case two rascals quarrelling one cut the other down, and in two others wives were savagely murdered by jealous husbands. One of the most curious cases, however, was that wherein a number of Chinamen assembled together with a view to smash an excise officer who *had given information against them. An axe was hurled at the intended victim*, but instead of striking him it hit a brother Chinaman, who died on the spot! In Rangoon a convict, without the slightest provocation, struck another prisoner on the head, death ensuing immediately. The defence of the culprit was that he was tired of jail life. At the same place the European steward of a ship stabbed his chief officer with a carving knife; and a Chinaman, after a petty squabble with his wife, struck her till she died in a boat on the river. At Bassein a native of Madras quietly murdered his wife and three children, at the same time severely wounding his mother-in-law and a fourth olive branch. In Henzadah a man who had a quarrel with a village policeman was waylaid at night by four men, and beaten so severely that he died in a few hours; while two men were quarrelling in a native theatre a third—a friend of one of the parties—rushed in and stabbed his friend's assailant, who died in two days; a man who had given evidence in court, was deliberately cut down in his own house with an axe, his daughter and daughter-in-law suffering a like fate; a Karen murdered a woman and hanged himself close to the body of his victim; a Burman in a quarrel with another was beaten, and although he succeeded in procuring the man's judicial punishment, he waylaid his enemy and killed him with a bludgeon. In Prome a young man, during an altercation with his step-mother regarding the sale of certain lands, cut her over the neck, attacked and killed his father who interfered, and then finished off his first victim. This is the list for the Amherst district—

A man who suddenly became insane killed his wife and committed suicide. A Shan induced a Burman to accompany him under the pretence that he had an elephant for sale; being joined by two companions they murdered the Burman, took his money, and fled across the frontier. The police of a frontier post hearing of the assembly of a party of dacoits, attempted to capture them, but were fired on and had one man—a Karen constable—killed on the spot; the dacoits however paid dearly for this, as two were killed and a third died of wounds. A Yooa Goung, or village policeman, had incurred the enmity of the Karens who composed nine-tenths of the inhabitants of the circle; seven men attacked his house and shot his wife, but the Goung escaped. A Burman, in a fit of anger, brutally killed his step child, only 18 months old; he was sentenced to transportation for life. A Karen, engaged in procuring evidence in an elephant theft case, was shot from behind a tree close on the frontier; no doubt was then entertained as to the identity of the murderer, who was arrested and brought to trial. Before the Sessions Court the chief witness gave evidence which was directly at variance with his statements in the lower Court, and thus the case failed. The trial of this witness for perjury has been instituted. A Karen was found murdered on his farm by some person then unknown. A party of four Karens called at the house of another of the same race, and desiring the inmates to come out, they deliberately shot the owner's wife. A family feud regarding the possession of an orange garden is believed to have been the cause.

In Shoay-Gyeen the body of a Shan was found in a river near a rest-house; he had evidently been murdered and the body thrown into the water. Four Shans were known to have passed the place about the time the murder was committed, but as the deceased was a stranger the body was not identified nor was any clue obtained. A man quarrelled, with a girl, cut her down, and then nearly killed himself; another man murdered his mother because his dinner was cold, and a third expressed his thanks to a body of elders, who had volunteered to settle a difference between him and his wife, by suddenly thrusting his *dao* into the breast of his best friend.

We might extend the tale still further, but the subject is not a very pleasant one, and the cases given will suffice to show our readers the value put upon life by the brutal Burmese. If we could make the Burman change his deadly knife for some more peaceful instrument, and could make him say with truthfulness *nil mihi fuerit unquam uxoribus, cum alienis*, we might hope for a better state of things, but so long as the *dao* is regarded as an indispensable article of dress and the feelings of husbands are so grossly outraged, we are afraid that the hangman will be a very necessary adjunct of the British Burma Government.

THE TOWNS OF THE PUNJAB.

TWELVE months ago, under a heading like the above, we gave a description of several of the principal places in the land of the Five Waters. With the help of the Sanitary Commissioner's Report for 1873 we are now able to enlarge upon the subject. Dr. DeRenzy spent more than half the year in visiting eighty-eight towns and villages, being everywhere hailed by the people as a great magician, who with a word could change a foul tank into a silvery lake, and a withered arm into a stout, strong limb. Wherever he went he was attended by a crowd of people who anxiously listened to his suggestions as to house-building, the removal of refuse and the construction of wells. "Much that I said," Dr. DeRenzy observes, "will no doubt be as seed that falls on dry stony ground. It will bear no fruit, but in some places where the people were suffering from grievous sickness, where their *Jawans* (young men and women) had

died in great numbers, my words seemed to make an impression and to excite a spirit of observation and reflection, which will I hope be productive of good."

The general ignorance and apathy of all classes of the native population have hitherto prevented Government interference in small towns removed from European supervision. English towns are composed for the most part of artisans, mechanics, and persons following professions, but the great majority of Punjab towns are little more than aggregations of farm-steads. In England the agricultural population live on their respective holdings; and the effect of this arrangement is that very little agricultural produce is brought within the town limits, and consequently the refuse matter to be removed is comparatively small. In the Punjab the case is very different. The insecurity of life and property has been for many ages so great, that the people of all classes, including the agricultural, have been driven to live together for the sake of mutual protection; and as the agricultural communities greatly outnumber the other classes, the towns have come to be mainly deposits for agricultural produce, cattle, and little more, in fact, than large farm yards. Cattle in hundreds, or, in many cases, thousands, are stalled inside the walls at night, the litter and fodder for them is strewn about, the manure collects, grain is stacked, the sugarcane is pressed, within the village enclosure. Nor are the different farmyards, which compose the town, spacious and airy; on the contrary the necessities of village defence have rendered it necessary that the habitations of man and beasts should be as compact, and cover as little space as possible. Such, in a few words, is Dr. DeRenzy's estimate of the habitations of man in the Punjab, and such being the constitution of native towns it would be folly to expect to find in them that cleanliness which is maintained in Great Britain. "It is too much the fashion for English people to speak of natives as a naturally uncleanly people, but those who do so, know little of the obstacles to cleanliness which exist in the structural arrangements of every native town. It is unfair to compare a native town with an English town; the comparison, to be fair, should be between a native town and an aggregation of English farm yards, if such can be conceived at all." This is very true and should not be lightly passed over.

Delhi receives both praise and censure from D. De Renzy, who noticed in all parts of the city an entire disregard of building regulations. People appear to build where they please, without any regard to order or arrangement. The houses are heaped upon one another with dark narrow passages between them, inaccessible to light and air. This want of arrangement greatly enchances the cost of conservancy and makes supervision difficult. In many places the houses are placed back to back, although "it is a fundamental principle in town building, that every house should have access to air in front and rear and a small piece of ground behind entirely unoccupied. I believe that this principle cannot be neglected in towns without most serious injury to the health and physique of the population." The greatest importance is attached to such an arrangement in Europe, and an earnest effort should be made to enforce it in the towns of the Punjab. Dr. DeRenzy has a strong impression, that of the many causes which combine to produce the physical degeneracy that forms so marked a characteristic of the town populations of the province, the neglect of the principle we have mentioned is the most important. It would not be possible at present to alter the house arrangement of the older portions of native cities, but an endeavour should be made to prevent an extension of the evil in the houses springing up under our own rule. Ferozepore, in Gurgaon,—a town that has been less than forty years under British dominion—is said to have the appearance of a thriving prosperous place. There are some very good streets, straight, moderately wide, well metalled and provided with side drains. There is a large number of well built houses, the building material being stone brought from the adjacent hills. They have a neat, tidy, substantial appearance, very unusual in native cities. Ferozepore has been very prosperous until lately, but the opening of the Rewaree Railway affected business injuriously, and the merchants, who seem to be an unusually energetic, clear sighted body of men, assert that they will be ruined unless the town is connected by either a metalled road or a Branch Railway with Gurgaon or Ulwar. Noh, another town in Gurgaon, and once the seat of a flourishing trade in salt, also appears to be rapidly degenerating, the inhabitants leaving their ruined huts daily. Last year the death rate was 69 per mille. Rewaree is filled with mud hovels four feet high, and in a state of dilapidation from the heavy floods of last year. The following may be taken as a specimen of the condition of a town occupied solely by natives, Gohanah, in Rohtuk being referred to. "I found quagmires of filth in many places. When going into the mohallah (ward) Hathai Rajputana, I was stopped by a person, who stated that that mohallah was *pardo* (excluded from inspection). After little parley, however, I was allowed to go in, and at once saw the reason why inspection was disliked. The filth of the place was indescribable. There were cart loads of filth in the streets, and the cess-pools were full to overflowing with black fœtid slush." Soneput in the Delhi district is a strange-looking town. It appears to be built to a great extent on the summit of an old brick kiln, raised about sixty feet above the level of the plain; many of the streets are consequently very steep, and the general surface of the place is irregular.

Loodiana is in a frightful condition, if what the Sanitary Commissioner says is correct. Immense open drains run in all directions and produce the "most abominable stench." The sewage system, created by the British Government, is a "curse to the town", the drains being so badly constructed that the largest amount of flushing cannot keep them clean. Simla is almost as bad. The meat market is situated close to one of the most offensive sewers, and the water spring at Combermere bridge emerges from the rock through a compost of bones, sardine boxes and old shoes! This is what Dr. De Renzy thinks of the Governor-General's summer retreat. "As it is impossible to provide a sufficient water-supply of pure quality, Simla is not a suitable habitation for the Government of India. The presence of the Government of India at Simla naturally attracts there a very large population, who, from the scantiness of building ground have been compressed within the narrowest possible limits: the crowding, the scanty and impure water-supply, and a system of sewerage of the worst possible kind form a combination of circumstances attended with great danger to the public health."

Startling as the statement may seem, it is a fact that there is hardly a town in the whole of the Punjab the water-supply of which does not furnish the most unmistakeable evidence of being largely contaminated with sewage, and a sewerage system in the English sense of the term does not exist anywhere. There are open drains which carry away a portion of the fluid refuse, but most of even this sinks, from generation to generation, into the soil on which the people live. The dry air and bright sunlight, which form so constant a distinctive character of the Punjab climate, go far to neutralise the offensive results of the wholesale gross pollution of the soil. In dry weather—and, as a rule, the weather is dry—the streets of the larger towns are not very offensive to the sense of smell. It is otherwise, however, on the occasions when the air is damp and rain has recently fallen, and it is impossible for any one, not hardened by habit to endure foul smells, to go into the back streets of cities like Dehli, Lahore, Umritsur, and Loodiana without experiencing a sense of depressing and sickening nausea.

PONDICHERRY.

(From a Resident.)

THE good inhabitants of this town are quite delighted at the prospect of losing their present Governor, who is going home in March next on leave, and will never return to India. The last mail brought the news that there are already two or three candidates for the soon-to-be vacant post, and the one most likely to succeed is the Baron Textor de Ravisi, who was lately one of the Members of the Oriental Congress in London. The Baron was formerly Governor of the French settlement of Karikal. With Mr. Faron will go away Mr. Cremazy, his son-in-law, who has succeeded in showing that he has more vanity than brain. As President of the Tribunal he is a very hard working man, and his judgments are impartially rendered, but having married the daughter of the Governor he thinks himself above all other mortals, and lets his pride have the better of his good sense. The last mail brought also very good news for the colony in the shape of a subsidy of four thousand pounds to the spinning and weaving manufactories of the place, three in number, to enable them to compete with the manufactories of France. What would Manchester say to this? The French policy is diametrically opposed to its claims.

They say the Railway from this town to join the South India line from Madras to Cuddalore is also sanctioned, and the agreement has been signed in London between the English Railway Company and the French representative of the colony.

General Ferrier, the author of the Affghanistan War, is proceeding to take the acting appointment of Governor in Chandernagore. As he had been very ill-treated by the *Courrier de l' Inde Francaise* he says that newspapers are at the bottom of every possible mischief, and without the press the people would be very happy. A rich man is always inclined to find it very foolish on the part of the poor to try to get some money! They say he has many heavy peccadilloes on his conscience; but it is no

business of mine; his confessor must know more about it.

The Comptoir has made an agreement in Paris with the Government for the starting and management of a large French Bank for the colony of Cochin China. It will be a Bank of Issue, and its success is more than probable, as the importance of the colony is daily increasing. After all expenses are paid, and certainly they are heavy, as the colony has to pay for the maintenance of the French squadron in the Chinese waters, the French Government receive annually more than 15 lakhs: the only drawback is the unhealthiness of the interior. A French admiral, Baron Duperré, has just been appointed Governor of Cochin China. But let us return to the outs *and ins of this place*; the Governor left the town last evening to go to Cuddalore, a distance of 12 miles, when he was invited by the Collector of South Arcot and the Civil and Sessions Judge to two balls to be given successively. I am afraid the balls will be rather dull if they expect the good people of this town to enliven them, as they have invited the old people only, who must be on the pension list as regards dancing.

They have no theatre here, but the church does most advantageously replace the same by its gaudy ceremonies. Ladies here in gay attire go morning and evening to Church, the Roman Catholics I mean, and the confessor plays a conspicuous part in the lives of the ladies whose husbands frankly declare that they would have preferred their wives to have been Protestants.

The convent school for girls is managed by the sisters of St. Joseph Cluny, and the education given is very good, but for fastness the future mothers of the colony can vie with any *fashionable boarding* school in France or England.

The weather is delicious just now, and were India as cold all the year round, it would soon become crowded, as all Englishmen would come to this splendid country, which in a few years will be able to manufacture cloths for the clothing of the inhabitants, and produce iron for the machines, while the underground regions contain the coal necessary for its wants. Will not some enterprizing firm start a paper manufacture; dirty rags will not be wanting for the same, and it will be a source of revenue for our municipalities!

OBITUARY NOTICE.

INTELLIGENCE of the sudden death of the Rev. Mr. Smith, of the Church Mission, Benares, from a fall occasioned by his foot slipping on the frosty ground, has been telegraphed from England. Mr. Smith was the oldest missionary in the North Western Provinces. Coming to India in the year 1831 he had spent upwards of forty years in actual residence in the country. His principal vocation was that of preaching; and his knowledge of Hindee was such that natives listening to his words without beholding him were entirely ignorant of the fact that it was a European speaking, and imagined that it was one of their own countrymen. Not only were his idioms correct, but the intonations of his voice, and the peculiarities of his accentuation, together with singular turns of expression harmonizing with the niceties of native thought, most difficult for a foreigner to catch and reproduce, were almost perfect as though, indeed, he had been born and brought up in the country. Mr. Smith was also a diligent writer of vernacular books and tracts on Christian subjects. His chief work is entitled Sat Mat Nirupan, and is devoted to a thorough investigation of Hindooism, and to an elaborate exposition of the claims of Christianity. He was a man of considerable natural ability, of intense earnestness, and of unflagging enthusiasm. Of a melancholy disposition, and often greatly depressed at the slow progress of Christian truth in Benares and its neighbourhood, nevertheless his zeal never for an instant faltered. In this respect, and in the lofty spirit with which he engaged in his noble enterprise, he was truly apostolic. Although constantly dissatisfied with the measure of success which attended his unceasing labours, yet that success was of no mean character. It was his happiness to see the Mission, in which he was the foremost worker, increase and develop until it became one of the most flourishing in Northern India, while its college, schools, orphanages, and Normal Institutions, both for numbers and efficiency were unsurpassed. Mr. Smith was a missionary of the old school, a school characterized by thoroughness and entire self-consecration, qualities not always so eminently manifest among missionaries of a later date.

*SUNDAY SCHOOL MANUAL.**

THE author of this little Manual tells us in a modest preface that he does not claim originality for his work. He merely makes suggestions, and hopes that he is clearing the way for something better. It is not attempted to teach experienced missionaries, though here and there some hints are scattered which are calculated to be advantageous to everyone interested in Sunday instruction. Putting old missionaries aside, there can be no doubt that new missionaries must find the publication of very great service. There are many such men in out-lying stations where they are cut off from all European Society. Isolated from their professional brethren they have a hard time in many ways. They have much to learn and much to unlearn. To workers so situated the Manual we are now noticing must be a great boon. But there is another feature of the publication on which we would lay particular stress. By means of it many Christians who are not identified with Missions may be enabled to commence classes of their own. There is reason to apprehend that ignorance of the *modus operandi* is a deterring influence in regard to a great deal of good that might otherwise be done in this country; inertness is not always the result of a want of will, a consideration which is perhaps not sufficiently borne in mind. It is hard for men fainting with a weighty burden, which there is apparently none to help them to bear, to realise that they have warm sympathisers, and that were there better knowledge there would be readier aid, yet it is our belief that such is really the case, and that ignorance of the proper way in which to come to the rescue is the cause of many people being left to fight the good fight in solitude. The following interesting chapter is devoted by Mr. Badley to what is called "the Berean Lesson."

This excellent system, which during the past few years has grown so popular both in Great Britain and America, and which is fast becoming, as it has already been called, "International," has been sucessfully introduced into the Sunday schools of India. Without stopping to point out its merits it may be briefly said that this system with adaptation and care can be profitably used to a greater or less extent in all Indian Sunday Schools. The Lesson Leaves are published in English and translated and published in Hindi, Urdu and Roman Urdu by the American Mission Press, Lucknow. They are prepared in advance and are dispatched the middle of each month, for the following month, so that schools in other stations may be regularly supplied. The Lesson Leaf is self-explanatory and is very simple. The Subject, Topic, Golden Text and Outline, should be thoroughly committed to memory by those who can read, and taught to others by the teachers. Other portions which may be designated should also be committed, proper credit being always given to the scholars who take pains to do it. As the lessons of this series are systematically arranged and connected, it will be found profitable in beginning one lesson to have some scholar to give a brief review of the preceeding lesson and also anything else he may be able to tell concerning the subject not found in the lesson. For example, if the lesson one Sunday be the "Birth of Moses" and the following Sunday the "Call of Moses at Horeb," the scholar might tell of smiting the Egyptians by Moses and his flight into the land of Midian. This will help explain the lesson, and will encourage the scholars *in reading the Bible—as the worthy Bereans did of old.*

The International Lesson Committee have adopted the following schedule of Berean lessons for the year 1875:

FIRST QUARTER.

1. Joshua Encouraged—Josh. i, 1 9.
2. Crossing the Jordan—Josh. iii. 14 17.
3. Memorial Stones—Josh. iv, 4-9.
4. Preparation for Conquest—Josh. v, 9 15.
5. Jericho Taken—Josh. vi, 12-20.
6. Achan's Sin—Josh. vii, 6-15.
7. Eoal and Gerizim—Josh. viii, 30-35.
8. Caleb's Inheritance—Josh. xiv, 6-15.
9. The Land Divided—Josh. xviii, 1-10.
10. The Cities of Refuge—Josh. xx, 1-9.
11. The Altar of Witness—Josh. xxii, 21-27.
12. Joshua's Warning—Josh. xxiii, 11-16.
13. Joshua's Resolution, (Review)—Josh. xxiv, 13-15.

SECOND QUARTER.

1. Judges Raised Up—Judges ii, 8-16.
2. Deborah and Barak—Judges iv, 1-9.
3. The Call of Gideon—Judges vi, 11-18.
4. Gideon's Army—Judges vii, 1-8.
5. The death of Samson—Judges xvi, 25-31.
6. Ruth and Naomi—Ruth i, 16-22.
7. A Praying Mother—1 Sam. i, 21-28.
8. The Child Samuel—I Sam. iii, 1-10.
9. The Death of Eli—1 Sam. iv, 12-18.
10. Samuel the Judge—1 Sam. vii, 5-12.
11. A King Desired—1 Sam. viii, 4-9.
12. Saul Chosen—1 Sam. x 17-24.
13. Samuel's Parting Words, (Review)—1 Sam. xii, 20 25

THIRD QUARTER.

1. The Word Made Flesh—John i, 1-14.
2. Following the Lamb—John i, 35-46.
3. Jesus at the Marriage—John ii, 1-11.
4. The New Birth—John iii, 7-17.
5. The Water of Life—John iv, 5-15.
6. Jesus at Bethesda—John v, 5-15.
7. The Bread of Life—John vi, 47-58.
8. Jesus the Christ—John vii, 40 46.
9. Freedom by the Truth—John viii, 28-36.
10. The Light of the World—John ix. 1-11.
11. The Good Shepherd—John x, 1-11.
12. The Resurrection and the Life—John xi, 34-44.
13. Christ Rejected. (Review)—John xi, 47-53.

FOURTH QUARTER.

1. Jesus Lifted Up—John xii, 23-33.
2. Washing the Disciples' Feet—John xiii, 1-9.
3. Many Mansions—John xiv, 1-7.
4. The Vine and the Branches—John xv, 1-8.
5. Friends and Foes of Jesus—John xv. 11-19.
6. The Work of the Spirit—John xvi, 7-14.
7. Jesus Interceding—John xvii. 15 21.
8. Jesus the King—John xviii, 33-38.
9. Jesus on the Cross—John xix, 25-30.
10. Jesus and Mary—John xx, 11 18.
11. Jesus and Thomas—John xx, 24-31.
12. Jesus and Peter—John xxi, 15-22.
13. Review.

And now as some of our readers may ask who were the Bereans, we would say a few words about them. They are an almost extinct sect of Christians. Their name is derived from the circumstance that the inhabitants of Berea "received the word with all readiness of mind, and searched the Scriptures daily" (vide Acts xvii. 11.) The founder of the Scottish Bereans was the Revd. John Barclay, a native of Perthshire, born 1734, died 1798. Some persons have called his followers Barclayans after himself. Chambers' Encyclopædia informs us that these people believe that the knowledge of God's existence and character is derived from the Bible

* *Sunday School Manual: adapted to Northern India.* By Rev. B. H. Badley. Lucknow: Printed at the American Methodist Mission Press, 1874.

alone, and not from reason or nature; that the Psalms of David do not relate to David at all, but exclusively to Christ; that assurance is of the essence of faith; and that unbelief is the unpardonable sin. In the ordinary points of doctrine they are Calvinistic. To some minds there may be something to object to in Mr. Barclay's views, but if so, there need be no offence in the system of Lessons known by the name of Berean, for the word is only applicable to that system in the sense that the Lessons originate in the practice adopted by the Bereans in apostolic times of searching the Scriptures daily.

INDIAN MAPS.

THE following interesting cartographical notice is extracted from the December issue of the *Geographical Magazine*. It is gratifying to realise from it how successfully Colonel Thuillier is conducting the work of his office, but we think it scarcely likely that Government will increase the funds at his disposal simply in order that nothing may be left to be accomplished by posterity.

The last parcel of maps received from India clearly proves that Colonel Thuillier is pushing forward the publication of the surveys with unabated energy. There are not wanting instances in which the results of a season's field work are published within a twelvemonth of its completion. This speedy publication is highly to be commended, for a map, not accessible to the public, represents so much capital locked up without bearing interest. The longer it is withheld from publicity, the more will it deteriorate in value, for though the main features of a country may not change, this cannot be said of minor topographical details. Old maps, therefore, assume more or less the character of historical documents, and cannot be trusted for information respecting the present condition of a country. We are glad to find that the Government of India fully appreciates the value of good maps, and nothing would please us more than an increase in the funds placed at the disposal of the Surveyor-General, as well as at that of his able co-adjutors, Colonel J. T. Walker, Superintendent of the great Trigonometrical Survey, and Colonels J. E. Gastrell, F. J. B. Priestley, and W. [illegible]. Anderson, of the Revenue Surveys, in order to enable these officers to make even more rapid progress than they have done hitherto, and that as little as possible of what we can perform ourselves may be left to be accomplished by posterity.

It is our pleasant duty to record the publication of thirty-two sheets one-inch Topographical and Revenue Maps, in addition to a variety of others on a larger or smaller scale. The Trigonometrical Survey Office furnishes two new sheets of the map of Guzerat, and four (with hills) of that of Kumaon and Ghurwal, all resulting from surveys made in 1872-73, Major C. T. Haig being in charge of those carried on the Guzerat, and Lieutenant J. Hill in charge of the surveying party stationed in Kumaon.*a*

None of the new topographical survey maps *b* call for particular notice, and we will therefore confine ourselves to mentioning the officers to whose labours we are indebted for them, and the years in which the surveys were made. The two sheets of Chota Nagpore are from surveys made by Captain G. C. Depree, as far back as 1863-4. The sheets of Simla and Jutog are by Captain G. Strahan (1872-3), and two editions of the map have been photozincographed from the same original. It is to be completed in twenty sheets, of which thirteen have now been published. The four new sheets of Rajpootana are from surveys by Capt. G. Strahan, 1870-73, those of Bhopal and Malwa are by Capt. R. N. Riddell, 1872-3 (who likewise supplies us with a plan of the environs of Bhopal), and those of Ganjam and Orissa by Lieutenant-Colonel G. H. Saxton, Captain G. C. Depree, and Mr. J. Dyer, 1856-65. The delay in the publication of the latter can be explained, no doubt, as arising from exceptional circumstances.

The Revenue Survey Maps are more numerous than usual, and include some fine specimens of photozincography. The officers of the North-West Provinces Revenue Survey *c* supply us with the new sheets of the one-inch map of Bijnour, surveyed in 1868-71, by Major A. D. Vanrenen, and with a plan of Nynee Tal, and environs, surveyed by J. Campbell and G. H. Cooke. This plan is exceedingly minute. Some idea of the nature of the country delineated may be gathered from the fact that, in order to get from the "Cart Bridge" to the "Cemetery" above, it is necessary to travel some 8 miles by road, although the direct distance between these two places is less than half a mile. The existence of features such as this would hardly be expected if we trusted to the delineation of the ground in *forming* our ideas of the nature of the country, and we are decidedly of opinion that in maps, drawn on so large a scale, and referring to a country presenting such differences of level, equidistant contours, or at all events a large number of altitudes ought to be inserted if they are fully to answer the purpose for which they are intended. The hill shading, in its present state, is only calculated to mislead.

The new sheet of the map of Oudh is by Major E. C. Anderson (1870-1).*d* The officers of the Panjab Survey *e* supply us with a capital plan of the cantonment and environs of Mooltan, in two editions, both photozincographed from the same original. Proceeding to the Central Provinces *f* we meet with a new map of Bhundara, in five sheets, and with three sheets of the map of Chanda, both from surveys by Captain F. Coddington (1867-71). There are, besides, plans of the cities of Hoshungabad and Dumoh, the former surveyed in 1863-4, the latter in 1864-5, and a very neat and handy map of the district of Dumoh, reduced from the Revenue Surveys to a scale of 4 miles to the inch.

From Bombay we have received a new edition of Colonel Laughton's plan of Bombay, first published in 1866, and two new sheets of the map of Sind, surveyed, in 1868-9, by Captain D. Macdonald, who still moves amongst the interminable ranges of sandhills, where we left him last.*g*

We have likewise received for the first time a number of maps resulting from the Madras Revenue Survey, which has been in progress since 1857, under the superintendence of Colonel Priestley. This survey, like that of the rest of India, is based upon the great triangulation, a circumstance for which we are mainly indebted to the earnest remonstrances of Colonel Thuillier, who succeeded in convincing the Board of Revenue that a map of permanent scientific value could be produced only in this manner, and that the additional expense involved by following his advice would be comparatively trifling. The survey has been carried on without interruption since the date mentioned, and out of twenty districts, four (viz., Nellore, Madras, Trichinopoli, and Tinnevelly), have now been surveyed completely or nearly so, whilst in eleven others more or less progress has been made.

Government villages are surveyed on a scale of 16 inches, Zemindari villages on that of 4 inches to the mile, and the plans, together with area books and other information respecting the nature of the land, which enables the revenue officers to make fair and just assessments, are published on the original scale. The village plans are combined into Taluk maps, on a scale of 1 mile to the inch, and the latter into district maps on half that scale.

The village plans are plain and unpretending in appearance, but fully answer the cadastral purposes for which they are intended.

The system of publishing them on an uniform scale strikes us as being far preferable to the spasmodic publication of isolated cities and cantonments, on a variety of scales, frequently unnecessarily large, which prevails in Northern India.

The Taluk maps are produced by a photographic process, but the names are printed from type, which detracts largely from their appearance. In the production of district maps a more elaborate system of colourprinting is applied. The map of the district of Nellore.*h* now before us, is probably a fair type of that class of map. The outline is printed in grey, the roads in red, and the names, from type, in black. Town and villages are classified according to their population, irrigated and unirrigated lands are distinguished, district roads and cart-tracks shown, and the orthographical features are fairly attended to. We do not doubt for a moment that these Madras maps are as correct, and their value intrinsically as great, as that of the maps published at Calcutta, but they are certainly inferior to them as respects technical execution. There are, however, exceptions to the rule, and the map of Horoornoorakul (we adhere to the rather inconsistent spelling of the original) with parts of adjoining Taluks is undoubtedly a very pleasing specimen of colour-printing.*i*

We now turn to maps on a smaller scale, amongst which the Indian Atlas *j* deservedly holds the first rank. It has been increased by three quarter-sheets since our last notice, that representing a portion of the Himalaya (64 S. W.) being a very fine specimen of hill engraving.

The sketch-map of India and that of the Bombay Presidency *k* both on the same scale, must be looked upon as preliminary or rather temporary maps, which will be withdrawn as soon as more complete and satisfactory maps of this kind shall be ready for publication.

The sketch-map of India, however, though rather rough looking, is stated to embody the results of all surveys up to date, and more than fulfils the promise held out by its title, for in addition to the political boundaries it gives the railways and numerous altitudes. Of really permanent value is the new map of Western Bengal *l* on a scale of 4 miles to the inch, which is based exclusively upon the revenue surveys. We hope the publication of this map, as well as of that of Eastern Bengal, will be pushed forward with due diligence, for, on account of its scale and its very ample detail, it is eminently calculated to meet the requirements of the public.

Two maps extending beyond the British boundary remain to be noticed. The first is described as transfrontier map No. 9,*m* and contains the whole of Nepal and Sikkim, with a considerable portion of Tibet. The native explorations conducted by Major Montgomerie, up to 1872, as well as Dr. Wright's sketches of Nepal, E. T. Johnson's map of Sikkim, Captain Carter's sketches, and Dr. Hooker's map, have been embodied in it, but we cannot help thinking that if existing materials had been used more exhaustively, certain portions of it might have been made more complete. But even now it abounds in useful information, and affords the readiest means of gaining a cartographical knowledge of Nepal, whose ruler has hitherto excluded English surveying parties from his territories.

The last map to be noticed is one of the frontier districts of Assam, *n* to the E. of longitude 92° 30′, and has been prepared for the use of the Duffla Expedition. The British territory is delineated fully, but the intelligence department has evidently not succeeded in gaining much information respecting the territory beyond it, which is almost a blank.

Sind Revenue Survey. Scale 1 mile = 1 inch. Sheets 80 and 81 (Oomerkot). Calcutta, 1874 3s. each.

h Map of the Nellore District, reduced from the Revenue Survey Maps. Scale 2 miles = 1 inch. Sheets 2, 3 and 6, Madras (Chepauk), 1873.

i Combined Map of Horoornoorakul, and a portion of Madikeri-Haleri Nadu Merkara Taluk. 1 sheet. Scale 2 m. = 1 in. Madras (Chepauk), 1873.

j Indian Atlas. Scale 4 in = 1 mile. Quarter-sheets 9 N.W., 64 S.W., and 128 N.E., Calcutta, 1874. 1s. 6d. each.

k Sketch map of India, showing political and revenue divisions. Scale 32 m. = 1 in. 6 sheets. 5th edition, with additions to January 1872. Calcutta, 1874. 12s.

Preliminary map of the Bombay Presidency, compiled from the latest materials, and from information furnished by the Bombay Revenue Survey and Settlement Department in the office of the Surveyor-General of India, December, 1873. Scale 32 m. = 1 in. Calcutta, 1874.

l Map of Western Bengal, compiled from the revenue surveys, based on the great triangulation in the Surveyor-General's Office. Scale 8 m. = 1 inch. Sheets 12, 16, and 17. Calcutta, 1874.

m Great Trigonometrical Survey of India. Transfrontier maps. Skeleton sheet 9. Scale 1 : 1,013,760. Calcutta, 1874. 4s.

n Part of the northern frontier of Assam, comprising portions of districts Darrang, Lakhimpur, and Sibsagar. Prepared for the use of the Duffla Expedition in the office of the Surveyor-General of India. Scale 4 in. = 1 m. Calcutta, 1874.

EPITOME OF NEWS.

Bengal and Calcutta.

— Several cases of cholera have occurred on board the *Glasgow*.

— The total rainfall at Cherrapoonjee last year was 429·92 inches.

— The Chief Justice of Bengal will be President of the Commisson for trying the Gaekwar.

— Ten sales of Bengal and nine of Malwa opium have produced £710,000 over the budget estimate.

— Four thousand persons in all visited the Fine Arts Exhibition.

— The Tirhoot State Railway was opened to the public for passenger traffic on the 11th inst. The line is only 36 miles long.

— The number of documents registered in Bengal during the past year was 328,369, as compared with 279,080 in 1872-73.

— During the past season, the results of tea manufacture in the Darjeeling districts have been most favourable, the total outturn being 45,000 maunds against 30,000 in 1873.

—The Yarkund Envoy, Syed Yakoob Khan, accompanied by Captain Hunter, of the Guides, arrived at Calcutta on the 15th.

— The hailstorm which visited Calcutta lately appears to have been general in nearly all parts of Bengal. There has been more or less rain throughout, except in Cuttack.

— It is reported that the official designation of the Assam Chief Commissioner will shortly be changed into that of "Chief Commissioner of the Eastern Provinces."

— Henry Warren, the demented ex-school-master, who fired a revolver some months ago at Colonel Wyndham in the tiffin room of Wilson's Hotel, has been sentenced to imprisonment during the Viceroy's pleasure.

— A good fall of rain throughout Bengal is reported: it was heaviest in the central and lightest in the western districts, and has done much good to the spring crops. Rain has also fallen in Assam, and rain with hail in Allahabad.

— Cement, equal, if not superior, to that known as "Portland," can be manufactured in this country at about half the cost for which that cement can be imported: this fact is worth consideration when taken in connection with the fact that considerable quantities of Portland cement are used on Government works here, and that the demand appears to be yearly increasing.

— "We could not," the Indian correspondent of *The Times* says, "put 30,000 men into the field. What we call our native army is merely an aggregation of men that could not stand the stress of the briefest campaign. And not only this, the machinery of the army, such as it is, has fallen out of gear. The officers are hopeless and discontented, the men have but small liking for the service, and the method of recruiting is such that if symptoms of mutiny did appear, we could not isolate it. It would rapidly leaven the whole army."

— The importance of providing insanes with industrial employment both as a preservative of health and as an effective aid in maintaining discipline is not lost sight of in the Dullunda asylum. On an average, all the patients present, except 48 including the sick, were last year engaged in some useful occupation. The total cash outlay in manufactures amounted to Rs. 21,826. The cash sales outside the asylum amounted to Rs. 11,339 only; but including the value of articles made over for asylum use, of those in store, and of the labour employed in repairs and petty constructions, the year closed with a balance of profit of Rs. 5,783.

— Although there appears to have been a certain amount of fever amongst the officers, troops and coolies connected with the Duffla expedition, the *Pioneer* says there have been but few casualties, which speaks well for the medical arrangements, as the force is entirely without tents. Bivouacking on newly cleared forest land is not, as a rule, conducive to good health; but taking example from the Ghoorkhas, and men accustomed to an out-door life in those parts, all hands turn to and manage to get under cover of some sort—chiefly using sheds made of boughs and leaves—in a wonderfully short space of time.

— Garden operations in the Bengal jails are cramped by the strict incidence of the rules, which prohibit the employment of able-bodied prisoners except those of good character, who have nearly completed the term of their sentence. Isolated experiments on special plants have, however, been made, and the extraction of fibres has occupied some attention. The jailor of Jessore has succeeded in turning out an excellent fibre from the Ramturai (*Abelmoschus esculentus*), and further inquiries are being made to ascertain whether the cultivation of the plant for this purpose is likely to prove remunerative. The jailor of the Hazareebagh Penitentiary has invented a method of cleaning aloe fibres, which seems likely to have important results, and to furnish a prominent industry for the Hazareebagh Jails. In several jails, attention has been directed to the rhea and other fibre-producing nettles, but as yet without any special result. At Rungpore, also, attention is being paid to the improvement of the indigenous tobacco, and, at Midnapore, the Inspector General hopes to make experiments with flax.

— Thirty estates, the property of Government, with an average area of 100 acres each, were sold during the year, and fetched about 10 years' purchase of the Government demand. It is presumed that these sales were made subject to a revision of the revenue at the end of the term of settlement. The whole question of the policy of selling estates of this kind is still under the consideration of Government: but the Lieutenant-Governor is inclined to think that eventually it will be found desirable to sell all estates which are not of sufficient value and importance to pay for the cost of a thsildaree establishment. In the opinion of Divisional and District Officers the working of the Sale Laws does not lead to hardship or injustice, the stringency of the law being tempered by the exercise of a judicious discretion in its application. At the same time cases of hardship occasionally come to light, and it appears to be generally believed that estates are sometimes brought to sale with the object of cancelling the tenures of subordinate proprietors. Sir Richard Temple feels some doubt whether it might not be possible, under certain safeguards, somewhat to relax the rigour of some portions of the present law, and to provide that notice of an arrear shall be given to those proprietors whose names are registered in the Collector's books.

North India.

— Rain is much wanted in many parts of Northern India.

— Small-pox is again becoming generally diffused throughout the Punjab.

— Memorials to General Barrow and Colonel Thompson are being got up by the Oudh Talookdars.

— A Russian traveller, M. Pierre Pachino, is now at Lahore, collecting information before proceeding on a journey to Tookestan *via* Chitral.

— It is said that diamonds are occasionally found in the Sumbalpoor district, and that about five miles from the county town there is a place called Hirakhuda, or the Diamond Isle.

— An officer of the 32nd Pioneers, at Umballa, has formed a dramatic *troupe* from the sepoys in his regiment. They are said to perform Hindustanee pieces very intelligently.

— Mr. Grant Duff arrived at Sealkote on the 11th and proceeded the following day to Jummoo to visit the Maharaja at Kashmeer. He returned on the 13th and left the same evening for Rawulpindee and Peshawur.

— Evil times have fallen upon Gónda. Its teeming population has been visited with two bad seasons—first deluge, then drought. The choukeedars are criminally inclined and discontented; and the vicinity of Nepal offers a ready asylum for the refugee murderer or robber and to the six or seven thousand released offenders.

— The combined road and Railway Bridge over the Jumna at Agra, the local paper says, shows sign of rapidly approaching completion. With the exception of a few wells, the foundations of all the piers have been secured, and some of the piers themselves are approaching completion. Large quantities of stone are ready stacked on the sandbanks near the bridge, which in the space of a few months will be converted into substantial blocks of masonry. The ironwork of the superstructure is also being erected.

—The military correspondent of the *Pioneer* says that the programme of Indian reliefs for the year 18-75-76 may be considered to be settled as follows: The 14th Hussars, from England, will replace the 18th Hussars at Bangalore; and the 2-16th, 1-25th, 33rd, and 34th, will proceed to India to replace the 36th, 2-25, 76th, and 107th, proceeding to England from India. The 1-10th, now at Singapore, will probably take the place of the 31st at Gibraltar, in which case the 80th, now at Hongkong, will proceed to Singapore.

—The following news has been received by the *Delhi Gazette* from Toorkestan:—"Naib Mohamed Ullum Khan, the Governor of Toorkestan, having called the chiefs, residents and merchants of Tajkurghan to a meeting, desired them to collect ten lakhs of tunkas and fifty thousand tillas, and to lend the amount to the Ameer as a loan, as the money was requried to defray the expenses of the Herat expedition. The Governor assured them that as soon as Herat affairs were settled the money would be re-paid them. All those present were very much displeased at the sudden demand made by Naib Ullum Khan. The merchants replied that they had no cash to lend the Ameer, and the chief citizens said that they could not comply with the Governor's request. In vain did the Governor try his best to assure them that there was no fear as to their money, as they could easily realize the sum from the duty they generally have to pay on their goods; but to no effect, as no one came forward to lend any money."

— Mr. Bauerman, the metallurgist deputed by the Secretary of State for India to examine and report on the feasibility of establishing Iron works in India, writes, "The most important deposits of iron ores that I have seen are those of Lohara in the Chanda District, and these would be better adapted for development than the Bengal ores, if they could be brought into communication with the Chanda and Berar coal fields * * *; and if the coal should turn out well, the locality seems to promise fairly for the introduction of iron making on a large scale." The quality of the Lohara ore having been placed beyond doubt by analysis separately conducted in England and India, and the existence of valuable limestone as a flux in the vicinity of the field in any quantity being also certain, it only remains to decide whether the coal now being raised from the Warora pit is of a kind to ensure the successful manufacture of iron. Mr. Ness, the Mining Engineer at Warora, is of opinion that a large proportion of the coal is too friable to stand "burden" in the furnaces, but this defect he proposes to remedy by making it "into blocks of fuel" after a process devised by himself and which has stood successfully the tests applied. Writing at a later date and after further trials of the coal he estimated that the quantity of friable coal would be between 30 and 40 per cent. of the out-put, the other 60 to 70 per-cent being large coal, having the quality of standing "burden" in the furnaces; and he recommended the erection of "two medium sized furnaces capable of producing, say, 150 tons a week of pig iron, and converting the greater portion of it into steel by the Bessemer process." An

expenditure of Rs. 5.000 for this purpose has been recommended to the Government of India. The experimental furnaces will be erected at Warora where the suitability of the "large coal," and the "patent fuel" made up of the small coal and slack, can best be tested, and then it will be time enough to decide on the most suitable site for an iron manufactory with reference to the several localities where the ore, the flux, and the fuel are found in closest proximity.

Bombay.

— The tour of Sir Phillip Wodehouse has been stopped by the Baroda crisis.

— The captain of the American ship *Sagamore* has been fined Rs. 150 for assaulting one of his crew.

— A Mussulman boy of Poona was recently sentenced by the Cantonment Magistrate to a month's rigorous imprisonment, for gambling at the road side.

— The Directors of the new Bank of Bombay have declared a dividend at the rate of five per cent. per annum for the last half of 1874.

— The *Committee of* the Famine Relief Fund established in Bombay have in hand a balance of Rs. 19,000, which will remain in deposit as available at the discretion of the trustees in any future case of famine or other local or general calamity.

— A few nights before Christmas, the Sheik of Kesom, a small island about ten miles distant from Bunder Abbas, made a raid on that place, attended by some twenty followers, and carried off a woman. The matter having been reported to the Shah, His Majesty despatched Hassan-es-Sultana, Governor of Shiraz, with 500 Infantry, 2 field pieces, and some cavalry to call the Sheik to account. Hassan-es-Sultana halted his followers at a little distance from Bunder Abbas, and, proceeding there himself, summoned the Sheik to appear before him. On arrival he was made prisoner and ordered to pay a fine of 20,000 krons, equal to about Rs. 800.

— It is stated, asserts the *Bombay Samachar*, that Mr. Souter has discovered a sunnud or document signed by the Gaekwar, purporting to grant to a person, now in custody, the enjoyment of a village worth Rs. 10,000 a year. Mr. Scott, who accompanied Mr. Souter to Baroda, examined all the papers in connection with the affair for two days, with a view to give his opinion as to whether there was any case against the Gaekwar. It is also reported that Mr. Souter has prepared a charge against the Gaekwar, in which he has cited the alleged attempt of Mulhar Rao to poison his brother Khunder Rao. Hints are also thrown out with reference to the sudden disappearance of the late Gaekwar's favorites. Avela, the favorite spy of Mulhar Rao, and his servant Salem, have been arrested.

— Lieutenant Cameron has sent to Lord Derby a despatch dated Kawele, Ujiji, May 14, 1874, in the course of which he says:—The efforts of England will, I trust, be successful in putting down the slave trade by sea; but at present they leave untouched an equally crying evil, the internal trade, which is rapidly depopulating vast districts. In going round the lake I was constantly shown places where villages had been, and when I asked where the former inhabitants were, invariably received the same answer, 'Killed, or carried off for slaves.' The price of a slave is only 5 dotis (20 yards) of calico, while the hire of a passage is 5½ from Unyanyembe here, so that it is far cheaper to buy slaves than to hire porters, besides which no porters are obtainable in Manyuema, and the whole trade there is carried on by means of slaves. Lieutenant Cameron has no hope of putting down the traffic until the internal communications of the country are improved.

— The Khedive recently received at Cairo a deputation of merchants and bankers of Alexandria, who presented an address from the European colony of Alexandria expressing their thanks to his Highness for his exertions during the late inundation of the Nile, and asking his consent to the erection of a memorial in consequence, and said that for this about £13,000 had been subscribed. The Khedive replied that it was a real happiness to him that heaven had given him the power of being useful to the country, and he would do all he could to ensure the prosperity of Egypt and of the European colony. He then spoke of the recent successes of the Egyptian arms in Darfur. That country was now, he said, annexed to the Egyptian dominions, and thus the population over which the Khedive ruled had been increased by 5,000,000 souls; for such was the population of that country, according to the reports his Highness had received from the officials and travellers who had visited it. In the course of five to six years he hoped that Darfur and Central Africa would be united with Egypt by a line of railway, but the cost of its construction would be defrayed by the resources of Darfur and Central Africa alone, without any recourse to foreign capital. His Highness declined to allow the proposed memorial to be erected, but said, with the approval of the deputation, he would appropriate the money subscribed to the foundation of a public school for boys of all creeds at Alexandria.

— Lieutenant Cameron has examined the western side of Lake Tanganyika, and has discovered the long-looked-for outlet which all physical geographers had agreed must exist, as in no other way could the sweetness of the water be accounted for. This outlet, it appears, is called Lukuga, and is situated five miles south of the islands explored by Speke. It had actually been passed by Livingstone, though in the night time, which might account for his having somewhat hastily concluded that the waters flowed into, instead of out of, the lake. Lieut. Cameron proceeded for about four or five miles along the stream, the current of which runs from one to two knots per hour, but further navigation was impeded by floating grass and large rushes. He believes, however, that it eventually reached the Lualaba. The Lualaba itself, according to Arab report, flows into the Congo, and not into the Albert Nyanza, as asserted by Livingstone and Stanley. This intelligence can hardly cause much surprise to those who read Dr. Behm's exhaustive essay on the subject, published two years ago, in which he arrived at the same conclusion in the most unmistakable manner. One Arab had gone fifty-five days' journey from Nyangwa down the Lualaba, which he stated was as broad as Tanganyika, and studded with inhabited islands, and had arrived at the sea, where white men had ships and factories. Lieut. Grandy, exploring from the West Coast of Africa, by way of Ambriz and Bembe, has found greater difficulty in penetrating into the interior of the country by that route and from his comparatively early recall on account of the death of Livingstone, he has been unable, apparently, to achieve any great geographical discovery. His opinion of the Congo is, that there are two main branches, the southern one draining Angola, and the northern one being, apparently, identical with the Lualaba. It is a matter of congratulation for geographers that sufficient funds have been collected to enable Lieut. Cameron to prosecute his discoveries. According to his last advices he will write from Nyangwa, and thence make his way down the Lualaba to the sea, and thus complete a journey of the very highest interest.

Madras.

— It is stated that steps are being taken to build a tramway in Bangalore.

— The weather in Madras is reported to be unusually cold.

— The Hon'ble J. D. Sim, member of the Madras Council, retires from the Civil Service in March next. He came out in 1842.

— An attempt at acclimatization is being made by a Dimbula planter, who has taken into that district three Australian pheasants.

— Mr. Sydney Higgs Craven, the late manager of the Galle Branch of the Oriental Bank Corporation, has been found guilty and sentenced to seven years' penal servitude for embezzlement.

— A "Manager of Schools" in Ceylon proposes the adoption, by the Educational Department of that Colony, of the following rule: "that none should be admitted into schools, to begin to learn English, after the age of nine years"!

— Ceylon has been famous for its elephants for ages, but with the advent of civilization and gunpowder herds of these animals are becoming very scarce, and under orders from home, the Governor is issuing stringent directions for the prevention of the wanton destruction of elephants.

— The waters of the Cheyair, Papugnee, Chitrauvitte and Penair having subsided, temporary lines have been laid upon the now dry, sandy beds of these rivers, so that communication between Madras and Bombay which has so long been interrupted owing to the washing away of the bridges spanning the rivers during the late floods, has been restored for the present.

— A small reform, but likely to be exceedingly useful to planters and beneficial to coolies, is about to be made, in the effort Government is making to institute a Money Order system between Ceylon and India. When coolies are able to remit money safely, expeditiously, and without a liberal percentage for bribes, to their relatives in India, Ceylon will become increasingly popular with the inhabitants of the densely-peopled districts of Southern India.

— The Governor of Ceylon in his address on the closing of the Legislative Council for 1874 remarked that it was the duty of Government to make an effort to preserve the ancient records of the Island—a duty owed not merely to the large and annually increasing number of students of Oriental history and of Oriental philology, but to the natives, many of whom have already widely distinguished themselves by antiquarian research, many more of whom will devote themselves to it if facilities for study be afforded. With this object, for some time past, the Government has annually spent a small sum in procuring copies of all books of interest which are still in existence in the Temple libraries. But, in addition to this, the Governor has thought it advisable to take immediate steps to obtain reproductions of all the other records which are to be found on rocks and detached stones, and which are gradually perishing by the action of time and weather and the ravages of man. Some of these inscriptions are almost perfect, and have already been translated; others are, however, in worse condition, and require the eye of a scholar to be reproduced with any approach to accuracy. The Secretary of State, Lord Carnarvon, has warmly approved of the proposal to form a complete and systematic collection of these inscriptions, and has secured the service of Mr. Goldschmidt, an eminent Orientalist, at a salary of Rs. 4,800 per annum, and has also procured a thoroughly well-trained photographer to accompany him. Ere long the Government will be in a position to publish a "Corpus Inscriptionum Zeilanicarum," which, while throwing light on the ancient history, religion, and customs of Ceylon, will be of the greatest value to students of philology.

Feudatory.

— The marriage of the heiress-apparent of the Begum of Bhopal will take place on the 24th instant.

— The Neemuch line of Railway is to be amalgamated with the Holkar line, under Colonel Pollard.

— The Rajah of Pertabghur, accompanied by his Ranee, intends visiting England shortly.

— The military warrant for the arrest of the sham Nana having expired, a fresh warrant has been issued through the Foreign Office.

— It is said that among the new charges brought against the Gaekwar is one of having had murdered, in his own presence, a man who had come down to Bombay to see the government on behalf of the person who styles himself Luxmeebaee's first husband.

— Among the claimants to the *guddee* of Baroda is a nephew of Siajee Rao Gaekwar, the father of Mulhar Rao. Of the five sons of Siajee, three became Gaekwars,—Gunputrao, Khunderao and Mulhar Rao. The last named Prince is the fifth and last surviving son of Siajee.

— Sir Lewis Pelly discovered forty lakhs of rupees in the Palace of the Gaekwar on Monday. The Sirdars denied all knowledge of the money. The Commission which will try the accused consists of Sir R. Couch, as President; the Hon'ble Mr. West, Judge of the Bombay High Court; Sir Richard Meade perhaps, Sir Dinkar Rao, and Mr. Jardine, Registrar of the Bombay Appellate Court, as Secretary.

— The *Bombay Gazette* asserts that there is not a Native State in India which is not a hot-bed of intrigue, and which does not cause the Supreme Government ceaseless anxiety. It is in the nature of things that this should be so, and that the Mahratta princes in particular should be unable to forget the comparatively recent glories of their race, and to reconcile themselves to the irksome task of playing subordinate parts in a new imperial system. Lord Dalhousie's maxim, that the English Government in India ought to avail itself of every fair opportunity to consolidate its empire by the absorption of the remaining native states, still embodies a wise principle of policy; and the only question that ought to be considered is, whether such opportunities of annexation as present themselves from time to time can be fairly made use of or not.

— The following is a copy of the latest telegram about affairs in Bardoa: Perfect quietness reigns in the city. No disturbance whatever has occurred excepting that one Arab soldier through bravado threatened to fire his matchlock. Sir L. Pelly is busy arranging a new native administration. The Gaekwar's accounts were found in confusion, only one responsible treasurer is to be appointed, while Sir L. Pelly will rigorously superintend all the departments of the administration. The Gaekwar's two gold and two silver guns have been brought into camp, followed by a great crowd. The Gaekwar is reported cheerful to-day, though yesterday he was much depressed. Crowds of natives watch his place of confinement. The Viceroy's detailed instructions have not been received at the Residency yet. None of the Gaekwar's troops have been disarmed. The British troops will be withdrawn from the city and the preservation of peace entrusted to the Gaekwar's regular force.

— Early on Thursday forenoon last the presence of Khan Bahadoor Meer Acbar Ali, the native head of the Detective Police in Bombay, in a dirty street situated in the native town, might have led, the *Gazette* says, a careful observer to infer that he was after some "big game." And so he was, for at the time he was quietly gleaning particulars connected with the internal economy of Mulhar Rao's branch firm in Bombay. It was the subject of talk that the Moonim of the firm, acting upon instructions, had within the last few days converted spare cash into currency notes for some lakhs of rupees, which were kept in a treasure-chest on the premises occupied by him. Be that as it might, the information collected by the Khan Bahadoor was considered sufficiently definite to allow action to be taken in the matter. At 5 o'clock the same afternoon, Mr. Edginton, Deputy Commissioner of Police, attended by Mr. Crummy, Superintendent of Police, Khan Bahadoor Abdool Ali, and a few detectives, paid a visit to the premises of the firm. Mr. Edginton was closeted with the Moonim, with whom he had a long conversation. The result was that seals were placed upon the treasure-chest and boxes supposed to contain valuable property; and measures were taken to maintain a strict watch upon the place and to see that nothing was removed.

Burma and the East.

— A slight shock of earthquake was felt at Akyab on the night of the 31st December.

— Mr. Mark Fryar, the mining geologist, has gone to the Shew Gyeen District to report on its mineral resources, which are said to be considerable.

— News from Mandalay has reached Rangoon that Colonel Horace Browne and Dr. Anderson arrived there on the 23rd December, and were well received by a deputation sent by the King.

— Apes are said to be trained as cocoa-nut reapers in the Straits. They go up the trees with a line attached, and obey the command of their owners like human beings. They twist the nut round and round till it falls down, when the feat is hailed by a jump and a chuckle of evident satisfaction.

— The results of the late expedition to Sunghie Ujong fully justify the decision of Sir Andrew Clarke to make a display of force, although the immediate object of the expedition was previously attained without its assistance. The Datu Bander and Rajah Mahmood had made their way to the Sultan of Salangore, but afterwards came to Singapore, under the escort of Captain Dunlop, to make terms with the Governor. This action on their part augurs well for the future peace of the petty States.

— The news from Achin is not encouraging. The neighbourhood of the Kraton had been flooded, and after the water subsided the exhalations from the wet mud seriously affected the health of the Dutch troops, no less than 1,100 of whom were under medical treatment on the 10th December. H. N. M. S. *Watergus* had been despatched to the West Coast with an ultimatum to the refractory petty States there, which are nominally under the Dutch flag, but returned to Great Achin on the 16th of last month with an unsatisfactory report of the results of her mission.

— A Teheran correspondent of the *Times of India* gives the following account of the presents made by the Shah of Persia to the Burmese Minister and suite:—"The Burmese Ambassador has received a first-class order of the Star and Lion, a diamond waist-belt and a diamond ring; his Secretary a second-class Order and a diamond ring; the Burmese Interpreter a fourth-class order and ring; others, inferiors in rank, shawls and rings. Mr. A. D. Cohen, of the firm of Cohen and Company, Bombay, the late Secretary to the Persian Consul-General, who accompanied the Embassy as Interpreter, on a salary of Rs. 500 per mensem, has also received a fourth-class order of the Star and Lion and a ring."

— On the 28th October the following incident happened at Achin according to Colonel Pel, the Dutch commander: "From our fortifications at Langkruk much activity was perceptible after midnight in the enemy's campongs and forts lying to the S. and E. Now and then musket and also lilla shots were fired upon our fortifications. About 3 A. M one of the sentinels at Kotta Petjoet, being favoured by moonlight, saw a person on the opposite bank of the Kurung Daru creeping towards Kotta Petjoet, and wounded him with a musket shot. The Achinese thereupon furiously ran into the river, which he forded with incredible swiftness, and notwithstanding a second and a third shot fired at him, rushed straight at the sentinel on the breastwork. Being checked in his course by pieces of glass lying outside that work, he ran round eastward and endeavoured to make his way through the entrance, but owing to the thorny bamboo obstructions, he failed in this also, after which he went further on along the brick portion of the works and concealed himself under a shed outside the N. side of the latter. The outpost commander, in the meantime, went out with 4 men along the W. side; when they came to the N side, the Achinese caught sight of the patrol and set out to meet them, sword in hand. Two bullets in the breast, and a thrust from a bayonet he had laid hold of, brought him down. He was young, well dressed, and had been often in fight to judge from scars on his body. Six to eight persons were with him on the opposite bank of the Kurong Daru, but had gone away when discovered by the sentinel."

Asia.

— A severe winter is expected in Japan.

— The Mikado is learning German and is said to be making satisfactory progress.

— Khilluts have been conferred on those who assisted the Russians during the late Khivan Expedition, by the Governor of Tashkend.

— An Envoy from the Sultan of Kashghur has arrived at Tokmak, and will proceed ty Tashkend if he obtains the requisite permission.

— The Japanese authorities are carrying out a scheme of coast fortification, which, it is said, "will involve the removal of the English and French troops."

— A Russian officer informs the Bokhara correspondent of *Indian Opinion* that the Shah of Persia has assisted Ayoob Khan, brother to Yakoob Khan, pecuniarily, and it is believed that he has instigated the Toorkomans to assist him also.

— The first railway accident, involving considerable damage to rolling stock, and some to limb, though fortunately none to life, occurred on the Kobe-Osaka railway on the 2nd December. It was occasioned by a bullock straying on the line.

— One of the retainers of the Japanese minister was struck and wounded by a stone while on his way from Pekin to Tungchow. At Tientsin the wounded man was visited by the Taotai and a letter of apology was sent to Mr. Yanigiwara announcing at the same time the capture of the offender.

— The Russian *Invalide* says that Yakoob Khan during his involuntary stay at Cabul was forced to consent to the succession of his younger brother, Abdcolla, and that his imprisonment and return to Herat would lead to fresh dissensions even were he not accompanied by and under the control of two generals.

— The branch of the Russian Imperial Bank at Toms, in Siberia, has been robbed of 340,000 roubles. The thieves excavated an underground passage to the vaults of the bank, effected an opening in spite of the strength of the masonry, and carried off all the cash. No clue has yet been found to the perpetrators of the deed.

— General Lomakin has returned from his expedition on the Attreck without any hostile collision. The Tekke Toorkomans of Merv have given up voluntarily 32 prisoners, and have promised to release the remainder by the end of the year. Satisfactory arrangements have been concluded with the Khans about the pasture-grounds.

— The American ship *Horatio*, Capt. Hardy, which arrived at Shanghai on the 1st December from New York, with kerosine oil and a general cargo, was totally destroyed by fire, in the harbour, on the 16th. The fire is supposed to have been caused by the carelessness of a Chinese tinsmith who was repairing some kerosine tins on deck. The Captain and chief officer were severely burnt.

— A lawsuit, showing a peculiar Japanese custom, has been decided against the native Governor of Nagasaki. It appears that certain people were desirous of changing their church and asked the Governor for permission to do so. The request was not granted, and an application was made to the Judicial Court for redress. The judge decided in favour of the people, and ordered that the Governor, who was represented by two Japanese officers, should pay the whole of the costs of the proceedings, and grant the request of the people as well.

— Monte Christo's escape from the sack in which he was flung into the sea from Chateau d'If has, according to the *Graphic*, been imitated by an ingenious Persian. Having incurred the displeasure of a high functionary at Shiraz, Mahommed Mirza was condemned to be fastened up in a sack with a viper, a cock, and a cat, and after an hour's time, when this happy family had improved their acquaintance, the sack and its contents were to be thrown into the river. Fortunately for Mohammed Mirza, his executioners forgot to search his pocket—which contained a small knife. Directly the mouth of the sack was closed upon him and his companions, he cut in half the viper, which was already encircling his leg, the cock and the cat were next despatched, and our Persian occupied the remainder of his hour by simulating a violent fight of the three animals, and giving forth the most

excruciating cries of agony. In due time sack and all were consigned to the water and then Mahomed Mirza, speedily freeing himself from the prison, gained the other side of the river, and went post haste to Europe, for the future a voluntary exile from his fatherland.

— There is one curious point in the recent settlement between China and Japan which seems to have escaped notice, viz. the suzerainty hitherto claimed by China over the Lewchoo islands. It appears remarkable that during the whole of the negotiation, no claim to this suzerainty, which if acknowledged would have completely barred the demands of the Japanese Government, was set up; so that the Chinese Government may be said to have *de facto* retired from an untenable position, without waiting as usual for the mortification of a defeat. Still, at one time, the suzerainty was a thing something more than nominal, and the Chinese did exercise considerable power or influence in the affairs of the Lewchoos. This is the more remarkable, as the Chinese never conquered or occupied the islands in force. It is indeed recorded that in the seventh century a war broke out with China, in which the latter country was successful, but it does not appear that any attempt to extend Chinese dominion over the islands was made till the time of Kublai Khan, at the close of the thirteenth century. An expedition was then fitted out, but met with no better success than other naval attempts of the Mongol rulers of China, and Lewchoo retained its nominal as well as actual independence till the ambassador of Hungwu, the first of the Mings, in 1372, persuaded the King of Lewchoo to acknowledge the supremacy of the empire and place himself under the protection of China. A Chinese colony was then introduced, and the island formally declared tributary to China.

— A letter from Constantinople in the *Allgemeine Zeitung* says that alarming intelligence has arrived there from the Turco-Persian frontier. Hadji Djaber, the Sheik of the town of Mohammera, on the left bank of the Tigris and Euphrates, which is in Persian territory, is endeavouring, "with the help of the English," to make himself independent. He was opposed by a portion of his tribe, who attacked him with troops and guns; but they were obliged to retire, as Hadji Djaber was assisted by numerous allies. Naziv Pasha, the Sheik of the Muntefik Arabs, and Cassim Tchelebi, one of the wealthiest of the citizens of Basra, sent him 5,000 armed Arabs, and thirty ships were placed at his disposal by the Sheik of Kuet. The English vice-consul of Basra and the English consul of Bagdad also proceeded to the scene of action. Seeing that further resistance was fruitless, Hadji Djaber's adversaries made peace with him, and he will probably now declare himself independent. "The English," adds the correspondent, "take every opportunity, both here and elsewhere, of showing themselves in the Persian Gulf." The other day they attacked a party of travellers from Nedjid under the pretext that they were contemplating a revolution, and twenty-two of the travellers were either killed or wounded in the struggle. In fact, the English are already practically the rulers of the Persian Gulf, of the mouth of the Tigris and Euphrates, and in Nedjid and Muscat; and if the Turks in Yemen wished to attempt a new demonstration against Aden, England would be able to retort very effectively in Babylonia. Events are preparing in these regions which have a very different scope and significance from the small diplomatic squabbles with Spain and Italy; and here at Constantinople the seriousness of the situation is fully appreciated, while in the rest of Europe no notice whatever seems to be taken of it."

— Two curious articles have been published by a Shanghai native newspaper, the *Hwei-Pao*, protesting against the construction of railways in the Chinese empire. *Hwei-Pao* is of opinion that the existence of railways in Europe is too recent to admit of a judgment being formed as to their practical utility, and, moreover, that there is not sufficient business in China to render them profitable. The Chinese journal goes on to say that "tea and silk are the principal objects of commerce, and these have hitherto been forwarded to the treaty ports by river steamboats. A substitution of railways for steamboats would not effect any saving in point of time and could not therefore, even from the point of view taken by the foreigners themselves, be of any service to China. Admitting that a little time was gained, the Chinese would not be benefited, for the goods would not be exported more rapidly. Thus the railways would only lead to an accumulation in the ports of vast quantities of goods which, as they could not be shipped off all at once, would fall considerably in price." The *Hwei-Pao* also says: "The accidents on the railway lines are very numerous, caused by collisions, by the engines or tenders taking fire, by the trains running off the lines, or by the bridges giving way and the trains being precipitated into the rivers below. In other cases the carriages are injured by the great speed at which they are hurried along, and the accidents are so numerous that it is often impossible to ascertain the exact number of dead and wounded. All the foreign journals are full of details concerning these accidents. But, admitting that most of the casualties are preventable, and that the trains follow their regular course, they travel quicker than the thoroughbred horse. and the people walking on the lines would have no time to get out of their way. From this cause alone the number of fatal accidents would be enormous. In all countries where railways exist they are considered a very dangerous mode of locomotion, and, beyond those who have very urgent business to transact, no one thinks of using them." This latter statement cannot as yet be accepted in its entirety; but, unfortunately, we have every reason to know that so far as England is concerned travelling by railway is "a very dangerous mode of locomotion."

— Over four hundred people are supposed to have perished by the burning of the S. S. *Japan*, one of those huge vessels which carry a population equal to that of a small town, across the Pacific. The *Japan* left Yokohama with a crew, including captain and officers, of 128 men, 2 cabin passengers, 2 European steerage passengers, and 425 Chinese, making a total of 557 souls on board. There were 620 tons of cargo, $358,508 worth of treasure, and 7 packages of mails. At the time the *Japan* was abandoned, the sea was very high, and a strong current was running, so much so that numbers of the people in the water drifted by the boats with such rapidity that all attempts to rescue them were useless. The following is the statement of the captain of the vessel: "The P. M. S. S. Company's steamer *Japan* 4,851 tons, E. R. Warsaw, Commander, left San Francisco on Saturday, November 14th, 1874; had pleasant weather with variable winds during passage to Yokokama; arrived Dec. 10, at 10 a. m., landed 22 cabin passengers, 4 European steerage, 8 Japanese, 400 tons cargo, 16 packages mails. Received on board 1 European steerage passenger, 3 Chinese, 45 tons cargo, 600 tons coal, 1 bag mail, stores, &c. Sailed from Yokohama, Dec. 11th, 1874, at 4 p. m. for Hongkong. Experienced pleasant weather up to noon Dec. 17th when the wind freshened into a strong breeze from N.E. rough sea. At 9 p.m. passed Lamock light distant 5 miles, ship under sail and steam. At 11.25 p.m. Breaker Point bearing West ½ South distant 26 miles. Strong N. E. monsoon with rough sea. Fire first discovered, engines stopped, ship headed in shore, ventilators turned from wind, all fire engines working in perfect order, every effort made to subdue the fire, at same time officers detailed to swing all boats preparatory to saving life. All efforts to save the mails proved useless. Finding it impossible to subdue the fire, abandoned the ship with last boat at 1 o'clock a. m., December 18th, the ship then being enveloped in flames amidships, directly in engine and fire rooms, all communication being cut off between forward and aft part of the steamer. Remained until noon in the vicinity of the wreck, saving life. Engaged a fishing junk to assist. Cruised in the vicinity of the wreck, and succeeded in saving 117 souls from boats and water. Seeing no more life stood in for Cap Chi point. At 6.30 p.m. intercepted English steamer *Yottung*, Captain Kock who kindly took us on board, and conveyed us to Swatow: thence transferred to steamer *Yesso* for Hongkong."

Literary.

— A new postage stamp of the value of one rupee has just been introduced into this country. Supplies having been received by the Superintendents of Stamps at the three Presidency towns, are now in course of issue to all local depôts.

— In the first number of a new Punjab native paper published in English at Lahore and called the *Punjab Intelligencer*, the following are given "as the causes which have originated lying in India:" (1)—Absence of morality; (2)—Absence of reprimand or punishment, whether social, scholastic, or parental; (3)—Bad society; (4) Cowardly revenge; (5)—Solicitude for evasion of punishment; (6)—Poverty; (7)—Cupidity; (8)—Law." The paper remarks that "Unless these causes are uprooted, lying will run on to perpetuity."

Ecclesiastical.

— The Rev. Mr. Burgess, of the Wesleyan Mission in Madras, has obtained Rs. 35 as costs from a native who charged him with abducting a boy and endeavouring to make him a Christian.

— The eleventh annual Session of the India Conference of the Methodist Episcopal Church began at Shahjehanpore on the sixth of January and continued until the twelfth. Thirty American Missionaries were present and eight or ten other members of the Conference, born in this country.

— After long discouragement, the Baptist Mission among the Chinese in Siam reports six-five baptisms in two weeks. Twenty-five of those converted were baptized at Ku-Buang, where a congregation consisting of thiry-four members was organized on that day. The converts at once made their subscriptions for the support of the Gospel.

— The late Missionary difficulty at Hoochow has been successfully adjusted by H. M.'s Consul, a sum of $200 having been paid as indemnity for the personal losses of Messrs. Meadows and Douthwaite, a proclamation issued, and a promise given that other premises will be provided as a preaching place, when the ill-feeling against the Missionaries has somewhat subsided.

— The whole number of Church members in North India is 1,889, a gain over last year of 332. According to the *Lucknow Witness* of the total, 261 are connected with the three English Churches in Lucknow, Cawnpore, and Allahabad, and of the year's increase nearly fifty was at these places. The remaining 270 were added from the Hindoos and Mahomedans. During the year 253 adults and 244 infants were baptized.

— In India, the American Board pay their Missionaries $1.000; the Presbyterian $1,000 to $1.080; the Reformed (Dutch) $1,100; the Methodist, $1.200. In China the American Board pays $900, and in southern China, $800; the Presbyterian Board, $1,000, except in Canton, $900; the Methodist, $950; the Baptist $900 and house; the Episcopal, $1,000. In Bulgaria and Western Asia, the American Board pay, according to size of family, from $650 to 750; the Presbyterian Board from $800 to$1, 500 and no house; the Presbyterian Committee, $900 and a house; the Methodist, $850. In regard to single missionaries the American and Presbyterian Boards each pay two-*thirds* the salary of a married missionary; the Methodist pay in China $550, and in India, $1,000: the Baptist, $800 and no house; the Episcopal, $600; the Reformed (Dutch), $600. For an unmarried female missionary the American Board pay one-half the salary of a married man; the Presbyterian Board,

from $280 to $600; the Methodist, to China, $475, and India, $750, including outfit; the Baptist $400 to$500; the Episcopal, $450; the Reformed (Dutch) $600; the Reformed Presbyterians, $400.

— A body of German Prostestant dissenters, who call themselves the "Templars," and have their chief seat in Wurtemberg, have established a number of colonies in Palestine, which, to judge from a report lately published in the Augsburg *Allgemeine Zeitung*, enjoy a prosperity denied to the now abandoned American and German settlements. The colony at Haifa, though only founded in September 1869, already numbers 300 members, who devote themselves chiefly to agricultural pursuits. About 17 acres on the slope of Mount Carmel have been converted into vineyards, and a terrace at the foot of the mountain has been planted with olive-trees. The colonists have purchased *300* acres of arable land near the village et-Tineh, 4 miles to the south of the town; and the grassland in the plain of Esdraelon supplied them last year with 60 loads of hay. The Governor of Damascus has promised to present them with 3000 acres of land, but has not yet done so. There is a congregational hall, which is also used as a school, a store, an hotel, and a windmill. The colony of the west of Yafa had 232 inhabitants in March last, amongst whom there were many masons, carpenters, smiths, and other mechanics. Most of the colonists inhabit the timber houses left by their American predecessors, but several stone-houses have lately been erected. There are a church and school, a hospital, a flour and wood store, a grocery store, an hotel, a steam-mill, and a laundry, with washing machines imported from Stuttgart. The third colony, Sarona, lies about 5 miles to the north of Yafa, on a height not far from the sea. It contains already fourteen flat-roofed stone houses, one and two stories in height, and is abundantly supplied with water from draw-wells, 70 feet in depth. The space behind the congregational hall has been planted with 1200 acacias, eucalypti, and other trees, and it is proposed to create similar plantations to the west of the village. The colonists own 310 acres of land, 80 of which lie in the valley, and the sandy soil along the sea-shore is said to be particularly favourable to the growth of vines. At Ramleh there are two Templar families, who manage an hotel and a treadmill, and at Jerusalem there are nine families, mostly mechanics. The "Colonization Fund" had an income, in 1873, of 10,451*l.*, and its accumulated capital, resulting from the investments of the colonists, amounted to 12,722*l.* in the beginning of the past year.

TELEGRAMS.

THURSDAY, JANUARY 14TH.

A defiant proclamation has been issued by Don Carlos against Don Alphonso.

The latest advices from Constantinople state that the Sublime Porte has declined England's counsel, with regard to granting Roumania the right to conclude commercial treaties direct.

The Reichstag have voted the Landsturm bill, the fifth clause of which authorises the drafting of men, in case of need, from the Landsturm into the Landwehr.

The return of the German gunboats to Santander is attributed to the Carlists having attacked and plundered a Mecklenburg vessel, which stranded off Guetaria.

FRIDAY, 15TH.

The New City of Paris Loan for 220 Million Francs will be issued immediately, in bonds of 500 Francs, with interest at the rate of 20 Francs on each. The issue price is not yet fixed.

President Grant has sent a message to Congress in which he vindicates the intervention of General Sheridan in the late embroglio at New Orleans, on the ground that lawlessness prevailed at the time. The President asks Congress for instructions in the affair.

SATURDAY, 16TH.

The German Government is acting most energetically to obtain satisfactton for the outrage lately committed by the Carlists at Guetaria. The Madrid Government have promised reparation for the insult to the German Flag. The German Gunboat *Nautilus* has gone to Zaranz to demand satisfaction of the Carlists.

Mr. Gladstone has written to Earl Granville resigning the leadership of the Liberal party, but stating his intention to remain in Parliament.

Doctor Newman has fulfilled his intention of replying to Mr. Gladstone's expostulation, and has published a pamphlet in which he admits that some Roman Catholics have overstretched truths; but declares that the Pope has never contemplated any interference with the loyalty of the subject.

Don Alfonso entered the city yesterday. His reception was most enthusiastic.

MONDAY, 18TH.

President Grant has sent a message to Congress, approving the bill for the resumption of specie payments, and recommending the resumption of tea and coffee duties.

TUESDAY, 19TH.

The Reichstag have voted a bill rendering civil marriages obligatory.

Alfonso will at once assume the command of the army of the north. He has declared in Council his desire to maintain religious liberty.

The *Times* announces that in consequence of the Shah of Persia, notwithstanding existing concession to Baron Reuter, having granted a railway concession to Russian General Falkenhagen, Baron Reuter has lodged a protest at Teheran and Earl Derby has instructed the British Minister at Teheran to support the protest officially and formally.

The Chinese imperial loan has proved a great success: no less than 20,131 bonds have been applied for from all quarters, being about sixty-two times the number offered.

WEDNESDAY, 20TH.

Baron Rothschild has issued a Brazilian loan of five millions sterling.

The verdict in the great city libel case of Rubery versus Sampson and Grant has been delivered, awarding plaintiff five hundred pounds damages against Sampson; Baron Grant has been acquitted.

The steamer *Faraday* has returned, having failed in her attempt to complete the Atlantic cable.

Spain has announced her intention of sending three war vessels to the Biscayan coast to obtain satisfaction for Germany for the recent outrage committed by Carlists in firing on a German vessel. Germany has accepted the promises of reparation made by Spain.

M. Cazeaux, the Bonapartist candidate, has been elected for the department of Hautes Pyrenees. This result has been totally unexpected, and has made a great impression at Versailles. The Committee appointed by the Assembly to enquire into the validity of the election for Nievre of Baron Bourgoing, Bonapartist candidate, have announced their resolve to extend enquiry into Bonapartist manœuvres throughout the whole country.

LETTERS TO THE EDITOR.

FATHER O'NEIL'S MISSION.

DEAR SIR,—In your issue for December 31st just come to hand, I observe under the head of Ecclesiastical Intelligence a para to the effect that 'Father O'Neil' is about to conduct a Mission at Lahore, which is further stated to be *the first of its kind ever held in India.*

Unless by the term 'India' is meant the Bengal Presidency only, this statement does not quite represent the actual facts of the case, inasmuch as, so far back as July of last year, a very successful Mission was held at Coonoor and Ootacamund (the two well-known Sanataria on the Neilgherry hills,) under the immediate direction of the Bishop. So marked indeed was the interest manifested by the European community generally in their services, that the question was asked on all sides whether a similar movement could not be initiated elsewhere; and one practical result has been that at this moment an English clergyman, the Rev. S. D. C. Douglas, vicar of All Saints, Derby, who has obtained considerable reputation at home as an experienced and able "Missioner", is on his way to Madras to hold a similar series of services here. My chief object indeed in now addressing you is not so much to correct the error into which your informant has led you, as to make known through your widely read columns to the many whom it will specially interest, the fact of the Rev. S. D. C. Douglas's visit. He is to commence his labours here next week, and after remaining with us a few weeks, he hopes to go on to Calcutta, and will possibly also visit Secunderabad and Bangalore.

There are, I feel persuaded, not a few of your readers who will join me in expressing the hope that the coming among us of such faithful single-minded servants of the Lord as Mr. Douglas and Mr. Somerville will lead to results of the most beneficial and lasting character. If, as some of us are often made painfully conscious, India is pre-eminently a land where Satan's seat is, how much the more need have we of those reviving quickening influences from on high by which alone we can be kept from yielding to the depressing influences which surround us, and be made worthy consistent followers of Him whose name we bear.

I remain,

Your obedient servant,

MADRASSEE.

MADRAS,
6th January, 1875.

MOORE'S MINSTREL BOY.

SIR,—Have you or any of your readers come across the extraordinary bit of criticism that figures conspicuously in the columns of the *Deccan Times* for January 6th. No provincial journalism, we are sure, has ever sunk to such depths of gross ignorance.

A correspondent—one, perhaps, whose poetic effusions have been rejected by the infallible discrimination of the paper in question—has, probably in revenge, perpetrated a hoax on the Editor, by sending, as his own production, two well-known verses of Thomas Moore's.

Listen to the blissful ignorance of the *Deccan Times*: "We have just received the following feeble production from the pen of a would-be poet. He styles it an Irish Melody . . . . and with a refreshing confidence in his own abilities, he asks us to look it over, and publish a critique on it." The critic then gives us the two verses—

"The Minstrel Boy to the war is gone,
In the ranks of death you'll find him, &c.

and continues:—"It is not pleasant, to have to dim the brightness of this rising star, but we cannot conscientiously pursue any other course." So the critic proceeds to do his duty, stifling all kindly feelings in the interests of literature. Poor Tom Moore! How he must be writhing in his grave!

The following are the remarks on the first two lines we have quoted above:—"Shall we? We think not. Reckless, dare-devil fellows as we doubtless are, we should scarcely venture into such imminent peril in the search of the corpse of an idiot boy. We use the expression "idiot boy" advisedly; for who but a youth of weak mind would, having previously slung a *wild* harp behind him, apply the term "land of song" to a country which has been notably deficient in the production of musical genius."

The two verses are, in themselves, perfect. Great feeling combined with exquisite rhythm would be sufficient to deter even superlative hyper-criticism from attempting to detect flaws. But our critic, as he himself says, is a reckless, dare-devil fellow. Indeed his recklessness in putting in print such jargon is simply astonishing. He finds fault with the epithet 'wild,' as applied to a harp, an epithet elegantly transferred by a common poetical figure, from the sounds the harp gives forth to the harp itself. But we are presupposing some small amount of literary knowledge in the mind of the writer. But further depths of degradation are reached.

"The minstrel fell! but the foeman's chain
Could not bring his proud soul under:"

"Who said it could?" asks the *Deccan Times'* critic. "Who would ever suspect a foeman's chain of either bringing a proud soul under or of sullying a harp?" The only answer that can be given to this very weak remark is that no one said it could; but the poet who wrote the lines said it couldn't.

No doubt the critic, unlike Byron, does not think that

"'Tis strange the mind, that very fiery particle,
Should let itself be snuffed out by an article,"

for he evidently intends to snuff out these verses of Moore's.

Only listen to his peroration, ye who have the "Dura ilia messorum," and still are strong enough to read on. "But why say more?" Why indeed, we ask, have said so much? or rather, why have used so many words in saying so little? "We think" the article continues, "that we have already proved to our readers" (we wonder how many there are of them) "that each verse of this eccentric rhyme teems with absurdities, that every line is replete with nonsense. If we have hurt the feelings of the writer we are sorry for it; but we had a duty to perform, and we have endeavoured to perform it truthfully, and impartially; and to show that we do not bear any ill-will towards the author, we shall be delighted to dine with him, smoke his cigars or ride his favourite screws."

We are heartily glad to see that the editor does not bear any ill-will against poor Tom Moore. By all means let him feed, and smoke, and ride screws: at any rate that will keep him employed, and prevent him from soiling his "gray goose quill" (or steel pen, if he uses one) with such absurdities.

Terse and apposite was Bacon's remark (Adv. of Learning, Bk. i. viii. i.) on Ovid's often quoted distich;

"Scilicet ingenuas didicisse fideliter artes
Emollit mores, nec sinit esse feros."

"But indeed the accent had need be upon *fideliter*; for a little superficial learning doth rather work a contrary effect."

Truly may we say with Pope

"A *little learning* is a dangerous thing."

In conclusion, we hope Moore will survive this formidable attack; and we would advise all aspirants to literary honours to keep in mind the following epigram, written by a rising poet of the day.

"There stands a man—and 'critic' is his name—
To guard the path that mounts the heights of Fame:"
If any man to glory wish to pass,
He must not mind the braying of the ass!

Yours, &c.
MÆCENAS

Balasore, January 14, 1875.

[*We cannot but think that the Deccan Times* was indulging in an elaborate joke.—ED. *Friend of India.*]

THE ARREST OF THE GAEKWAR.

The special correspondent of the *Bombay Gazette* gives the following interesting account of the arrest of Mulharao: On the left of Colonel Pelly sat Colonel Jacob, Major Watts, Captain Jackson, General Devine, and his friend the magistrate. Mr. Richey, the Assistant Resident, was also in the room. Behind Colonel Pelly stood Bapoobaee and Govindrao Mama. Out of a window in a room at the further end of the drawing-room the men of the 2nd Cavalry could be seen distinctly; while facing the drawing-room door a very good view could be obtained between the pillars of the portico, and, through the trees in the garden beyond, of the movements of the British troops, whose encampment teemed with soldiers on the alert. An interpreter named Muncobaee was called, and after a pause of a few seconds, during which the Gaekwar stared eagerly at Colonel Pelly, the latter said to the interpreter:

Tell His Highness that, as I have already told the Viceroy and all my personal friends, I am really personally much obliged to His Highness for the aid he has always given me, and the cordial manner in which, since my arrival, he has conducted his affairs.

The interpreter spoke in Guzeratee, and His Highness received each part of the sentence with what I can only describe as a sound resembling a grunt. But there was no mistaking the intense earnestness of the man.

Colonel Pelly continued—I have not a single complaint to make against His Highness personally regarding matters which have transpired since I came to Baroda. I believe that he has faithfully done everything which I desired.

The Gaekwar spoke earnestly to the effect that he had always received kindness from Colonel Pelly.

Colonel Pelly continued—Tell His Highness that if I had only had to deal with affairs which have transpired since I came here, I sincerely believe I should have been able to see him through his difficulties and restore order to the administration of this State. I have acted towards His Highness with perfect good faith ever since I arrived here.

The Gaekwar again protested, in tones of great earnestness, his regard for Colonel Pelly.

Colonel Pelly—But a man cannot guide the events of his own life, and circumstances arose which, in spite of myself, compelled me to look into the past so far as the administration of this State by His Highness was concerned.

The Gaekar protested that no one in Govindrao's line of family could be found who would be guilty of disloyalty to the British Government.

Colonel Pelly—And tell His Highness that His Excellency the Viceroy and I will do all that can be done to secure justice for him.

The Gaekwar spoke his assent.

Colonel Pelly—His Highness is aware that about a year ago, a Commission assembled here to inquire into the state of his affairs.

The Gaekwar signified his assent.

Colonel Pelly—His Highness is further aware that two or three months ago an attempt was made to poison the representative of the British paramount power, Colonel Phayre.

The Gaekwar intimated his assent.

Colonel Pelly—Under the order of the Viceroy and Governor-General in Council an inquiry was made into that case, and in the course of that inquiry the name of his Highness was brought into connection with the crime.

The Gaekwar folded his hands, and protested his innocence, repeating that none of Govindrao's family would be guilty of any form of disloyalty to the British Government.

Colonel Pelly—His Highness is further aware that immediately when I became aware that his name had been brought into connection with the crime, I took an opportunity within half-an-hour of intimating to His Highness that such was the case.

The Gaekwar assented.

Colonel Pelly—Tell His Highness that it is the desire of His Excellency the Viceroy that His Highness should have full justice, and His Highness may be assured that such shall be accorded to him.

The Gaekwar said something excitedly. What it was I could not catch, but he was very earnest, drawing quite close to Sir Lewis Pelly.

Colonel Pelly—I have an exceedingly painful duty to perform; but nevertheless it is my duty, and I must carry it out. Tell His Highness that when the investigation was concluded, all the papers were forwarded to His Excellency the Viceroy in Council. Last night I received by telegram a reply from the Government of India, in consequence of which I am compelled to take certain measures.

The Gaekwar asked that this statement should be repeated, and apparently weighed every word.

Colonel Pelly—Among these measures is the issue of a proclamation by order of the Viceroy and Governor-General in Council. That proclamation is as follows in Guzerathee.

[Here the interpreter read the proclamation in Guzerathee. The Gaekwar listened attentively. Then after a pause His Highness asked that he might be allowed to employ barristers in his defence.]

Colonel Pelly—Tell His Highness that every opportunity will be afforded him to clear his character, and he may consult any law officer or barrister whom he chooses to consult. The inquiry will be a full and public one. His Highness may have every confidence in me that I will not lower my estimation of his dignity or treat him with less consideration on account of the unpleasant duty which I have this morning to perform. Although it is my duty to arrest him, tell His Highness that I shall see that he is placed in a comfortable dwelling, wherein he will be afforded every facility of consulting his legal advisers; and that he shall remain there, attended with every comfort, until the inquiry into his case shall take place with due publicity.

The Gaekwar folded his hands appealingly and exclaimed that he had many enemies. His family were against him, and it seemed as if even the ground he was resting upon would cry against him. There was no one in the world in whom he could look for favour excepting God, the Viceroy and Colonel Pelly. He had told Colonel Pelly from the beginning that he was surrounded by enemies; and now he would see it was true.

Colonel Pelly—Tell His Highness that yesterday evening I would have received him, but Bapoobee met me as I was going to the telegraph office to receive my instructions from the Viceroy, and I had to remain there a considerable time.

The Gaekwar said he had intended to speak on the previous evening of the very matters which Colonel Pelly had alluded to.

Colonel Pelly—Tell His Highness that I would have been happy to receive his visit if circumstances had permitted. I am well aware of his desire to see me last night and now to shrink from this ordeal.

The Gaekwar—You need have no suspicions about me. I would have come here last night, and I come to-day.

Colonel Pelly—We are all aware that His Highness has many enemies, and for that reason we shall send out our troops to-day to keep down disturbances or attacks upon his property. We shall send His Highness to the best house in camp in order that he may be safe from his enemies, and that we may see that he is treated with every consideration. One of my greatest fears is that the badmashes with which the town abounds may, when they become aware of the events of to-day, think that the time has come for disorder and plunder, and if His Highness were placed in the town I do not think his person would be so safe as it will be in camp.

Colonel Jacob concurred with Colonel Pelly in thinking it advisable to place the Gaekwar within cantonments, in order that His Highness might be treated with all the leniency and courtesy which the circumstances would permit of.

Colonel Pelly (to the interpreter)—Tell His Highness that this room being under the British flag, and considering that he has come to pay me a visit here this morning, I can not arrest him here; but with His Highness's permission I will accompany him to his own territory and there perform the necessary ceremony.

The Gaekwar wished to be arrested at once.

Colonel Pelly—Tell His Highness that I do not wish the arrest to take place in the city, as it might be exceedingly unpleasant there, and at the same time I cannot arrest him in the Residency, and if His Highness is agreeable, I shall accompany him to the verge of the British cantonments and arrest him on the confines of his own territory.

After reading the proclamation, Colonel Pelly turned to Bopoobaee and told him he would expect him to look to the peace of the town, for which purpose he was to communicate with the various authorities. At this moment Dr. Seward, Cantonment Magistrate and Residency Surgeon, arrived, and Colonel Pelly told him that his bungalow would be required for the accommodation of the Gaekwar, and invited him to come and stay at the Residency. Turning to Colonel Jacob, Colonel Pelly said, it would be necessary to have a strong European guard over the Maharajah. Free access to His Highness by his counsel would be permitted, but persons whom it might be inconvenient to permit to see His Highness during his period of surveillance—such, for instance, as persons suspected of having complicity in the attempt upon Colonel Phayre's life—should not of course be permitted to approach the Gaekwar. He (Colonel Pelly) would inform the officer of the guard what persons should be admitted to see His Highness and what persons should be excluded. Colonel Pelly then rose, a signal that the unpleasant interview was over. He accompanied His Highness down the room, the Gaekwar drawing his cloak tightly around him and walking with a quick shuffling gait. He explained to His Highness that he was expected to proceed to the verge of his own territory, and there be formally arrested. The Gaekwar seemed bewildered, or very reluctant to get into his carriage; but when Colonel Pelly had driven off, His Highness got in and followed, and the company whirled out of the Residency gate with considerable *éclat*, the musical branch of the saluting party rattling their drums and blowing their flutes as the cavalry which preceded Colonel Pelly cantered past, and a native galloping by the side of His Highness, crying out his titles probably for the last time. A few minutes brought the party to the limits of the British cantonments on the way to the city; and just beyond a little white bridge and under the shadow of two handsome trees, the carriages were stopped, and Colonel Pelly advanced to the Gaekwar. After the exchange of a word or two the Gaekwar's carriage was wheeled round, Dr. Seward got into it, and His Highness was driven rapidly back to cantonments—a prisoner of the British Government. Few quieter or more rapid transitions from sovereignty to imprisonment have ever taken place. If we except the 9th Native Infantry, who were drawn up in line on the maidan at some distance from the road, only a few natives saw the actual ceremony of arrest take place, and probably they did not comprehend it. Accompanied by a cavalry escort, the Gaekwar was taken into Dr. Seward's house, a European guard of fifty men and an officer quickly surrounded it, and then Col. Pelly, the Assistant Resident, Mr. Richey, and other gentlemen who had attended at the ceremony, returned rapidly to the Residency.

DEPARTURE OF TROOPS FOR BARODA.

(Bombay Gazette)

On the afternoon of the 12th the troops which arrived here from Poona on Friday night left Bombay for Baroda. Mr. Souter reached Calcutta on Monday evening, and late the same night orders came to Bombay from the Governor General that the troops were to be moved on without delay to Baroda. It is inferred from the issue of these orders that the dethronement of Mulharrao has been resolved upon; but the proclamation will probably not be published for a day or two yet. The special trains with the troops will reach Baroda early this morning, and the force will then be ready for work; but it is not considered likely that there will be any disturbance, as Mulharrao has already, it is understood, intimated to Sir Lewis Pelly his readiness to give himself up. What he may do, however, when he sees his chief courtiers arrested, and when he himself is told to leave Baroda, is another matter; and the Government has acted wisely in taking precautions, for, although the people of Baroda long for a change, there are thousands of desperate characters who would like nothing better than a row. The two Railway Companies were warned a few days ago to have rolling stock in readiness for the conveyance of the troops, and we understand that the B. and C. I. Company have had guards put on all the bridges in the Gaekwar's territory, and that from Surat to Baroda a pilot engine will precede the first of the four trains from Bombay to see that the road is clear. It is not forgotten that the late Gaekwar was nearly killed at a bridge near Baroda by the train in which he was travelling being thrown off the line; and that Mulharrao, then the next heir, was suspected of knowing more than could be brought home to him of this attempt to open for him a short cut to the throne. Another precaution taken by the Railway Company is the supersession of the station master at Baroda by the station master at Surat.

Early yesterday morning an experiment was tried at Boree Bunder to ascertain how long it would take to put the men in the trains. Brigadier General Gell, commanding the Presidency Division, attended by the Divisional Staff, rode on to the General Parade Ground on the Esplanade punctually at 6.30 A.M, when "the alarm" was immediately sounded. The troops were promptly under arms, when a Division of D Battery 9th Brigade R. H. A. and a detachment of H. M. 7th Fusiliers were told off for service, and immediately marched to the Railway Station at Boree Bunder, where a train was in readiness for their reception. The men were all in full marching order, and the horses, baggage, and all other equipments accompanied them. In exactly three quarters of an hour from the time of the alarm being sounded the whole force was embarked. The guns, it may be mentioned, were already in the trucks as they arrived from Poona. The time occupied may be thus divided; 15 minutes in getting saddled, accoutred, mounted and reaching the Railway Station, and 30 minutes in loading up men and horses, for two guns complete with waggons and carriages, 44 men, 45 followers, besides 145 Infantry with, their baggage, &c. The Division of Artillery was under the command of Major Hall and Lieutenant Sharland, R. A., and the Infantry under Colonel Herbert, Colonel Maude and Captain Clarke, and the arrangements for embarking the troops were under the immediate supervision of Major Sexton, assistant Quarter Master General.

The experiment was considered satisfactory by the Brigadier General, and it was deduced therefrom that, as the 15 minutes occupied between the camp and the Railway Station would not be required for the remaining two Divisions of the same strength (they would have arrived while the first was loading up), the whole Battery and Wing of Infantry with all their belongings might be despatched in an hour and a half from first to last. The result of the afternoon's operations did not quite justify this expectation, but we believe that some extra time was consumed by delay with the first train and by Commissariat arrangements which, perhaps, could not well be avoided on so short a notice.

The following memorandam shows the arrangements made in the afternoon for the despatch of the Troops, the composition of the several trains, and the troops convoyed by each :—

1st train consisting of—1 saloon carriage, 5 second class. 5 compartments, 12 horse-boxes, 1 third class. 2 gun trucks 2 waggon trucks, 2 brakes total 25 vehicles; accommodating 5 officers and 145 men of the 27th Fusiliers, and 2 officers and 55 men of the Royal Artillery 36 horses and 40 followers.

2nd train consisting of—1 large composite carriage, 5 second class of 5 compartments. 12 horse-boxes, 1 third class. 2 gun trucks. 2 waggon trucks 2 brakes—total, 25 vehicles; accommodating 2 officers and 160 men of the 2-7th Fusiliers, and 1 officer and 44 men of the Royal Artillery, 36 horses and 40 followers.

3rd train consisting of—1 large composite carriage. 2 second class of 5 compartments 1 ditto of 4 compartments 13 horse-boxes. 1 third class. 2 gun trucks. 2 waggon trucks 1 forge truck, 2 brakes—total 25 vehicles; accommodating 2 officers and 89 men of the 2-7th Fusiliers, and 2 officers and 44 men of the Royal Artillery. 39 horses and 40 followers.

4th train consisting of—1 small composite carriage. 1 third class carriage. 11 waggons camp equipage 1 ammunition van, 1 spare waggon, 1 store waggon 1 store cart. 2 cattle vans. 2 brakes—total 26 vehicles; accommodating 1 officer, 16 men and 40 followers.

Total strength leaving (men only)—2-7th Fusiliers—20 officers, 409 men. 1 apothecary, 3 horses. Royal Artillery —5 officers. 143 men, 1 apothecary. and 108 horses.

The news soon spread abroad in Bombay that the troops were on the move, and crowds of people gathered about the terminus to see them start. Four trains had been got ready, each composed of 25 vehicles, or 100 vehicles in all; and the troops were a complete battery of field Artillery, with its Field Service equipment of horses, guns, waggons, and followers complete, and a full wing of British Infantry, strength as given in the foregoing memorandum, with followers, hospital equipments and medical stores, commissariat establishments, and rations for men and horses for one day. A Reserve of Ammunition for Artillery and Infantry, besides Commissariat Porter for the troops, accompanied, and also camp equipage for the whole force. The order for the move was issued in the Camp at 2 P. M., but there was a delay on arrival at Boree Bunder, owing to the first Train not being ready; notwithstanding this delay, the first Train started at 3-10 P. M., the 2nd Train at 4, the 3rd at 5, and the 4th Train at 5-55 P. M. The Horse platform is very limited and indeed so is all the space at the disposal of the military authorities at Boree Bunder, thus necessitating a good deal of shunting and allowing of only 8 Horse-boxes being loaded at the same time. Notwithstanding these drawbacks, it will be seen that the work was done under four hours. The expeditious manner in which the troops were despatched reflects the highest credit on General Gell and Major Sexton, A. Q. M.G., who were both present till the last train left the station. Mr. Conder, General Traffic Manager G. I. P. Railway, and Mr. Keily, personally superintended the work of preparing and dispatching the troops. Mr. Currey, Agent B. B. and C. I. R., was also present on the platform, and Mr. Duxbury, Traffic Manager B. B. and C. I., went on with the first train from Dadur Junction to Baroda. The camp on the Esplanade was in the meantime struck, and the tents removed into the Grand Arsenal, so that it is certain no more European troops are under orders for Bombay. Simultaneously with these movements a Native Infantry Regiment from Ahmedabad was moving on Baroda, distant only 4 hours by rail. Colonel H. E. Jacob, Staff Corps, now commanding at Baroda, will be senior officer of the whole force. Lieut-Colonel Herbert commands the Fusiliers, and Major Hall the Artillery.

EUROPE.

"ROCKS AHEAD" IN INDIA.

(Pall Mall Gazette.)

The great Mahratta feudatories of the Government of India will have rendered that Government a most valuable service if by their unexpected activity and their ostentatious reconciliations they fix the thoughts of those who rule our empire in the East upon the possibility of another struggle on the part of the natives to shake off the English yoke. There is, we admit, nothing more than a possibility—the very barest of possibilities. All the probabilities of policy are opposed to such a remarkable combination of scattered, heterogeneous, and often antagonistic forces as a national insurrection in Hindostan would be. But, nevertheless, the possibility, such as it is, involves consequences altogether too momentous to be left out of the calculations of Anglo-Indian statesmen. It is not more remote than the possibility of an invasion of England, and yet this latter notion tacitly underlies the whole scheme of our military organization at home. Does a similar conception of the reality of dangers which are apparently out of the range of likelihood inspire and govern the military policy of the Indian Government? We have no means of judging except from the external, and it may be superficial, meaning of the facts, but from these it certainly appears that the contingency of another outbreak like that of 1857 has not been practically allowed for. If the estimate of the *Times'* correspondent at Calcutta be, we do not say accurate, but anything approaching to the truth, the British power in India is now feebler in point of physical force than it has been at any time since the news of the mutiny suddenly roused Englishmen to a sense of the precarious tenure on which our Oriental dominion was held. Is it anything like the truth to say that with all the long roll of our Indian forces, European and native, we could not upon any sudden emergency place 30,000 effective soldiers, fitted for instant and active service, in the field? Is it true, or near the truth, that the native army, a costly, a troublesome, and frequently a dangerous establishment, is so rusty and rotten in all the machinery of its organization that it can count only as an aggregation, to use Prince Bismarck's familiar but forcible phrase, of "armed persons"? Is it the fact that the large body of English officers in the Indian service, who constitute so heavy a charge upon the Treasury of India, are, with a few exceptions, useless for military command or organization, and are merely contributing to the illusion of an efficiency that does not exist? These are questions which the information furnished and the apprehensions expressed by the *Times'* correspondent at Calcutta oblige us to ask, and we should like to be quite sure that the Government of India has already applied its mind to them. The thunderbolt of 1857 came upon the Administration of the East India Company not without many warnings, yet it found the Indian Government wrapt in self-confidence, and the military organization of the empire ready to snap under the strain that was put upon it.

The lessons of that terrible time were too frightful to be easily forgotten, and we do not suppose that Anglo-Indian officials will ever again be lulled into the same apathy. But there are degrees of intellectual indolence, and the "let-alone" feeling may have gone far without carrying Lord Northbrook and his advisers to the height of arrogant self-confidence that prevailed before 1857. It has gone far enough, we are sure, if all the questions we have asked above cannot be answered, promptly and without qualification, in the negative. The importance of maintaining our military strength in India in such a state of efficiency and accessibility that our Government may always be able to put its foot without an instant's delay on the first tongue of flame that may leap up out of the obscure seething mass of native hopes and fears is too vital, too paramount, to be supplanted by that easy-going assurance with which England has advanced upon most dangers. An implicit faith in English luck and English pluck, a rooted conviction that whatever stumbles and hard knocks we may meet with at the outset we are sure to pull through in the long run—these are principles on which possibly it may be safe to regulate our military policy in Europe or to organize campaigns against semi-barbarous enemies. But in providing for the contingencies which our military force in India is intended to cope with, the risks are too tremendous to allow of any reliance on national good fortune, or on the inherent qualities of the English race. The mutiny of 1857 was an enormous peril; but the ruin it brought upon our civil and military administration in Bengal might have been multiplied fivefold if the flame had spread into other provinces which remained loyal, or were held to their loyalty by strong hands, such as those of Lord Lawrence; if the great native feudatory princes had been daring enough or impolitic enough to place themselves at the head of the insurrection; if the Nizam had chosen to kindle Mahomedan fanaticism in the Deccan; or if Scindiah and Holkar, laying aside, as they formally did the other day, their traditional hostility, had aroused the dormant spirit of the ancient Mahratta Confederacy. The peril of the mutiny fell short of its possibilities in so far as none of these developments of the original conflagration occurred. But if a new danger resembling that of 1857 were to arise next year, what reason have we for supposing that it would not be complicated and aggravated by events which were absent from the crisis that threatened our power seventeen years ago?

There are unmistakable signs of agitation among the native populations of India which give point and force to the doubts that have been suggested touching the efficiency of our military organization. It is not satisfactory to learn that these signs have shown themselves specially among the Mahrattas, our rivals —and at one time not unequal rivals—in the struggle for empire, and even now much less effectually broken up as a nation and recast in the mould of Anglo-Indian Government than any other of the sometime ruling races of India. The arrest of the supposed Nana Sahib by Scindiah, whatever the real history of that obscure transaction may be, had unquestionably moved the popular mind in Western India very profoundly. The emotion of this event had not died away when the almost incredible story of a public reconciliation and alliance between the two greatest of the Mahratta Sovereigns provoked speculation. The attempt of some persons connected with the Court of the Guicowar of Baroda to kill the British Resident, Colonel Phayre, by poison has added to the mental perturbation of the Mahratta country. All these vague alarms may contain the germ of wild and dangerous hopes, and we never can tell how such perilous stuff is propagated in the bosoms of a reticent and suspicious people. The wave of troubled feeling may subside, but then it may not; and if it should rise higher we must be prepared to meet it. If we are not ready to confront a swelling agitation with an overwhelming power and a sense of calm superiority, we have quitted the attitude in which alone it is safe for us to stand as the rulers of India. It is idle to calculate what force of soldiers this or that native potentate could bring against us, what national insurrection the alliance of Scindiah and Holkar could call to arms, what might be the discipline, the armament, or the spirit of the insurgents. It is mere waste of time to frame ingenious theories to prove that the great Mahratta feudatories are probably sincere in believing that their dynastic interests are bound up with the British authority, and that their present excitement arises from the apprehension of a movement as menacing to them as it could possibly be to us. Our policy is, or ought to be, a plain straightforward pratical one, dependent on no political guesswork whatever. We know for certain that agitations are continually arising among the Indian populations, and we are justified in considering every movement of the kind as dangerous as the striking of a match in a powder magazine. It is our duty to calculate carefully the worst that may result from such an explosion and to provide the means for putting down the conflagration at once. It is because doubts have been cast upon the sufficiency of the means at present provided by the Indian Government for dealing with such a crisis that we think public opinion at home is justified in reminding the Viceroy and his advisers of what England expects them to do and to see.

MR. DISRAELI'S INFLUENCE IN THE POLITICAL WORLD.

(Spectator.)

Mr. Disraeli's repeated returns of ill-health have caused his party to be visited by great searchings of heart. What are they to do, supposing he should be too unwell to hold on his way as Prime Minister? When the master retires from the school, who would carry on the work of Conservative education? Would it be Mr. Gathorne Hardy, whose sympathy with the hearts of country vicars and country squires almost rivals that which the motherly head of the schoolhouse should display with the tender fears and anxieties of the mothers of the pupils? Or would it be Sir Stafford Northcote, whose studies under the great rival schoolmaster have taught him something of the secrets of the foe, and whose serious and didactic candour is eminently adapted to keep before the slower pupils of his class the useful though humiliating lesson that Conservative convictions are neither intuitions of the conscience nor distinctive characteristics of patriotism, but only arguable opinions, though with perhaps more to recommend them just now to British constituencies than the convictions of the opposite party? These are anxious, though at present, fortunately, only hypothetical, questions; and they have been eagerly debated lately in many a Conservative group, not perhaps the less eagerly that a political party has, except in very rare cases, little or no freedom of action in such matters,—the etiquettes of political precedent exercising, as they must do, a very much more paramount influence than the wire-pullers of the party are ever willing to admit. But though the succession to Mr. Disraeli's place in the House of Commons is not a matter, we suspect, on which political discussion, even within the Conservative party itself, is likely to take much effect, it is natural, and may be useful, now that the moment of special anxiety about him has passed away, to examine what his peculiar function in political life has been, and how far it would be possible or impossible to supply it from the other political resources of his party.

It seems, then, to us that Mr. Disraeli's chief characteristic as leader of the Conservative party has been that, in mind, he has never been a Conservative. With equal truth, of course, it may be said that in mind he has never been a Liberal,—nor a Radical, nor a Tory,—nor anything but a keen and critical observer of the strife, who has lent his counsel to the Conservative side. His views have at least tended to dissolve all the different political cements by which party unity is created. His own party have been chilled by his didactic expedients into distrust of themselves; his opponents have been puzzled into distrust of themselves and their leader. Both parties alike have learnt to expect that under the spell of his enigmatic influence all sorts of reversals of the ordinary rules of politics might take place,—that the brier might spring up in place of the myrtle-tree here, and the rose instead of the thorn tree there,—indeed, that the worst rule for judging correctly of the true character of modern political influences would be "By their fruits ye shall know them." Both Mr. Disraeli's mistakes and his successes have been due to his entire intellectual disembarrassment of anything like interior party prepossessions. He has taught his own party that all its own instincts are tainted with a sort of original sin of dogmatism, which it may often be quite necessary to expose and even

to cauterise; and this is always a kind of lesson which paralyses party earnestness. Moreover, he has also taught his own party that, under that new dispensation wherein it is not considered in any way discreditable to it to outbid its opponents in the appeal to ignorant sympathies and blind habits of thought, great victories are possible for it which it could never have won by acting on the old traditions and treading in the old ways. And this, again, is another bewildering lesson which is apt to bring about, amongst the first learners of it, a fit of political giddiness. On the other hand, he has succeeded almost equally well in the last year or two in bewildering the party of his opponents. They have begun at last to connect popular power with reactionary tendencies, and to associate the notion of democratic institutions with measures intrinsically hostile to the people's welfare.

If, then, Mr. Disraeli were to resign his place, we cannot doubt that he would leave a very different political world behind him to that which he found on assuming the post of tutor to the Conservative party. But we are strongly inclined to think that the most permanent effect of his influence would be its effect not on the party of his friends, but on the party of his opponents. The prepossessions of landowner and the country clergy are too strong to have been very profoundly affected, even during the thirty years or thereabouts during which Mr. Disraeli has contrived to keep their minds at a somewhat painful stretch for the reception of new ideas. When the pinching boot is taken off the last, the leather too often shrinks back to its old dimensions; and were Mr. Disraeli removed, we are sure that the first observable effect on the Conservative party would be a similar shrinking-back into something approaching at least to its old dimensions of thought. As a carefully cultivated type of flower is always tending to revert to its wild character, so an artificially-produced type of Liberal Coservatism is always tending to recur to its hereditary stock. It takes a good deal of "pressure," as Mr. Disraeli himself told a Scotch audience some years ago, to keep the mind of the Conservative party open to new conceptions, especially to the idea of its own possible short-sightedness. Mr. Gathorne Hardy would not even attempt to use that pressure, for he himself has often resented its application. His innate sympathies have always been treacherous to his probable sincere efforts to learn Mr. Disraeli's lessons. He belongs by nature to the very type of Conservatives which Mr. Disraeli has been striving by new grafts, and new soil, and new modes of training, to modify and expand. Sir Stafford Northcote, on the other hand, would try hard to discharge the task of his present chief, but he would hardly succeed in the attempt. He does not possess the resources, and pertinacity, and weight of character for discharging such a task in his own,—that is, the best,—way, by persuasion, by exhortation, by illustration, by line upon line, and precept upon precept of mild and yet earnest exposition of wider thoughts; and still less does he possess the gift for discharging it in Mr. Disraeli's fashion, by making his party from time to time feel to their very hearts the intellectual indifference, and sometimes even the scorn, with which their own most precious ideas inspire their leader and master. Mr. Disraeli once gone, both the genius of the single genuine Tory in the Administration, and the complete inability of the party to furnish anyone able to keep both his own mind and that of his colleagues above the under-currents of the old party ideas, would combine to bring back the character of Conservative statesmanship in some degree towards that of the old days, when it meant the supremacy of squirearchical habits and proprietary prejudice, the adhesion to the old institutions in their old forms, the enthusiasm for the privileges of caste, and the resistance to innovation. Even last Session, with Mr. Disraeli at the head of affairs, it was hard, it was only just possible for him to neutralise this tendency towards a reversion of type to the Conservatism of the old *regime*. If his 'detached' intellect were to disappear from the supreme place, we should very soon find the hereditary habits of generations exerting, not indeed, their old force, but a very considerable force, and completely predominating over those feeble and alien influences which would then have lost their chief spell. The wild crab-apple of natural Conservatism would reassert itself once more, even in the very tree grafted by the present Premier's genius, with the view of producing the elaborate Disraeli pippin of Tory democracy. Mr. Disraeli only just keeps down the influence of the wild stock by all his tending, and digging, and manuring, and succeeds more because he really does not himself recognise the force of the old influences, than because he effectually subdues them. He is like the captain of the ship which carried Ulysses past the abode of the Sirens. His ears are deaf to the sounds which charm his party. He does not even catch the strains which strike to their very heart, and so he can keep the helm down and avoid the rocks on which they would run the ship But is there any one who could in this respect take his place? Mr. Gathorne Hardy has not unfrequently been heard to utter something very like maledictions on the insensibility of his chief to those sweet, squireen strains of custom and tradition. Even Sir Stafford Northcote catches the notes of magic now and then, and even when he does not, he is hardly *proof against the passionate entreaties of* those who do. No statesman left in the Tory party would be strong enough to prevent at least a very considerable reversion to the old influences and ideas, if once Mr. Disraeli were removed. At the same time we must remember that though a very decided reversion of type must be expected, there would be no danger of a complete return to the Toryism of thirty years ago. The great social changes, the vastly greater permeation of one class by the ideas of the others, would itself prevent that. Mr. Disraeli has not been the only, nor perhaps the most powerful monitor of the Tory party. Time and culture have worked on his side. Statesmen like Lord Derby and Sir Stafford Northcote, though they do not at all represent the average views of the party, are much more intelligible to the average Conservative than they were. There was a time when Lord Stanley was regarded by his party as little better than a Radical in disguise. Now, though he is probably thought unsound, he is looked up to as a real, though too Liberal, Conservative. Even when Mr. Disraeli retires, the reversion of type in the Conservative party will be comparatively moderate to what it would have been ten years ago; and it would be quite conceivable that with a leader of rather more force holding Sir Stafford Northcote's views, the Conservatives would be much safer in their tenure of power, than they ever will be under a chief so incalculable in his ways of thought, so apt to blunder from sheer ignorance of English feeling, and from scorn for the pettiness (as he conceives it) of the issues put before him, as is Mr. Disraeli. Under Liberal Conservatives who shared the feelings of the party while commanding a wider intellectual range, it is quite likely that the present Conservative party would be far better satisfied, far less uneasy, far more united, than they can ever be while they are led by a finite political incarnation of the Unknown and Unknowable.

We suspect, however, that one real change would be likely to result from Mr. Disraeli's retirement, namely, a change in the Liberal party caused by the relapse of Conservatism into a moderate form of its old type, as we have been anticipating. Hitherto, for some time back, the extreme Radicals have always cried out that, if they cannot mould their own leaders to their own views, they are pretty sure to get from Mr. Disraeli what they cannot get from Mr. Gladstone, or Mr. Goschen, or Mr. Forster. That state of mind,—which has led to a good deal of captious strategy,—would probably disappear directly we had a known statesman, instead of an embodiment of the unknown, at the head of the Tory party. And it would be an additional reason for the moderation of the Radicals that they have learnt so uncomfortable a lesson lately from Mr. Disraeli himself, as to the previously unsuspected affinities of "the Residuum" with Conservative institutions. A great element of chaos has been introduced into party relations by the ambiguous purposes and character of the Tory chief; and that element of chaos has been exaggerated by the discovery that democratic institutions may be made under clever management to lead to very much the same class of results as oligarchical institutions The undefined hope which Mr. Disraeli has excited in Radical breasts, has tended to demoralise the revolutionary wing of the Liberal party; but the lesson as to the Toryism of mobs, has probably tended to sober and restrain it. And with Mr. Disraeli's retirement, we think we might expect not only a more intelligible, though probably a duller type of Conservatism, but also a better disciplined and more coherent loyalty among the genuine Liberals. We do not regard Mr. Disraeli as in any way necessary to the success of his party. We are not sure that—at all events if there were one or two really strong men of Sir Stafford Northcote's and Lord Derby's type to succeed him,—the Tory party would not gain indefinitely in strength by his retirement. But we do believe that the effect on the discipline of the Liberals to be caused by his retirement would be a good one, especially after the lesson they have recently learned of the veins of Conservative feeling running through the class of household voters. Mr. Disraeli has acted on both parties as all great uncertainties are said to act on human character,—by exciting unreasoning expectations, and leading men to hope for incalculable results from incalculable causes. We shall be much duller, but perhaps also not a little soberer, whenever his disturbing and eccentric influence is removed.

PRINCE BISMARCK AND THE ULTRAMONTANES.

(*Economist*).

Prince Bismarck probably finds the political advantage which the internecine war between himself and the Roman Catholic party of the Empire produces, too considerable to be at all anxious to let party feeling on the subject subside as much as it otherwise might. Certainly he never loses a single opportunity afforded him by the folly of his antagonists for lashing the Papal party into a fury, and the National party into an opposite fury. We cannot altogether wonder at his policy. No doubt his own temper is gratified by the enthusiasm in the National Liberal party which his taunts provoke; but that is not all. Moreover, so long as he can keep this partizan temper up to boiling point, he has exceedingly little to fear from endeavours which would be more worthy of the Liberals, for guaranteeing the liberty of the subject and the liberty of the press in a sense in which at present it can hardly be said that either of these liberties has, as yet, any proper existence. Again, so long as that fever of suspicion prevails, which in all countries is apt to affect the reason of persons who devote themselves to the absorbing occupation of scenting out Jesuitic intrigues, Prince Bismarck need not fear that the Reichstag will sanction any serious inroad either on the strength of the army, or on the central power which controls and administers it. These are conveniences so substantial that Prince Bismarck may well find excuses for indulging his certainly very remarkable talent for exacerbating the temper of his antagonists and stimulating the anti-Papal fury of his friends. But he must at least remember that while he continues to play this game, he will be undermining his enduring fame as a statesman, even though he gains cheers a thousand times more enthusiastic than any which rent the Chamber on the 4th or 5th December. If Mr. Newdegate had anything like Prince Bismarck's talents, and could find materials in the British Parliament for setting the Liberals and the Catholics upon each other such as unfortunately exist in the German Reichstag, he could hardly go farther than Prince Bismarck in attributing all the mischief that is made in the world, and much of which is due directly to Prince Bismarck's own policy, to the malign agency of the Roman Catholic propaganda. Thus, in the outbreak which caused so strange a scene in the Reichstag on the 4th December, after Herr Jörg's speech, when Prince Bismarck declared that, however much the Roman Catholic and particularist party might disown all responsibility for the assassin Kullmann, he would still hang on to their skirts—and quoted Kullman's own reason for his attempt, namely, that Prince Bismarck was the author of the ecclesiastical laws, and had injured the fraction of the Chamber to which he (Kullman) gave his adhesion—the Prince really made capital out of the morbid excitement which his own repressive policy had engendered. He knew, and did not pretend to deny, that the Centre party which he was thus irritating and upbraiding, thought of the attempt on the Minister's life, much as all other parties thought of it, namely, as a shocking crime and a still more monstrous folly. But being able to say, as of course he could say, that the attempt was due to the revengeful feelings of a rabid Roman Catholic and particularist, he managed to saddle the party itself with a sort of impersonal responsibility for the crime of an assassin. He might just as well have saddled Italy with the crime of Orsini, or the Southern States of America in general with that of Booth. There is a sense in which the responsibility for Orsini's crime was really traceable to the Powers who stifled all the hopes of Italian patriots, and another in which the steady resolve of the North not to permit the secession of the South was really in some measure responsible for the fanaticism and madness which this resolve, perfectly legitimate as it was, produced; and in such a sense, it would be true to say that Bismarck's policy of severity towards the Church, and of absorption in relation to the petty States of Germany, whether partially unwise or perfectly wise, was really responsible for the outbreak of murderous passion against him. But there is hardly any sense in which it is fair to say that a failing cause is itself responsible for the futile vindictiveness of its morbid adherents, unless it can be shown that the rank and file of that cause lend any sanction to this vindictiveness. Statesmen who put their "foot down," as Mr. Lincoln used to say, on vivid prejudices and passions, whether reasonable or unreasonable, have to make their account for a certain amount of venom from the most narrow-minded of the victims whom they thus crush. But all really great statesmen will face this openly, and where they see the natural issue of what they deliberately resolved upon, they will not use it to render the chasm between the crushed and the crushing party still wider; on the contrary, they will have the magnanimity to say that this was a phenomenon fairly to be expected, and that they are very far indeed from wishing to cover with the odium of such outbursts those who, though ranked on the same losing side, yet disapprove and openly censure the violence displayed. Prince Bismarck is, perhaps for reasons, perhaps also partly from defect of temper, unequal to such magnanimity, and thinks it preferable first to put his foot on a powerful party, and then to justify what he has done by holding up to ignominy as almost a collective act that attempt to bite which the pain and pressure have elicited from one of the most ignoble of the party. He would drive the Jesuits to extremities, and then prove that he was right by pointing to the passion which his policy had elicited from the most miserable of the creatures of the Jesuits. That is a course which may answer its purpose for a time, but it is not one which can bring any permanent credit to the most brilliant and successful statesman of his day. It is his highest duty to smooth, not to embitter, the anger which his policy has necessarily engendered. We believe that he is great enough to be aware of that duty, and that but for the unfortunate advantage which this course secures him in diverting Liberal energy from less convenient enterprises, he would be disposed to take it. Still it is impossible for onlookers not to find the spectacle which they now witness in the German Reichstag a melancholy one.

The ablest statesman of his day—the statesman who has made the external unity of Germany a reality,—ought not to be the first to make the internal discord of Germany a reality too. Yet that is what is really happening. The fierce strife within the house is being fed by the very man who has built the house.

And Prince Bismarck's achievement on the 5th December was, though not so immediately productive of violence, little less unfortunate than his achievement on the preceding day. On the 5th of December he seems to have directed his efforts to sowing broadcast the same kind of superstitious belief as to the universal efficacy of Papal intrigues as those which Mr. Newdegate and Mr. Whalley propagate with a remarkable want of success in our more sceptical land. He told the Reichstag that he had adequate proof that the weight which turned the scale for war with the reluctant Emperor of the French in 1870 was cast in by the Papal intriguers, who hoped to extract from the war a great religious profit for the Pope and the power of the Pope. Well, we have no doubt that Prince Bismarck can really produce evidence that the Catholic party favoured the war—which, however, there is too much reason to fear that the *secular* party in France also favoured. It was the vanity of France, not her religion, which led her into that unhappy struggle. And no doubt the religious people were as vain as the secularists, and contributed as many councillors to the war party as did the latter. But Prince Bismarck's evidence must be of a very exact kind indeed to persuade us that the late Emperor Napoleon was influenced exclusively by any advice of this sort in taking the fatal step. The common belief that he was determined greatly by the urgent advice of his ministers, who believed that a war-like attitude was then absolutely essential to the popularity of the Ministry, seems to us to have had a vast amount of evidence in its favour. No one pretends to suppose that Paris was much influenced by Jesuits or by the Pope, yet it was the mad cry of Paris which, as we all knew at the time, had most effect in precipitating France into war. The Emperor himself may no doubt have been influenced to some extent by his wife, and his wife was certainly more or less under the influence of the sacerdotal party. But no one had less belief in the astuteness of the sacerdotal politicians than the Emperor, and had he not felt keenly the pressure of his constitutional ministers, of his capital, and of the Opposition, who taunted him with lowering the flag of France, he would never have yielded to the advice of cardinals or priests. The circumstances of the declaration of war of 1870 are far too well known in their general outline to admit of such sensational interpretations as Prince Bismarck wishes to put upon them, and which the great National Liberal party of Germany is credulous enough to accept *with open mouths*. Indeed, if any minor event could be credited with the responsibility for the war, it would probably be that false account of M. Benedetti's hectoring conduct to the Emperor and peremptory dismissal by him, which certainly found its way into print through German, and, indeed, *official* German organs. We in England have lived through the phase of referring all the evil of the world to Jesuits or any other devil's advocates. We no longer ascribe to them that semi-preternatural power which would be necessary to justify such a hypothesis. We leave these wild ideas to Mr. Newdegate and Mr. Whalley, and an occasional crowd at Exeter Hall. We find the Popes usually blunderers, and their agents habitually clumsy. We believe that the power they wield is mostly due to the folly of those who persecute them, and so give them a fictitious popularity. And it is to us matter of sincere regret to see a party so generally intelligent and so powerful as the National Liberal party in Germany spending its enthusiasm on a wild-goose chase after these phantoms of the mythic age of politics; and to see Prince Bismarck encouraging them—though by no means, we suspect, sharing their fears—partly out of a personal resentment which a great statesman ought to repress, and partly out of a politic liking for a political conflict in which he can gratify the deepest feelings of the Liberal party without really enlarging the bounds of constitutional freedom, or sacrificing any of the force that has raised the great military monarchy he serves to its present pre-eminence among the great powers of Europe.

DARK AND BRIGHT SIDES OF INDIAN PROGRESS.

(Pall Mall Gazette.)

No fault can be found with the writer of the highly interesting "Statement exhibiting the Moral and Material Progress of India," which has just been printed, if his pages are rather largely suffused with rose colour; for Parliament, when it provided for an annual report on the subject, must have expected something of the kind. But the English public is not likely to forget that just about twelve months ago a certain gloomy and terrible side of Indian affairs was imperiously commanding its attention. The report does not deal expressly with the year of the famine in Tirhoot and Bengal, but it is impossible for a reader to go through it without scrutinizing every page to find its bearing on the famine. The people of India may as the report seems to indicate, be getting improved justice and better education, more roads, more railways, and more canals; the aggregate wealth of the country may be greatly increasing; yet we cannot forget that but for one effort on the part of the Government, which if once or twice repeated would reduce it to bankruptcy, some millions of men would have perished from simple want of food. Such multitudes of them were collected together in the afflicted districts, their earnings were so small and their savings so scanty, that a simple accident of climate, known to occur almost at fixed intervals, was on the point of producing in a month or two the effects of a dozen years of pestilence and war.

It is astonishing to reflect on the nearness to ourselves of a period at which this country was menaced by the worst of the dangers which impend over mankind in India. At a time so recent as the accession of the Queen the terror of all thoughtful Englishmen was the apparently deepening pauperism of the great mass of their countrymen. There was great wealth in the country, but it was in few hands, and there was only too much reason to think that the multitude of agricultural labourers and of the artisans of towns were earning so little and multiplying so rapidly that we should soon be in face of a swarming underfed population, which, if it did not break out in wild anarchical revolt, would from time to time perish in crowds from scarcity, probably through the agency of deadly epidemics killing human beings by wholesale, as if they were vines or potatoes grown on ground too narrow for their nourishment. To such a pass had we been brought by the clumsy communism of the old poor-law system, by the protectionism of our tariffs, and by the religious opinions inculcated by the clergy of all descriptions on the subject of marriage and birth. To what, then, are we indebted for a deliverance—not, indeed, total, but partial, for it has barely extended to the agricultural labourer—from so terrible a national destiny? In the first place, we owe it very slightly to the cause on which most reliance was placed by the great writers who first set the problem of population in its true light. In some countries, as in France, the proper proportion between food and consumption is mainly preserved because human beings are not brought into the world in excessive numbers; but there is no reason to think that any such rule obtains among the great majority of the inhabitants of these islands. The true causes which have enabled large sections of the vast population of this country to multiply and yet to live in increasing comfort are so plain that it is a pity to disguise them in the technical language of political economy. In the first place, we have lived on our coal. The extraordinary progress of mechanical invention in our day has enabled us to convert our coal beds into power on the most enormous scale and to give it the most various applications; and by the aid of our skill and of the power stored under our soil by nature we have been able to manufacture a prodigious variety of commodities which, dispersed over the world, have *sent* us back their price principally in the shape of food. A second alleviation of our condition has been through the continued emigration of adventurous Englishmen and to a far greater extent of Irishmen to the partially tilled and partially peopled regions of the world. Englishmen, then, have multiplied with all the alarming rapidity which was expected from them forty years ago, but the mouths to be fed have been fewer than might have been looked for through the flight of emigrants to all quarters of the globe; and those that remained have used more coal, converted it into manufactures with more skill, and sold them for food, since the establishment of free trade, with more success than anybody could have supposed possible in the first year of the Queen's reign, and thus considerable numbers of them have contrived to live, and to live in greater comfort than their forefathers.

If we take our key from the economical history of Great Britain during the last forty years, we shall have little difficulty in separating those portions of this report which throw light on the gravest of Indian questions from those which merely tend to show that the generation now living in India is free from some of the evils to which its ancestors were exposed. The improvement of administration and justice, the diffusion of education, the suppression of exceptional crimes such as infanticide, the beneficent pressure exercised on native States, are all subjects of considerable interest; but many of the measures described, while they make life undoubtedly happier and softer to great numbers of people, not only do not diminish but actually help to augment the dangerously growing disproportion between food and men. The points to which too much attention cannot be directed are such as these. How much coal is there in the country, and of what sort? It appears from the Report (p. 101) that India contains far more coal than was once supposed, but the area within which it is found is small for so vast a country, and therefore not accessible from the greatest part of it, and the coal, though about equal to Australian, is considerably inferior to English coal. The limited extent to which it is at present applicable to economical purposes may be inferred from the fact stated in the report, that though it is largely used by the railways, it cannot as regards other objects compete with coal imported from England through the Suez Canal, even at the prices which were beginning to range in the year 1872-73, to which the report refers. It would be most interesting to trace a connection between the recent discoveries of coal and the new industries of spinning and weaving by machinery which are rising at various points of Indian territory; but opinion seems divided on the question whether these undertakings have their origin in the protective operation of an import duty, in the fraudulent adulteration of English cottons by the Lancashire trade, or in natural causes of local growth. On the whole, the report points to the conclusion that for the purpose of supplying the population with sufficient food an almost exclusive dependence must for the present be placed on the greatest and oldest of Indian industries—agriculture. There are obviously two modes in which the productive capacity of the soil can be turned to most account. One is by directly extending and improving the cultivation of food grains; and with reference to this the chapter of the report on irrigation is of the utmost importance; since there is no sort of doubt that of the two elements essential in India for the production of food, earth and water, the last runs to waste at present in enormous quantities. But at least as much interest belongs to the description given in the report of the success of certain staples which, though not directly consumable as food, may, like English coal, be sold for food. Thus jute, which a few years ago was hardly known in England and but scantily cultivated in India, is now, next to rice, the greatest crop produced in Bengal proper, and one of the chief articles of Indian commerce. A similar success, according to the reporter, is probably in store for rhea, or China grass, a fibre for which there is an almost unlimited demand, and of which India can furnish an almost unlimited supply, but which does not at present enter into trade for want of suitable separating machinery, which invention has not hitherto been equal to devising. There is no question that the fund for the purchase of foreign food which the profitable exportation of such fibres furnishes is greatly more effective than would be the cultivation of food crops on the soil which the industrial products occupy.

Nevertheless, let the amount of food produced in India be increased to its furthest limit, there is the terrible certainty behind that population will increase up to precisely the same point. To act directly on population, as the school of Malthus proposed, is apparently even less possible in India than in England. Among the few facts popularly known about the constitution of native Indian society is its organization in families and castes, to which the rule of "increase and multiply" is of religious obligation. Still, there is that resource which has thinned, so greatly to their advantage, the crowding multitudes of his country—emigration. There are parts of the world which ought to be to the dark-skinned natives of India what the temperate regions of North and South America, of South Africa, and Australasia are to be fairer races. A few pages of this report are devoted to Indian emigration; but much of it is an account of the precautions and restrictions with which emigration has been fenced round by the Indian Government. Undoubtedly such safeguards against abuse are needed, if only because the industrial system which Indian labour would naturally take the place is the system of negro slavery. But it is quite possible to misconstrue the lesson of slavery. It was a method of conferring a great advantage on the world as a whole which was excessively clumsy and cruel in its initial stage. After all that has befallen the Southern United States, the West Indies, and tropical South America, they are of infinitely greater service, both to the human race as a whole and to the portions of it now living in them, than if no negro had ever entered them. Even the very black men who dwell there, cruel as were the sufferings of the first generations from whom they are descended, are happier in co-operating with the carpet-bagger and the scalawag than if they were practising obi or joining in human sacrifices in Dahomey and Ashantee. The situation of the redundant labourers of India is, in fact, very much that of the rhea fibre described in this report. The grass is in Asia; the demand for it is in Europe; all that is wanted is a machine to get over a particular difficulty at starting. There are enormous tracts of hot country in the world which might be turned into gardens by Indian labour. The Indian labourers suffer from perennial poverty, and stand in danger of periodical extermination through the multitudes in which they are crowded together. All that is required is some administrative machinery which would take the labourer to his work under a system less coarse than servitude. No worthier object than this could engross the attention of the Indian Government, which has not been slow to boast of its administrative skill and success.

PRINCE BISMARCK AND HIS EMPEROR.

(Spectator.)

Nothing can exceed the interest of the documents which Prince Bismarck has allowed to be published during the progress of the Arnim Trial. More than any despatches yet given to the world, more than the conversations he has held with interviewers, more even than his speeches in the Reichstag, these papers reveal to mankind the complex character and motives of the German Chancellor. Throughout the correspondence he appears always the same man—a statesman of the first class, superior in force to any rival, better informed as to facts than his own agents, fearless to foolhardiness, skilful to wiliness, and al-

ways patriotic to the bone, yet mixing up with his patriotism a sort of imperial selfishness, and a deep jealousy of any possible rival; despotic to oppressiveness towards his agents, yet capable, when they are supported at Court, of stooping to taunt them into giving him the opportunities of dismissal which, had he been unfettered, he would himself have made. Throughout nothing can be more decisively lucid—we do not say more accurate—than the Chancellor's views of foreign affairs as they existed during the occupation of France, nothing more patent than his anger that the Emperor should receive official reports penetrated by any other ideas than his own, nothing more irritating than the contemptuous irony with which he strives to goad his overpowerful agent into resignation.

The inner conviction which pervades his whole correspondence is clearly that Count Arnim is a dangerous opponent, whose Reports reveal opinions sure to make him acceptable to the Emperor, who is backed by influences in Berlin which make him irremovable, and who must therefore either be compelled to cease from "argumentation"—that is, to report as he is bid—or driven by rebukes of the most savage kind into throwing up his post. That Count Arnim was for years able to bear such letters proves of itself his possession of more character and determination than some of his later acts have made the world believe. Throughout there is evidence of a double anger in the Prince,—anger that his instructions, even though acted upon, should be criticised, and anger that his opponent should make himself so acceptable a rival. The Prince detests Arnim for his views, but detests him more from a suspicion of his motive in insisting on those views, and scolds him for failure in statecraft with an inner jealousy that in abusing M. Thiers, in complaining of his own treatment, in deprecating the Republic, in extolling the Duke d'Aumale, in petting the Monarchists of all parties, in depreciating the French Army, the Ambassador in Paris is always trying to carry favour with the Emperor. The Prince tells him, with a vehemence which suggests that the letters were shown to the Emperor, that on each and every point he is in the wrong. The business of Germany was to obtain her indemnity, and M. Thiers would pay it, while other persons might not,—a curious intimation, levelled apparently not at M. Gambetta, but at the Bourbon Princes, for whom, and not for the ex-Dictator, a Hohenzollern might have sympathy. The danger of Republican opinions spreading to Germany—which would strike the Emperor—was in the Prince's judgment *nil*, for the Commune had created in Germany a reaction among Germans towards the institutions already existing, and the Republic would but serve the part of a *corpus vile*, experiments on which would show all Germans the valuelessness of that mode of Government; while as to material danger, a Monarchy might find in monarchs friends which a Republic would seek in vain. They might press for easy terms to a young Monarchy, and (*subaudi*) the Emperor might yield. There were combinations which, were a monarch on the throne of France, might be inconvenient to Germany,—Austria, for instance, "being jealous of our milliards," and Russia (again *subaudi*) envious of our strength—and therefore let the Republic live, though even to suggest in an official report that some Frenchmen believed that the German Government could be in relations with Gambetta was, until proof was forthcoming, an insult to the Emperor himself,—a sentence surely meant, not for Arnim, not for the public, but for the one man in Europe whose fiat could arrest even Prince Bismarck's strong career. Whether these letters, which, be it remembered, the Foreign Office insist were "despatches," were shown to the Emperor, or were only meant to be read by him afterwards, or were summaries of arguments used in conversation between the Prince and his Imperial master, when the latter was half convinced by his Ambassador's reports, we shall perhaps never know, but their tone throughout is that of one answering, always with immense force, occasionally by most secret revelations, and once or twice by most needless accusations of ignorance about German opinion, arguments of such moment that the burden of contending with them almost overweighted the strong Chancellor. Why, except that he was taxed by the worry of refuting these arguments in the Imperial closet, worry produced by Count Arnim's Reports, was the Chancellor so annoyed by argumentation which he might so easily have disregarded? The Count never disobeyed instructions. The prosecution implies that he did, but no particle of evidence is produced, and it is evident that he did not, for if he had, the Chancellor would have instantly laid before his Sovereign complaint of an indiscipline, a direct breach of hierarchical subordination, which the Emperor William would have been the last man in his Empire to condone. He might have forgiven the man, but he would infallibly have punished the official. It is the arguments, not the acts, of the Ambassador which inflame the Chancellor, though he tries hard to find acts for condemnation; and they inflame not because he dislikes them, but because they weigh deeply in the mind of the Prince, "whose vassal, after all, I am." Without remembering this great personality, which Prince Bismarck never for an instant forgets, this Sovereign, whose prerogative is real, and to whom even the servant who has made Germany is ultimately responsible, it is impossible to understand thoroughly the Chancellor's communications.

Apart from Count Arnim and the overwhelming desire to prove him in the wrong, which, as regards the immediate future, no doubt he was, nothing can be more definite than Prince Bismarck's line. He would, first of all, have his indemnity, M. Thiers would pay it, and he should therefore support M. Thiers, a calculation which so far proved correct. As to possible danger from a successor to M. Thiers, from the accession of a stronger Republican, the Chancellor hates and despises Republicanism, till he disregards it, till he honestly believes that Republican France would be so weak, and so disorderly, and so Communard that it would serve as a drunken Helot to keep the Germans from political intoxication. M. Paschal Grousset, a Red dyed in the wool, in a most able letter in the *Times*, suggests that Prince Bismarck has published his denunciations of the Monarchists because he now believes that France, with super-subtlety, will think that the party which he then praised, but which he now secretly dreads, viz., the Left Centre, must necessarily be bad; but Prince Bismarck's wiles are not of that literary order. He was, we believe, telling his correspondent, and in some indirect way his Emperor, the actual fact; he thoroughly believed Republicanism a bad form of government for France; and he was cynical enough, or narrowly patriotic enough, therefore to wish for its continuance, to sneer at Germans who "are always thinking for the world," and to take credit for absence of selfishness in not desiring the Republic to be Communard. We do not believe he has altered his opinion now, unless, indeed, he has altered it since the Czar, it may be in reply to all this, and to the strange letter in which Prince Bismarck tells Arnim not to distrust Count Orloff, for he knows him to be a friend—a letter unconnected with the case, and intended to make Frenchmen despair of Russian aid—sent to Marshal MacMahon every Order of Russia except the military one, the Order of St. George. The Bourbons Prince Bismarck hates *as* Ultramontanes, and he fears their monarchical relations, and therefore, alike for the sake of the foreign policy of Germany and of the Monarchical organisation of the Empire, he prefers the continuance of the Republic he despises. Whether he is wise in this preference history must decide, but there is one ground of consolation for French Republicans more substantial than that of M. Paschal Grousset. Prince Bismarck, throughout his career, with all his intellect and all his strength and all his marvellous success, has shown an inability to comprehend the depth of purely spiritual, we do not mean religious, but spiritual forces. He has no more notion of the force Republicanism, if time is granted it, may evoke than he has notion of the fervour which may be evoked in quiescent or indifferent minds by religious persecution. He no more sees why France after her Revolution swept over Europe, than why Rhinelanders once enthusiastic for the Empire now regard him almost as a foe. He hates and loathes Democracy, and does not see what English Tories almost as fierce as he acknowledge every day, the nearly irresistible strength which Democracy derives from its spiritual power, from the hopes and the longings and the aspirations which it kindles in the imagination of those "common millions" without whose devotion the Army of Germany and the diplomacy of Bismarck, and the stone throne of Charlemagne, on its feet of cannon-balls, are but the shadowy instruments or symbols of a quickly-vanishing power.

We have touched but a portion of this Correspondence, which will yet afford material for historians, but we have touched the two portions of most interest,—those which reveal the double action upon the Chancellor's mind, his hatred of opposition even on paper and his dread that this opposition might influence his Emperor,—and those which display his view of the true policy of Germany in regard to France. We are bound to add, however, one more word. It has always been supposed that Prince Bismarck at heart desired a renewal of the war with France, but the despatches make this exceedingly doubtful. It is probably true that Count Arnim gave Dr. Landsberg, his agent in German Press affairs, reason to believe that he thought so, and that he held the policy one which ought to be exposed in Germany; but it is quite possible that the Ambassador—whose advocate, Dr. Dockhorn, argues in Court that truth is not the essential quality of diplomatists—wanted the German Press to frighten the French into submission about the Pastorals. Nothing would do that more effectually than a German protest against a coming war, and that protest apparently did its work, the Bishops being very severely cautioned and their dioceses subsequently revised by Rome. Whether that be so or not, however, the Chancellor distinctly repudiates any wish to see France and Italy in collision, because Germany could not desert Italy, and the war would therefore involve her. One pretext for Hostilities was therefore consciously passed over, and though the Chancellor may have modified his policy since, he is entitled to the benefit of this unexpected evidence.

PARTIES AND THEIR LEADERS.

(Pall Mall Gazette.)

The moment when the announcement is made with some show of authority that Mr. Disraeli is steadily recovering at Bourne-mouth from his severe illness is the moment at which the statement can be made with least offence that the condition of the Prime Minister's health has for some time past caused great anxiety to his friends and to a portion of the public. The uneasiness on the subject began in the later days of the last session of Parliament, it certainly was not diminished by the spectacle of the physical difficulties under which the successful speech at the Guildhall was delivered in November, and it has been naturally much increased by the attack which has brought about Mr. Disraeli's temporary retirement from the conduct of public business. Mr. Disraeli's political youth, for he is now for the first time the head of a Government formed under regular conditions, and the vigour and vivacity of speech which never fail him, have disguised from public attention the slow advance of time and the fact that the Prime Minister has neared his seventieth year. Many English statesmen at that age might have looked forward to some years of office, and it is not at all impossible that the alarm of which we have spoken may be groundless; but when a man of Mr. Disraeli's years suffers from impaired health during a period of six months, it is not unnatural that the contingency of his proving physically unequal *to the labours and responsibilities of* his position should have a place in political speculation. But the managers of the Liberal party are at least as uneasy about their leader as the Conservatives can be about theirs, though it is not Mr. Gladstone's physical but his mental and moral health which is in question. Mr. Gladstone has not at present made the smallest sign of an intention to resume his place at the head of his followers. There are some indications, not necessary to mention, which rather point to the contrary determination; and, indeed, no great sagacity is needed for the suggestion that Mr. Gladstone, once deep in theology, will not be easily restored to politics. He has for the first time in his life struck upon a vein of theological argument which is not only congenial to his own tastes, but in harmony with the opinions of the great majority of Englishmen. He is no longer engaged in explaining away by endless distinctions and subtleties his sympathy with sacerdotal practice and doctrine; he is fighting, though on a very narrow standing ground, for civil life and country against the despotism claimed by a foreign priest over mind and conduct. This occupation, probably felt by Mr. Gladstone himself to be all-absorbing, happens to furnish him with a plausible plea for persevering in withdrawal from political leadership. He may reasonably reply to the urgency of the Liberal spokesmen who have recently been declaring him to be indispensable that the Opposition cannot muster respectably in a division without the Irish Roman Catholic contingent, and that it will be very long before the Roman Catholics in the House of Commons vote again with the author of the Irish Church and Irish Land Acts.

The mere *suggestion that* neither *of the great political parties* is very sure of having its present leader to lead it opens up a wide prospect of difficulties and uncertainties. The disadvantages under which the Conservatives would be placed by the retirement of Mr. Disraeli are manifest enough. The party has, in fact, suffered from two sets of causes, one permanent and the other accidental. It naturally has its deepest roots among the same classes which supply the members of the House of Lords, and though entrance to parliamentary life is easier to young men of these classes than to others, the advantage is much more than compensated by the liability of successful Conservative politicians to be banished from the House of Commons by the lapse of lives in the peerage. Then, again, the exile of the Conservatives during so great a length of time from office, which is attributable to the mistake of Protectionism, has had its effect upon the class, much larger than is commonly admitted, which consists of persons beginning public life without fixed opinions, and many politicians of eminence have taken their place among the Liberals who might just as well have been Conservatives. Thus, the Ministerial party, strong enough in the House of Lords, is by no means equally strong in the House of Commons as regards the persons upon whom the brunt of political conflict must fall when Mr. Disraeli is no longer in the front. On the other hand, the strength of the Opposition in debaters of the second order is not to be questioned. Their is no longer any breed of young Liberals, or at all events it is to the last degree scanty; their place has been taken by the provincial alderman or mayor, or by the valuable Dissenting preacher. But Mr. Lowe, Mr. Forster, Mr. Bright, Sir William Harcourt, Lord Hartington, and Mr. Goschen are some of them men of great, all of more than respectable, parliamentary capacity. But how is a Liberal leader to be found among them? There is not a single name which does not represent an enormous amount of jealousies and animosities arrayed against the politician who bears it, and if all of these public men are not equally unfortunate in this respect, those who are least disliked or distrusted are least equal to the position.

The Liberal party, however, labour under one special difficulty from which the Conservatives are free. If Mr. Disraeli at any time renounces office, it will be because his retirement is unavoidable and final; no statesman of our day can be more thoroughly depended upon to struggle to the last against the necessity of withdrawal. Not so Mr. Gladstone. No purpose of his, however sincerely formed or obstinately persisted in for a while, can be regarded as absolutely fixed and final. No calculation can be made on the footing of his retirement which his sensitive con-

science, eager temperament, and irritable nerves may not eventually disturb. There may always be some Public Worship Regulation Bill which will be too much for his resolutions. Now, no words can express the confusion introduced into the political arena by Mr. Gladstone's sudden descents into it. He is still, if not the first statesman in the House of Commons, its first member: first in fluent, impressive, and often eloquent speech, and first in dialectical resource. When a public man of this order suddenly joins in a debate without concert with his political friends, the effect is always in the highest degree embarrassing; but when he drops into the House of Commons from a distance and takes a course which he has had no personal observation to guide him in choosing, he produces utter disorder, and often quite as much among his adversaries as among his nominal following. It is no mere conjecture that Mr. Gladstone acting as a free lance will go far to render all government impossible. The most sagacious statesman of the day made up his mind on this point at the most important crisis in Mr. Gladstone's political history. There was probably no public man then living of whom Mr. Gladstone had a higher opinion than Sir George Cornewall Lewis, but Lord Palmerston was *so impressed with the formidable* character of Mr. Gladstone's attacks on the Chancellor of the Exchequer that he determined to have the assailant at any risk among his colleagues, and on the first opportunity he made offers which put an end to Mr. Gladstone's attempt to hold a middle position between the Conservatives and the Liberals. If the present Prime Minister were no longer able and if the late Prime Minister continued unwilling to remain at the head of their respective parties, no words would be too strong to describe the confusion which would follow. The most probable result of such a state of things would be some wholly new political combination. Meantime, so long as it is uncertain whether the opening of the next session of Parliament will find Mr. Disraeli thoroughly restored to bodily and and Mr. Gladstone completely reinstated in mental and moral health, the sanguine hopes which some persons seem to entertain of a long period of political tranquillity must be considered to rest on very slight foundation.

PUNCH.

CHRISTMAS.

ICICLES, and frost, and snow;
Holly green, and mistletoe;
Hasty kisses—
Stolen blisses—
Blushing *misses*, whispers low.

Blazing fires within the grates;
Lads and lasses on their skates;
Careless sliding,
Graceful gliding,
Pairs colliding, broken pates.

Laughter, which unceasing flows;
Welcome, wheresoe 'r it goes;
Slipp 'ry places,
Footstep traces,
Glowing faces, frozen toes.

Nipping breezes from the hills;
Robins upon window-sills;
Toil forsaking,
Pudding making,
Pastry baking—Christmas bills,

Pantomimes on Boxing-night;
Princesses in dazzling white;
Goblins scheming,
Fairies dreaming,
In a wondrous blaze of light.

Children's parties, where the fun
Knows no end when once begun;
Childish fancies,
Timid glances,
Dainty dances—over-done.

Christmas trees all hung with gold;
Nuts and oranges untold;
Fond caresses,
Well combed tresses,
Thin white dresses—deaths of cold.

Joyful bells, that gaily ring,
And the gladsome tidings bring,
"Christmas morning,
Carol-borne in,
Heed the warning! Pray and sing!"

CANINE PROCLIVITY.

ONE of the gentlemen, of whom, "Every one," say Lord Bacon, generalising rather widely, "doth love a dog," and one who seems to love a dog rather overmuch, is Mr. James Holdon, a pitman, of Rainton, near Durham. Would not Holdon, by the way, be a somewhat apt name for a dog, particularly a bull-dog?—and Mr. Holdon appears to have a good deal in common with the fiercer bulldogs. Mr. Holdon so loves his dog that he feeds him on mutton, which he refuses to his wife and children. He came home drunk the other night, and asked for the dog's supper. According to the *Newcastle Daily Journal*, in the report of an assault case, in which Mr. Holdon was the defendant and the complainant one Robert Stokoe, heard before the Houghton-le-Spring magistrates:—

"His wife told him that the mutton he had purchased for the dog had been cooked for the children and herself. Upon hearing this he knocked his wife down, and commenced kicking her, when the complainant, who was in bed, got up for the purpose of rescuing the poor woman from further injury, when the defendant struck at him with a chair, inflicting severe wounds. Afterwards he took the complainant's silver watch, to which was attached a silver guard, a half sovereign, and a gold lion, and threw them into the fire, in the absence of the complainant, and they were, with the exception of the silver, burnt."

The foregoing statement was attested by the defendant's wife; and it also appeared in evidence that Mr. Holdon was accustomed to buy the best of mutton for his dog, never letting his wife and children have any, but, whenever his wife asked for a piece, knocking her down, whence, then and there, before the Bench, Mrs. Holdon appeared with a black eye.

In justice to Mr. Holdon, it is fit to say that it further appeared that, while he gave his dog the meat he denied to his wife and *family, he ate nothing of it* himself except the offal. But perhaps Holdon prefers paunch to leg of mutton. Then, too, his dog is described as a "racer." It may pay him to keep a winning dog in high condition with prime mutton; so that Mr. Holdon is a gentleman whose love for a dog may not be wholly disinterested. The Magistrates considered his partiality for his dog and his conduct towards his wife and family and fellow-lodger altogether to constitute "a most disgraceful case." They fined him two pounds ten shillings, and costs, or two months' imprisonment; and perhaps it is to be wished that Mr. Holdon may have been unable to pay the money, and is now in gaol.

A WISE PRELATE.

THE genial Bishop who excused himself from coming up to Town to vote on the Public Worship Bill, because he had got "a garden party," should have said "a lawn party." Nobody then would have felt the least surprised.

"CHLORAL" CORRESPONDENCE.

SIR,

I have read in the *Times* and *Pall Mall Gazette* the delightful effect of a dose of Syrup of Chloral on any one about to take a sea-voyage. Soothing Syrup! It will be lovely of course at sea, but, O! how charming on land! for directly my wife——. But no matter, I shall use it on myself: and I shall hear, see, say nothing, and feel nothing. How aggravated she will be!

Yours, in high spirits,
A MEAN-SPIRITED CREATURE.

The Birdcage, Henpeckham Rys.

Welcome, Chloral! with all my heart. Now I *can* go to a Concert of the highest Art and most classical music, and "smile and smile, and be a villain"—I mean deceive my worthy relative, for whose opinion I have a pecuniary respect, into thinking that I am, what I am not,

AN ARDENT ADMIRER OF BACH & CO.

DEAR SIR,

MY only reason for *not* going much to Church is on account of the Sermons to which I am compelled to listen. Now, however, away I 'll go with my little bottle of Chloral and sleep snugly all through it. Aha! Glorious! With my little bottle of Chloral—sounds like an old-fashioned comic song chorus, doesn 't it?

With my chloral loral, chloral loral,
Chlorallylora!
Ri tol chlorali do!

Yours ever,
A LOVER OF COMFORTABLE DOCTRINE.

SIR,

Let me recommend every householder to take a strong dose of Chloral on Boxing-Day. I shall, not being

A TIPPER.

SIR,

Will the London Chatham and Dover and the Steamboat Companies generally supply "Chloral" regularly to the Passengers? They *ought*. If so, let 'em advertise at once, "A Full Chloral Service twice a day" between England and France. This will catch the Ritualists.

Yours sincerely,
ONE OF THE SURPLICE POPULATION.

CHRISTMAS HAMPERS.

(350)

COLT'S NEW GOVERNMENT ARMY REVOLVER,

as recently adopted for the United States Cavalry, takes the 450 central fire service Boxer Cartridge. It equals a rifle in range and in accuracy of fire, and is unequalled for durability of construction. It can be easily loaded and unloaded when dark, and can be carried with perfect safety when loaded. It far surpasses in efficiency and quality of make the numerous cheap pistols of various make which now flood the market.

COLT'S LARGE BORE BREECH-LOADING DERINGER,

for the waistcoat pocket, shoots hard and straight.

COLT'S DERINGER REVOLVER,

for personal and house defence, fires a larger ball than any other Revolver of the same weight and size.

To be had through any respectable Gunmaker or Dealer in Arms, or from

Colt's Fire Arms Manufacturing Company,

14, PALL MALL, LONDON, S. W.

(335)

(G)

THE DECAY OF THE TEETH

Arises from neglect, and the use of tooth powders, pastes and washes, which containing mineral and other deleterious acids utterly ruin the enamel.

ROWLANDS' ODONTO

Is entirely free from all injurious elements, whitens and preserves the teeth, prevents and arrests their *decay, strengthens the gums, and gives a pleasing* fragrance to the breath.

ROWLANDS' MACASSAR OIL

Prevents the hair falling off or turning grey, strengthens weak hair, causes it to grow on bald patches, and makes it beautifully soft, pliable and glossy.

ROWLANDS' KALYDOR

Removes all freckles, spots, and cutaneous eruptions, and realizes a healthy purity of complexion.

ROWLANDS' ESSENCE OF TYRE

Produces immediately a perfect change in red or grey hair, whiskers and eyebrows, to a glossy and permanent brown or black, which colour neither washing or perspiration will remove. **GREAT CARE** must be taken to ask for Rowlands' Articles, of 20, Hatton Garden, London, and to see that their signature, A. ROWLAND & SONS, is in RED ink on the wrapper of each, no others being genuine. Sold by all Chemists, Perfumers, Druggists, and at all Bazaars throughout India.

WHITMORE'S

Compound Liniment of Arnica.

A specific for the cure of

Rheumatism, Lumbago, Sciatica, Sprains, Confusions, Weakness of the Joints,

Chilblains, &c.

It is also an excellent remedy as a stimulating application to the surface of the Chest and Back in Bronchitis, Inflammation of the Lungs, Pulmonary Consumption, and Hooping Cough. When the Liver is inactive, rubbed over it, its stimulating properties have a beneficial effect, and in all cases where counter-irritation is desirable, it will be found invaluable.

In bottles, small, medium and large.

WHITMORE'S

Stomachic and Liver Pills.

No Pill is so efficacious in promoting DIGESTION, strengthening the STOMACH, correcting ACIDITY, preventing or removing HEADACHE, GIDDINESS, &c., arising from a COSTIVE HABIT, DEBILITATED STOMACH, or TORPID LIVER.

They require no change of DIET, and those of the MOST DELICATE CONSTITUTION may take them with safety.

Taken as an adjunct with WILKINSON'S SARSAPARILLA with the greatest success.

THOS. WILKINSON, 270, Regent St., London.

LEA & PERRINS'

CELEBRATED

WORCESTERSHIRE SAUCE,

DECLARED BY CONNOISSEURS

TO BE

THE ONLY GOOD SAUCE.

CAUTION AGAINST FRAUD.

The success of this most delicious and unrivalled Condiment having caused certain dealers to apply the name of "Worcestershire Sauce" to their own inferior compounds, the Public is hereby informed that the only way to secure the genuine is to

ASK FOR LEA & PERRINS' SAUCE,

and to see that their names are upon the *wrapper, labels, stopper,* and *bottle.*

Some of the foreign markets having been supplied with a spurious Worcestershire Sauce, upon the wrapper and labels of which the names of Lea and Perrins have been forged, L. and P. give notice that they have furnished their correspondents with power of attorney to take instant proceedings against *Manufacturers* and *Vendors* of such, or any other imitations by which their right may be infringed.

Ask for LEA & PERRINS' Sauce, and see Name on Wrapper, Label, Bottle, and Stopper.

Wholesale and for Export by the Proprietors, Worcester; Crosse and Blackwell, London, &c., &c.; and by Grocers and Oilmen universally.

To be obtained of

BISSONAUTH LAW & CO.,

(339) *Calcutta.*

ROYAL INSURANCE COMPANY.

The Annual Meeting of the Company was held on August 6th.

THE FOLLOWING IS FROM THE REPORT ON THE

LIFE DEPARTMENT.

During the past year 1,406 new Proposals were made to the Company. Of these 1,099 were accepted and completed for 514,638*l.*, the new Premiums thereon being 17,271*l.* 2*s.* 9*d.* The total income from Premiums, after deducting re-assurances, amounted to 237,415*l.* 10*s.* 8*d.*, and the interest received from investments (exclusive of that on the annuity funds) was 64,990*l.* 9*s.* 10*d.* The claims during the year were:—

By Death: Original sums assured	£117,228	17	6
Bonus additions thereon	7,423	11	2
By Matured Policies (including Children's Endowments): Original sums assured	1,750	0	0
Bonus additions thereon	134	15	0
	£126,537	3	8

The result of the operations for the year is that, after *payment of all claims,* annuities, and *expenses of* every description, 158,347*l.* 0*s.* 4*d.* has been added of the Life Funds, making the total accumulations of the Life Branch of the Company,

£1,761,523-11-11.

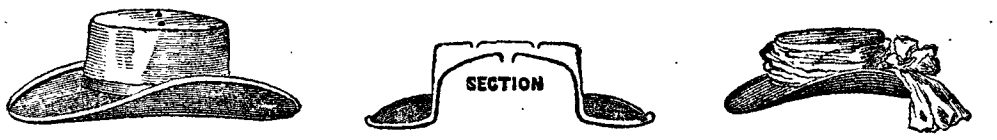
THE "TERAI" HAT,

FOR LADIES AND GENTLEMEN.

A SOFT DOUBLE HAT FOR WARM CLIMATES.

an be folded and closely packed without damage. Especially adapted for travelling purposes.



ANDRE AND CO., HATTERS,

127, NEW BOND STREET, LONDON,

Direct the attention of Ladies and Gentlemen to their New "TERAI" Hat, now much worn in all the northern provinces of India, and highly recommended. FORWARDED RETAIL POST FREE TO ANY PART OF INDIA, PRICE 23s. 6d. THE DOUBLE HAT.

SIR,—I am happy to be able to speak in the highest terms of your Terai Hat for EASE, COMFORT, CONVENIENCE OF PACKING AND DURABILITY. Although the Hat is hardly a sufficient protection for the head in the extreme heat of the Plains of India, YET FOR ALL WORK IN THE HILLS AT ALL SEASONS, FOR JOURNEYS, AND FOR GENERAL WEAR IN THE COOLER WEATHER IN THE PLAINS, it is admirably adapted. The late Earl of Mayo constantly wore your Terai Hat, which was recommended to him by Colonel Ramsay. I remain, yours faithfully,

O. T. BURNE, late Secretary to his Excellency the late Earl Mayo.—16*th July*, 1873.

Gentlemen,—I have found your Terai Hat a first-rate Hat. I never wear anything else when in the district. It is a wonderful protection from the sun, and is, in my opinion, not ONLY FITTED FOR THE COOL SLOPES OF THE HIMALAYAS, BUT FOR THE SEVERE HEAT OF THE PLAINS OF INDIA. I wear it in May, at Poona, the hottest season of the year, and find it preferable to the ordinary felt Helmet. The Lady's HAT IS PRONOUNCED TO BE PERFECTION AS A RIDING HAT.

I am, Gentlemen, yours faithfully,

AYRTON PULLAN, Capt. Dept.-Supt. G. T. Survey of India.
4th June, 1874.

ANDRE'S NEW PATENT PITH AND FELT SOLAR HATS,

(Known as Beake's Patent,) WELL VENTILATED, SUN AND WATERPROOF.

These new Hats are remarkable for their superiority in respect of quality, finish, lightness and comfort, are made in various shapes for Ladies and Gentlemen, and are likely to supersede the plain felt Air Chamber Hat hitherto worn.

TRADE ORDERS PROMPTLY ATTENDED TO.

MARAVILLA COCOA.

TAYLOR BROTHERS (the largest Manufacturers of Cocoa in Europe), having the EXCLUSIVE supply of this UNRIVALLED COCOA, invite Comparison with any other Cocoa for Purity—Fine Aroma—Sanative, Nutritive and Sustaining Power—Easiness of Digestion—and especially, HIGH DELICIOUS FLAVOUR. One trial will establish it as a favourite Beverage for breakfast, luncheon, and a Soothing Refreshment after a late evening.

N. B. Caution—"MARAVILLA" is a registered Trade Mark.

MARAVILLA COCOA.

The *Globe* says. "TAYLOR BROTHERS' MARAVILLA COCOA has achieved a thorough success, and supersedes every other Cocoa in the market. Entire solubility, a delicate aroma, and a rare concentration of the purest elements of nutrition, distinguish the Maravilla Cocoa above all others. For invalids and Dyspeptics, we could not recommend a more agreeable or valuable beverage."

For further favourable opinions vide *Standard, Morning Post, British Medical Journal*, &c., &c.

HOMŒOPATHIC COCOA.

This original preparation has attained a world-wide reputation, and is manufactured by TAYLOR BROTHERS, under the ablest HOMŒOPATHIC advice, aided by the skill and experience of the inventors, and will be found to combine in an eminent degree the purity, fine aroma, and nutritious property of the FRESH NUT.

SOLUBLE CHOCOLATE.

MADE IN ONE MINUTE WITHOUT BOILING.

THE ABOVE ARTICLES are prepared exclusively by TAYLOR BROTHERS, the largest Manufacturers in Europe, and sold in tin-lined packets only, by Storekeepers and others all over the world. Steam Mills, Brick Lane, London.

GRATEFUL—COMFORTING.

EPPS'S COCOA.

BREAKFAST.

"By a thorough knowledge of the natural laws which govern the operation of digestion and nutrition, and by a careful application of the fine properties of well-selected cocoa, Mr. Epps has provided our breakfast tables with a delicately flavoured beverage which may save us many heavy doctor's bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—*Civil Service Gazette.*

MANUFACTURE OF COCOA.—"We will now give an account of the process adopted by Messrs. James Epps and Co., manufacturers of dietetic articles, at their works in the Euston-road, London."—See article in *Cassell's Household Guide.*

Made simply with boiling water or milk.

Sold only in ¼-lb. and 1-lb. tins, labelled thus:—

Hony. Secretaries. John Muir, Esq., D. C. L., LL.D., Ph. D., 6, Greenhill Park. Archibald Campbell Swinton, Esq., of Kimmerghame, LL. D.

Acting Secretary—John Christison, Esq., W. S., 46, Moray Place, Edinburgh.

Hony. Secy. for India. George Smith, Esq., LL.D., Serampore, Bengal.

The existing Endowments of the University of Edinburgh are totally insufficient to afford necessary encouragement to the cultivation the higher learning. A resolution was passed by the General Council of the University, in October 1863, that measures should be adopted for supplying this deficiency. A public meeting was held in Edinburgh, in May 1867, under the Presidency of his Grace the Duke of Buccleuch, supported by the Earl of Dalhousie, the Lord Justice General, and other influential persons. Since 1861 capital to the amount of £60,771 has been given or bequeathed to the University and the interest is applied to scholarships or fellowships. Much of this was secured through the formation, in April 1864, of the Association for the better Endowment of the University of Edinburgh, the objects of which are,—to circulate information regarding the insufficiency of the endowments of the University; and to collect funds by means of Annual Subscriptions, Donations, and Bequests which may be appropriated (1) to the Foundation of new Scholarships or Fellowships; (2) to the augmentation, where necessary, of the incomes of the Principal and Professors; (3) to the Establishment of new Professorships or Lectureships and (4) to other purposes tending to promote the efficiency of the University as a seat of learning.

The income of the Association from annual Subscriptions now amounts to about £245. Considering, however, the large number of old Students and others who may be expected to take an interest in the improvement of the University, the Committee think it might easily be raised to such an amount, at least, as would enable them to establish, in every year, *one Fellowship of £100 a year, tenable for three years.*

Subscribers of One Guinea per annum are Members, and Donors of Ten Guineas and upwards are Life Members of the Association; but Subscriptions and Donations in excess of these sums are earnestly solicited by the Committee.

Donations and subscriptions, from India and the East, will be remitted to Edinburgh *at par*, if paid to the Chartered Mercantile Bank, Calcutta, to the credit of

GEORGE SMITH, LL. D.,
Honorary Secretary of the Edinburgh University Endowment Association.

MILITARY ORDERS.

THE WEEK.

THE Viceroy leaves Calcutta for the North on the 15th March; he will enter Delhi two days later, afterwards visiting Puttiala, and reaching Simla early in April.

DURING the last few days Sir Lewis Pelly has been as active as ever in pushing forward the difficult task he has undertaken of getting the affairs of Baroda into good order. He has continued to display a courage, tact, and self-control beyond all praise. By courteous firmness, accompanied by a frank expression of his will, he has succeeded in keeping the Sirdars in a docile frame of mind. We are glad to learn that the King's Own Borderers have been brought to Bombay from Jubbulpore and Saugor. The Mahratta country is peaceable enough, but the continuance of such a satisfactory state of things cannot fail to be promoted by the presence of a strong European force.

SIR RICHARD and Lady Temple reached Chittagong on the 13th instant. In reply to a memorial presented to him by the inhabitants His Honor congratulated the people of Chittagong on the number of vessels moored in the river, sixteen of the number belonging to European ports. He then imparted the gratifying information that the Government of Bengal had applied to the Government of India for a loan of Rs. 90,000 for carrying out improvements in the port, and that, as there was already a similar sum of Rs. 90,000 at the credit of the port fund, with the combined sums, amounting to Rs. 1,80,000, much could and would be done. Concerning the request of some of the people for an elective municipality, the Lieutenant-Governor said he doubted whether it would be advisable to introduce such a measure now, but that he had no objection whatever to one or two of the non-official residents being brought into the municipal commission, and that gradually, no doubt, the town would arrive at that state of advancement which would warrant his granting the boon asked for.

OUR London correspondent speaks of the severity of the cold in England at the date of his letter; here, also, the cold has of late been severe for Bengal. During the last day or two we have had a clouded sky with occasional falls of rain; and the consequent chilliness of the atmosphere has been making the thinly clad natives thoroughly miserable. Europeans too have not been particularly happy in their feelings, and have been donning heavy clothing; yet generally the thermometer has been standing only at "temperate," half way between summer-heat and freezing point. There is something in the climate of India (is it that the great heat of May, June, and other months makes a contrast painfully perceptible?) which does not admit of pleasurable sensations, even when the thermometer stands at a degree that would produce no remark from any one in Europe. In London, at the date of our advices, the thermometer was 15 degrees below freezing point, that is, half way between that point and zero. Well may the people have suffered. It is remarkable that the fact of coarse brown paper forming a very warm and inexpensive lining for garments has not yet obtained recognition from the poorly clad classes.

A Pondicherry correspondent has called attention to two good bargains for capitalists. It appears that the *County of Perth*, a derelict vessel, is to be sold within a few days, and that a Pondicherry spinning and weaving factory will be put up for sale on the 10th February. The mills have been worked successfully for some years, and are to be sold by auction simply because the shareholders cannot agree among themselves as to the way their business should be conducted.

WE have received some notes on Balasore and Chandipore, Orissa, which have been printed by Dr. Woodford, and from them we are glad to learn that the latter place is the "Brighton of Bengal." The notes are accompanied by a landscape-engraving and a plan, and from neither should we have derived an idea of the dignity of Chandipore but for an express statement to that effect. The plan shows the site of *the* bungalow of the place, and the sketch presents us with its external features; as Chandipore appears at present to have but one house, it is not unkind to consider it rather early in the day to make a comparison with "London on the Sea," but there is no knowing what the Balasore sea-beach may become hereafter. It is thus described by Dr. Woodford:

> The sea-beach is most enjoyable, and is covered with scarlet crabs on the receding of the sea tide. Chasing them to their holes affords children inexhaustible pleasure and healthful exercise. Time alone is necessary to show the incalculable benefit to be derived by the inhabitants of Calcutta from such a watering place. How many families might be spared the expense and separation of a visit to Europe by a timely resort to Chandipur? an inexpensive change of one, two, or three weeks to this picturesque spot doing wonders, when medicine has failed to restore the flagging energies of vital depression, nor is it too much to expect to see, ere long, two steam vessels carrying weekly numbers of invalids and others desirous of a short change or holiday, as in the hot months there is a cool invigorating S. W. breeze from the sea, the temperature being 8° lower than that of Calcutta, and very often 12° and 13°. Chandipur, however, is not as a rule suited to the Doorga Poojah Holiday seeker, as storms prevail at that season, and there is more or less fever prevailing then on the sea coast. The seasons embrace the cold and hot months *only*, that is from the beginning of November to the end of May, and for the Christmas holidays no more charming place could be found. In a sanitary point of view, there can be no questioning the advantage to be derived from a change of this description over that of a short trip to the hills, which on account of the sudden changes of temperature (from great heat to severe cold, and from cold to excessive heat) is too often followed by organic derangement, necessitating a return to Europe, more especially in the case of old Indian residents. These remarks do not of course apply to those who can afford to remain on the hills during the whole of the hot and rainy seasons, nor to the Neilgherries of Madras, perhaps, as the intervening sea trip gradually prepares the constitution for the changes both in going and returning.

WE would inform those of our readers who are interested in education, that a most useful little work has just been published by Messrs. Higginbotham & Co., Madras. It is an Introduction to the study of Geography, and has been written by Mr. George Duncan, whose publications have already obtained for him many favourable notices from the press.

A reader of the *Friend of India* writes as follows: "Mr. Eden in his last Administration report states, 'His Majesty the King of Burmah has had *numerous* young men educated in Europe and Calcutta.' This implies, that a little outlay in education is considered beneficial by the ruler of Burma Proper, and that His Majesty considers the money well spent. I know of one parent who has a large family, and who spends nearly the *whole* of his income in their support and education at one of the hill stations in India, but after all, his boys when they attain maturity, however highly educated, will not be eligible for the Civil Service. The *sine qua non* is a competition *in England*. The salaries given to Eurasian officials in Burmah are not adequate to enable them to send their boys to England, to qualify for the higher appointments in the covenanted service in India. The wealthy Hindoos and Mahomedans of Bengal, the Parsees of Bombay and the affluent natives of Madras are sending their sons to Europe, and Mr. Eden bears testimony to the fact that 'during the last year, two lads [from Rangoon] have been sent to England to complete their education, the first Burman lads ever sent there by their relations unaided by any extraneous help.' Gratifying as this intelligence is, I hope it will prove an incentive to Lord Northbrook, to espouse more heartily the good cause he has generously undertaken, to rescue "*poor whites*" from the obscurity and degradation they have descended to for lack of Government recognition. There are numerous East Indian officials holding responsible appointments in Burmah, who will never rise to anything higher, because

it has not been customary to confer on them appointments in the Commission or Civil Service; and the idea of rewarding men of 20 and 30 years' faithful service by encouraging their children has not been mooted in Burmah, nor thought of by the Governor General. I believe that, if Lord Northbrook cares to do a gracious act, more than six senior officers in Rangoon and Moulmein could be found who are well worthy of promotion by the Government of India. Without opportune relief of this sort, the wealthy Burmese will get the start of the 'poor whites' in Burmah."

THE *Indian Charivari*, albeit it occasionally aims a shaft at the *Friend of India*, is now being conducted in a way we are sincerely glad to commend. Of late there has been a great improvement in the management, and there can be little doubt that our contemporary will rapidly enlarge the size of the subscription-list. With the last issue appeared a capital cartoon of Sir Salar Jung, accompanied by an explanatory notice, so well written that we have pleasure in reproducing it:

Can any good man come out of the Natives of India, is a question which most residents in this country, who have had much intercourse with Natives, must have often asked themselves. We may not be intimate with the domestic life or the natural feelings of our Aryan brothers, so we can only judge of them by what they choose to show us. And what do we find? Pomp and vanity amongst the highest; the shallowest of knowledge amongst those who profess to have been educated; and ignorance and chicanery too prevalent amongst the lower classes. In India, as elsewhere, the exceptions prove the rule. What has been the cause of the popularity amongst all Europeans of our late visitor, Sir Salar Jang, but that, in dealing with him, Englishmen felt that they were dealing with one who had the same feelings as themselves, in fact, with a gentleman. True to his liege lords, the late and the present young Nizam, Sir Salar Jang, has also proved true to those to whom he is, to a great extent, indebted for his present position. As minister to the State of Hyderabad for many years, he has almost solved the difficult problem of serving two masters. Without display of force or bluster he has converted the people of Hyderabad from a nest of gamblers and conspirators into a progressive and trading community. Always hospitable and friendly to Europeans, he has at the same time preserved the friendship and respect of the Chiefs and people of Hyderabad, though not one of them, or to the manner born. The man's disposition is typified by his dress, unostentatious but dignified. He despises the barbaric pearls and gold, and his favourite ornament is that presented to him by the conquerors of his adopted country. Amongst Natives he eminently deserves the title of that badge of which he is so justly proud—"The Star of India."

AT the Trades' Association Annual Dinner on Monday last, Mr. Aitchison C. S. I., Foreign Secretary to the Government of India, made the following important observations in the course of a speech delivered in reply to the toast, *The Civil Service of India*:

The distinction between regulation and non-regulation provinces is fast becoming a purely historical one, and the military element in the latter must necessarily decrease. Our empire has reached its natural limits of the mountain and sea. The native princes within the boundaries of the empire have received charters of independence, and our armies have now become their bulwark and defence. Our work now is one of consolidation, not of extension. Even in our most recently acquired possessions, the Government is every day becoming less personal, less dependent on the character of individual men, than on the framing of just laws and the impartial administration of them. There are some who consider this a symptom of danger and decay. Undoubtedly, if the transition be too suddenly made, it becomes a real source of danger. Refined laws, too far in advance of the social wants of the people, may become as oppressive in their operation as laws that are bad in themselves. But the gradual substitution of constitutional for personal government is a sign of progress, not of decay. No doubt there is less scope for individuality of character, we may never again have the soldier-civilian and solder-political in the same profession. But our long settled provinces have produced men with qualities equally valuable of their kind—men like Thomason, and Sir John Peter Grant, and Sir William Grey and others, whose achievements, if less brilliant than the triumphs of war, have at all events secured for them an undying place in the history of the country, while more than one of them has been raised to high and responsible offices under the Crown when their service in India was done.

MR. AITCHISON referred as follows to the competition system. It is generally known that this distinguished servant of Government originally came to India as a "wallah;" but we would allude specially to the fact because the writer of an interesting sketch of Simla and its celebrities in *Blackwood's Magazine* has very recently fallen into the error of describing Mr. Aitchison as having been Lord Dalhousie's Private Secretary.

I shall not be expected to say much about the competition system, but for which I should probably never have been in India at all. As a matter of personal opinion, I agree with those who would allot a certain number of nominations to our public schools and colleges, who would raise the standard of age for admission, and would bring the selected men together for a couple of years at some central college. With regard to the existing arrangements, however, I can hardly be wrong in saying that while no one can pretend they have satisfied the hopes the extreme admirers of the competition system had formed, they have not, on the whole, done badly, and have done far better than the enemies of the system predicted. The mixture of fresh blood has undoubtedly given vitality to some branches of the administration. At the same time it is satisfactory to find that men of the old Indian families enter freely by the common door. Indeed, on looking over the Civil Service list, one is surprised at the large number of old Indian names that have come in by competition. There is an Udny, one of the oldest names in India, Harrington, Tucker, Cunningham, Plowden, Beaden, Money, and many others, among whom I would particularlize a Durand, who gives promise of displaying all the virtues that distinguished his father, my lamented friend and master. As regards the admission of natives, I am sure there is no one here who would for a moment wish to deny them a fair field and fair play. We can no more administer India without them than we could have conquered India without the Sepoy Army. It is not fair that natives should do the drudgery, while we reap the advantage. We are bound in honor and in common justice to give them the chance of rising to appointments, for which their abilities and character may qualify them, and if they can beat us in the race, all honor and success to them. But I am not so sure that a competition examination is a suitable door for their admission under present circumstances. I say under present circumstances designedly. The system of selection which was provided for by a recent Act of Parliament, is in my opinion far preferable. I say this from no fear of our countrymen being outstripped in the contest. That would be a most unfair and unworthy reason to assign. But it seems to me that all the objections to the competition system generally, as being mainly an intellectual test, and a very imperfect test of other qualifications that are equally necessary, apply with far greater force to the case under consideration. The chief objection to it in my mind, however, is its unfairness to the people of India themselves. And why unfair to India? Because the state of education in India is exceedingly unequal. As yet competition may be said to be practically limited to men educated in the atmosphere of the presidency towns. In many of our provinces, peopled by some of the finest races under our rule, education is as yet very backward, and must be so for many years to come. The young men of these provinces, although possessing many of the best qualities for successful administration, would be nowhere in a competition examination. The application of a competition test sounds very fair, but instead of giving all an equal chance, it would practically exclude the majority.

BEFORE sitting down Mr. Aitchison thus spoke of the Trade of Calcutta.

I am confident I express the sentiments of the Civil Service, when I heartily wish prosperity and success to our hosts in all their undertakings. The government of the day fortunately seems to be alive to the interests of trade. At present, as you all know, there is a committee *sitting for* the purpose of equalizing and lowering the tariff. I wish they could see their way to abolish it altogether. It may seem Utopian, but I am confident the time will come when the ports of every civilized country will be free ports to which the commerce of the world will flow without artificial hindrances. The Government, too, have been doing what they can to find new markets for our trade. We have been applying the key to the closed gates of Thibet. The recent mission of Sir D. Forsyth was mainly designed to open up the markets of Eastern Turkestan. At this moment a mission of Mr. B. Elias, the distinguished geographical explorer, is examining the commercial *routes* between Burmah and Western China. And in Calcutta, too, much has been done. When last I had the pleasure of partaking of the hospitality of the Calcutta Trades' Association—I think it was two years ago—the Lord Bishop compared our fair city to a beautiful woman without a nose. We had no bridge then. Well, Calcutta has now got her nose. It is broken in the middle to be sure, but it is a very handsome nose for all that. Gentlemen, in behalf of the Civil Service, in all its branches, Covenanted, Military, Native, and Uncovenanted, I return you most cordial thanks for the toast you have proposed.

THE following statistical tables have been obligingly furnished by a gentleman who is greatly interested in Coolie Emigration. It will be seen how creditable to the depôts is the ratio of mortality in them as compared with that of the suburbs of Calcutta. It is true that the depôts are situated in those very suburbs, but in making a comparison between them and the neighbourhood it should be borne in mind that the depôts are subject to careful European medical inspection from day to day; the people admitted are also to some extent selected lives.

October 1874.

* In both cases the emigrants were suffering from fever at the time of admission.

THE BENGAL CHAMBER OF COMMERCE.

We have before us the report of the Committee of the Bengal Chamber of Commerce as submitted by Mr J. C. Murray, the President, to the half-yearly General Meeting held on the 5th instant, and we are bound to state that it does that gentleman and his colleagues much credit. The report is most interesting; it handles topics that are of the greatest public importance; and it is throughout well and carefully written. We are more especially struck with the manly attitude assumed by the Chamber towards the local Government. Always respectful and temperate in argument the Chamber does full justice to its own influential position as representing the wealthy, enterprizing, and intelligent mercantile community of Calcutta. One cannot turn over the pages of the report without realising that there is after all such a thing in India as public opinion; the fact has often been doubted; but we have no hesitation on the point. In the Bengal Chamber of Commerce there is an enlightened spirit of independence that promises well for the future of the country. The merchants of Calcutta feel themselves free; they address Government from time to time in a manner that shows them to be conscious of knowing their private business better than any paternal authority can do; and they hold their own by virtue of good sense, by the force of logic, by the weight of experience, and by special familiarity with the subjects discussed. Very laboriously is the press of India achieving an equally honorable position; the difficulties thrown in its way have been enormous from the time of James Silk Buckingham to the present date; he was expelled the country by an arbitrary and undisguised exercise of authority, and though since his banishment no act of hostility equally conspicuous has been attempted, pressure has systematically been brought to bear in one form or another on those who have been compelled by the course of events to stand in opposition to an objectionable policy. It is not necessary to refer to the gagging Act; that was the extraordinary measure of an extraordinary period. We allude to those frowns and smiles, to those subterranean modes of attack, which place the freedom of the press from time to time in the greatest hazard. The only guarantee for the freedom of the press is to be found in the existence of a chivalrous spirit in the midst of the community, in the recognition on the part of the public that it is not always the journal which receives the most favours from Government that should be the most trusted or should receive the largest measure of support. A fear of offending ought not to characterise Englishmen anywhere; such a spirit should be alien from the journalist in every part of the world; but here in India where so much remains to be done to "make the bounds of freedom larger yet," the need is especially great for out-spokenness and self-reliance; but it is scarcely possible for men "to have the courage of their opinions" unless they dwell in a congenial atmosphere of thought, and unless they mingle to some extent with those who are like-minded with themselves. It is gratifying then in the true interests of journalism, as well as in the true interests of the community, to have the fact impressed on the mind, after a perusal of Mr. Murray's speech in the Chamber, that there is a circle in India in which men can breathe freely, where they are not afraid to say what they think, where they can admire and contemn in obedience to their own convictions, and where they do not disguise their real feelings in deference to a signal from "superior authority"

CODE TELEGRAMS.

A certain portion of the report submitted to the General Meeting of the Bengal Chamber of Commerce on the 5th inst. illustrates the sturdy way in which the Chamber can stand to its guns. We are by no means sure that the merchants of Calcutta are altogether blameless; but certainly they have the right to express their views firmly. They are not to be "put down;" whatever rules they obey they intend to do so by virtue of the formally correct manner in which certain principles have been promulgated; they do not intend to act on the *ipse dixit* of an official; they will argue; and the result, in the one particular case which we are about to notice, is a victory to themselves We refer to a correspondence that has taken place between the Director General of Telegraphs and the Chamber of Commerce in regard to the admissibility of code message tendered for transmission under the provisions of the International Convention, as revised at Rome in 1872 by the representatives of the contracting States. The Director General announced some time ago an intention to reject any code messages that might be constructed in a way he did not approve; the Chamber of Commerce, however, believed that such messages were being framed in strict accordance with the Convention rules. The rejection of messages in arbitrary fashion would undoubtedly have proved a most serious inconvenience to the public, and the general question being regarded by the Chamber as of material importance to commercial interests, the Committee did not hesitate to dissent from the official interpretation placed by Colonel Robinson on the language of the Convention, and to press for a withdrawal of his departmental orders, those orders having caused great dissatisfaction and occasioned frequent remonstrance. A lengthy correspondence ensued which terminated in the decision of the Director General not to disturb existing arrangements, and to take no further action until the next Conference at St. Petersburg. The last assurance reads rather like a threat, but the Chamber with much good humour has replied it is confident that Colonel Robinson's efforts, when at the Conference, will be directed towards introducing with success such amendments of the Convention as may tend to the convenience of the commercial public, and promote the development of general telegraphic communication between this and other countries. We hope the Chamber of Commerce may not be disappointed, but we are very much afraid that Colonel Robinson is not in the best possible frame of mind for labouring earnestly after the desired result.

The dispute which has thus been shelved for some months hinges on the Convention of Rome having allowed for the first time in the history of telegraphy the use of what are called "dépêches en langage convenu." Colonel Robinson thinks such telegrams may have previously existed in the shape of ordinary language, but if so they were unauthorised by the rules of the telegraphic service; indeed at the first Convention, that of Brussels, all secret telegrams were absolutely interdicted. It was Colonel Robinson himself who when at Rome carried the day for secresy in the form of words agreed upon beforehand by parties using the telegraph, though it should be stated that at a prior Conference secresy had been allowed in the shape of cypher. It was Colonel Robinson's mission to gain for the public the advantage of being allowed to use words for the purpose of abbreviating the extent and concealing the purport of messages, instead of employing arithmetical numbers with that object. When at Rome the Colonel proposed the Vienna Convention being so amended as "etablir une distinction précise entre les dépêches chiffrées qui seraient composées de chiffres ou de lettres, et entre les dépêches en langage conventionnel consistant en mots de dictionnaire." Subsequent events have caused Colonel Robinson to lay great stress on the expression "in dictionary words." As indicating the true character of the system thus authoritatively established we would quote an observation which was made at the Conference held in Rome by the representative of the Indo-European Company: "Les dépêches échangées entre l'Europe et les Indes sont presque toutes composées de mots appartenant aux langues reconnus, mais rédigées de façon à ne pas offrir un sen compréhensible."

On returning from Rome Colonel Robinson entertained the opinion that the special relief which had been conceded there to "dépêches en langage convenu" was based on the understanding that such despatches were to be composed of commmon dictionary words in one language, as used in ordinary clear conversation but after some time he found that ideas very dissimilar from his own were current in Calcutta. While some of the older firms and banks continued to use short, simple and familiar words, there were other firms which acted on a different plan. One house in particular boasted some time back of using 30,000 quotations. Colonel Robinson says their vocabulary was three times as numerous as the English language, but Marsh tells us (p. 125 of his Lectures as published by Murray in Dr. Wm. Smith's Series of Manuals) that "the number of English words not yet obsolete, but found in good authors, or in approved usage by correct speakers, including the nomenclature of science and the arts, does not probably fall short of one hundred thousand"; and he remarks, in a note, "In this estimate—one hundred thousand—I include technical terms only so far as they have become a part of the general vocabulary of all cultivated persons. If we add all the special terms of every science and art, the number of English words would be far beyond one hundred thousand." Dr. Wm. Smith regards Marsh's figures as excessive, since Professor Max Müller has pointed out that Richardson and Webster give altogether 43,566 words. The truth probably lies between the numbers given by Müller and Marsh; but however that may be, we must regard Colonel Robinson as wrong, unless it be that he would become an authority, and has been busy counting some particular class of words to be found in his favourite Webster. In his vexation at

the conduct of the self-willed firm who were so happy in the use of 30,000 quotations, Colonel Robinson insists upon it that they must have searched nearly all the maps of all the countries in the world to provide their codes with such a string of unpronounceable proper names of persons and places, as those of which he has given the following specimens: Walkinreed, Agostonfalva, Agathee, Agrianonsi, Agvijador, Agnijonaso, Agujetage, Agyajbiborla, Adiaphentic, Aboikna, Abrostola, Aboraca, Alberus, Abisares Acontes, Abiactum, Adranum. Another firm has annoyed the Director General of Telegraphs and his subordinates by using words such as "adiapnensthia" that are to be found in technical books, but are not to be met with in ordinary dictionaries. We have alluded to Webster, and did so knowing that it is Colonel Robinson's authority. When the word "adiapnensthia" was brought to his notice he turned to his author, but the word was not there, and he concludes, not unnaturally, that it is more Greek than English. Such words as these he calls "intolerable," and we think the public will generally sympathise with him in condemning them. One gentleman, we are told, who was shown a botanical dictionary, exclaimed with delight, "What words for my code," but he could never have bestowed a thought on the extra trouble given by such words to the unfortunate signallers of the Telegraph department. Colonel Robinson in a letter to the Chamber of Commerce observes, "Conventional language as used in India is a Frankenstein of Indian origin, which probably grew out of the rule that obtained up to 1869 that each figure in a number should be written out in full and charged for as one word, thus making cypher exceedingly expensive, but now that five cyphers are charged for at the average length of a word, viz. five, cypher is as cheap as ordinary language. Consequently if conventional language codes were suppressed the injury inflicted on the mercantile classes would be only nominal; the only question is how much time should be allowed for the change."

After an interchange of much correspondence with the Director General of Telegraphs the Chamber of Commerce at last took what we must regard as a sensible and conciliatory step; they proposed for Colonel Robinson's consideration that, with the view to such an amendment of the codes used by merchants in Calcutta as would render messages prepared from them admissible without challenge, official intimation should be given as to *what is* and *what is not* a code message. They asked for a clear definition authoritatively pronounced, so as to guide the commercial public in so framing their telegrams as to insure absolute admissibility; for instance, would all the words contained in Webster's Dictionary, and all the geographical nomenclature in Johnston's General Gazetteer, and in the Index to Philip's Imperial Library Atlas, or other standard works of a similar character, be accepted as component parts of a code-message in the English language? The Chamber of Commerce finally placed before the Director General of Telegraphs this concise view of the case; "Without some definite and authoritative statement as to what will be acceptable to the Telegraph department, the Committee need hardly point out that, with every desire on the part of the framers to avoid the introduction of words that might possibly be objected to, codes may be so drawn up as to render them valueless, and the time and labour spent in amending them of no avail." Colonel Robinson had over and over again called attention to the fact that the authorities at a transmitting station have power without appeal to reject messages framed in an objectionable way; it would then have been easy for him to have named some standard work as containing words *to which he would not object*. The desire to be safe would have been an inducement to merchants to have followed the track thus indicated; but instead of meeting the public half-way, the Director General contented himself in his reply to the Chamber, with postponing all authoritative action till the meeting of the St. Petersburg conference, telling the merchants what they already knew very well, "Words in Webster's dictionary and the nomenclature in Johnston's General Gazetteer and in the Index to Philip's Imperial Atlas are certainly admissible." "More than this," continued Colonel Robinson, "any proper names, be they of person, place or things, in England, in India, in China, in Japan, in Kamschatka, or anywhere else in the universe are admissible as code words." We may misjudge, but to us this phraseology looks like a display of temper, and we can only regret to gather from it that the Director General deliberately refused to avail himself of the opportunity afforded him by the Chamber of limiting the unrestrained use of the powers given by the Convention of Rome; at the same time the Director General in perfectly tantamount words admitted the public all along to have been acting strictly within their right, and we are therefore puzzled to find him at one time protesting against a state of things, which at another time he admits to be correct, and will do nothing to alter.

The public must now await the result of the next Conference at which Colonel Robinson will be sure to tell his *infandum dolorem*, and at which, it is to be hoped, certain books in each of the twenty-seven languages that may be used by message-senders will be authoritatively named as those which contain admissible words. Colonel Robinson might have anticipated such a measure, so far as Calcutta is concerned, in the way we have already indicated; but it may have been that Colonel Robinson lost his temper. It is amusing to read in connection with an entirely different subject, *viz.* a proposal to improve the telegraphic communication between Calcutta and Rangoon, that Colonel Robinson cannot resist the temptation of having a fling at "codes." He says, "irrespective of the difficulties of maintenance, there is another cause which has operated to block this line. Most of the telegrams sent over it are in what is vulgarly called 'Code.' To within the last two years code-messages were charged double and as cypher if the words used were other than ordinary English Dictionary words familiar to the signallers. Unfortunately in view to assimilating our internal to the international rules these restrictions were removed, and now codes consist of all the long words and all the long names of all the towns and villages of all the countries in the world. The result is that a modern code-message such as is used by the advanced (u intelligence) firms occupies the wire at least four times as long as an ordinary English message paying the same price." If we might hazard a guess, it would be that the true nature of the grievance felt by the Telegraph department has not yet been touched on in the course of this long article; in spite of all the stress laid on strange and unpronounceable words, we are inclined to think the objectionable feature of code-messages is of a nature for which the public are in no way responsible. It is customary in the Telegraph department, owing to a want of confidence in the correctness and skill of the signallers, to make them, when transmitting, repeat all proper names, thus giving the men extra labour and occupying the wires twice the time; how delightful would it be then to the department, if code-messages were got rid of *altogether*, consisting, as they do, almost entirely of proper names.

INDIAN DISEASES.

IN Dr. Cuningham's able report on the sanitary history of the European troops in India during the year 1873 we find the following table, from which it will be seen that the ten chief causes of mortality in each presidency stand in the following order:—

DEATHS PER 1,000.

Bengal.

1.	Hepatitis	1·80
2.	Enteric fever	1·53
3.	Heart diseases	1·42
4.	Malarial fevers	1·39
5.	Apoplexy	1·37
6.	Phthisis pulmonalis	1·20
7.	Respiratory diseases	1·15
8.	Injuries	1·09
9.	Cholera	·90
10.	Dysentery	·79
	Total deaths to these ten causes ...	12·64
	Total death-rate of the year ...	15·40

Madras.

1.	Hepatitis	4·0
2.	Dysentery	3·65
3.	Heart diseases	2·18
4.	Injuries	1·92
5.	Cholera	1·22
6.	Phthisis pulmonalis	1·13
7.	Apoplexy	·96
8.	Enteric fever	·78
9.	Malarial fevers	·70
10.	Suicidal deaths	·44
	Total deaths to these ten causes ...	16·98
	Total death-rate of the year ...	18·29

Bombay.

1.	Hepatitis	2·35
2.	Apoplexy	1·41
3.	Enteric fever	1·31
4.	Heart diseases	1·22
5.	Phthisis pulmonalis	1·03
6.	Injuries	·75
7.	Dysentery	·56
8.	Malarial fever	·56
9.	Respiratory diseases	·38
10.	Suicidal deaths	·28
	Total deaths to these ten causes ...	9·85
	Total death-rate of the year ...	11·72

In all three tables hepatitis heads the list, though the death-rate due to it varies greatly in the three presidencies, from 4 per 1,000 in Madras to 1·80 in Bengal, Bombay occupying a middle place. Dysentery, which has an intimate relation to hepatitis, follows a similar order as regards the comparative extent in which it affected the mortality in the three presidencies, for while it stands second in Madras it comes seventh in Bombay and tenth in Bengal. The figures in some respects present a remarkable contrast to those of 1872, during which year both in Bengal and Bombay cholera was in the first rank, occasioning a mortality of no less than 10·66 in the one and 3·33 in the other.

In Bombay there was no cholera, while the amount of that disease was greater in

Madras than Bengal. Looking at the *total* death rate, Madras, it will be perceived, was still unfortunately prominent. It must be remembered that these figures have reference to European troops alone, and that it does not necessarily follow that the Madras Presidency is the most unhealthy for Europeans generally. The habits of the British soldier differ probably to some extent in Madras from those of his class elsewhere. Toddy and arrack are more abundant in Southern India than in the North, and the consumption is much larger. In Bengal, smoking the hookah is an indulgence among all classes of Hindoos from morning to night at every moment of leisure, but as you travel towards the equator the hookah is only to be seen in the hands of Mahomedans or North-country visitors. While *in Bengal* the European soldier may feel little temptation to become a hookah smoker, but in Madras he is greatly influenced by the prevalent passion for toddy and arrack drinking. The climate in the South, too, is not favourable to much exercise and physical exertion, so that commanding officers are not, we imagine, disinclined to be easy-going in regard to the amount of drill imposed on their men. This cautiousness is highly to be commended, for throughout a great part of the year anything like worry to the troops would entail bad results; but it would seem to be plain that in the Southern presidency some step is urgently required to bring the life of the British soldier into a routine more favourable to the healthiness of his liver. This ought not to be difficult; it is well known what causes liver-complaint, and what promotes a healthy action of the system; stimulants and inaction are the great agents for bringing about hepatitis. The craving for drink which is unfortunately so easily gratified in Madras may be hard to combat, yet it should be opposed as much as possible. Temperance societies, for instance, should receive every encouragement; and with regard to inaction commanding officers have it all their own way; whatever the medical authorities recommend they can fully carry out. We should be sorry to venture on anything like "laying down the law" in regard to this subject; but to our mind the conclusion is irresistible from Dr. Cuningham's figures, that it is incumbent on the heads of the Madras Army to make the routine life of the British soldier harmonise better with the climatic conditions of that presidency.

Dr. Cuningham sees no reason to modify the conclusions which were expressed by him a year ago in reference to the cholera-outbreak of 1872, but as those conclusions have to some extent been misrepresented and misunderstood, and as the questions involved are of great practical moment, he has recapitulated the most important of them. He considers that the history of the epidemic of 1872, added to previous experience, seemed to show as regards India:

1st.—That if human intercourse plays any part in the dissemination of cholera, it must be a very secondary part.

2nd.—That the facts of individual outbreaks, and especially the remarkable immunity of the attendants, are altogether opposed to the doctrine that the disease is spread by communication with the sick.

3rd.—That the theory which would explain the phenomena on the supposition that, in a year of epidemic prevalence, very many sources of water-supply over an enormous area had been polluted with cholera discharges, while in a year when cholera is dormant such pollution has either been rare or has not taken place at all, fails altogether to explain the facts either of wide-spread prevalence or of individual outbreaks.

4th.—That there is no evidence to show that a person affected with cholera multiplies within himself any specific poison, or that he disseminates any such poison either by means of the intestinal or any other discharges.

5th.—That cholera in India appears to be due to certain conditions of air and soil, or of both combined, as yet little understood, which are always more or less present in the Lower Provinces of Bengal—the endemic area—and which appear only occasionally in the Upper Provinces, the intervals between the times of their appearance increasing as we proceed to the North-West, and being so short in the immediate neighbourhood of the Lower Provinces that it is impossible to define exactly where the endemic limit ends.

6th.—That these conditions would appear to be often singularly localized both in the endemic and epidemic areas, as is evidenced by the very local character which so distinguishes outbreaks of the disease.

7th.—That the great danger arises from exposure to these conditions, and not from exposure to any emanations from the sick.

8th.—That even if the contagious character of cholera could be proved beyond all manner of doubt, any general system of quarantine sufficiently strict to be effectual is impracticable, and must do much more harm than good.

9th.—That the great safeguards against cholera are sanitary improvements—the improvement of drainage, of water-supply, of dwellings, of everything in short which can contribute to health. Of water suppiy it may be remarked, not that it may be safe only against cholera evacuations, and the results which have been theoretically ascribed to them, but that it may be safe against every form of impurity.

Dr. Cuningham puts forward his views in regard to the propagation of cholera most unhesitatingly, but it should be remembered that a large body of medical men differ from some of his conclusions *toto cœlo*.

Prior to the year 1871 enteric fever was but little recognised in India; since then its importance has had distinct acknowledgment, and deservedly so, since it produces considerable mortality in persons between 20 and 30 years of age, the period of life when it is most common. Dr. Bryden has shown satisfactorily that enteric fever has been known for many years, although it is only of late that it has received special attention as contributing no insignificant element to the class of disease called "continuous fever." A most remarkable incident of the year 1873 was the total disappearance of dengue as an epidemic fever. It was also a gratifying feature of the year that apoplexy and sun-stroke, taken together, were less prevalent and fatal than they had been in 1872; there were 174 cases and 76 deaths in 1873, whereas in the previous year there were 268 cases and 114 deaths. It is interesting to observe that in regard to apoplexy and sun-stroke Madras, which has shown so badly in regard to hepatitis and dysentery, is better off than the other presidencies; the ratios are 3·2 cases per 1,000 in Bengal, 2·2 in Madras, and 2·8 in Bombay; the mortality from this cause being in Bengal 1·37, Madras ·96 and Bombay 1·41. Of the 76 deaths 55 occurred in the months of May, June, and July; in Bengal 34 out of 50 occurred in May and June. Having already adverted to the evil fame of Madras for hepatitis and dysentery, we regret to observe that Dr. Cuningham states diarrhœa to have been more prevalent in Madras than in either Bengal or Bombay, but it occasioned no deaths in Madras. In the other presidencies there was no great amount of mortality from this cause.

It is satisfactory to learn from Dr. Cuningham's report that the children of European soldiers have suffered much less during 1873 than usual. The statistics of sickness and mortality among them during three years are shown in the following table:

Years.	Ratio per 1,000.		
	Admissions.	Daily sick.	Deaths.
1871 ...	846	39	74·21
1872 ...	946	39	99·08
1873 ...	741	33	60·29

In regard to the mortality of children Bengal is always especially unfortunate, the three presidencies showing these ratios; admissions per 1000, Bengal 822, Madras 671, and Bombay 583; daily sick Bengal 41, Madras 22, and Bombay 25; deaths Bengal 67 97, Madras 51·30, and Bombay 48·50. Dr. Cuningham observes, "The ratios for Bombay are the most favourable. But those for Bengal, lamentably high as they are, still show a great diminution on those of many previous years. In 1872, for example, in Bengal the cases of sickness among children were 990, the daily sick 47, and the deaths no less than 112·95 per 1000." The great proportion of children's ailments is entered under the head of ophthalmia, fevers, general debility, and diarrhœa. It is in the first six months of a child's life that it is more particularly liable to contract disease, and the next six months are very little better; but by and by when the *teens* are reached matters are by no means cruelly bad. The children of whom we have been speaking are the offspring of European soldiers in barracks and cantonments; and we would ask whether the sad mortality to which we have referred does not indicate a need for the benevolent action of the well-to-do classes. Surely some organization might be perfected for watching, to a useful extent, over those dawning lives which are now being sacrificed so fearfully wherever European soldiers are collected.

MYSORE AFFAIRS.

(*Communicated.*)

SOME months back the *Friend of India* referred to the unsatisfactory state of affairs in the province of Mysore. It is now the time to chronicle what appears to be the natural result of continued mal-administration. About a year ago the Chief Commissioner, in order, as we are informed, to compensate the provincial exchequer for the declining condition of the land revenue, determined upon enforcing a tax—the levy of which is unprecedented in British India, and which is said to have been first introduced into Mysore under the *régime* of Anche Bukshi, the infamous Dewan of Hús Naick, whose atrocities paved the way for Hyder's ascendancy to power. The impost in question is no other than a tax of sixteen rupees per annum on thatched houses: tiled houses being exempt. As the wealthier classes invariably live in tiled houses, it is not easy to discover the *rationale* of the tax, and the fact that the Jharmalis or high caste Brahmins of Mysore have been excused from payment does not decrease the difficulty. About three months ago the fiat went forth for the adoption of coercive measures towards defaulters. This step was not attended with much danger among the peaceable inhabitants of the lowlands, but any one acquainted with the province ought to have known that trouble was brewing in the highlands of Chitaldroog, a district the inhabitants of which have paid no revenue to Government for thirty years or more. Unfortunately the authorities did not take the trouble to strengthen their hands by calling in the aid of troops, although Colonel Prettyjohn, who had casually heard in Bangalore from a private source of the progress of events, pressed upon the Chief Commissioner the necessity of despatching a battalion of Barr sepoys to the disaffected district. The result of this anything but masterly inactivity was, that on January 8th the whole of the fanatical Mussulman population of Chitaldroog, who have hitherto found peaceable employment in the numerous coffee plantations of the district, headed by a man named Jami Mahomed, and followed by a good many Hindus, assembled undisturbed in the hill fort of Dodderi. Here they remained for three days. On the 11th raising the "Shanbogue" (the old Mysorean war cry) and brandishing their "wurgs" they sallied into the low country, and, it is said, sacked the Taluq cutchery. It is also said that the Taluk Amil was carried off after a promise on the part of Government not to levy the tax had been forced out of him.

The facts are given as they occurred; but it is to be regretted that there are not more minute particulars. One cannot be blind to the discontent with the present administration which prevails in Mysore. This discontent may be indirectly traced to the system which has for some time been followed by the Government of India of appointing as Chief Commissioner of Mysore officers who have had no previous acquaintance with the province. And yet the Mysore Commission is not lacking in able officers. Colonels Elliot and Puckle are both men of considerable administrative talent. But there is one officer whose claims have been systematically passed over, and whose ripened capacity and experience in the province ought at the present juncture to render him a peculiarly useful adviser to Lord Northbrook on Mysore affairs, Lieut. Colonel A. J. Bruce.

A STRANGE PLANT.

IN Bundlekund, Rohilkund and the Doab is to be found a remarkable weed, known locally as "kans," and which in some parts of the country has spread so widely that a radical remedy has been found necessary. Kans is no new thing, notices of it appearing in the oldest Hindoo books, but no man has yet written its true history. Tales of its destructive ravages have been handed down from father to son for many generations, but every one allows that the plant has increased much during the last fifty years, particularly in Bundelkund.

Kans, sometimes termed a weed, has also been described as the *Saccharum spontaneum*, while others call it a grass; yet it seems to be neither a grass nor a weed. Kans has peculiar properties of its own, which are the same wherever it is found, whether in Rohilkund or Bundelkund. It first makes its appearance in small scattered tufts, and looks like coarse grass, but soon grows so strong and thick as often to resemble young wood, and it is very dry and coarse. The roots spread first obliquely, intersecting one another, till, a few inches below the ground, they form a regular network, which effectually chokes all other plants and prevents them from ever reaching the surface of the soil. The roots then strike down a depth of eight or ten feet. In the hotseason partly from being trodden down and eaten by cattle, and partly from exsiccation, the pest becomes thin and stunted in height; but as soon as the rains begin, it at once revives and spreads to a wonderful extent, till the stems are four or five feet high, and so hard and thick that a man or horse can with difficulty walk through them. It continues in this state till the end of October, and remains green a month longer, but after March little remains except the everlasting roots. When once the plant has taken root in the course of a few years it covers whole fields and completely stops cultivation. Mr. F. O. Mayne, the Collector of Banda, has observed that kans "if left alone, exhausts itself in fifteen or sixteen years, but if the land is cultivated or disturbed it lasts longer. After fifteen or sixteen years the land again is fit for cultivation, and kans never makes its appearance again for seven or eight years. After that kans again shows itself, and unless at once checked, the lands must be again abandoned as before for a similar period. There are many old men who have seen kans come and disappear two or three times in the same piece of land within their own memory." In some places, where the peasants have large cattle and strong ploughs, the plague is kept down, while elsewhere a *machine* called a *bukar* is used, which penetrates below the surface of the earth and cuts away the roots, thus leaving the ground partially free for cultivation for that season, but the weed is not permanently destroyed. The machine is very rarely used in Banda, where the people are impoverished, but it is a common implement of agriculture in the Humeerpore District. If, however, kans is once allowed to gain head and its network of roots to spread and thicken, its eradication becomes almost an impossibility. The more you plough the worse the grass becomes, and no crops will grow. Many methods for its destruction have been tried, but all in vain. Flooding, however, is the most successful remedy yet applied, the peasants possessing the idea that while kans is removed from the surface by this means, the soil itself is at the same time so hardened by the trampling of cattle and the heat of the sun that the weeds cannot again break through the crust, and by continuing the process for three successive years the roots are at last smothered and disappear. And that flooding has this effect is borne out by a report that in soils left fallow for some years the land breaks up into large holes, which in the rains are filled with water, that saps and rots the kans roots and destroys them. In marshy lowlands kans has been often known to disappear in five years, owing to the trampling of the surface with cattle. Whilst, however, such means may answer in a field here and there, or even experimentally on a large scale, the process is manifestly too expensive to become of any general use. Where hundreds of acres are covered with kans, who can afford to make bunds for flooding such immense areas, and where are the cattle to trample out a weed covering several square miles? Simple flooding, without trampling, does not answer. Fire has been tried, but it does not touch the roots, and whilst it burns the grass itself, the ashes left behind serve as manure to the kans, which grows more plentifully, higher, and more rapidly the next rains. In fact, Mr. Mayne says, the only true remedy against the spread of kans is a light assessment and light rents. The people can then buy good ploughs and large strong bullocks, and can feed both themselves and their cattle, and they will not then allow the kans to get ahead. On the other hand, if Government levies too high a rate, either the zemindars throw their fields out of cultivation for a time in order to force a fair revenue and meanwhile the kans spreads, or the landholders become gradually ruined, and there is a want of peasantry, want of seed, want of cattle, of ploughs, and of food. The second state of affairs generally follows the first, and so in either case lands get out of cultivation and kans springs up, and the people are not able to keep it down. And when once kans has taken root no available means will rid the people of it: the fields must be left uncultivated for more than a decade.

There is no known plan or process by which this grass can be destroyed. The soil where it is most abundant is marshy and exceedingly tenacious, the depth of the roots rendering eradication impossible. Any partial disturbance of them is found to assist rather than hinder the progress of the plague, which acquires strength alike from fire and flooding.

MOULMEIN TIMBER.

THE teak timber exported from Moulmein for the past half century has had an unrivalled reputation; it is the strongest that is made use of in all Europe, and the most suitable for building durable ships. That Moulmein teak is greatly prized

in the Government, and other dockyards in the United Kingdom, is proved by the testimony of Colonel Beddome, Inspector of Forests in Madras, who says, "the dockyards are well supplied with Burma teak, which is obtained at prices varying from 13 to 16 £ per load of 50 cubic feet. The consumption is very large in the construction of both iron-armour-plated and of wooden vessels, and it would be still more used, if the supply were equal to the demand." Colonel Beddome has done some injustice to Moulmein in publishing a statement that the statistics of the trade of the port give a direct denial to. The exports of Timber from Burma have been as follows

	Tons.
1870-71	81,029.
1871-72	87,545.
1872-73	115,643.
1873-74	116,902.

These figures show that the increasing demand of the European market has been met by an increasing supply from Moulmein and Rangoon. It is a matter of surprise that Colonel Beddome's statement should be printed and published in the British Burma Gazette, and that neither Mr. Eden nor the trading portions of the community should take any trouble to refute an insinuation of a prejudicial nature. There is one good section in Colonel Beddome's report, wherein he condemns the system of using Italian oak (Quercus Sessiliflora) which is "always full of cracks, that have to be filled up with lime and tallow, and has been proved to last, less than half as long as teak." It is added that the only advantage in Italian oak is that it is obtained "with the curve required for frame work." Here is a revelation startling to shipowners and well worthy of Mr. *Plimsoll's* attention. Colonel Beddome states that teak is more durable than Italian oak, and he instances the following cases. "The *Albion* built of Italian oak in 1842 at Devonport, was repaired in that dockyard in 1862. Almost all her timbers were found in a rotten state and new timber to the value of £10 000 was required in her repair. In the same year, the *Bombay*, built in Bombay in 182-, was repaired at Devonport, and there was hardly an unsound piece of wood found in her, or a piece taken out that was not put in again, in some form or other." The demand for curved timber (called crooks in Burma) is increasing in England, and with the view of bringing Malabar teak into notice, Colonel Beddome, a Madras Officer, brings the wood of his division prominently before the dockyard authorities. Natural though it may be for a zealous officer to laud the products of his special province, it should not be done to the prejudice of Burma teak, a wood which is not to be rivalled in any part of India. The Inspector of Forests has suggested that a Scotch forester be deputed to "spend several days in the Chatham and Sheerness dockyards to make himself fully acquainted with the sizes and curvatures required in timber, and to make experiments for creating an artificial curved growth in young trees, such as are carried on with some of the Italian oak-trees." Colonel Beddome says, "all the authorities connected with the building of wooden vessels assured me that it would well repay them to give double the price for teak with the natural curve than for the straight logs as now always supplied from Burma." The Madras Government is to be called upon to secure the outturn of naturally crooked and stunted teak. We shall be very much surprised if we find Mr. Eden slow and unwilling to point out to the Indian and English authorities that crooked timber can be obtained from Moulmein superior to that procurable in the Nellambur forests. A difference is that Forest officers in Burma have not yet learnt to make *crooked* reports! B.

LONDON LETTER.

LONDON, *Jany. 1st.* 1875.

A happy new year to all the readers of the *Friend*, and many returns of it. While you are enjoying a glorious Christmas, we are suffering from the severest, the most gloomy and the most fatal weather that has been known for a dozen years. Throughout Europe the cold is intense. In England, night after night, ten, twelve and fifteen degrees of frost are registered, and as yet there is no symptom of improvement. The sun rarely makes his appearance, and we have often, to add to our discomfort, a dense fog, and yesterday at midday, in the city, it was nearly as dark as at midnight. Many of the rivers are frozen over. In the country, the snow storms have been peculiarly severe, and many have perished under the pressure of the frost and snow. In the city of Exeter yesterday, the snow was ten inches deep, and where there has been a drift it is often several feet thick. The weather has been particularly fatal to the aged, and day after day the obituary of *The Times*, generally three quarters of a column in length, records the death of from fifteen to twenty between 70 and 90. The condition of London is deplorable. It is under the government of vestries, the worst in the world, and it is a disgrace to civilization. It has also been the most calamitous of seasons, and any thing but a happy Christmas. The *La Plata*, which was overloaded with the submarine cable, has foundered at sea, as it was predicted, and all the lives were lost save two. The *Cospatrick*, with 450 emigrants for New Zealand, has also been lost, with almost every one on board, and on Christmas eve, by the breaking of a tire or axle on one of the carriages of a train not far from Oxford the whole train, with the exception of the two hindmost carriages, was thrown off the line and precipitated down the bank into the stream; thirty-four were killed and more than seventy wounded, some of them very severely. What makes this catastrophe the more melancholy is that the majority of the passengers were travelling for their Christmas holiday. Scarcely a day passes without the announcement of some fresh railway accident, as it is the custom to call these calamities. The Shipton accident to which I have alluded is now under full investigation, and it will be a most searching one; the whole country is agitated to a very extraordinary degree, for there can be little doubt that with a continuous brake, and a free communication between the passengers and the guard and driver, the train might have been stopped in time to prevent the accident. The damages the Railway Company will have to pay will be heavy—the last assessment made by a jury was 80,000 Rupees, for shattering the nerves of a farmer. But there must be some power created by Parliament to compel the Companies to adopt the improvements which have been so frequently urged by the Board of Trade. The whole system of Railway economy requires vigorous and impartial overhauling.

The state of the army here is attracting the serious attention of the country and the ministry. The soldier is now almost the worst paid man in the country, and with the universal rise in wages his pay is disproportionately defective. It is not sufficient to attract recruits, and their character is in every respect becoming more and more deteriorated. The desertions are moreover alarming. An idea is gaining ground that unless the pecuniary position of the soldier is improved, it will be necessary to resort to conscription. At a late public dinner, the Duke of Cambridge distinctly alluded to such a contingency; and it is conjectured that this may have been intended to prepare the public mind for an increase in the army estimates, as it may be doubted whether John Bull, having got rid of the press gang, will stand such a continental measure as a conscription, and would not rather submit to an augmented taxation.

The Calcutta correspondent of *The Times*, a fortnight or three weeks ago, brought forward the subject of your Staff Corps in a very elaborate communication, and placed the incalculable injury it had inflicted on the Indian army, in so clear and palpable a light as to attract general attention. It had never been so perspicuously exhibited before. He stated moreover that at the present time the Government could not put more than 30,000 men in the field. The condition to which this precious measure of the Staff Corps has reduced the army appears incredible, and the letter of *The Times* correspondent has done signal service by sounding the note of alarm, which has been echoed through the press, and discussed with judgment, more especially by the three journals which understand Indian questions and take a deep interest in them, *The Times*, the *Spectator* and the *Pall Mall*. There is not to be found on the page of History any record of such an army in which the number of subalterns is exceeded by that of captains, who are fewer than the field officers, and in which the major portion of the officers have no military duty to perform, and are doing what is humorously called "general duty," that is, drawing their military pay until they have served, or rather "lived" long enough to mature their claim to a military pension of £1,100 a year. It is a burlesque to call this an army, and it exposes us to the contempt of Europe. We have committed many blunders in India in the infancy of our rule, while we were serving our apprenticeship to the craft and mystery of Oriental government, but this folly, perpetrated in the maturity of our experience, which compromises the efficiency of the force, and at the same time exhausts the treasure of the State almost surpasses belief. To whose agency this fatal measure is due, I do not exactly know, but it ought to be exposed, lest the odium of it should fall upon some innocent official. It requires a root and branch remedy whatever it may cost.

The papers announce the death of Dempster Heming, the oldest member of the English bar, at the age of 96. Fifty-eight years ago he held the most lucrative offices in the Supreme Court in Calcutta, and was officially allowed the use of the money deposited with him, as Lord Holland—then Henry Fox—was

allowed to employ the sums entrusted to him as Paymaster of the Forces. In both cases enormous fortunes were accumulated, but this source of wealth has long since been dried up by the improved principles of the age.

M.

---

*THE RAMAYANA OF VALMEEKEE.**

FIRST NOTICE.

MR. GRIFFITH has now published the fifth and last volume of his excellent translation of the Ramayana, a work which few men would have undertaken and fewer still carried to completion

It may be remembered that at the end of the fourth volume a vast host had assembled together for the succour of Sita, held captive by the Lord of Lunka. They had pressed onward from all parts of the Peninsula in the direction of Ceylon, but their progress had been stopped when the sea was reached. This is the description of the building of the bridge over which the warriors of Rama are supposed to have pressed to Sita and victory—

Unrooted trees to earth they threw,
And to the sea the timber drew.
The stately palm was bowed and bent,
Asokas from the ground were rent,
And towering Sals and light bamboos,
And trees with flowers of varied hues,
With loveliest creepers wreathed and crowned,
Shook, reeled, and fell upon the ground.
With mighty engines piles of stone
And seated hills were overthrown:
Unprisoned waters sprang on high,
In rain descending from the sky:
And ocean with a roar and swell
Heaved wildly when the mountains fell.
Then the great bridge of wondrous strength
Was built, a hundred leagues in length.
Rocks huge as autumn clouds bound fast
With cordage from the shore were cast,
And fragments of each riven hill,
And trees whose flowers adorned them still.
Wild was the tumult, loud the din
As ponderous rocks went thundering in.
Ere set of sun, so toiled each crew,
Ten leagues and four the structure grew;
The labours of the second day
Gave twenty more of ready way,
And on the fifth, when sank the sun,
The whole stupendous work was done.

In the meantime Ravan attempts to persuade his fair captive that her lord is dead, by means of a magic head, stained with dust and blood and purporting to have been severed from the body of Rama. Sita's lament is very impressive—

As lie the dead she lay: at length
Slowly regaining sense and strength,
On the dear head she fixed her eye
And cried with very bitter cry:
'Ah, when thy cold dead cheek I view,
My hero, I am murdered too.
Then first a faithful woman's eyes
See sorrow, when her husband dies.
When thou, my lord, wast nigh to save,
Some stealthy hand thy death wound gave.
Thou art not dead: rise, hero, rise;
Long life was thine, as spake the wise
Whose words, I ween, are ever true,
For fate lies open to their view.
Ah lord, and shall thy head recline
On earth's cold breast, forsaking mine,
Counting her chill lap dearer far
Than I and my caresses are?
Ah, is it thus these eyes behold
Thy famous bow adorned with gold,
Whereon of yore I loved to bind
Sweet garlands that my hands had twined?
And hast thou sought in heaven a place
Amid the founders of thy race,
Where in the home deserved so well
Thy sires and Dasaratha dwell?
Or dost thou shine a brighter star
In skies where blest immortals are,
Forsaking in thy lofty scorn
The race wherein thy sires were born?
Turn to my gaze, O turn thine eye:
Why are thy cold lips silent, why?
When first we met as youth and maid,
When in thy hand my hand was laid,
Thy promise was thy steps should be
Through life in duty's path with me.
Remember, faithful still, thy vow,
And take me with thee even now.
Is that broad bosom where I hung,
That neck to which I fondly clung,
Where flowery garlands breathed their scent,
By hungry dogs and vultures rent?
Shall no funereal honours grace
The parted lord of Raghu's race,
Whose bounty liberal fees bestowed,
For whom the fires of worship glowed?
Kausalya wild with grief will see
One sole survivor of the three
Who in their hermit garments went
To the dark woods in banishment.
Then at her cry shall Lakshman tell;
How, slain by night, the Vanars fell;
How to thy side the giants crept,
And slew the hero as he slept.
Thy fate and mine the queen will know,
And broken-hearted die of woe.
For my unworthy sake, for mine,
Rama, the glory of his line,
Who bridged his way across the main,
Is basely in a puddle slain;
And I, the graceless wife he wed,
Have brought this ruin on his head.
Me, too, on him, O Ravan, slay:
The wife beside her husband lay.
By his dear body let me rest,
Cheek close to cheek and breast to breast.
My happy eyes I then will close,
And follow whither Rama goes.'

The lines—

"Shall no funeral honours grace
The parted lord of Raghu's race?"—

indicate those admirable rites and funeral prayers which Professor Müller has described in his excellent work, *Die Todtenbestattung bei der Brahmanen*. Sita laments that the body of Rama will not be honoured with rites and prayers, nor will the Brahman priest while laying the ashes from the pile in the bosom of the earth, pronounce over them the solemn and magnificent words; "Go unto the earth, thy mother, the ample, wide, and blessed earth..... And do thou, O Earth, open and receive him as a friend with sweet greeting: enfold him in thy bosom as a mother wraps her child in her robe."

Rama's men close round the threatened city:

Some in their headlong ardour scaled
The rampart's height, the guard assailed,
And many a ponderous fragment rent
From portal, tower, and battlement.
Huge gates adorned with burnished gold
Were loosed and lifted from their hold;
And post and pillar, with a sound
Like thunder, fell upon the ground.
At every portal, east and west
And north and south, the chieftains pressed:
Each in his post appointed led
His myriads in the forest bred.
'Charge, let the gates be opened wide:
'Charge, charge, my giants,' Ravan cried.
They heard his voice, and loud and long
Rang the wild clamour of the throng,
And shell and drum their notes upsent,
And every martial instrument.
Forth, at the bidding of their lord,
From every gate the giants poured,
As, when the waters rise and swell,
Huge waves preceding waves impel.
Again from every Vanar throat
A scream of fierce defiance smote
The welkin: earth and sea and sky
Reechoed with the awful cry,
The roar of elephants, the neigh
Of horses eager for the fray,
The frequent clash of warriors' steel,
The rattling of the chariot wheel.
Fierce was the deadly fight: opposed
In terrible array they closed,
As when the Gods of heaven enraged
With rebel fiends wild battle waged.
Axe, spear, and mace were wielded well:
At every blow a Vanar fell.
But shivered rock and brandished tree
Brought many a giant on his knee,
To perish in his turn beneath
The deadly wounds of nails and teeth.

At last Rama launches at his foe a dart "whose fire was kindled by the almighty sire."

'T was feathered with the rushing wind;
The glowing sun and fire combined
To the keen point their splendour lent;
The shaft, ethereal element,
By Meru's hill and Mandar, pride
Of mountains, had its weight supplied.
He laid it on the twisted cord,
He turned the point at Lanka's lord,
And swift the limb-dividing dart
Pierced the huge chest and cleft the heart,
And dead he fell upon the plain
Like Vritra by the Thunderer slain.
The Rakshas host when Ravan fell
Sent forth a wild terrific yell,
Then turned and fled, all hope resigned,
Through Lanka's gates, nor looked behind.
His voice each joyous Vanar raised,
And Rama, conquering Rama, praised.
Soft from celestial minstrels came
The sound of music and acclaim.
Soft, fresh, and cool, a rising breeze
Brought odours from the heavenly trees,
And ravishing the sight and smell
A wondrous rain of blossoms fell:
And voices breathed round Raghu's son:
Champion of Gods, well done, well done.

Mr. Griffith has omitted the canto describing the sights and sounds of evil omen portending the destruction of the giant, but one line—

"His horses poured their burning tears"

is new and is too Homeric to be passed by unnoticed. Read the following extract from De Quincey: "The old Homeric superstition which connects horses by the closest sympathy, and even by prescience, with their masters—that superstition which Virgil has borrowed from Homer in his beautiful episode of Mezentius (Rhœbe diu, res si qua diu mortalibus ulla est, Viximus)—still lingers unbroken in Crete. Horses foresee the fates of riders who are doomed, and express their prescience by weeping in a human fashion." The horses of Achilles weep in Iliad xvii, on seeing Automedon, their beloved driver, prostrate on the ground. With this view of the horse's capacity, it is singular that in Crete the animal by preference should be called the brute, or irrational creature. But the word has, by some accident, been lost in the modern Greek. As an instance both of the disparaging name, and of the ennobling superstition, take the following stanza from a Cretan ballad of 1825, written in the modern Greek: "Upon which he mounted, and his horse wept; and then he saw clearly how this should bode his death." Under the same old Cretan faith, Homer in Iliad xvii. 437, says:—"Tears, scalding tears, trickled to the ground from the eyelids of them (the horses), fretting through grief for the loss of their charioteer."

The meeting between Sita and her lord is powerfully pourtrayed:

He saw her trembling by his side,
And looked upon her face and cried:
'Lady, at length my task is done,
And thou, the prize of war, art won.
This arm my glory has retrieved,
And all that man might do achieved;
The insulting foe in battle slain
And cleared mine honour from its stain.
This day has made my name renowned
And with success my labour crowned.
Lord of myself, the oath I swore
Is binding on my soul no more.
If from my home my queen was reft,
This arm has well avenged the theft,
And in the field has wiped away
The blot that on mine honour lay.
The bridge that spans the foaming flood,
The city red with giants' blood;
The hosts by King Sugriva led
Who wisely counselled, fought and bled;
Vibhishan's love, our guide and stay—
All these are crowned with fruit to-day.
But, lady, 'twas not love for thee
That led mine army o'er the sea.
'Twas not for thee our blood was shed,
Or Lanka filled with giant dead.
No fond affection for my wife
Inspired me in the hour of strife.
I battled to avenge the cause
Of honour and insulted laws.
My love is fled, for on thy fame
Lies the dark blot of sin and shame;
And thou art hateful as the light
That flashes on the injured sight.
The world is all before thee: flee:
Go where thou wilt, but not with me.
How should my home receive again
A mistress soiled with deathless stain?
How should I brook the foul disgrace,
Scorned by my friends and all my race?

---

* *The Ramayan of Valmiki Translated into English Verse.* By RALPH T. H. GRIFFITH, M. A., Principal of the Benares College, Vol. V. London: Trubner and Co. Benares: E. J. Lazarus and Co. 1874.

For Ravan bore thee through the sky,
And fixed on thine his evil eye.
About thy waist his arms he threw,
Close to his breast his captive drew,
And kept thee, vassal of his power,
An inmate of his ladies' bower.'

Sita replied—

'Canst thou, a high-born prince, dismiss
A high-born dame with speech like this?
Such words befit the meanest hind,
Not princely birth and generous mind.
By all my virtuous life I swear
I am not what thy words declare.
If some are faithless, wilt thou find
No love and truth in womankind?
Doubt others if thou wilt, but own
The truth which all my life has shown.
If, when the giant seized his prey,
Within his hated arms I lay,
And felt the grasp I dreaded, blame
Fate and the robber, not thy dame.
What could a helpless woman do?
My heart was mine and still was true.
Why when Hanuman sent by thee
Sought Lanka's town across the sea,
Couldst thou not give, O lord of men,
Thy sentence of rejection then?
* * * * *
To Lakshman then she turned and spoke,
While sobs and sighs her utterance broke;
'Sumitra's son, a pile prepare,
My refuge in my dark despair.
I will not live to bear this weight
Of shame, forlorn and desolate.
The kindled fire my woes shall end
And be my best and surest friend.'
His mournful eyes the hero raised
And wistfully on Rama gazed,
In whose stern look no ruth was seen,
No mercy for the weeping queen.
No chieftain dared to meet those eyes,
To pray, to question or advise.
The word was passed, the wood was piled,
And fain to die stood Janak's child.
She slowly paced around her lord,
The Gods with reverent act adored,
Then raising suppliant hands the dame
Prayed humbly to the Lord of Flame:
'As this fond heart by virtue swayed
From Raghu's son has never strayed,
So, universal witness, Fire
Protect my body on the pyre.
As Raghu's son has idly laid
This charge on Sita, hear and aid.'
She ceased: and fearless to the last
Within the flame's wild fury passed.
Then rose a piercing cry from all
Dames, children, men, who saw her fall
Adorned with gems and gay attire
Beneath the fury of the fire.

The restoration of the lady, the reconciliation with Rama and the latter's distribution of gifts to his friends close the volume.

Ten thousand years Ayodhya, blest
With Rama's rule, had peace and rest.
No widow mourned her murdered mate,
No house was ever desolate.
The happy land no murrain knew,
The flocks and herds increased and grew.
The earth her kindly fruits supplied,
No harvest failed, no children died.
Unknown were want, disease, and crime:
So calm, so happy was the time.

In the original there follows an enumeration of the chief blessings which will attend the man or woman who reads or hears read this tale of Rama. These blessings are briefly mentioned at the end of the first Canto of the first Book, and it appeared to the translator unnecessary to repeat them in their amplified form. The Bengal recension (Gorresio's edition) gives them more concisely as follows: 'This is the great first poem blessed and glorious, which gives long life to men and victory to kings, the poem which Valmeekee made. He who listens to this wondrous tale of Rama unwearied in action shall be absolved from all his sins. By listening to the deeds of Rama he who wishes for sons shall obtain his heart's desire, and to him who longs for riches shall riches be given. The virgin who asks for a husband shall obtain a husband suited to her mind, and shall meet again her dear kinsfolk who are far away. They who hear this poem which Valmeekee made shall obtain all their desires, and all their prayers shall be fulfilled."

EPITOME OF NEWS.

Bengal and Calcutta.

— The total length of railways open in India on the 30th of June last was 5,822 miles.

— The Burmese envoy left Calcutta on Saturday morning *en route* to Gya.

— The receipts of the late Fine Arts Exhibition amounted to Rs. 2,500.

— Mr. C. E. Bernard goes home on furlough next month.

— The amount of tolls collected by the Port Commissioners at the Hooghly Bridge has fallen far short of the expectations that had been entertained.

— The principal rice harvest has now been completed throughout the greater part of Bengal, and the result has been generally favourable.

— During the stay of the *Glasgow* in Calcutta three of the crew died from cholera and one from heart disease, while five are still in hospital.

— The Chief Justice has nominated Mr. J. B. Roberts to the shrievalty of Calcutta for the next year.

— The attornies of the Calcutta High Court have decided to present the Hon'ble Sir R. Couch with a testimonial.

— A few days ago a boat-load of burning straw passed beneath the Hooghly Bridge, fortunately without doing any damage.

— The Yarkund Ethnological Collection, now being exhibited at the Indian Museum, will be closed on the 1st February, when the articles will be forwarded to Kensington.

— The Annual Dinner of the Calcutta Trades' Association took place on Monday night in the Town Hall, under the presidency of the Master, Mr. R. Allardice. The guests numbered nearly two hundred.

— The annual Brahmo procession took place, with unusual *eclat*, on Friday last. On Saturday nearly 2,000 persons assembled in the Town Hall to hear Baboo Keshub Chunder Sen's anniversary lecture.

— A deputation of Bhagulpore zemindars has presented the Lieutenant-Governor of Bengal and the Viceroy with addresses of thanks for their exertions during the recent famine.

— On Sunday evening a shocking accident occurred in Fort William, a private of the Buffs falling from a first-floor verandah on to the road beneath. His head was completely smashed, and he died the following morning.

— The Senate of the Calcutta University have decided that the Tagore Law Professor may be appointed for such term as the Senate think proper in each case, after considering the recommendation of the Syndicate, and that he shall be always eligible for re-appointment.

— The *Bharat Sungskarak* thinks there is much reason for congratulation at the fecundity of the Native Press. "But when the publications are scrutinized we are obliged to hide our diminished heads. There is nothing in them that is worth preserving or showing to others in proof of literary talent."

— The East India Association has presented a memorial to Lord Salisbury praying that the Indian authorities may be empowered to grant appointments in the Public Works Department to natives of India without requiring them to go to the expense of a voyage to England on the bare chance of obtaining a nomination through the Civil Service competitions, and then, should they succeed, to study three years at their own expense.

— Had it not been for the energy and perseverance of Colonel Wyndham the Calcutta "season" of 1874-75 would have been a dull one. He has given us a good Opera, and when that time honoured institution the Annual Fancy Fair was in its last throes he gallantly stepped forward and—what is far better—benefited the Calcutta charities, to a large extent. So far the expenses of the Opera have exceeded the receipts, and it is to be hoped that the Opera Ball to be given on the 5th of next month will improve Colonel Wyndham's exchequer.

— A large and enthusiastic meeting of zemindars and other gentlemen interested in the restoration of the B. A. classes in the Krishnaghur College, was held in the Hall of the College on Saturday last. The *Hindoo Patriot* says that more than Rs. 16,600 was collected on the spot—including subscriptions of Rs. 5,000 each from Coomar Khitis Chandra Roy of Nuddea and Baboo Nuffer Chunder Pal Chowdhry, and Rs. 1,000 from Baboo Surendro Nath Pal Chowdhry. An influential committee was appointed to collect subscriptions and otherwise to aid in carrying out the intentions of the Lieutenant Governor.

— Mr. English's dramatic *troupe* has now been playing in Calcutta for a considerable time, and appears to be generally approved of, but we are informed that the London Manager has had enough of the east, which is not, he finds, such an El Dorado as he was led to believe. It is probable that Miss Carry George will bring out a first-class company from Australia, for the ensuing season; the last few months have shown that a good colonial *troupe* has no reason to dread comparison with a London one. This talented actress is now in Calcutta *en route* for Australia and will appear in a *recherché* performance at the Opera House on Tuesday night.

— The *Englishman* says that the facts about the Chief Justice's resignation are as follows: In September Sir Richard Couch wrote privately to the Home Secretary, intimating his wish to resign about the end of February, 1875, but reserving the date in view to a decision being come to as to his service for pension. The pension point was examined in the Home and Financial Departments, and the Chief Justice was informed, demi-officially, that until he fixed a definite date for his retirement, nothing would be done. On the 28th December the Chief Justice wrote, fixing a date for retirement, and this was announced to the Secretary of State, both by despatch and by telegram, on the 31st.

— The Government of Bengal has decided not to curtail the Doorga Puja holidays as prayed for by the Chamber of Commerce. At the instance of the Government of India, to whom the subject had been submitted for consideration, some of the most influential native gentlemen were consulted and their replies indicate a unanimous opposition to any proposal for a curtailment of the general holiday during the Doorga Pooja; and as regards the native employés of the Custom House it is suggested that if with a view to meet the wishes of the mercantile community the holidays in that office are to be limited to one close week, the work entailed by the opening of the Customs House during the rest of the vacation should be met by relays of workers to be remunerated by extra fees.

— From the 1st April 1875, the following rates of pay will be allowed to all Majors of Royal Artillery and Engineers serving in India, and from the same date, the special command allwances of Rs. 250 and and Rs. 100 per mensem now given to officers commanding Heavy and Garrison batteries will cease. Majors of Horse and Foot Artillery, with their batteries, will draw Rs. 929-6-4 and Rs. 759-3-0 respectively. This, in assimilation with the rule in force out of India, will include a battery command allowance, which is fixed at Rs. 50. Majors of Royal Engineers, when not in receipt of any staff salary or command money, will draw Rs. 709-3 (the same as Majors of Foot Artillery, less the command allowance), and when in receipt of a consolidated pay, instead of Rs. 140 as at present. Majors of Royal Artillery and Engineers in receipt of staff salaries, will draw Rs. 640-14 as allowed to Majors of other branches who draw staff salaries.

— It having been determined that an establishment of seven European officers for each Native Regiment of Cavalry and Infantry should, as a rule,

be present in India, and that the places of certain absentees, though in India, should also be temporarily filled as if they were on furlough in Europe, the Governor General in Council has notified that qualified officers may be appointed as probationers for the Indian Staff Corps temporarily to fill vacancies in Native Regiments, which may be caused by the absence of any of the permanent establishment including the 2nd Wing Subaltern, under the following circumstances, *viz.*:—

I.—On furlough on private affairs or medical certificate out of India (furlough without pay or under Rule XI of the furlough rules of 1868 excepted) unless when Officers are already away on furlough, and one is expected to rejoin within six months;

II.—Officiating in an appointment Civil or Military, when it is known that the Officer will not return to his regiment;—or

III.—Officiating *on probation* in a Civil or Departmental appointment; when the Officer's confirmation in the appointment merely depends on his passing the prescribed tests on completion of the regular period of probation.

But whenever the services of an unemployed Officer are available to fill the vacancy, no fresh appointment to the Staff Corps on probation can of course be made.

North India.

— Two divorce cases will shortly be tried in the High Court of the North-West Provinces.

— The 25th Regiment left Jubbulpore for Bombay on Saturday last.

— The railway bridge over the Chenab is rapidly approaching completion. It is the longest bridge in the world.

— Simla has had a fair fall of snow at last, and there are prospects of the various ice-pits being filled before the winter is over.

— While two European lads were playing with a gun, not knowing it to be loaded, in Lucknow recently, the trigger was pulled "in fun," and one of the boys killed.

— The Governor-General proposes to visit Delhi about the middle of March. He will remain in camp a fortnight, and will hold a durbar for the reception of the native Chiefs in the vicinity.

— The memorial to be erected to the late Colonel Thompson at Khairabad is to take the form of a *bauli*, or staircase well, for the frequenters of the fair and travellers in general.

— While returning from the Allahabad railway station a few nights ago, Lieutenant Hay, of the 2-22nd Regiment, was thrown from his horse and killed.

— The suit of Mulkah Jehan, a widow of one of the late Kings of Oudh, against the Deputy Commissioner of Lucknow, in reference to certain property valued at several lakhs, has been decided by the Civil Court in favour of the plaintiff.

— The Lieutenant-Governor of the North West has been on a visit to Jeypore and the Sambhur Lake. Sir Henry Davies is now at Dera Ismail Khan, where he intends staying some time. The Commander-in-Chief has lately visited the Maharaja of Puttiala.

— The Governor General in Council has directed the formation of an army reserve of one thousand horses, which for the present will be kept at the Saharunpore and Haupper Stud Depôts. Horses, invalided from corps and batteries under the provisions of the Bengal Army Regulations, will be sent to the former depôt if quartered at and above Umballa, and to the latter when stationed below it, under such instructions as may be issued from time to time by the Commander-in-Chief.

— It is reported, says the *Pioneer*, that a messenger lately arrived at Cabul from the Akhoond of Swat with the object of interceding for Sirdar Yakoob Khan, but that the Ameer refused in a most summary manner either to see the messenger or read his letter, remarking that such messages were generally false, and should not be allowed to reach him. Nauroz Khan, of Lalpoora, has written a submissive letter to the Ameer, which has been answered in a conciliatory manner. Naib Mahomed Alum Khan has been sending revenue and presents from Toorkestan.

— An amusing story is told by *Indian Opinion* of the Yarkund envoy. During his stay at Lahore, amongst other amusements which were prepared for his entertainment, was the musical performance of a local Patti. Next day he was asked what he thought of the songstress's talent, and he appeared to be somewhat unwilling to express his opinion, but on being pressed to do so, finally stated that he did not care much for it, and that the reason he was so chary of saying anything about the young lady was that he knew the newspapers would be certain to get hold of what he said and thought, and the news that he had wasted his time in so foolish a way would be sure to be read in Toorkestan. He is said to have stated that he felt, in common with all distinguished personages, a strong distaste for being made the subject of newspaper comment, and entertained a decided objection to having his daily doings and movements chronicled in the public press, though he supposed it was one of those inconveniences which always attended greatness!

— A pretty building, called the "Hall of Justice," has lately been erected by the men of the Deolee Irregular Force under the orders of Colonel J. D. MacDonald. The "Hall of Justice" has been constructed by Colonel MacDonald as his orderly-room, in which also he conducts his duties as Cantonment Magistrate. It is built in a picturesque spot and has been most tastefully constructed. The roof rests on a front and rear wall, pierced with artistically designed arches for the doors and windows, and at the sides on two columns. The space between the columns and end walls are filled with handsomely-designed trellis work executed in chunam. The painted windows in the front consist of single slabs of slate cut through in elaborate and handsome patterns. The centre and also the wall in several places are further decorated with various heraldic devices from designs by Lieutenant Neville, 14th Bengal Lancers, and Lieutenant Montague James, 3rd Bombay Cavalry, carved on slate and emblazoned. Amongst these are the arms of the Deolee Irregular Force, of the Agent, Governor General and Political Agents, of Colonel MacDonald and of other officers connected with the station. The ceiling is of lathe and plaster perfectly executed, and is coloured a pale-blue in panels; the panels being enclosed by a narrow gold beading. The blending of the colours in the decorations is most effective and pleasing. A church is also being built by the same workmen.

— Notwithstanding all the vicissitudes and uncertainties which attend this traffic in the hands of dealers having transactions with the European markets, 'cotton continues to take rank in the annual returns of the Central Provinces as one of the principal articles of export, and though not so profitable as in former years to either exporter or grower, it is no doubt still, to the latter, a remunerative branch of cultivation. The area under cotton cultivation for the Province generally was last year 880,315 acres, or slightly higher than it was during the past seven years. The season was on the whole a favourable one for the crop, a deficiency in the latter rains having protected it from discolouration, or what is known to the trade as "black leaf." Steam cotton presses have been set up at Hinganghat and Wurdah, and nearly the whole quantity exported from the Nagpore country has thus been despatched in "full pressed" bales ready for shipment. Cotton presses have as yet no where been set up in the Narbudda Valley and the article still leaves those districts in the shape of "dokras" or unpressed bales. The quality of the Narbudda Valley cotton is comparatively inferior, while that of Hinganghat has a European reputation; the one requiring trade inspection and classification, the other not; and hence probably the hesitation to set up cotton presses in the Narbudda Valley. The importance of a recognized quality, as connected with full pressing, was forcibly illustrated during the year in Berar, where considerable uneasiness among dealers prevailed on its becoming known that a very inferior variety of Hoshangabad cotton seed which was lately eradicated with much difficulty from Khandesh, and which is known commercially as the old Khandesh cotton, had been introduced into East Berar. The seed, it is said, was brought there by a speculative native who was charmed with the large yield from the plants, and other cultivators being equally captivated it has spread to so very considerable an extent that no one who has lately purchased cotton in the Oomraotee market can have failed to have met with it in his selections.

Bombay.

— Mr. Dadabhoy Nowrojee intends to proceed to England again.

— H. M.'s gunboat *Frolic*, Commander C. E. Buckle, has been ordered to the East Indian from the China, station.

— Eleven lakhs worth of bullion and specie, belonging to the Gaekwar, have been seized in the Western Capital.

— One hundred and sixty-three men of the 1st Bombay Light Cavalry have left Poona for Baroda for patrol duty.

— A correspondent of a Marathee paper states that the Gaekwar, in his confinement, is a prey to grief and anxiety. He passes sleepless nights, but sleeps well by day.

— Mr. Scoble, Advocate-General of Bombay, with Mr. Inverarity, of the Bombay Bar, will appear for Government before the Commission in the Gaekwar's case.

— The Duke of Connaught, accompanied by a distinguished suite, was to have embarked at Brindisi on the 15th January. Before coming to India he will make a tour in Egypt.

— The new time-table for the Calcutta mail train will not be brought into force until the 1st March, as the Post Office authorities are not ready with their arrangements for working the evening mail.

— A *chota* cyclone occurred a few nights ago at Bombay. Several native boats were capsized and a large number of lives lost. There was a heavy fall of rain and the temperature was lowered considerably.

— A huge meeting, held at Poona recently, adopted a memorial to the Viceroy, thanking him for his forbearance in not annexing Baroda, and his faithful adherence to the Queen's proclamation.

— The Beloochee Pathan, Meer Ahmed Khan, who was sentenced by Sir Charles Sargent, at Bombay, to six months' simple imprisonment on the 29th June last, on a charge of adultery with Mrs. Lennon, has now been banished to Beloochistan.

— The *Times of India* mentions that two officers of the 66th Regiment, when out shooting lately near Belgaum, met with serious accidents. One was mauled about the head and face by a panther, which he severely wounded; and the other by a bear.

— The services of Mr. F. H. Souter, Commissioner of Police, Bombay, have been temporarily placed at the disposal of the Government of India for employment on special duty connected with the affairs of Baroda.

— The steamer *Cortes* has been wrecked on a reef in the Red Sea. She left the Tyne on the 15th December for Aden with a cargo of coals, after discharging which she was to have proceeded under ballast to Bombay to receive a home cargo.

— The P. and O. mail steamer *Avoca*, which arrived in Bombay lately, suffered no less than four breaks during the voyage, in consequence of mishaps to her machinery. Fortunately the damages were easily repaired, the longest delay being about eight hours.

— Consequent upon the seizure of the effects of the

Gaekwar's firm in Bombay panic prevailed in the Shroff Bazaar at Moombadevi. The firm was in the habit of cashing hoondies and advancing moneys on the security of gold and silver ornaments. Several hoondies drawn upon the firm remain unpaid, and are not likely to be honoured.

—It has now been placed on record that a number of the crew of the American ship *Sagamore* were kept lying among coals in the ship's hold for several days and had only a couple of biscuits each a day to eat; and that the American Consul acted wrongly in saying the men had no legitimate grounds of complaint, and in letting them be turned ashore without their wages and in a state of destitution.

— Miss F. W. Anstey, one of the children of the late Mr. Anstey, has filed an administration suit against his widow, praying for an account of the estate and effects of the late barrister. Mr. Louden the Administrator-General of Bombay, who obtained letters of administration to Mr. Anstey's estate, has been served with an order of Vice-Chancellor Bacon, requiring him not to part with the money until further orders of the Court.

— The profit and loss statement of the New Bank of Bombay during the past half year exhibits a net gain of Rs. 2,83,869-4-11, to which must be added Rs. 34,146-9-9, the balance brought from last half-year, making an available total of Rs. 3,18,015-14-8. The Directors have declared an *ad-interim* dividend at the rate of five per cent. per annum. This will absorb Rs. 2,03,125, and leave a balance of Rs. 1,14,890-14-8 to be carried forward. The whole capital of the Bank has been called up, and will amount to one crore of rupees when paid in full. The outstanding calls amount to Rs. 87,850.

— *Native Opinion* does not wish to see the state treasures and valuables of the "Gaekwar pilfered and made away with during the period of uncertainty now prevailing at Baroda. But the manner in which the search is being made at the palace day after day and every valuable 'find' laid hold of is keenly felt by the people. Every rupee or a thing of value found in it cannot be considered state property. It is true that when a native administration will be re-established in Baroda, every pice will be accounted for. We hope more moderation and respect for popular feelings will be shown in searching the palace than appears to be hitherto the case."

— The *Rast Goftar* says that even if Mulharrao should be cleared of the charge hanging over him, it would be a mistake to allow him to regain possession of the Baroda *gaddee*. He may or may not be guilty of attempting to poison Colonel Phayre, but he has been proved guilty of other crimes, and the restoration of such a prince to the *gaddee* would be the greatest insult to the subjects of the State. The best plan, says the *Rast Goftar*, would be to appoint a successor under the regency of Mr. Dadabhoy Nowrojee. If the Gaekwar is found guilty of the crime imputed to him, the task of appointing a successor from the Gaekwar's family should be left to the British Government: if otherwise, Mulharao should be permitted to name his successor.

— The London correspondent of the *Gazette* says he has received what appears to be special and reliable information with regard to the arrest of Yakoob Khan. His information is that the Khan visited the Ameer because the Ameer threatened to visit the Khan. The Ameer had heard that Yakoob had increased his forces beyond the permitted number, and expressed his intention of seeing for himself whether the report was true or not. Yakoob, to conceal either the excess, as some say, or the paucity, as others believe, of his forces, thereupon himself offered to visit his father. Before doing so he took the precaution of obtaining a safe conduct from the Ameer, as well as the support of many chiefs influential in Cabul. On his arrival in that city, Yakoob immediately became the object of the most bitter intrigues on the part of Abdoolla Jan's mother. She, employing to the fullest the influence she possesses over her husband, represented that, as long as Yakoob survived, she and her son were not secure of their lives, and she removed her son from her own apartments to those of the Ameer. These reports may lose in weight by coming, as they do, from a point so distant from the basis of information, but, as they have emanated from a well-informed quarter, they throw light on a very mysterious business.

— In the course of a very sensible speech in convocation on Tuesday week last, the Vice-Chancellor of the Bombay University stated his belief that the Matriculation test is too severe for the "mass of the rising generation, who are being educated at too high a pressure." A separate middle-class examination should, he suggests, be created for them. Regarding the Matriculation Examination, to which the address was chiefly devoted, the Vice-Chancellor was of opinion that the number of candidates who passed last December was proportionately very small, because the bulk of those who were presented were very imperfectly prepared. The examiners, who had been unfairly attacked in the press, were painstaking and conscientious, and if a candidate was fit to pass he would, and if he was not he would not. The rawness of candidates was in a great measure owing to their eagerness to get into the public service, to which passing the Matriculation Examination had for the last three years been made a condition of entrance. Still, as the number of passed candidates not going on to College has begun to increase from 20 to more than 40 per cent., the December massacre should, in future, be avoided by establishing a middle-class examination for the "mass of the rising generation," who in the opinion of "one of the greatest benefactors to educational establishments" are destroying their bodies to strengthen their minds, and whose sons at the present rate will have neither bodies nor minds either to strengthen or to destroy.

— The proceedings of the Suez Canal Company are again the subject of complaint. The International Commission which met at Constantinople last year recommend unanimously that, pending the adoption by Maritime States of an uniform international system of tonnage, ships passing the Suez Canal should be provided with an official certificate, to be delivered to them by the competent authorities of their respective flags, determining their net tonnage according to the technical rules laid down by the Commission, and these certificates were to be accepted as proof of the net tonnage on which the Canal tolls should be levied. This recommendation was sanctioned by the Porte, and it thus became obligatory on the Suez Canal Company to respect such certificates. Nevertheless, the Company assumes to itself the right to repudiate them, and every vessel that goes through the Canal is remeasured by its officers. This is an entire innovation on their former practice, under which they were accustomed to accept without questioning the tonnage as described on the register of ships. The present practice is productive of great annoyance to ships, and involves loss of time without really benefiting the Company. It is strange that the intelligent Directors of the Canal Company do not perceive that a vexatious policy towards commerce must be equally injurious to shipping interests and their own.

— But there is another complaint brought against the Company, which is of a serious character, inasmuch as it involves a charge of illegality. The Company has a right to charge towage dues whenever it furnishes to a ship a tug boat to assist in towing her through the canal. It, however, also levies this fee on a vessel which is towed by a tug belonging to her owner. Furthermore, the towage duty is charged if a ship is simply accompanied by her owner's tug or tender without receiving any towage service from it at all. Thus Her Majesty's troopships passing through the Canal, and employing as they do their town steam power, are accompanied by the *Hasty* or the *Prompt*, which are used exclusively as tenders; yet the Company has been charging upon the troopships 50 centimes per ton, in addition to the toll of 10f. per ton, on account of these tenders. Now it is clear the charge of 50 centimes per ton for towage is only leviable for towage services actually rendered, and was never meant as a source of revenue for the Company. The latter is, no doubt, entitled to levy the toll of 10f. per ton on tugs or tender towing or accompanying other vessels, but towage dues can only be imposed when a steam-tug of the Company tows a ship. The proceedings here complained of are in excess of the powers conferred on the Company by the act of concession, and could not be substantiated before any equitable tribual. It rests with the Porte to redress these grievances through the Imperial Commissioner in Egypt, who is placed there to watch the proceedings of the Company and see that the conditions of the concession are not transgressed.

— The Solicitors to the Gaekwar have sent the following letter to the Bombay journals: The papers of late have teemed with accusations and statements against the Gaekwar, his friends, and retainers. Some of these statements have been apparently written with the intention of influencing readers to believe in his guilt; for instance, in a paper this morning, he is spoken of as "a man acquainted with the diabolical arts of the poisoner." As the Gaekwar is about to be tried, the load of prejudice created by this reiteration of charge will weigh heavily against him, and may prevent his having a fair trial. Not that the Judges will be in the faintest degree influenced by anything but the evidence before them, but that witnesses and others will be intimidated from coming forward and giving evidence or supplying information which may be of use to the accused. Those who, like ourselves, are acquainted with the defence of criminal cases, know too well the difficulty of getting witnesses to come forward and give evidence, even of the simplest facts, in defence when there is a strong feeling against the accused. It arises, we suppose, from the desire not to be considered as taking part with the accused, and there is no way of influencing a native's conduct so easily as by working on his fears. We appeal to you to let the Gaekwar have the same fair play you would give to any accused person. We would remind you that evidence which before now, *prima facie*, has borne every appearance of truth, has, under the light of investigation, been found utterly incredible. In this case no man on behalf of the Gaekwar has read the evidence upon which the Government has proceeded; and no word has yet been spoken in his behalf. He has not yet had the common privilege of every accused of having a preliminary investigation before a magistrate, or other authority in his presence, or in that of his advisers.

— Another large haul of treasure was made in the Gaekwar's Palace on the 20th instant. Writing on the following day one special correspondent says: Thanks to the previous discovery of £400,000, the Palace is now being thoroughly searched, and every day Captain Jackson and Mr. Souter, accompanied by some of the best members of the detective police, select a portion of it which they go through thoroughly and systematically. Lately they went to the Gaekwar's dispensary, which adjoins his Highness's bedroom, and is as unlike a dispensary (as you or your readers would understand the phrase) as you could imagine. It is a dark room filled with cupboards and chests and large earthern oil bottles, and the only thing suggestive of medicine is some bottles of pepper-mint lozenges in one of the cupboards. There are a number of "old woman" methods of curing diseases employed in the Gaekwar's palace, but as these are partially incantations and partially absurd preparations, they are not represented to any great extent in the dispensary cupboards. When the troops first entered the Palace they found as chief apothecary an old woman whose qualifications for the post were comprised in the fact that when Mulharrao was in prison she used to cook his food and make herself generally useful. Great reluctance to admit anybody into the dispensary was exhibited, and when at last the *entrée* was permitted to Captain

Jackson, he thought that he was going to be confronted by some terrible examples of occult science, and perhaps his comrades doubted whether he would ever come out again alive. However, he saw nothing more alarming than large earthen jars, some cupboards, and a number of boxes. The great mystery of the dispensary now stands revealed, and though one of the most remarkable and potent medicines in the world has been discovered in it, it is by no means a new remedial agent, having been recognised as an admirable "sovereign specific for an inward bruise" from the earliest recorded time.

Madras.

— The local Government is considering the expediency of constructing a tramway to Coonoor Ghaut.

— It has been decided to appoint honorary magistrates in the mofussil.

— Twenty dacoits have been captured four miles from the capital with a large amount of loot.

— A new Co-operative Society has been started at Madras, under the presidency of the Government Solicitor and Mr. Loch.

— Messrs. Maxwell and Co. have suspended payment. The liabilities amount to above sixteen lakhs of rupees.

— A coffee planter in Wynaad has been charged before the local magistrate with setting fire to the huts of fourteen natives residing on his estate.

— Two East Indian youths of Ootacamund have been each sentenced to three months' rigorous imprisonment for window-smashing.

— Mr. Gordon will act as chief Commissioner of Mysore, while Sir Richard Meade sits on the Baroda Commission.

— The *Mail* suggests that, in the event of the dethronement of the Gaekwar, the Maharaja of Vizianagram or some equally eligible prince should be placed on the throne.

— An officer, belonging to a regiment stationed at Secunderabad, has got himself into serious trouble by a too energetic exercise of martial authority, after a ball recently held at the station.

— Mr Lavelle, who some time ago made an application to the Madras Government for a general mining right throughout that Presidency, offering a royalty of 3½ per cent., has again made another application, raising the royalty offered to 5 per cent.

— A school master in Trichinopoly has been sentenced to three months' rigorous imprisonment and a fine of Rs. 100, for having falsified his register with intent to obtain a grant for a boy who was not qualified under the rules.

— The Madras trade-returns for last year show a slight decline in the imports of shirtings, but a considerable increase in those of yarns, jacconets, and Turkey red goods. The exports of cotton are somewhat above the average, and those of hides and skin show a steady increase.

— Mr. J. G. Coleman, a successful East Indian, has been appointed a member of the Madras Legislative Council. Mr. Coleman has won this distinction by an amount of public spirit unprecedented in the town of Madras, and we are heartily glad to learn that Lord Hobart has recognized the merits of so useful a citizen.

— The *Madras Mail* says that "in one of our southern sanitaria during the Christmas holidays, the resident missionary sent his watch round one Sunday with a list of the names of the parties who were to see it to regulate their own watches, so as insure punctuality in church. Three strange gentlemen, mistaking the worthy parson's meaning, and prompted by the charity peculiar to the season, put their names in the list for 'two tickets each', and added a memorandum asking when "the raffle would come off."'

— Two cases of murder committed in the Island are recorded in the last issue of the *Ceylon Times*. In one of these cases, a woman was hacked to pieces with a hunting knife by her jealous paramour; no fewer than seventeen gashes being found on her body, and her spine being broken as well. Her mother, who went to the house on hearing her cries, was stabbed in the breast by the murderer, and had to be removed to the Hospital where she is now recovering. In the other case six persons have been apprehended in connection with the death of a native who was seriously assaulted and died on the following day.

— *Vanity Fair* thinks it is a pleasing reflection that among the Englishmen who imperil their health and liver in Eastern climes there are still some who have an adequate conception of the importance of their existence for the interests of their country. "Thus Lord Hobart, the Governor of Madras, spends the greater portion of the year in the Neilgherry Hills, finding that the temperature of the plains does not suit him. Some time since, indeed, he conceived the hardy project of making himself acquainted with the sphere of his Government during the cold weather, and set out on a progress. But unhappily some lively wit without due respect for Governing Powers sent him an anonymous letter, stating that if he visited Negapatam he would be poisoned. It so happened that he received this letter just as he reached the town in question, and had taken up his quarters in the house of a gentleman who had offered him hospitality. With a fitting sense of things, he at once set his body surgeon to examine all the pots and pans in the kitchen, refused to go out to dinner, gave up his tour, and incontinently returned upon his steps with his pockets full of hard-boiled eggs—to the intense satisfaction of the author of the anonymous letter."

Feudatory.

—The liabilities of the Kotah Durbar are said to amount to ninety lakhs of rupees.

— Last year the revenue of Baroda was ninety-four lakhs, and the expenditure a hundred and seventy-one!

— Hyder Jung, the Secretary to the late Prince of Arcot, has appeared before the Insolvent Court, Madras, and stated that his liabilities amounted to a lakh and eighty-eight thousand rupees, which were incurred on account of the late Prince. The Judge ordered the discharge of the petitioner.

— A native paper published at Kurrachee says "that since the return of the ex-Jam of Lus Beyla's son, Alloo Khan, to Lus Beyla, the administration of that territory has improved considerably, and precautionary measures have been taken by him against the rapine and plunder that used at one time to prevail thereabouts."

— A correspondent of the *Pioneer* states that the news of Colonel Phayre's removal was known to the Gaekwar and in the native city before the telegram reached Colonel Phayre himself. "Indeed, I am assured, that when the gallant Colonel opened the document, three thousand Brahmins were already feasting in honour of its contents. A new telegraphic staff, which was obviously desirable, has been secured, also a new Post Office staff, and a new station-master."

— Contrary to expectation, the Maharaja of Travancore, with his Dewan and a large retinue, left Trevandrum on the 18th, and arrived at Cochin four days later. He was recieved enthusiastically, a large number of boats with music having been sent to accompany him into the Cochin territory; and, on landing, a salute of 21 guns was fired. At the landing place the Elliah Raja and the Cochin Dewan received his Highness, and at the palace the Raja gave him a hearty welcome. After breakfast, in which both the sovereigns and the Cochin princes joined, the Travancore Maharaja left for Madras and Calcutta via Shoranore.

Burma.

— Burma rice is now largely used in Glasgow in the manufacture of Scotch whiskey.

— Lady Mayo has written to the Chief Commissioner of Burma as follows, with reference to the erection of a building to be named "The Mayo Home for Seamen." "It gives me great pleasure to hear from you, that the Memorial subscriptions at Rangoon are to be appropriated in building a Sailors' Home, as in a place where there is such an increasing trade, it must be much wanted, and will, I suppose, be available for sailors from all European countries. I am very glad you have suggested this kind of Memorial, as it is a charity Lord Mayo considered very essential, and one he took much interest in whilst in Calcutta."

— The quantity of land under rice crops and left fallow assessed in Burma during the past year was 2,061,568 acres, against 1,883,120 in 1872-73,—an increase of 178,448 acres, or 9·47 per cent.; and the revenue demand in the respective years amounted to Rs. 34,62,432 and Rs. 31,19,852,—the increment having been Rs. 3,42,580, or 10·98 per cent. The percentage increase in 1872-73 over 1871-72 was in acreage 3·42, and in revenue 4·35. The production of rice continues on a largely increasing scale. The quantity exported during the year was, by sea 811,106 tons, and to Upper Burma 24,718 tons,—a total of 835,824 tons, or 88,819 in excess of the exports during 1872-73, and almost double the quantity shipped seven years ago.

Asia.

— The absence of all news respecting Yakoob Beg's expedition against the Chinese is much noticed.

— It is reported that the Emperor of China died on the 12th instant of small-pox, and that his probable successor will be the grandson of Prince Tun.

— Six thousand Manchou Tartars have invaded the Amoor Province, wrested some 15 years ago from China. Preparations are being made to drive them back.

— The Grand Duke Nicolai Constantinovitch—whose arrest by the Emperor's order caused a good deal of talk a year or two ago—has been declared insane by a medical committee. An Imperial decree places his person and fortune under the guardianship of his father, the Grand Duke Constantine.

— A portion of the Herat expeditionary force is encamped at Candahar, and the rest at Gurrishk. At Herat troops are volunteering from all places to aid Ayoob Khan. They maintain themselves from their own resources, and are serving the Sirdar faithfully.

— By the new Treaty between China and Peru free emigration is allowed under certain regulations, and a line of steamers will probably convey emigrants, under strict government supervision. It is also provided that a Chinese commission shall visit Peru, in order to inspect and report upon the condition and prospects of the emigrants. The Peruvian Government agrees to give the Members of the Commission the fullest assistance in the fulfilment of their duties, to compel employers to provide passages home to time-expired Chinese labourers, and to place all Chinese subjects on the same footing, in every respect, as those of the most favoured nation. A sort of *avant courier*, in the shape of a confidential agent, arrived at Lima last September. The emigrants, instead of being the scum of Southern China, will now come from the northern provinces, and will be a far superior class. A line of screw steamers, with a guarantee from the Peruvian Government, will probably be established to convey them, and the accommodation and provisions will be strictly regulated and inspected by official agents.

— Mr. W. E. King, Vice-Consul at Kewkiang, says that during a tour on the Upper Yangtsze and in Szechuen he observed that the junk sailors and others smoked opium with impunity. Their constitutions seemed robust, for they had prodigious appetites, and their work was very hard, lasting from 4 A. M. until dark, with hardly any intermission, and constantly requiring them to strip and plunge into the stream at all hours, and often in the most dangerous parts. The two persons most addicted to smoking were the pilot and the cook. On the incessant watchfulness and steady nerve of the former the safety of the junk and all on board frequently depended, and the second worked hard from 3 A. M. to 10 P. M., and often longer, and seemed independent of rest or sleep. This latter had a conserve of opium and sugar, which he chewed during the day, as he was only able to smoke at night. Consul King declares his opinion as to the mischief

of opium-smoking to be much modified. He feels bound to recognize the fact that the habit can and does exist without detriment to health or capability, the opium merely affording a solace and a stimulant.

— The Constantinople correspondent of the *Allgemeine Zeitung* reports that extreme distress prevails in the outlying provinces, while the authorities snatch the last fragments of food from the poor inhabitants for arrears of taxes. Last winter many poor people sold even their children for a few piastres to get bread, and the purchasers are now so reduced that they cannot maintain themselves and get rid of the children, whose parents or relatives have, perhaps, long since perished of cold and hunger. Fifty thousand Mahomedans and 2,000 Christian families have migrated to Adana. About half the former have since succumbed to disease in a strange climate, while the latter have not suffered so much. There are still 200 sick immigrants in the hospitals at Tarsus. The same correspondent mentions that the new Mosque, a costly scheme which appeared very anomalous considering the financial difficulties of the Porte, has been for the present abandoned. He comments on the hostility displayed by the native press towards England and Protestantism at a time when subscriptions are arriving for the famine in Asia Minor. One of the papers lately alleged that England and Russia had entered into a holy alliance to suppress liberty of conscience, affirming that Russia contained 20,000,000 Mahomedans, and that the Indians ought to be represented in the British Parliament.

— The news is telegraphed from St. Petersburg that a mission has arrived from the Atalik Ghazee with the indemnity for a Russian caravan said to have been plundered on its passage through his dominions. Yakoob Beg, in remitting the sum asked on behalf of one of the two first Russian adventurers who appeared at Kashghur, has especially protested against the assumption that there was any real charge against his own Government that could be sustained on evidence. His letter points out that the other Russian merchant found no difficulty in coming or going or trafficking, and was perfectly satisfied with the measures taken to facilitate his trade; that the wares said to have been robbed were never shown to any one, and might not have existed so far as the Kashghur officials were made aware; and, finally, that all local inquiry has failed to obtain any trace whatever of the alleged outrage on the claimant, which was heard of first when he got safely back into Russian territory. Nevertheless, the messengers of the Atalik Ghazee say openly that that Prince has resolved rather to pay the indemnity suggested to him than run any risk of incurring the enmity of so powerful a neighbour as Russia. And as he is at present likely to be involved in a serious struggle with China, hardly less formidable so far as Kashghurian independence is concerned, his conduct under the circumstances is not difficult to understand.

— Hitherto, whenever China and Japan have happened to come to blows, the dependency of Corea has generally been mixed up in the quarrel, and taken sides with the more bulky, if not more powerful, neighbour. In the present instance, however, Corea, departing from her traditional deference for China and jealousy of her insular rival, unaccountably selected the present conjuncture as an opportunity for upsetting the Anti-Japanese Party and the Government, and welcoming the establishment of friendly relations with their ancient enemy in language of the most fulsome flattery. The change was so sudden and complete as to give reasonable occasion for the suspicion that the Japanese had, as a part of their designs against China, cunningly converted their old enemy into an important ally. This clever little bit of diplomacy the Japanese papers state was effected by Moriyama Shigera, an emissary of the Japanese Foreign Office, who proceeded to Corea in June last. He seems to have arrived there at a moment of great perplexity and indecision in the national counsels, and perceiving (so say the Japanese) that the Coreans were in a state of profound alarm, lest, when the expedition against the Formosans returned in triumph it would be turned against themselves, he adroitly used his powers of persuasion to such effect that he succeeded with but little difficulty in dispelling traditional illusions and inclining the national mind in favour of his own country. The Coreans thereupon are reported to have forthwith degraded and thrown into prison all officials hostile to friendly relations with Japan, and to have "uttered sentiments resembling those of a defeated General declaring that he surrenders himself." The very inhabitants, it is said, felt as if the gloom of night had dispersed, and feasts of mutual congratulation became general throughout the country.

Literary.

— The Professorship of Natural Philosophy in the Presidency College is to be given to Mr. C. B. Clarke.

— Her Highness the Begum of Bhopal has compiled a history of the country over which she rules so well.

— The first number of the *Oriental Figaro*, a weekly serio-comic paper, will appear in Calcutta on the 6th February.

— Only one of the pictures exhibited in the Calcutta Fine Arts Exhibition found a buyer among the native gentlemen, and that picture was a daub of questionable decency.

— Russian geographical literature is now unusually rich, Central Asia naturally occupying the prominent place, owing to the recent expedition against Khiva. The official history has not yet appeared, but besides numerous articles and sketches, Dr. Emil Schmidt has published an account of it in German, while Dr. Grimm has given us the 'Impressions of a Military Surgeon,' and Lerch has treated of the history and geography of the country in his 'Khiva oder Kharezin,' with a full discussion of the authorities. Ivanin has related in greater detail than ever before the history of the unfortunate expedition of Perovsky in 1839-40. The third volume of the 'Annual of Turkestan,' besides many articles reprinted from the *Turkestan Gazette*, has an account of the Upper Zarafshan, with an excellent map and a bibliography of books and articles relating to Central Asia, printed in Russian since 1692. Sobolef's 'Geographical and Statistical Information about the Zarafshan District,' which received the gold medal of the Geographical Society, Terentief's 'Statistical Sketch of Central Asia,' and Petrofsky's 'Trade Statistics,' and 'Silk Culture in Central Asia,' are also deserving of mention.

— The capital book, however, is Khanikof's translation of Litter's 'Iran,' which is, nevertheless, a great disappointment. With the wonderful knowledge of this Orientalist, it was expected that the notes would be new and exceedingly valuable, but it would seem as if the translator had done little of the work himself. Much has been translated from Spiegel, valuable, it is true, but attainable elsewhere, and devoid of the comments and corrections which Khanikof could so easily have added. Veniukof's 'Sketches of Contemporary China' is interesting, but consists of articles previously published. Far newer and fresher are Mainof's 'Journey to Onega and Karelia,' the 'Search of the Clipper Izumrud' for the naturalist Miklukha-Maklay, who was pursuing his investigations on the shores of New Guinea, and especially Nemirovitch-Datchenko's 'Sketches of Solovetzky Monastery and the Murman Coast.' Strielbitzky's 'Survey of the Russian Empire,' and Ilyin's 'Statistical Atlas' are valuable, and the huge three volume quarto of the *Compte Rendu* of the Statistical Congress held at St. Petersburg in 1872 is by this time well known to every statistician. Of late, Russian literature has fallen into two camps. For a long time there have been the liberal and reactionary schools in literature as well as in politics; the artistic and the realistic schools; but there are now the schools of Moscow and of St. Petersburg. Strict geographical division is, of course, impossible, as there are journals and writers in St. Petersburg that support the ideas of Moscow, though it would be difficult to say the reverse. The Moscow school is grouped round the *Russian Messenger* and the *Moscow Gazette*, or in other words, about M. Katkoff; while the St. Petersburg school, embracing very different opinions and tendencies, finds its expression in the *Messenger of Europe*, *Annals of the Fatherland*, and *Fact* (Dyelo).

Ecclesiastical.

— The Church Missionary Society spends about Rs. 2,50,000 on its South Indian missions.

— The Bishop of Bombay stated in his recent charge to the clergy of his Diocese that he had confirmed, during six years, 1,700 persons, of whom one-third were natives. During the same period seven persons were admitted to the Holy Order of Deacons of whom four were natives. Six of these seven, and four others, were admitted to the priesthood. Rs. 32,500 was contributed in 1874 in the Bombay Presidency towards missionary objects, and about Rs. 40,000 to other purposes, as orphanages and the poor.

— A telegram from Constantinople of the 31st of October stated that the Governor of Syria had ordered the suppression of all Protestant schools in that Province, and had stopped the building of a school at Jaffa. Letters have just been received from Jaffa, dated the 30th of November and the 5th of December, from which it would appear that this statement was incorrect. The Protestant schools in Palestine have not been interfered with, nor has the building of a school at Jaffa been stopped; and both the Governor of Syria and the Pasha of Jerusalem, under whose immediate jurisdiction Jaffa is situated, deny that they have any intention or have received any instructions to interfere with the schools in question.

— The Rev. Robert Bruce, who has been for two or three years resident in Persia, is about to return home, and will carry through the press a revised translation of considerable portions of the Bible into Persian, upon which he has been engaged. Mr. Bruce has been regarded only as a North Indian missionary on leave, for the Church Missionary Society, to which he belongs, has not had a regular Persian mission. The missionary work he has been able to do will not now, however, be suffered to come to an end, as the committee have accepted the offer of Mr. E. Downes, well known for his intrepid attempt to enter Kafiristan, to take Mr. Bruce's place for the time, in the event of no other qualified missionary being found for the post.

— The Christians at Tripoli have lately incurred the severe displeasure of the Moslem community at that place owing to a most untoward occurrence, for which they are unjustly blamed. It seems that a column in the great mosque was one morning found to be adorned with a huge placard bearing some very offensive remarks on the Moslem religion. This document purported to have emanated from the Christians, with a cross marked upon it, and several Christian names, such as "Mr. George" and "Mr. John," added to it as signatures. The indignation caused by this act of sacrilege was heightened by the fact of the day on which the placard made its appearance being a Mussulman festival, and therefore a general holiday. The excitement continued for two days, during which the Christians were severely ill-treated, and would probably have received further injury but that the authorities, having received orders from Damascus, took energetic measures for their protection, and made several arrests. The respectable Turks, to their credit, disapproved of the persecution of the Christians, well knowing that the whole affair was got up by some wily Moslems for the purpose of irritating their community against the Nazarenes. In the

meantime Essad Pasha, the Governor-General, has hurried from Damascus to Tripoli, intent on discovering the authors of the objectionable document, and visiting them with such signal punishment as shall deter others from adopting this ingenious plan of fomenting religious discord. Let us hope he will be successful.

TELEGRAMS.

THURSDAY, JANUARY 21ST.

Prince Leopold is seriously ill. An attack of typhoid fever has been followed by hemorrhage. Doubts exist as to his recovery.

Alphonso has started for the seat of war to assume the command of the army.

MONDAY, 25TH.

The bulletins respecting Prince Leopold report unfavourably. The last accounts state that his weakness is gradually increasing.

The Great Powers are trying to avert a conflict between Montenegro and Turkey; but, notwithstanding all efforts, a collision is apprehended.

The *Jorawur*, outward bound, to Calcutta, has sunk off Falmouth; the crew landed safely.

The *Mecca* has sustained such injuries in a collision that she has put into Lisbon to stop leakages.

In the Assembly the Committee of Thirty's Constitutional Bill, the main features of which are the maintaining of the title of the President of the Republic and establishment of Ministerial responsibility in two Chambers, has been again brought forward, the discussion having been adjourned from last session. After two days' excited debates a large majority decided to proceed with the second reading of the bill. This is a defeat for the Legitimist party, whose motion last session, respecting the suspension of the paper that first published Comte de Chambord's manifesto, brought about the drafting of the Constitutional Bill.

TUESDAY, 26TH.

The Porte has consented to the trial of the Montenegrins by a mixed tribunal to sit at Montenegro.

Prince Leopold is better.

Garibaldi has arrived at Rome, where he has been enthusiastically received.

The associated colliery owners in South Wales have decided on a general lockout on 1st February.

WEDNESDAY, 27TH.

The address from the Manchester Chamber of Commerce has been presented to the Marquis of Salisbury, who, in replying, complimented the Duke of Argyll on his policy, which his Lordship said he would be glad to continue; and that there would never be any break of guage in the lines of the Government of India. He bore testimony to the splendid services which the Indian Government officers had rendered their country in preventing disasters from the famine in Bengal. He believed the financial future of India depended on the due development of Railways, and it was gratifying to find the Native Princes desirous to co-operate with the Government in this direction.

With respect to duties on cotton-goods, his Lordship said he had a strong conviction these ought to go, and was satisfied that the interests of India and Manchester were identical, and that the development of manufactures, which might be legitimately expected to flourish in India, was prevented by withholding English capital.

Obituary:—The Countess of Carnarvon.

A proclamation, issued by Don Alphonse to the inhabitants of the Basque Provinces, summons them to submit to his rule, and promises to respect the liberties of the subject.

The Assembly have resolved to proceed with the second reading of the bill for creating a Senate.

Mr. John Bright, speaking at Manchester yesterday, urged the dis-establishment of the English Church.

Garibaldi has taken his seat in the Italian Parliament.

Mr. Bristowe, Secretary to the American Treasury, has submitted estimates to Congress, proposing the re-imposition of tea and coffee duties.

An expedition is being organised by the English and Indian Governments under the direction of Joseph Norman Lockyer F. R. S. to observe the eclipse of the sun on the 6th of April. The expedition starts in February and will be represented by Janessen for France, Vogel for Germany and Tacchini for Italy.

The principal object of the expedition will be to photograph the spectrum of the sun; it is probable that the four stations from which the observations will be made are the Nicobar Islands, Bentinck Island, Mergui and Siam.

The Gaekwar has retained Serjeant Ballantine for his defence on a fee of ten thousand guineas.

Bright yesterday when advocating the disestablishment of the church deprecated any violent agitation.

MARRIAGES.

January 13. At Bisharatpore, near Goruckpore, by the Rev. H. Stern, Mr. DOMINGO GOMEZ, B. A., Head Master of the Anglo-Vernacular Miss. School, Goruckpore, to Kamini, eldest daughter of Baboo PRAN KRISHNA GANGOOLY.

18. At Agra, by the Rev. Fr. Symphorien, Rector of St. Peter's College, Mr. JAMES WELLER MAXWELL, of Eta, N. W. P., to Cora Louise Goutiere, second daughter of the late Mr. A. F. GOUTIERE of Goruckpore.

19. At St. Andrew's Church, Calcutta, by the Rev. J. M. Thomson, M. A., Mr. JOHN THOMSON, to Charlotte, second daughter of Mr. A. BATHIE.

21. At St. Peter's Church, Fort William, by the Bishop of Calcutta, Mr. ALFRED AUGUSTUS WACE, B. C. S., to Amy Margaret, eldest daughter of Mr. H. L. DAMPIER, B. C. S.

23. At St. Thomas's Church, Howrah, by the Rev. D. B. Morris, Mr. JOHN CALVERT, to Ella Jane, elder daughter of Mr. B. DICKENSON, Calcutta.

BIRTHS.

January 4. At Purneah, the wife of Mr. J. J. MACKAY, of a daughter.

17. At Todgurh, Ajmere, the wife of the Rev. ALEXANDER P. C. JAMESON, of a son.

18. At Singell, Kurseong, the wife of Mr. E. T. PARTRIDGE, of a son.

20. At Dinapore, the wife of Mr. S. S. SAUNDERS, Sub-Engineer, P. W. D., of a daughter.

DEATHS.

December 18. At London, Jean Charlotte, widow of the late Major F. T. BOYD, H. E. I. C. S., of Ballycash, Ireland, in the 66th year of her age.

24. At Calcutta, Mr. JOHN WATKINSON ROBERTS, aged 74 years and 5 months.

25. At Fulham, London, Lieutenant-Colonel W. T. NICOLLS, Retired List, Madras Army.

January 12. At Malta, Jane, the wife of Mr. ALEX. MCDONALD, Gourepore Factory.

LETTER TO THE EDITOR.

THE CONVERT HUTCHI.

DEAR SIR,—Allow me to state that the *point* of Hutchi's case, to which you refer in the *Friend of India* of 4th December, has been misunderstood by many both in India and England.

It is not a case of conversion after a Hindu marriage. The Law of India provides a remedy for such cases (although the act regarding the re-marriage of converts has not yet been extended to Mysore.)

But the grounds on which Hutchi claims her freedom are two.

First, that she was an openly avowed Christian *before* her enforced betrothal, and that therefore such betrothal (though indissoluble between Hindus) was legal and null between a Hindu and a Christian.

2ndly, that Appiah stated in open Court that he did not and could not look upon her as his *wife*, that he only wanted to get possession of her and "would treat her as Soolai" (a prostitute.) It is considered by excellent legal authority here, that this refusal to recognize her as his wife constitutes desertion. Appiah has since married; and the monstrous hardship is evident, that Hutchi should be compelled to consider him as her husband, when he refuses to look upon her as his wife. I consider that the case in India was mismanaged, for it was not tried upon these grounds.

Under the Penal Code it is impossible that a Christian should marry except by Christian rites—and Miss Anstey refused to buy a divorce, 1st because it would have been acknowledging the validity of this illegal betrothal, and 2ndly because Appiah raised his demands, in truly Sybilline fashion. The lad openly stated in court that he had never made any inquiry after Hutchi for nearly a year after she fled to the Mission, and that he never thought of opposing her marriage to Lutchmiah, until he was stirred up to do so by a nominal Christian who did so out of revenge; Miss Anstey having refused his request for Hutchi as a wife for his son.

Hutchi is clearly free "from the trammels of Hindu law," and had she become a Mahomedan she could have married at once.

It is surely an egregious anomaly that Christian law should pronounce her bound to a man whose wife she never could be, and who has a wife already.

Every lawyer who has been consulted both at Madras and in this country is of opinion that no Court would require her to return to Appiah, seeing that it is not the office of British Judges to supply concubines to Hindus. Neither would any Court so far violate the conscience of a Christian woman as to compel her to occupy such a position.

Appiah and his witnesses were guilty of the most barefaced perjury in Court, and ought to have been committed for it. Pray excuse the length of this communication.

I am, dear Sir,
Faithfully yours,
COLIN MACKENZIE,
Major-General.

BARODA.

The following interesting telegrams relative to affairs in the Gaekwar's capital are taken from the *Bombay Gazette*:—

18th January, 1875.

Here is a characteristic bit of Baroda romance. Sir Lewis Pelly received private advices that, within the last two or three days, forty lakhs of the Gaekwar's money had been turned into Government of India one thousand-rupee notes, in Bombay, and forwarded to Nowsaree. By some extraordinary means, Sir Lewis Pelly secured the receipt for the money, which was in the Senaputtee's handwriting. Colonel Pelly sent for the Senaputtee, showed him the receipt, and demanded the money. The Senaputtee pleaded ignorance. At nine o'clock last night Captain Jackson, accompanied by the Senaputtee and a detective, entered the palace, and, in some boxes in the Ranee's rooms, discovered forty lakhs in Government promissory notes rolled in bundles of cloths. Captain Jackson, preceded by some sowars, drove back rapidly to the Residency with the money. Sir Lewis Pelly expects to recover other forty-five lakhs, eighty-five lakhs, in all, having been missed. A Durbar of the Sirdars is called by Colonel Pelly this afternoon, at which he will remonstrate with them and ask if they were cognisant of this affair.

This afternoon Sir L. Pelly met in durbar a very numerous gathering of Sirdars. He detailed the discovery of the forty lakhs and said he had come to the conclusion that the assurances of the Sirdars on the previous occasion that they would treat him with perfect good faith had not been fulfilled so far as the Senaputtee, or Commander-in-Chief, was concerned. He had therefore determined to put no further trust in their assurances but to depend on himself; he being responsible for the safe custody of the State property. Accordingly, a thorough search of the palace would have to be made, and every article inventoried. In answer to Sir L. Pelly's question whether the Sirdars approved the Senaputtee's conduct, they said they knew nothing about the concealment of the forty lakhs. A further conference upon the subject will be held a few days hence. To-morrow being Buckree Eed Sir L. Pelly visits in state the Mahomedan noblemen in the city. The Maharaja continues well. His chief fear seems to be that somebody may poison him from outside his place of confinement. Mr. Souter has returned to Baroda.

19th January.

It being the custom of former Gaekwars to visit the Mahomedan Sirdars on the Buckra Eed festival, this forenoon Sir L. Pelly drove in state to the house of the Nawab Meer Kamaleedeen Hoossen Khan, the Sirsooba of the Gaekwar's Contingent, and there met the Mahomedan Sirdars. The procession from the Residency was imposing. Sir L. Pelly was in the Gaekwar's State carriage accompanied by Royal Artillerymen, and an escort of the Second Light Cavalry and a Rissala of the Nawab's Sowars. The Gaekwar's troops lined the highways. There was a great crowd of sightseers, but only demonstrations of curiosity were exhibited. Sir L. Pelly was received by the Nawab and his brother. After a nautch, in which two women sang and danced, Sir L. Pelly, according to the custom of former Gaekwars, presented a dress of honour to the Cazee. The Mahomedan Sirdars then presented nuzzurs to Sir Lewis Pelly, who addressed them at some length, urging them to give him their assistance in the good government of the State. The Nawab put flowers round the necks of Sir L. Pelly and other gentlemen, and after a distribution of pan the Durbar terminated. Sir L. Pelly has received the Viceroy's despatches. The treasure captured on Sunday has been placed under a European guard. The Maharaja is very cheerful to-day. Luxmeebaee's husband is in Baroda and frequently visits the Residency. A grand hunting expedition is to take place shortly.

20th January.

The Senaputtee's conduct will be decided upon to-morrow by a committee of Sirdars, and if he be deposed no Senaputtee will be reappointed, the office being considered superfluous. A squadron of cavalry is coming here from Poona for escort duty during the Gaekwar's trial. Kazee Shahaboodeen has been invited to return to Baroda in connection with revenue survey duties.

21st January.

Nana Sahib (Khanvilkur), who was apprehended a few days ago, will be tried by an ordinary court on

criminal charges. Arrears of pay have been ordered for the troops. An important consultation of Sir Lewis Pelly with the head Sirdars was held to-day, at which the Senaputtee was removed and his office abolished. An inam commission is to be constituted. It will first enquire into the Sirdars' claims and debts. The revenue officers have been addressed by Sir Lewis Pelly, and directed to their several districts with detailed instructions. A proclamation for recovering waste land will be issued immediately. A standing committee is to assemble to disentangle the numerous frauds and intrigues with a sub-committee of search for the Palace. Lewis Pelly has selected premises for the sitting of a commission, which will meet on Feb. 18. A large number of guests are gathering at the Residency. No more troops will be brought here at present. The native infantry regiments spoken of as in orders for Baroda have only been warned to hold themselves in readiness.

EUROPE.

THE BAR AND THE REFORM OF THE LAW.

(Pall Mall Gazette.)

Having reformed the courts of law, it is not at all unnatural that the authors of that operation should propose to reform the legal profession. The proposal to do so was made in a bill which Lord Selborne introduced towards the close of the last session, and which in some form or other will probably be proceeded with next year. The subject is one in which the public at large are far more deeply and immediately interested than is apparent at first sight, and it appears to us to be a matter of extreme importance that the principles on which it depends should be as widely understood as possible, and that the public should not be misled by specious commonplaces and by a mere vague impression that every existing institution is in a bad state and ought to be altered, into inflicting an irreparable injury upon one of the most powerful and characteristic of English professions. We fear that there is considerable danger of this, for there is no Radical like a successful lawyer turned loose on the ladder by which he has mounted to fame and fortune. The general nature of the proposals put before the public in relation to the legal profession is to the following effect: It is said that the Inns of Court are anomalous, useless, superannuated institutions; that the law itself is in an entirely unsatisfactory, unscientific state, and in particular that lawyers are illeducated. The proper remedy for this, it is said, will be found in appropriating the surplus funds of the Inns of Court to the establishment of a legal university in which one common course of education is to be provided for barristers and attorneys—a measure which is advocated upon the ground that it will lead to the removal of the distinction between the two branches of the profession—and in transferring the power of discipline now vested in the benchers of the different Inns to a Council of discipline which, as well as all future benchers, is to be elected by the suffrages of practising barristers of a certain standing, and is to have the powers and procedure of an ordinary court of justice.

It appears to us that the whole of this scheme, plausible as it looks and well as it embodies a number of commonplaces on the subject, is based on wrong principles, and would do great mischief if it were carried into effect as it stands. Some of the premisses upon which it is founded appear to us to be true; but others are, we think, entirely false, and the conclusions founded upon them are unsound. It is undoubtedly true that several of the Inns of Court have surplus funds for which at present they have no use at all, and which in consequence are for the most part spent from time to time in building. It is also true that the law of England is in an unsatisfactory and unscientific state, but it is an entire mistake to say that this arises from the bad education of lawyers, or can be remedied by any improvement in their education.

There are few subjects on which a greater amount of plausible but essentially mischievous commonplaces are current than the subject of legal education. We do not believe that any body of professional men whatever are better educated in their profession than English lawyers, or are less apt to make mistakes in it. Law, it must always be remembered, is not a science arising out of principles inherent in natural objects and independent of human volition. It is a set of definite positive rules enacted by men and dependent on their will. A good professional education is an education which makes the members of the profession acquainted with these rules, and which enables them to apply the rules to given states of facts as they occur. Now, if any one asserts that English barristers and attorneys do not know their business, that they are incapable of giving sound legal advice, that they cannot prepare legal arguments or conduct cases in court properly, his assertion shows only that he is ignorant of the subject. There are quite as many lawyers in each grade of the profession thoroughly well instructed in every branch of it as there is employment for; and we would appeal to the experience of any one who has had any experience on the subject to say whether any considerable proportion of miscarriages of justice occur on account of the incompetence of the professional men engaged in their management.

All that can justly and poperly be said against the education of lawyers is that the system itself in which they are educated hardly deserves to be called a system at all; that it is intricate, incomplete, obscure, in many places uncertain, and in others contradictory and fragmentary; that it does not from a systematic connected whole, and therefore is incapable of being taught as if it did form one, and the result is that a lawyer thoroughly well educated in his profession often has a small, sharp, incoherent, and altogether unphilosophical turn of mind. This, however, is the fault not of the education, but of the subject-matter which is taught, and the defect must be removed not by improving the education but by reforming the law. If you want to raise the mental calibre of lawyers and to give them a more systematic philosophical cast of mind, recast the law itself in a more systematic and philosophical mould. Codify the common law and redraw the statute book, and the study of the law of England will become a liberal pursuit; but so long as the law is what it is, mere improvements in the mode of teaching it will do no good. In the case of the law the old proverb is inverted—the cooks are excellent, but the meat is diabolically butchered, though it is not bad meat.

The mistake of supposing that it will is a very natural inference (though a very ill-founded one) from precedents which really do not apply to the case. If the object were to improve the state of medical knowledge and practice, or to make men better engineers, or to raise the standard of literary taste, the institution of an improved system of education would be a very natural means of gaining that end. The rules of medicine or engineering and the canons of taste have no inherent virtue. They are, and are known to be, mere approximations to or statements of principles inherent in nature itself, and they may be, and are continually, modified by the growth of experience. With law the case is entirely different. All the law professors who ever lived would not be able by lecturing for ever to alter the legal value of a legal rule. They would not, for instance, be able to strike the words "malice aforethought" out of the definition of murder; or to deprive the words "to and to the use of" of their mystical importance; or to cause the word "issue" to be anything but a delusion and a snare to testators, or to alter the doctrine of powers or the law of domicile; or to take away the distinction between chattels real and real property. They would not, in short, be able to simplify materially any one branch of the law. Nothing but the Legislature can do that; and until the Legislature takes the task seriously in hand, all that an army of professors can do will be to explain by historical researches how things came into their present confused condition—a process of considerable value in some points of view, but of comparatively little practical importance to a professional student.

It must always be remembered that law students are men, and not boys, and that they study their profession simply in order to make money by it. To suppose, therefore, that they will pass their time in attending more or less philosophical lectures upon their profession when the law itself is utterly unphilosophical is absurd and contrary to all experience and common sense. Their one object will always be to acquire that practical familiarity with their profession which pays in its actual everyday routine, and no other way of giving their studies a philosophical character can possibly be devised except that of giving the law itself such a character. The real effective education of a lawyer must always in the nature of things be determined by the law itself, and as long as the law is what it is the only possible way of getting a practical acquaintance with it, of learning how to use it, will be by a somewhat servile process of detail identical in principle with apprenticeship.

It must also be remembered that the notion that there is somewhere or other such a thing as a science of law or of jurisprudence, or whatever else you please to call it, which might be taught if only professors were paid to teach it, is a dream. There is no such thing in any part of the world, though there are materials from which such a science might be constructed; and though, as we have pointed out on former occasions, lawyers do in practice proceed upon a method analogous to that of scientific men. There are two, and only two, systems of law with which we have anything to do—English law and its descendants on the one hand, and Roman law and its descendants on the other. German and French writers, and more particularly German writers, have thrown modern Roman law—that part of the Roman law which still occupies in most parts of Germany the same position as the common law of England occupies in this country and America—into a moderately intelligible and systematic form; but to speak of it, as many people do, as if the result was a triumph of human reason, like astronomy, is to speak quite at random. The Roman law has its merits and defects, like has law of England; but each is what it is, and can be altered only by express legislation, and not by paying professors to speculate about it. Books about the common law might be written like the works of German professors on what they call "Pandektenrecht;" but when written they would only be altered and possibly improved Blackstones. They would not alter the law.

As to the bearing of the proposed alterations on the organization of the legal profession, we must reserve what we have to say for a future occasion.

PRINCE BISMARCK ON THE FRENCH GOVERNMENT.

(Economist.)

It is curious enough to discover that the great Minister who has been supposed in this country to have wielded ever since the war with France almost unbounded influence in the administration of the German Empire, was engaged before the end of the very year in which peace with France was concluded, in vehemently attacking the views held by the German Ambassador in Paris on the policy proper to be pursued towards the Government of France. Moreover, it is evident enough that Prince Bismarck arraigned his Ambassador's views with so much the more acrimony that his subordinate's opinions on these matters were independently communicated to the Emperor, and sometimes even, as it would appear, made known to the Imperial Parliament, though they were in clear antagonism to the views of his chief. On the 23rd December, 1871—the year of the surrender of Paris—Prince Bismarck writes a letter full of angry criticism on the Germano-French policy of Count Arnim, in which the Prince makes it one of the main heads of complaint that Count Arnim's misleading official reports are "communicated to his Majesty, and possibly to Parliament and other Cabinets, as *pièces justificatives.*" Yet for two years more and upwards, indeed till the spring of this year, Count Arnim remained at his post without in any degree learning more submission to the great Chancellor, whose language of reproach continued, and grew, if possible, even more acrimonious, until Count Arnim was at length recalled. It is quite clear that this violent divergence between the views of the Minister and the Ambassador could not have continued all this time, and during so critical a period, unless there had been a good deal of favour shown to the German Ambassador in Paris from the very highest quarter; indeed, the outspoken wrath of Prince Bismarck is itself sufficient evidence that he found the most serious obstacles placed in his way when he tried to reduce Count Arnim to subjection, and that he was hardly powerful enough to venture on the final step of asking his Majesty to choose between his Chancellor and his Ambassador in Paris, or else to reduce, by an exercise of his own royal authority, the rebellious servant to obedience. Any how, the fact is plain enough, and is very significant, that for considerably more than two years the most important by far of the German embassies was quite out of the Imperial Chancellor's hands, and was held by a sort of rival who advised the throne in a sense quite different from that of Prince Bismarck, and was upheld in his contumacy by the profound assurance of some controlling sympathy in the breast either of the Emperor or some of his nearest councillors.

When we come to look more closely at the points on which Prince Bismarck and Count Arnim differed, it is not so difficult to explain the apparent magnitude of the paradox. Confessedly Count Arnim held that anarchy in France was dangerous to the peace of Europe, and even to that of Germany. He seems to have feared that Socialistic or Communistic ideas, if they got the upper hand in France, might spread like a plague to Germany also; he also sympathised with the hereditary principle, and desired to see the Legitimists succeed in restoring the line of the Comte de Chambord; at all events, he held that order in France was essential to the interests of Germany and the full payment of the indemnity, and that order was hardly likely to continue under M. Thiers and the Republic. On the other hand, Prince Bismarck held that it was the first interest of Germany to uphold a weak, though not impotent Government in France—a Government not dignified enough and not powerful enough to command anything like a foreign alliance, and yet not insignificant and not feeble enough to be overturned by a mob. He tells Count Arnim quite frankly that he does not wish to see a French Government with which Austria—or we may presume Russia, though he keeps Russia's name out of the despatch—would be disposed to sympathise; that he does not want to be pressed to overlook failures in the due payment of the indemnity on the plea of the meritorious character of the attempt to establish once more a hereditary throne in France, and of the moral duty incumbent on Germany of fostering such an attempt by showing a certain amount of leniency and favour towards the leading personages in any such endeavour. He declares that he wishes France to remain isolated and weak, though not too weak to go on discharging her obligations. M. Thiers must not be upset by the "revolution," for then in all probability Germany would have to renew the war in order to get her money. On the other hand, M. Thiers must not be overset by any of the "Monarchical Pretenders," for in that case there would be a certain tendency to "a very inconvenient grouping of the powers," to be brought about with the express view of depriving Germany of some of the advantages she had secured for herself. The ill-will felt at Vienna for the conquests and money acquisitions gleaned by Germany from the war, would be pretty sure to take the form of compassion for France, in case any excuse for such compassion were afforded by a restoration of the old reigning House; and, on the whole, take it which way you would, it was for the interest of Germany that France should remain weak, though not too weak: weak enough to disgust the Radicals of Europe with Republics, Republican nough to disgust the Monarchies of Europe with the results of revolution, yet not too weak to collect the taxes

and raise heavy loans wherewith the German armies might be bought off. Now these being the opposite views of Count Arnim and the Chancellor, it is not, perhaps, very surprising that the Ambassador's views found more sympathy at head-quarters than Prince Bismarck approved, or could easily overcome. Kings have always a tenderness for the representatives of belief in hereditary Monarchy, and yet it is very difficult to persuade them that nations which adopt such a Monarchy really become more powerful foes in consequence. They have more fear of the intrigues of the revolutionary societies than they have of the strength of the Monarchical power. They cannot help thinking of a new Monarch as a new friend, and are always disposed to believe that a Monarch will be much more averse to the risk of a possibly unfortunate war, than a Republic which has nothing of so much value to lose; while in spite of their profound admiration for the strength of Monarchical institutions, their fear of Monarchs as open foes is not half as deep as their fear of revolutionary gospels. We are not surprised then that the views of Count Arnim found favour in the highest quarter, in spite of the violent displeasure of the Chancellor. And though we are by no means able to agree with Count Arnim, that it was the interest of Germany to favour a Legitimist Monarchy in France, we are not in the least surprised to find that a favourable ear was lent to those views, even against the most urgent counsels of the responsible German Minister. There was something too artificial, too fine-drawn in the Chancellor's wish to keep at the head of French affairs a Government weak, though not two weak. Diplomacy cannot hit the exact line between wind and water so precisely as all that; and the rather cynical notion, moreover, which clearly pervades Prince Bismarck's despatch, that the communistic *experimentum in corpore vili*, as he calls the interregnum of the Paris Commune, even if it were to be repeated, would be rather useful than otherwise to Germany, as tending to turn Moderates into Conservatives and Liberals into Moderates, is one so threatening to all order in Europe that we can easily understand its exciting a strong dislike in the Emperor's mind, and its seeming to him the conception of a rash and inveterately contemptuous statesman.

We ourselves should be inclined to hold that neither Prince Bismarck nor his contumacious Ambassador were in the right. We should hold with the latter—with Count Arnim—that the strongest Government France could set up, would be on the whole the best for German interests. And we should hold with the former—with Prince Bismarck—that the Government of the Legitimists could, by no possibility, be the best for German interests. It is perfectly true, no doubt, that if you look upon France and Germany as internecine foes, always on the very eve of a new war, it would be for the (military) interests of Germany that France should get no settled Government, but be constantly falling from one revolution into another. But even Prince Bismarck does not venture to say that Germany could look with satisfaction on such a result as that. And even the grim satisfaction with which he provisionally contemplate such a result is not statesmanlike. For nothing can be worse for Germany and for Europe than to have a perpetual state of anarchy in France. Apart from all questions of contracts between the two countries, the life of nations is so closely bound up together that, were France to fall into the condition of Spain, all Europe would suffer from it, and Germany herself would suffer even materially far more than any compensation out of the plunder of the war could by any possibility repay her. We hold it to be prefectly true that the most settled Government France could have would also be the Government least likely to declare war rashly. Settled Governments know that they have much to lose; unsettled Governments only think of what they have to gain. Nothing can be clearer than that Louis Napoleon was profoundly averse to the war by which he lost his throne, and that his safest advisers were as averse to it as he. If Prince Bismarck had been as anxious to avoid it as was the Emperor of the French, that war, we suspect, would never have taken place. Even now the Napoleonic party is the only party which has had the boldness to declare that if it came to power it would wholly repudiate the policy of revenge. And the reason it has had the boldness to make this declaration, is that it knows better than any party the depth and strength of the prudence, caution, and timidity of the peasantry and the merchants of France, the secret delight they would feel in a policy of safety, and the superficial cowardice which prevents them from avowing openly to the French people the feeling which really actuates them. That is the knowledge which emboldens the Imperialists of France at the present time to declare openly that they—who of all others are most responsible for the invasion and dismemberment and heavy mulcting of France—would, if they succeeded to power, make no attempt to revenge these calamities and indignities on the great Power which inflicted them. But a restored Monarch who was—as the Legitimist Monarch would be—in the hands of the sacerdotal party and a small clique of the old nobility, would have no such means of reading the hearts of the people, and of anticipating their secret wishes. Either a Republic truly representing the cautious feelings of France, or an Empire which is by virtue of all its tradition in the closest possible sympathy with the proprietary fears of France, might well appreciate properly the immense risk, the terrible responsibility, of a new war. But the last power to appreciate this risk adequately would be a throne built on obsolete ideas, half chivalric and half sacerdotal, and which must be profoundly out of sympathy with the frugal peasantry and the cautious commercial classes of the French nation. Prince Bismarck was right in fearing a Legitimist restoration. Count Arnim was right in fearing a weak and temporary Government. Whatever the risk of a renewal of strife may be, it would be far greater in the case of any Government which had come by a stroke of luck to the supreme power, than in the case of one vitally related with the pepple, and knowing truly all their weakness and fears. An unstable Government is always likely to be a worshipper of chance, and war is one of the favourite resources of worshippers of chance. But the most unstable Government now possible in France would probably be the Government of the Comte de Chambord. And the least unstable of any such Governments would be, in our opinion, either a very moderate and cautious Republic, or an Empire, resting, like the last, on the votes of the people.

THE CHEQUE BANK.

(Economist.)

The intersting experiment of the "Cheque Bank" has now been tried for more than a year, and the report and accounts which have been issued for the first year, coupled with a supplementary report by the manager, exhibit very clearly what the results so far have been. The object of the bank may be briefly described as that of substituting for small payments a new kind of cheques, which have some of the qualities of bank notes—the bank issuing in exchange for a deposit a book of blank cheques, which can only be filled up for a sum at, or under, a maximum amount named on them, so that the receiver of a cheque, though exposed to some chance of loss by forgery, has always the assurance that the bank has money to meet it. The bank makes its profits by receiving interest from the banks with which it is in association on the amount of deposits undrawn, which must usually be a considerable part of the original deposit, as the cheques are only gradually filled up. The result, as far as the profit of the first year is concerned, is naturally a loss to the shareholders, time being obviously necessary to acquire business. The accounts show that the expenditure and depreciation chargeable to the profit and loss account of the year amounted to 18,164*l.*, and as the gross income is only 4,671*l.*, there is a loss of capital in the first year of 13,493*l.*, exclusive of 4,879*l.* for advertising and minor items, which are to be written off the profit and loss of future years. Of the income, again, the sum of 3,000*l.* may be reckoned as the income from 100,000*l.* consols purchased by way of guarantee to depositors, so that the receipts from the bank's business were only 1,671*l.* in the first year, against 18,164*l.* of expenses. Of course this is no argument that the experiment will not eventually succeed, as the bank must wait till it is known before it can hope to receive a large amount of deposits, and must also spend a great deal during the intermediate period in advertising. And in regard to deposits, there has undoubtedly been a remarkable progress made, which induces us to believe that there is a better chance of the experiment succeeding than we should have been at first inclined to suppose, considering the great facilities offered by existing banks and the apparent smallness of the special field which the new bank occupies. The amounts received from customers and balances in hand increased as follows during the first year:—

Received from Customers.	£	Balances in Hand.	£
From July 22 to September 30, 1873 (60 working days)	40,717	On September 30, 1873	20,736
From October 1 to December 31, 1873 (77 working days)	71,511	On December 31, 1873	35,781
From January 1 to March 31, 1874 (77 working days)	120,564	On March 31, 1874	59,147
From April 1 to June 30, 1874 (76 working days)	162,634	On June 30, 1874	79,694
From July 1 to July 22, 1874 (19 working days)	62,329	On July 22, 1874	87,026

And during the period which elapsed between the 22nd of July last and the 4th of November, the date of the report, embracing 89 working days, the amount received from customers was 238,413*l.*, and the balances then in hand were 103,849*l.*—the amount of progress having thus been at an increasing rate during the entire existence of the bank. Assuming that the average balance on which the bank received income in 1873-74 was about 50,000*l.*, and that the same rate of progress continues in 1874-5, the average balance yielding income in that year will be about 150,000*l.*, so that the present annual receipts from sources exclusive of Consols should, at least, be three times what they were in 1873-4, or about 5,000*l.*, making the total gross income of the bank at least 8,000*l.* This approaches very nearly the amount of the current annual expenditure, exclusive of advertising and depreciation, viz., 10,588*l.*; and in another year the same rate of progress would give a small profit, the staff of the bank, it is stated, being sufficient for a much greater business. As far as can be gathered from the supplemetary report, which contains most ample details, the principal use of the bank is made (1) by large employers who make deposits and give the cheque books of the bank to subordinates for the purpose of "petty cash", and (2) by remitters of small sums, the cheque of the bank being practically taken everywhere throughout the country, as well as in the principal foreign towns, and being cheaper than a Post Office order. The cheques are also employed as a substitute for notes and coin in travelling, and in making purchases at shops where the customer is not known, and in a variety of other ways where an ordinary cheque could not be used. The bank having advanced so far, the progress of the experiment during the next few years may be watched with all the more interest.

THE SHAKERS OR GIRLINGITES.

(Spectator.)

We do not quite agree with Mr. Auberon *Herbert*, who says in his letter to the *Times* of Tuesday that the difference between the poor Shakers, who have just been ejected from their house near Lymington for debt and general incapacity to manage their worldly affairs, and the "respectable" Christian world outside their gates, is chiefly this,—"that they [the Shakers] carried out their superstitions" logically, that is, that "they had the misfortune to believe absolutely in what they professed,"—while the Respectables do not. Nothing is easier, and to our minds, nothing is less convincing to any thoughtful man, than that sort of attack upon a large conception of a very complex matter which consists in panegyrising the earnestness of those who take a small and very fragmentary view of it as if it were the whole, and in condemning by implication the sincerity of everybody else. What do we call the medical practitioners who ride a hobby, like exercise, or cold water, or electricity, or a particular regimen of living, to death, and make health depend on following the prescribed rules, except ignoramuses or quacks? And it seems to us that whatever can be said against Christ's teaching, it can hardly be denied that it is as rich and complex a thing, as much needing study as a whole, and the careful avoidance of fragmentary treatment and caricature, as the principles of medicine. To say that the followers of Mrs. Girling are more like the early Christians,—say, for instance, the followers of St. Paul,—than any of the regular Christian Churches, is virtually to say, we suppose, that the early Christians came to such a dead-lock with the world around them as Mrs. Girling's followers have come to,—which was not the case, indeed if they had, we should probably have never heard either of the Archbishops praying for rain, on whom Mr. Herbert is unjustly severe, or of Mrs. Girling and her friends, to whom he is justly lenient. The early Church at Jerusalem, which had all things common, never seems to have mortgaged its property and forgotten to pay the interest till the mortgage was foreclosed. St. Paul, at all events, was evidently a man of business. He not only made tents successfully, so as to be "chargeable to no man," but he inculcated the most excellent business principles,—principles, indeed, at once of worldly and unworldly wisdom,—on his unknown disciples at Rome:—"Render therefore to all their dues; tribute to whom tribute is due, custom to whom custom, fear to whom fear, honour to whom honour. Owe no man anything, but to love one another." But while we do not think Mr. Herbert has had at all a great success in using Mrs. Girling and her followers as inexpensive missiles to cast at the heads of less eccentric Christian Churches, we heartily agree with him that the attempt to make her out insane because she takes up in a somewhat isolated and capricious fashion a knotty fragment or two of the Christian teaching, was a very monstrous one; and also we agree with him entirely that it is exceedingly likely that a new generation may arise which will look on "the superstitions of the educated as even more pitiable than the superstitions of the ignorant," though whether the former superstitions will then be illustrated by the superficial essays of orthodox prelates, or by those of heterodox automatists, we think it might be rather difficult hastily to determine. In any case, Mr. Auberon Herbert has acted with his usual kindliness and keen feeling for misery, in giving the poor Shakers the offer of a large barn and outbuildings for temporary occupation, though he must have been aware that by doing so he was strengthening their belief,—and as he thinks, their superstition,—that God would answer their prayers; indeed, it would probably be a special marvel to them that God should do so by making use of so sceptical and unbelieving an instrument for that purpose as himself.

With regard to the creed itself which has led all these poor people into their very unsuccessful speculations at Lymington, and now got them between the horns of a very disagreeable dilemma,—on the one hand, the disavowing of a faith to which they feel pledged by the loyalty of inward conviction,—and on the other, a very uncomfortable and gradual kind of starvation,— what strikes one most about it is not at all its affinity to the creed of the early Christians as that creed appears in the New Testament, for that was full of depth and spiritual shading, but the crude and hard simplicity it displays, the corporeality without any sensual feature,—in a word, the ten-

dency to degenerate from Christ's Gospel into a creed of the type which we might suppose the "toiling millions of men sunk in labour and pain" to mould for themselves out of the more prominent physical elements of a greater creed. As a rule, of course, the beliefs of men on *all* subjects have been chiefly determined by the inspiration or the genius of the few. The many have been led, not leaders. Life and force, and often youth, and flashes of either genius or inspiration, have been necessary to trace out a great creed on any subject. And for the most part, the dull leaden experience of the masses of men before they grew into the light of such beliefs have not verified such creeds, though the beliefs themselves have often power to transfigure and glorify what was previously leaden-hued experience. It takes a man whose life is more vivid than that of others, whose emotions are more intense, whose imagination is more easily kindled, whose conscience is more powerfully efficient, or whose intellect is more flexible and vigilant, to think-out the great thoughts, or receive the great flashes of illumination, which thenceforward touch the experience even of all the rest of the world with light. It is easier, for instance, for a man to whom all the events of life present some new and striking world of opportunity, to believe in the divine providence which guides his individual life, than it is for the creature of dull routine and wearing toil, to whom labour means weariness, and each new morning means only a new winding-up of the machine. Such a man may accept with joy the great gospel, "Now is my heart troubled, and what shall I say? Father, save me from this hour. *But for this cause came I to this hour.* Father, glorify thy name,"—may find it shed a flood of light ever his life; but his own experience, *previous* to such a spring of the soul towards an authoritative announcement of the truth, would never for a moment have suggested it. It would never have occurred to him that the very key of the trouble and difficulty in earthly circumstances was the use of that trouble and difficulty for ends which nothing but trouble and difficulty, nay, nothing but *that* trouble and difficulty, could have answered. It takes either inspiration or the highest genius to find a meaning for ordinary human life which shall not be a depressing meaning. We might almost say that the world would hardly have had a religion, if there had been none but common minds with common experience,—not because the common minds with the common experience are incapable of accepting it, but because it takes uncommon minds with uncommon experience to help them to interpret their own ordinary life rightly. Just as science would be impossible without an uncommon mind and uncommon powers of observation to find a key for common minds and common powers of observation, so the great ideal and religious faiths of the world would be impossible without the same help. Let an ordinary mind try to recast for itself the teaching either of science or of faith,—without constantly recurring to the luminous guidance of men more or less capable of discovery,— and it is sure to show some great degeneration of conception, to grovel toward a dull, unillumined routine notion,— a routine notion that wants all life and vigour. It takes something much above us to show us what is; nay, it takes a constant striving towards that which is above us to keep up the knowledge we have once attained of what is; and nothing is more certain than the tendency in man, after the first great impression caused by a new working of the mind or heart has passed away, rapidly to lose all the depth and vividness of that impression, and quietly to substitute for it something far more in keeping with the dull and spiritless experience which preceded the making of that impression.

Now the creed of the Girlingites seems to us just such a leaden corporeal recast of one knotty bit of Christianity, as would proceed from "the toiling millions of men sunk in labour and pain," though it is brightened up with a marvel or two and a very strong appeal to the faithfulness of honest hearts. Mrs Girling, at least as she appears to have explained her creed in the presence of the *Daily News'* reporter, must have got hold of a very strong impression indeed that the gift of the Spirit of God is accompanied and signified by a complete renewal of the human *body*, so as to set it free from all that is evil and perishable in it, and fit it for the immortal life. All her peculiar creed hinges somehow on the body. The dancing of the Shakers is believed to be the possession of their bodies by the Holy Spirit. Their celibate life is due to the influence of the Holy Spirit on their bodies. It was a vision of Christ in the body from which Mrs. Girling dates her revelation. It has been by miraculous cures of bodily ailments that her belief in that revelation has been sustained and renewed. Here is the account of what she says:—

"She then prayed earnestly for the Spirit of God to enlighten her, and after long and earnest pleading, at the midnight hour, in darkness and solitude, she received the Holy Spirit. She immediately experienced an entire change of body from top to toe. Eight years afterwards, at noonday, she saw a vision. She saw Christ in the clouds, and from Him received a revelation that she should not see death till He came, and also a commandment to preach this to all men. Addressing herself pointedly, she said, with arm and finger extended. 'As clearly and surely as I see you and see your features, so clearly did I see the form and face of Christ, the Son of God. You may think me crazed, or what you like. I care not: but I know as surely as I stand here that my body shall never enter the ground. I do not say Christ will be here to-day, to-morrow, next week, or next year—for I know not when: but I do know I shall be alive when He comes. I have preached the truth to millions of people, and with God's grace will still preach the same to-night. Amongst you, my friends, are doubtless married men. I do not say you are wrong, God forbid. Marry and be given in marriage, but being sons of Adam, all your bodies must see death. Our bodies are already quickened by the Holy Spirit, and will not see death. I do not say you will receive condemnation at the day of resurrection, but each man as he acts in accordance with his conscience so will he receive judgment and have different degrees of happiness. We who follow Christ cannot marry. We must live a celibate life, the same as Christ. I assure you we live in perfect purity when changed by the Holy Spirit. I have experienced many miraculous cures before the revelation of Christ—total paralysis of the body, blindness of one eye, a mouth drawn all on one side—all was cured in a marvellously short space of time."

And yet, as Mr. Auberon Herbert justly says, there is not a sign of insanity about her. She is not very successful, but she acts like successful generals and successful statesmen, in being rather anxious than not to be "interviewed" by newspaper reporters, and very desirous to make public all that she teaches. When she was examined by Dr. Adams in relation to her sanity, her coolness was admirable. She was simply "amused" at the doubt shown of it. She bantered the doctor rather skilfully about the "mesmeric" hypothesis of the Shakers' dances, and remarked that if she had really had any such mesmeric power, he would have been the person on whom she would certainly have displayed it. She utterly repudiated any expectation of a miracle to shelter her Shakers from the weather on the night of their expulsion, or to restore the ejected furniture to the house from which the sheriff's officers had taken it. She did not yet know, she said, what, under the circumstances that had taken place, she and the brethren would do, but "*there were two things she claimed and would have,—religious liberty and justice,*"—a very British sentiment indeed, and not in the least wanting in either reasonableness or *savoir-faire*. In fact, everything seems to show that Mrs. Girling is by no means a stupid person, while the strong attachment to and faith in her of all the brethren, proves in all probability that there is nothing of the impostor about her. It seems to us that this rather ignorant, but shrewd and very earnest person, has just recast an odd corner of the Christian teaching in a very corporeal sense which takes a strong hold of a certain small number of the "dim, common populations," by reason of the very audacious claim it makes to transfigure at once and for ever that toil-worn, much-enduring body which seems so paradoxical an appendage to the spiritual life. Probably no class feels the full "burden of the flesh" like the labouring class. The hard-tasked instrument of labour, weary, soiled, and ill-adjusted to any but strongly-marked efforts, looks exceedingly unlike the temple of a spiritual life. But Mrs. Girling's strange fanaticism takes, at all events, this bull by the horns. It takes St. Paul's teaching that the body is sacred because it is the temple of the Holy Spirit, and interprets it to mean that the Holy Spirit shows its physical dominion over it by shaking it about and impelling it to dance, and so transforming it that it will not pass through death, but be caught up to meet "the Lord in the air." That is an admirable instance of the degeneration of a spiritual truth, but it is hardly a worse superstition than the belief that by mere eagerness to take hold of the proffered merits of Christ a man can secure for himself his salvation. The one is a degeneration due to the spell exercised by the weary body over the imagination of the marvel-seeking labourer, the other a degeneration due to the spell exercised by the keen commercial faculty,—the love of an easy bargain,—over the imagination of the marvel-seeking trader. Both seem to us remarkable illustrations of that lowering of high faiths which must always come from reading them in the sense in which, if we could conceive it, the minds needing emancipation would themselves have tried to imagine such faiths,—in other words, from overlaying the new teaching with the very class of tyrannical conceptions from which it is intended to set us free. There is no doubt a charm for these poor people in the mere idea that the Holy Spirit can directly move their bodies without the co-operation of their own minds,—the fascination consisting in the feeble and superstitious notion that it is to be closer to God to have Him govern the body without the concurrence of the mind than through the mind. Such superstitions are indeed almost always the compounds resulting from the fusion of faith with want of faith. The Girlingites present no exceptional case, though they present a case of a somewhat coarser kind of superstition than in the middle-classes we ordinarily meet with.

MR. CHARLES AUSTIN.

(Pall Mall Gazette.)

A very short notice in Monday's *Times* stated that Mr. Charles Austin, "well known in legal and general circles," died the other day at Brandeston Hall, in Suffolk, at the age of seventy-five. All that is said of him, apart from a few dates, is that he "acquired great eminence at the parliamentary bar, and obtained the honour of a silk gown in 1841." This is rather a curt notice of one of the very ablest men of our day, though it must be owned that, with all his splendid gifts, there really is little more to be said about him.

Mr. Charles Austin was the younger brother of Mr. John Austin, whose work on the province of jurisprudence has, since his death, obtained a degree of fame and influence which it never acquired in its author's lifetime. The two brothers had (as brothers usually have) much in common and many points of strong contrast. They were two of the very ablest men of the age in which they lived. The elder brother's book shows sufficiently the character of his intellect, and upon the few persons who knew him well his conversation made an even deeper impression than his book. In gravity, force, and accuracy of thought he equalled, if he did not exceed, the writers with whom it is natural to compare him, such as James and John Mill. The whole tone of his mind, his moral sympathies, and his religious feelings, were infinitely graver, deeper, and more manly than theirs. He was, however, languid, low-spirited, and constitutionally indolent, and the results of his thought and labour are in consequence not great, and are instructive to comparatively few. He led the simplest and quietest of lives in a small cottage at Weybridge. "I ought to have been a schoolman. In these days no life would suit me so well as that of a German professor," was his account of himself to an old friend.

Mr. Charles Austin had probably as powerful a mind as his brother, and as much aptitude for abstract speculation; but he was of a totally different temperament. Accounts of his militant Radicalism and his brilliancy in discussion are to be found in the Autobiography of Mr. John Mill and in Mr. Greville's Memoirs. He was one of the eager band of reformers who, when George IV. was king, thought that they had discovered the great secret by which everything might be set right, and who declared war against all existing institutions, in a mild constitutional fashion. The war was never a very bitter one, and as time went on most of the soldiers took service in the camp which they were to have attacked. Charles Austin in particular might be described as the Demas of Benthamism who forsook it, "having loved this present world." A somewhat cynical critic, who, however, was neither unfriendly nor quite unsympathizing, observed upon him and his brother, "They were both very clever fellows. Charles was much the cleverest. John served God, and Charles served the devil and made much the best bargain of the two." "Serving the devil" was a more picturesque than exact manner of describing the fact that Charles Austin got into practice at the parliamentary bar when that singular profession was in its palmiest condition, and that his marvellous gifts as an advocate gave him a position there the like of which was never attained by any other man in any branch of the profession. His income in the year 1847—the great railway year—was something fabulous, nor do we venture to state the sums which we have heard mentioned. His reputation was so great that he received many briefs merely in order to prevent his appearance on the other side, and this no doubt is the origin of the story (mythical or not) of his being met riding in Hyde Park on one of the busiest days in the session. "What in the world are you doing here, Austin?" "I am doing equal justice to all my clients." What Bentham in heaven can have thought of his distinguished disciple it is difficult to imagine. Probably he reflected that as such fees were going it was as well that they should go to a Benthamite.

In 1848, and in the forty-ninth year of his age, Mr. Austin retired from practice, having bought the estate in Suffolk where he died. He was in the full vigour of his life and in the very prime of his powers. He had a well-deserved reputation as the most successful advocate of his age with the doubtful exception of Follett. He was a man of most brilliant talents of all kinds, and of varied accomplishments, and from the day of his retirement to the day of his death, being twenty-six working years, his most important avocation, as far as the public knows, was presiding at the quarter-sessions for East Suffolk.

LITERARY GOSSIP.

(Athenæum.)

We have much pleasure in announcing that it has been settled that an official history of the Ashantee Campaign shall be published. It is not yet finally determined to whom the task shall be confided, but it will probably be entrusted to two well-known officers who distinguished themselves in the war.

A handsomely illustrated edition of the Poems of Sydney Dobell will be issued in two volumes early in the present year. As a sample of the posthumous portion of the contents, we are able to publish a short fragment, valuable alike for its seasonableness and its beauty. It is entitled 'New Year's Eve.'—

As when at twelve o'clock strong January
Flings wide the gates of life and we look out
Straight to the primroses, and with the swallow
Skim thro' the dawns of daffodils and up
To bluebell skies, and from the bluebell skies,
Like a wild hawk upon a flight of doves,
Swoop upon June and Paradise, and on
Beyond the bounds of Eden to an Earth
Boss'd with great purples of new-clustered wine
Betwixt the tented harvests red and gold,
And so into a cloud, and know no more——

The volumes will be a welcome gift to an esoteric public. They should do something to spread a knowledge of their author among general readers.

We hear of the deaths of two provincial notabilities, Mrs. Trafford Whitehead, a literary lady, of Manchester, and Mr. Charles Rogers. Some years

ago Mrs. Whitehead contributed a series of poems to the Manchester press, under the *nom de plume* of "A Manchester Lady." Some of these were included by the late Mr. Harland in his 'Modern Songs and Ballads of Lancashire.' The deceased lady also wrote a novel, entitled 'The Grahams of Bessbridge House.' Mr. Charles Rogers was well known in Yorkshire for his writings in the dialect of that country. He was the editor of 'T' Bairnsla Foaks Annual an Pogmoor Olmenac,' which has been published, we believe, annually for more than thirty years. It is written in the Yorkshire dialect, and has considerable popularity in the country.

The Rev J. W. Ebsworth has in the press a reprint of the 'Westminster Drollery' of 1671-1672.

Dr. H. Dunbar, a son of the late Prof. Dunbar, who for many years held the Greek chair at the University of Edinburgh, is engaged upon an Homeric Dictionary.

Mr. John Noble, author of 'Fiscal Legislation, 1842-1865,' has in the press, and will shortly publish, 'National Finance, a Review of the Policy of the last two Parliaments and of the Results of Modern Fiscal Legislation.'

The death is announced of Sir William Boyd, of Edinburgh. He was the author of a 'History of Literature,' 'Lectures on Ancient and Modern Literature,' &c.

PUNCH.

A CHRISTMAS NUMBER A LA MODE.

JOHN SMITH was ill, very ill. He had sent for the Doctor in hot haste. His family (a numerous one) surrounded his easy chair. The poor old man (poor in health, only let it be understood, for he was as rich as Crœsus in pocket) gazed at the assembled throng with eyes dimmed, not by tears of affection. His numerous relatives bent over him to hear what he had to say.

"My friends," he gasped out, "I want you to do me a favour. I cannot last much longer, and before I die I should much like to hear all your stories."

There was an awkward pause, and then one of his relatives advanced. He was a little old man dressed in a suit of seedy black. He cleared his throat coughed apologetically, and commenced as follows:—

The Pew-opener's Story.

"The Church of St. Bunkum is in the ward of Cold Without, in the City of London, &c., &c. One foggy November morning, when the streets were, &c., &c., I was dusting the reading-desk when, &c., &c. The Bride was a timid young thing, and as she stood before the Curate, &c., &c. The Bridegroom was nervous, &c., &c. The young couple drove off in a cab, &c., &c. He tried hard to get work from the editors of the magazines, &c., &c. She pined away, &c., &c. And on New Year's Eve I heard that they both were dead!"

When the little old man had finished his story, John Smith opened his eyes and exclaimed, "Let me hear the next."

Accepting this invitation, a bright-looking young man with curly brown hair and sparkling blue eyes stepped briskly forward, and began—

The Civil Engineer's Story.

"'Charley, old man, you will never do it!' exclaimed my partner. My partner was, &c., &c. In spite of this, I determined to begin the work the next morning, &c., &c. The men murmured, &c., &c. I seized the revolver from Morton's hand, &c., &c. And so he was tried, found guilty of manslaughter, and sentenced to penal servitude for life."

The bright-looking young man hastily wiped away a tear, and bowing to the company, left the apartment.

Old John Smith roused himself from a gentle slumber, and cried "Now for the next!"

A pale-faced man, very blue about the cheeks and chin, advanced, and related—

The Story of the Christmas Clown.

"Old Higgings used to work the Norfolk Circuit when me and Sally were engaged at thirty shillings a week as 'useful people.' My wife (she was called Miss Florence Plantagenet in the play-bills) was, &c., &c. Well, one night when we had a good house (it was Signor Tomkins's benefit) we, &c., &c. The rouge was still on her face, &c., &c. 'It is fever,' said the doctor, in a low tone and I, &c., &c. I gave the audience my usual joke (we call it a 'wheeze' in the Profession) before I came off, so that the Signor might have time to prepare for jumping through the paper balloons, when, &c., &c. The audience roared with laughter, &c., &c. 'She 's dead,' said the doctor, as I came off, and poor lass, so she was!"

The Christmas Clown buried his face in his hands, and poor old John Smith (with tears in his eyes) observed, "A sad, sad story. And now for the next."

A gentleman, with a face overflowing with drollery, advanced, and, without any preface, commenced—

The Story of the Man Without a Memory.

"I never could remember anything, &c., &c. When I was a boy, &c., &c. When I was a youth, &c., &c. Well, I was engaged to be married, &c., &c. I was called in the morning, &c., &c. 'The day of your marriage, Sir,' said he, and &c., &c. I looked at my watch, &c., &c. I hurried to the church, &c., &c. The clergyman was very angry; he said, &c., &c. The ring was not on the piano, &c., &c. And to this day I am a bachelor, whilst Mary, (the woman I adored) is married to the hated pork-butcher, and is the mother of five children!"

There was a roar of laughter as the speaker finished. After the merriment had subsided, some one called attention to poor old John Smith. His jaw had dropped, his features were rigid, his eye glazed, his expression one of the deepest dejection. He was dead!—the concluding story (it was a comic one) had finished him without the assistance of a doctor!

BETTER LATE THAN NEVER.

SIR,

IT must have been! I've got at it. I've only just hit upon it. The story of Brummy and the Dog-fight. I've found out the solution of it all. It was evidently intended, at the commencement of the autumn theatrical season, now over, to draw public attention to *Richard Cœur de Lion* at Drury Lane. Did n't you see the pictures on the walls? "The hound attacking the Knight." Of course. Depend on it, something went wrong, and the scheme was mismanaged somehow, or under that picture we should have seen long ago daily advertised, "The Man and Dog Fight in *Richard Cœur de Lion* at Drury Lane every evening."

Yours,
SLEEPYHEAD WOKEUP.

A WINTRY SECT.—The Shakers.

COCKNEY FURRIN AND 'OME REVIEW.

Horgustus. Rather 'ard of hold Bismarck to be down on Harnim, hain't it?

'Enery. Yes, I'm sorry for old 'Arry Harnim. I wonder if Bismarck 'll hindorse 'is committal with "No Christmas Fare." Carden 'd ha' dun it if he 'd a cot the poor beggar.

CELESTIAL COLD SHOULDER.—A Correspondent suggests, as explanation of the late severe weather, that Venus has been flirting with the Sun, and creating a coolness between him and the Earth.

A NICE DISTINCTION.

Sunday Visitor. "What is that Boy of yours playing at, Mrs. Mullington?"

The Vicar's Wife. "O, well, of course he can't have his Ball to play with on Sundays—so we let him have the Sofa-Cushion to kick!"

GROSS NEGLECT OF DUTY.

Sunday School Teacher. "What did your Godfathers and Godmothers then for you?"

Sunday School Dunce. "Nothing at all, Miss—neither then nor since!"

MOTTO FOR THE MIDLAND RAILWAY.—"*Nulli Secundus.*" Second-Class for Nobody.

"FIVE O'CLOCK TEA."

Lady (to Relative from Australia). "Will you take any Refreshment, Cousin George?"

George. "Thanks, Bella. Don't mind if I do. Give us a Handful o' Tea and a Billy o' Water, and I 'll Boil it, while you make me a Damper!"

MOTTO FOR A MANAGER.—"*Cætera decent.*"

A REAL BLESSING TO FATHERS.

A SERIAL on sale at the Railway Bookstalls bears on its front page the following announcement:—

"*Little Folks* Enlarged without Increase of Expense."

If this could actually be accomplished, what a blessing it would be for Paterfamilias, particulary at the present festive season of eating and drinking and growing bills for growing children.

TWO RATES DISLIKED BY DISSENTERS.—Pew-rates and Cu-rates.

"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley, for the above named Pills, for wind in the stomach, from which I suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted. —I am, Sir, yours truly, HENRY ALLPASS.—To the Proprietors of NORTON'S CAMOMILE PILLS."

ESTABLISHED IN 1820.

C. LAZARUS AND CO.

(Incorporated with Shearwood & Co.,)

CABINET MAKERS, UPHOLSTERERS,

Billiard Table Manufacturers,

BY APPOINTMENT

To His Excellency the Viceroy and Governor-General of India,

AND

His Royal Highness the Duke of Edinburgh

CALCUTTA.

THE NEW PATENT

ELECTRIC BILLIARD MARKER.

C. LAZARUS & Co. beg to draw the attention of Clubs, Messes, and the public in general, to this wonderful and very ingenious adaptation of the great *principle of*

ELECTRICITY

As applied to the noble recreation of

BILLIARDS.

One of the greatest inconveniences attendant on this scientific game and the one most felt by players, is the interruption to play by having continually to run to the wall marking board to mark the score, and the liability to mistakes in so marking. By this new invention mistakes are impossible, and annoyances and inconveniences are done away with, and the interest in the game is doubled. *Every player can now mark his score without leaving the table and from the cushion he is standing near.*

The apparatus itself is so simple in construction, that an Amateur can put it together in half an hour, without the assistance of an Electrician. The Battery will last for months, without being refilled, and when it needs to be renewed can be done at any time, for a few annas.

The extreme simplicity of the ELECTRIC MARKER and the low charge for the same will, C. L. & Co., are satisfied, make it as popular with the Billiard-playing community of India and the East, as it has already become in England and on the Continent. C. L. & Co. have at present only a very limited supply of the ELECTRIC MARKERS, but are expecting fresh consignments shortly. Meanwhile all orders will be registered for execution.

The MARKERS can be seen in full work, and all particulars may be ascertained from C. L. & Co., who have been appointed by the Patentees sole Agents for India and the East. They cannot therefore be procured elsewhere.

MIRRORS.

THE Mirror has undoubtedly, in this Country, long been esteemed and sought after as a beautiful and Appropriate Embellishment to the Indian Mansion. Knowing that Mirrors hold such an important position in Decorative Art, C. Lazarus & Co. have made arrangements for the supply of Mirrors from the most celebrated manufacturers. They have just received, and have now on view at their show rooms,

A Magnificent and most varied Assortment of

Plate Glass Mirrors,

Of every design and size, by far

THE HANDSOMEST AND LARGEST

Ever imported into this Country, and which for brilliancy of reflective power, truthfulness of reproduction, and Style of Mounting have never been surpassed. The Silvering also of these Plates is on a new and most approved principle, not so liable to deterioration as the old method of Mercurial Silvering.

C. L. & Co. earnestly and respectfully solicit an inspection, satisfied that, what they would here desire to pronounce, *viz.*,—An opinion on the Intrinsic Excellence of the Mirrors, will be better done by those who may favour them with a visit than by any description in a trade Advertisement, which must of necessity fail to convey to the mind an adequate idea of these really superb works of Decorative Art.

In order to effect a speedy sale with a view to further importations, C. L. & Co. are prepared to offer these Mirrors to the Public at exceptionally low rates, being in fact very little over manufacturer's prices.

Billiard Tables.

The numerous flattering testimonials received by C. LAZARUS & Co. from all parts of India, China, Burma, Persia, Java, Ceylon and the Straits, prove that their tables are now considered the best manufactured and are the only ones appreciated in the places enumerated.

(213)

DR. J. COLLIS BROWNE'S CHLORODYNE.

THE ORIGINAL AND ONLY GENUINE.

ADVICE TO INVALIDS.—If you wish to obtain quiet, refreshing sleep, free from headache, relief from pain and anguish, to calm and assuage the weary aching of protracted disease, invigorate the nervous media, and regulate the circulating systems of the body, you will provide yourself with that marvellous remedy discovered by Dr. J. COLLIS BROWNE (late Army Medical Staff, Member of the College of Physicians, London,) to which he gave the name of

CHLORODYNE,

And which is admitted by the Profession to be the Most Wonderful and Valuable Remedy ever discovered.

CHLORODYNE is the best remedy known for Coughs, Consumption, Bronchitis, Asthma.
CHLORODYNE effectually checks and arrests those too often fatal diseases—Diptheria, Fever, Croup, Ague.
CHLORODYNE acts like a charm in Diarrhœa, and is the only specific in Cholera and Dysentery.
CHLORODYNE effectually cuts short all attacks of Epilepsy, Hysteria, Palpitation, and Spasms.
CHLORODYNE is the only palliative in Neuralgia, Rheumatism, Gout, Cancer, Toothache, Meningitis, &c.

CAUTION.—BEWARE OF PIRACY AND IMITATIONS.

From LORD FRANCIS CONYNGHAM, Mount Charles, Donegal, Dec. 11th, 1868 :—"Lord Francis Conyngham, who this time last year bought some of Dr. J. Collis Browne's CHLORODYNE from Mr. Davenport, and has found it a most wonderful medicine, will be glad to have half-a-dozen bottles sent at once to the above address."

*** EARL RUSSELL *Communicated to the College of Physicians that he had received a despatch from Her Majesty's Consul at Manilla, to the effect that Cholera has been raging fearfully, and that the* ONLY REMEDY *of any service was* CHLORODYNE.—*See Lancet, Dec.* 31, 1864.

J. LOWE, M. R. C. S. E., Missionary in India, states—"In nearly every case of Cholera in which Dr. J. Collis Browne's CHLORODYNE has been administered in the earlier stages of the attack the patient has recovered. Every traveller in India should carry a supply."

Extracts from the GENERAL BOARD OF HEALTH, LONDON, as to its efficacy in Cholera :—"First Stage or Premonitory. In this stage the remedy acts as a *charm*. One dose is generally sufficient.

From DR. THOMAS SANDIFORD, Passage West Cork :—"I will thank you to send me a further supply of CHLORODYNE. It was the most efficacious remedy I ever used, affording relief in violent attacks of Spasms within a minute after being taken. One patient in particular, who has suffered for years with periodical attacks of Spasms of a most painful nature, and unable to obtain relief from other remedies, such as opium, &c., finds nothing so prompt and efficacious as CHLORODYNE."

DR. M. MILLMAN, of New Galloway, Scotland :—"I consider it the most valuable medicine known."

DR. GIBBON, Army Medical Staff, Calcutta :—"Two doses completely cured me of Diarrhœa."

From DR. B. J. BOULTON & CO., Horncastle :—"We have made pretty extensive use of CHLORODYNE in our practice lately, and look upon it as an excellent Sedative and Anti-spasmodic. It seems to allay pain and irritation in whatever organ, and from whatever cause. It induces a feeling of comfort and quietude not obtainable by any other remedy, and it seems to possess this great advantage over all other Sedatives, that it leaves no unpleasant after-effects.

CAUTION.—VICE-CHANCELLOR SIR W. PAGE WOOD stated that Dr. J. COLLIS BROWNE was, undoubtedly, the Inventor of CHLORODYNE that the story of the defendant, FREEMAN, was deliberately untrue, which, he regretted to say, had been sworn to.—See *Times*; July 13, 1864.

Sold in Bottles, at 1*s.* 1½*d.*, 2*s.* 9*d.*, 4*s.* 6*d.*, and 11*s.* each. None is genuine without the words "Dr. J. COLLIS BROWNE'S CHLORODYNE" on the Government Stamp. Overwhelming Medical Testimony accompanies each bottle.

(447) Sole Manufacturer—J. T. DAVENPORT, 33, Great Russell Street, Bloomsbury, London.

DESIGNS FOR CANNING COLLEGE, LUCKNOW.

COMPETITIVE designs are invited for the proposed Canning College at Lucknow, estimated to cost one lac and twenty thousand Rupees, including out-offices. The buliding, including Verandahs, will cover about 23,000 feet, to be distributed as detailed below :—

	Including walls.	S. feet.
Examination Hall, ...	100 × 60 =	6,000
Eight class rooms	160 × 60 =	9,600
European Professors, ...	25 × 30 =	750
Principal	25 × 30 =	750
Native Professors	25 × 30 =	750
Bath rooms	10 × 30 =	300
Office	25 × 30 =	750
Library	60 × 30 =	1,800
Graduates room	25 × 30 =	750
Total ...		21,450
Add for Verandahs &c. ...		1,550
Grand total, Superficial feet,		23,000

The building will be erected contiguous to the Kaisur Bagh buildings, and the character of the design must be in general keeping with the architectural features of these buildings.

A premium of Rs. 2,500 will be paid to the successful competitor in one sum on the submission of the general drawings—plans, elevations and sections with specification and approximate Estimate, together with the working and detailed drawings.

The plan of the site, photographs of the adjacent buildings, and other particulars will be available for intending competitors on application at the office of the Superintending Engineer, Public Works Department, Oudh. Each design will bear a distinguishing mark, device or motto, and the same, with name and address of each competitor in a separate sealed cover, will be forwarded to the address of the Superintending Engineer, Public Works Department, Oudh, Lucknow, with the designs, which will be received up to 1st May 1875, and to no later date.

ALL BILIOUS COMPLAINTS

And every Disorder depending on either *Functional Derangement* of the LIVER or *Obstruction of the Hepatic* or *Biliary Ducts*, such as INDIGESTION, JAUNDICE, HEARTBURN, DYSPEPSIA, PAIN IN THE RIGHT SIDE AND SHOULDER, BLOTCHES, HABITUAL COSTIVENESS, OFFENSIVE BREATH, DEPRESSION OF SPIRITS, OPPRESSION AFTER MEALS, NERVOUS AND GENERAL DEBILITY, RESTLESSNESS, WASTING, &c., &c., &c., have their appropriate Remedy in

Dr. E. J. LAZARUS'S

ESSENCE OF CHIRETTA.

That it is the only Preparation that has a *really beneficial* influence on the LIVER has already been proved, *beyond all doubt*, by the 97,500 CASES in which it has been tried. It has already saved *thousands* of valuable lives [*see the numberless Testimonials in the Pamphlet of Directions that is wrapped round each bottle*], and has enabled very many thousands more to continue their residence in India in the enjoyment of perfect health and comfort; hence it has, with all truth, been generally styled

THE GREAT INDIAN REMEDY.

Prepared only by Messrs. E. J. LAZARUS & Co., at the MEDICAL HALL, BENARES, from the Original Receipt of E. J. LAZARUS, M.D., and sold by all Medicine Vendors at 4 Rs. each bottle.

CAUTION.—We have a host of unscrupulous imitators—*an indubitable proof of its value*—against whom the Public are warned. Please observe that every bottle is capsuled, and bears on its labels the facsimile of our signature.

THE DECAY OF THE TEETH

Arises from neglect, and the use of tooth powders, pastes and washes, which containing mineral and other deleterious acids utterly ruin the enamel.

ROWLANDS' ODONTO

Is entirely free from all injurious elements, whitens and preserves the teeth, prevents and arrests their decay, strengthens the gums, and gives a pleasing fragrance to the breath.

ROWLANDS' MACASSAR OIL

Prevents the hair falling off or turning grey, strengthens weak hair, causes it to grow on bald patches, and makes it beautifully soft, pliable and glossy.

ROWLANDS' KALYDOR

Removes all freckles, spots, and cutaneous eruptions, and realizes a healthy purity of complexion.

ROWLANDS' ESSENCE OF TYRE

Produces immediately a perfect change in red or grey hair, whiskers and eyebrows, to a glossy and permanent brown or black, which colour neither washing or perspiration will remove. GREAT CARE must be taken to ask for Rowlands' Articles, at 20, Hatton Garden, London, and to see that their signature, A. ROWLAND & SONS, is in RED ink on the wrapper of each, no others being genuine. Sold by all Chemists, Perfumers, Druggists, and at all Bazaars throughout India.

(442)

"FOR THE BLOOD IS THE LIFE."

CLARKE'S

WORLD FAMED BLOOD MIXTURE.

Trade Mark,—"Blood Mixture."

THE GREAT BLOOD PURIFIER AND RESTORER.

For cleansing and clearing the blood from all impurities, cannot be too highly recommended.

For Scrofula, Scurvy, Skin Diseases, and Sores of all kinds it is a never-failing and permanent cure.

It Cures old Sores.
Cures Ulcerated Sores on the Neck.
Cures Ulcerated Sore Legs.
Cures Blackheads, or Pimples on the Face.
Cures Scurvy Sores.
Cures Cancerous Ulcers.
Cures Blood and Skin Diseases.
Cures Glandular Swellings.
Clears the Blood from all impure Matter,
From whatever cause arising.

As this mixture is pleasant to the taste, and warated free from anything injurious to the most delate constitution of either sex, the Proprietor solicits sufferers to give it a trial to test its value.

Thousands of Testimonials from all parts.

Sold in Bottles 2s. 3d. each, and in Cases, containing six times the quantity, 11s. each—sufficient to effect a permanent cure in the great majority of long-standing cases. BY ALL CHEMISTS and PATENT MEDICINE VENDORS throughout the world.

Sole Proprietor, F. J. CLARKE, Chemist,

AGENT FOR RANGOON.

The Rangoon Medical Hall.

UNIVERSAL LIFE ASSURANCE SOCIETY.

ESTABLISHED IN THE YEAR 1834.

Head Office, 1, King William Street, London.

Insurances effected with or without participation in profits.

Committee of Management, Indian Branch, Calcutta.

CECIL STEPHENSON, Esq., East Indian Railway Co.
WILLIAM THOMAS BERNERS, Esq., of Messrs. Ashburner & Co.
GEORGE MILLER, Esq., of Messrs. Hoare, Miller & Co.
JAMES WALTER LOWE, Esq., Barrister-at-Law.
JOHN MATHESON LYALL, Esq., of Messrs. Lyall, Rennie & Co.

ASSURERS under the participating scale share in the Society's profits after six years' premia have been paid, and thus receive back each and every year thereafter, either in the form of an addition to the original sum assured, or of a reduction of the next year's premium, at their option, a Bonus, the amount of which is governed by the annual valuation of the Society's Assets and Liabilities.

This principle was adopted on the establishment of the Society in 1834, and it is manifest that on a business where *stability* is the first necessity, an undeviating rule which limits the distribution of all profits to the existing condition of the Society's affairs in each year, is the true and *only principle on which stability can be guaranteed*, whilst the assured are relieved from the payment of any higher premium than is absolutely necessary from year to year to maintain that stability.

During the past eleven years, Policy-holders so assured in the Universal Life Assurance Society have been thus relieved to the extent of 50 *per cent. of their yearly Premium*, the sum allotted for Bonuses this year being £34,065.

Medical Adviser:

DR. T. EDMONSTON CHARLES, 10, Harrington Street.
Hour of attendance—10 A.M.

Capital	...	£500,000-0-0.

(463)

COLT'S NEW GOVERNMENT ARMY REVOLVER,

as recently adopted for the United States Cavalry, takes the ·450 central fire service Boxer Cartridge. It equals a rifle in range and in accuracy of fire, and is unequalled for durability of construction. It can be easily loaded and unloaded when dark, and can be carried with perfect safety when loaded. It far surpasses in efficiency and quality of make the numerous cheap pistols of various make which now flood the market.

COLT'S LARGE BORE BREECH-LOADING DERINGER,

for the waistcoat pocket, shoots hard and straight.

COLT'S DERINGER REVOLVER,

for personal and house defence, fires a larger ball than any other Revolver of the same weight and size.

To be had through any respectable Gunmaker or Dealer in Arms, or from

Colt's Fire Arms Manufacturing Company,

14, PALL MALL, LONDON, S. W.

LEA & PERRINS'

CELEBRATED

WORCESTERSHIRE SAUCE,

DECLARED BY CONNOISSEURS

TO BE

THE ONLY GOOD SAUCE.

CAUTION AGAINST FRAUD.

The success of this most delicious and unrivalled Condiment having caused certain dealers to apply the name of "Worcestershire Sauce" to their own inferior compounds, the Public is hereby informed that the only way to secure the genuine is to

ASK FOR LEA & PERRINS' SAUCE,

and to see that their names are upon the *wrapper, labels, stopper*, and *bottle*.

Some of the foreign markets having been supplied with a spurious Worcestershire Sauce, upon the wrapper and labels of which the names of Lea and Perrins have been forged, L. and P. give notice that they have furnished their correspondents with power of attorney to take instant proceedings against *Manufacturers* and *Vendors* of such, or any other imitations by which their right may be infringed.

Ask for LEA & PERRINS' Sauce, and see Name on Wrapper, Label, Bottle, and Stopper.

Wholesale and for Export by the Proprietors, Worcester: Crosse and Blackwell, London, &c., &c.; and by Grocers and Oilmen universally.

To be obtained of

BISSONAUTH LAW & CO.,

(339) *Calcutta.*

ROYAL INSURANCE COMPANY.

The Annual Meeting of the Company was held on August 6th.

THE FOLLOWING IS FROM THE REPORT ON THE

LIFE DEPARTMENT.

During the past year 1,406 new Proposals were made to the Company. Of these 1,099 were accepted and completed for 514,638*l.*, the new Premiums thereon being 17,271*l.* 2*s.* 9*d.* The total income from Premiums, after deducting re-assurances, amounted to 237,415*l.* 10*s.* 8*d.*, and the interest received from investments (exclusive of that on the Annuity funds) was 64,990*l.* 9*s.* 10*d.* The claims during the year were:—

By Death: Original sums assured	*£117,228*	*17*	*6*
Bonus additions thereon	*7,423*	*11*	*2*
By Matured Policies (including Children's Endowments): Original sums assured	*1,750*	*0*	*0*
Bonus additions thereon	134	15	0
	£126,537	3	8

The result of the operations for the year is that, after payment of all claims, annuities, and expenses of every description, 158,547*l.* 0*s.* 4*d.* has been added of the Life Funds, making the total accumulations of the Life Branch of the Company,

£1,761,523-11-11.

WOODSTOCK SCHOOL FOR GIRLS,

LANDOUR.

Will re-open on the 1st of March, 1875.

Address,

REV. D. HERRON,

Dehra.

MARAVILLA COCOA.

TAYLOR BROTHERS (the largest Manufacturers of Cocoa in Europe), having the EXCLUSIVE Supply of this UNRIVALLED COCOA, invite Comparison with any other Cocoa for Purity—Fine Aroma—Sanative, Nutritive and Sustaining Power—Easiness of Digestion—and especially, HIGH DELICIOUS FLAVOUR. One trial will establish it as a favourite Beverage for breakfast, luncheon, and a Soothing Refreshment after a late evening.

N. B. Caution—"MARAVILLA" is a registered Trade Mark.

MARAVILLA COCOA.

The *Globe* says. "TAYLOR BROTHERS' MARAVILLA COCOA has achieved a thorough success, and supersedes every other Cocoa in the market. Entire solubility, a delicate aroma, and a rare concentration of the purest elements of nutrition, distinguish the Maravilla Cocoa above all others. For *invalids and Dyspeptics*, we could not recommend a more agreeable or valuable beverage."

For further favourable opinions vide *Standard, Morning Post, British Medical Journal*, &c., &c.

HOMŒOPATHIC COCOA.

This original preparation has attained a world-wide reputation, and is manufactured by TAYLOR BROTHERS, under the ablest HOMŒOPATHIC advice, aided by the skill and experience of the inventors, and will be found to combine in an eminent degree the purity, fine aroma, and nutritious property of the FRESH NUT.

SOLUBLE CHOCOLATE.

MADE IN ONE MINUTE WITHOUT BOILING.

THE ABOVE ARTICLES are prepared exclusively by TAYLOR BROTHERS the largest Manufacturers in Europe, and sold in tin-lined packets only, by storekeepers and others all over the world. Steam Mills Brick Lane, London.

EXPORT CHICORY MILLS, BRUGES, BELGIUM.

(309)

GRATEFUL—COMFORTING.

EPPS'S COCOA.

BREAKFAST.

"By a thorough knowledge of the natural laws which govern the operation of digestion and nutrition, and by a careful application of the fine properties of well-selected cocoa, Mr. Epps has provided our breakfast tables with a delicately flavoured beverage which may save us many heavy doctor's bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—*Civil Service Gazette.*

MANUFACTURE OF COCOA.—"We will now give an account of the process adopted by Messrs. James Epps and Co., manufacturers of dietetic articles, at their works in the Euston-road, London."—See article in *Cassell's Household Guide.*

Made simply with boiling water or milk.

Sold only in ¼-lb. and 1-lb. tins, labelled thus:—

JAMES EPPS & CO.,

HOMŒOPATHIC CHEMISTS,
48, THREADNEEDLE STREET, AND 170, PICCADILLY.
Works—EUSTON ROAD and CAMDEN TOWN.
Makers of Epps's Milky Cocoa (Cocoa & Condensed Milk).

SPECIAL SILVER MEDAL

VIRO DOCT L.J.DE JONGH.M.D OLEI JECORIS ASELLI. INTEGRITATEM EMTORIBVS TVENTI REX. D MDCCCXLVIII.

PRESENTED BY THE KING OF THE NETHERLANDS

DR. DE JONGH'S

KNIGHT OF THE ORDER OF LEOPOLD OF BELGIUM

LIGHT-BROWN COD LIVER OIL

GOLD MEDAL OF MERIT

LEOPOLD I ROI DES BELGES

PRESENTED BY THE KING OF THE BELGIANS

The only real test—universal medical experience during twenty-five years—has conclusively proved DR. DE JONGH'S COD LIVER OIL to be, beyond all comparison, the purest, the most palatable, the most easily digested, and the most rapidly efficacious of all kinds.

SELECT MEDICAL OPINIONS.

SIR G. DUNCAN GIBB, Bart., M.D., LL.D.,
Physician and Lecturer on Forensic Medicine, Westminster Hospital.

"The experience of many years has abundantly proved the truth of every word said in favour of DR. DE JONGH'S Cod Liver Oil by many of our first Physicians and Chemists, thus stamping him as a high authority and an able Chemist whose investigations have remained unquestioned."

DR. EDWARD SMITH, F.R.S.,
Medical Officer to the Poor Law Board of Great Britain.

"We think it a great advantage that there is one kind of Cod Liver Oil which is universally admitted to be genuine—the Light-Brown Oil supplied by DR. DE JONGH."

DR. EDGAR SHEPPARD,
Professor of Psychological Medicine, King's College.

"DR. DE JONGH'S Light-Brown Cod Liver Oil has the rare excellence of being well borne and assimilated by stomachs which reject the ordinary Oils."

SIR HENRY MARSH, Bart., M.D., T.C.D.,
Physician in Ordinary to the Queen in Ireland.

"I have frequently prescribed DR. DE JONGH'S Light-Brown Cod Liver Oil. I consider it to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

DR. LETHEBY,
Medical Officer of Health and Chief Analyst to the City of London.

"In all cases I have found DR. DE JONGH'S Cod Liver Oil possessing the same set of properties, among which the presence of cholaic compounds, and of iodine in a state of organic combination, are the most remarkable."

DR. GRANVILLE, F.R.S.,
Author of the "Spas of Germany."

"DR. DE JONGH'S Light-Brown Cod Liver Oil produces the desired effect in a shorter time than other kinds, and it does not cause the nausea and indigestion too often consequent on the administration of the Pale Oils."

General Debility and Emaciation.

In cases of EXHAUSTION and PROSTRATION produced by exposure to the debilitating influence of tropical and unhealthy climates, DR. DE JONGH'S OIL is much more safe and useful than the ordinary stimulating tonics, and it has been resorted to with the most beneficial effects after the whole range of these had been tried in vain. By its administration the natural appetite is revived, and the functions of digestion and assimilation are improved, reanimated, and regulated, the muscular power and activity are sensibly and rapidly increased; and, when its use has been steadily persevered in, its peculiar nutritive and reparative properties have entirely restored health and strength to the most feeble and deteriorated constitutions.

BENJAMIN CLARKE, Esq., M.R.C.S., F.L.S., *Author of "Notes and Suggestions on Cod Liver Oil and its Uses,"* writes:—

"Having myself taken both the Pale and Light-Brown Cod Liver Oils for debility, I am able, from my own experience, to remark upon their effects and comparative usefulness as remedial agents. After the Pale Oil and all other remedies that I could think of had failed. I tried, merely as a last resort, DR. DE JONGH'S Light-Brown Cod Liver Oil. I received immediate relief, and its use was the means of my restoration to health. In their sensible properties and chemical constituents, the Pale Oil and DR. DE JONGH'S Light-Brown Oil are distinct medicines; and, from my observation of their mode of action and effects, I must believe that I have seen many patients die, both in hospital and private practice, some of them of juvenile years, and others in the prime of life, who, in all probability, would have been cured, if the medical properties of DR. DE JONGH'S Light-Brown Cod Liver Oil had been known as they are now, and its use prescribed."

ROWLAND DALTON, M.R.C.S., L.S.A., Esq., *District Medical Officer at Bury St. Edmund's,* writes:—

"In giving my opinion of DR. DE JONGH'S Light-Brown Cod Liver Oil, I have no hesitation in saying that I have not the slightest confidence in any other kind. The effects of DR. DE JONGH'S Light-Brown Cod Liver Oil are sure and most remarkable, *especially in that broken down state of health and strength* which usually precedes and favours tubercular deposit; and I never recommend any other sort. The Oil I have had from you was for my own use, and it has certainly been the only means of saving my life on two occasions, and even now, when I feel 'out of condition,' I take it, and like it, unmixed with anything, as being the most agreeable way. I could wish that DR. DE JONGH'S Oil would come into general use, and entirely supersede the Pale and other worthless preparations."

The Wasting Diseases of Infancy and Childhood.

In those severe disorders, *Infantile Wasting and Rickets,* from which children suffer so extensively, and which destroy so many infants, the good effects of this Oil are incontestably established, its operation being oftentimes so very remarkable as to cure the disease when every other remedy had failed, and all hope of saving life had been abandoned.

In cases of languid and imperfect nutrition, often observed in children, where the appetite is capricious, and digestion slow and painful, and the body becomes weak and wasted, without any apparent disease, this Oil, after a few weeks, and sometimes in a few days, has produced the most extraordinary transition to a state of normal health.

THOMAS HUNT, Esq., F.R.C.S., *Surgeon to the Western Dispensary for Diseases of the Skin,* writes:—

"In badly nourished infants, DR. DE JONGH'S Light-Brown Cod Liver Oil is invaluable. The rapidity with which two or three teaspoonfuls a day will fatten a young child is astonishing. The weight gained is three times the weight of the Oil swallowed, or more; and, as children generally like the taste of DR. DE JONGH'S Oil, and when it is given them, often cry for more, it appears as though there were some prospect of deliverance for the appalling multitude of children who figure in the weekly bills of mortality issued from the office of the Registrar-General."

DR. ROBERT C. CROFT, *Author of "A Handbook for the Nursery,"* writes:—

"I have tried DR. DE JONGH'S Light-Brown Cod Liver Oil, and find that it contains all the properties which render the Oil so efficacious. I find, moreover, that many patients prefer it to the Pale Oils, and are able to retain it more comfortably. It is almost a specific in many of the diseases peculiar to infancy and childhood, and I have seen marked benefit produced by its use."

*** DR. DE JONGH'S LIGHT-BROWN COD-LIVER OIL is sold **ONLY** in bottles sealed with a metallic capsule impressed with his stamp, and bearing beneath the pink outside wrapper a label with his stamp and signature, and the signature of his Sole Consignees, ANSAR, HARFORD, and Co. A sixteen-page pamphlet, with stamp and signatures, accompanies each bottle. To this capsule, and to these marks on label and pamphlet, purchasers are earnestly requested to pay particular attention.

WITHOUT THESE NONE CAN POSSIBLY BE GENUINE.

IMPERIAL Half-Pints, 2s. 6d.; Pints, 4s. 9d.; Quarts, 9s.

Sole Consignees—ANSAR, HARFORD, and Co., 77, STRAND, LONDON.

SOLD BY ALL RESPECTABLE CHEMISTS, DRUGGISTS, AND STOREKEEPERS THROUGHOUT THE WORLD.

CAUTION.—*Purchasers are earnestly cautioned against mercenary attempts frequently made to substitute other inferior kinds of Cod Liver Oil when* DR. DE JONGH'S *is applied for. All offers of other should therefore be firmly rejected.*

THE WEEK.

THE following instructions issued to the Commission appointed to investigate the charges against His Highness Mulharao Gaekwar of Baroda were published on the 15th instant for general information:—

To the Honourable Sir Richard Couch, Knight Bachelor, and Chief Justice of Her Majesty's High Court of Judicature at Fort William in Bengal;

His Highness Mookhtar-ool-Moolk, Azeem-ool-ktidar, Rufi-oos-Shan, Wala Shikoh, Mohtashim-i-Douran, Oomdut-ool-Oomrah, Maharaja Dheeraj-Alijah Maharaja Jeeajee Rao Sindiah Bahadoor, Sreenath, Munsoor-i-Zaman, Fid-vee-i-Huzrut Malikah-i-Mooazuma, Rafi-ood-Durjeh-i-Inglistan, Maharaja of Gwalior, Knight Grand Commander of the Most Exalted Order of the Star of India;

His Highness Siramad-i-Rajaha-i-Hindoostan, *Raj Rajender Sree Maharaja Dheeraj Sewaee Ram Sing* Bahadoor, *Maharaja of Jeypoor*, Knight Grand Commander of the Most Exalted Order of the Star of India;

Colonel Sir Richard John Meade, Knight Commander of the Most Exalted Order of the Star of India, and Chief Commissioner of Mysore and Coorg;

Raja Sir Dinkur Rao, Knight Commander of the Most Exalted Order of the Star of India; and

Phillip Sandys Melville, Esquire, of the Bengal Civil Service, and a Commissioner in the Punjab.

Whereas an attempt has been made at Baroda to poison Colonel R. Phayre, C.B., the late British Resident at the Court of His Highness Mulharao, Gaekwar; and whereas the following offences are imputed against the said Mulharao, Gaekwar, that is to say:—

I.—That the said Mulharao, Gaekwar, did by his agents, and in person, hold secret communications for improper purposes with some of the servants employed by Colonel Phayre, the Resident at Baroda, or attached to the Residency;

II.—That the said Mulharao, Gaekwar, gave bribes to some of those servants, or caused such bribes to be given;

III.—That his purposes in holding such communications and *giving such bribes were to use the said* servants as spies upon Colonel Phayre, and thereby improperly to obtain information of secrets and to cause injury to Colonel Phayre, or to remove him by means of poison;

IV.—That, in fact, an attempt to poison Colonel Phayre was made by persons instigated thereto by the said Mulharao Gaekwar;

And whereas the Viceroy and Governor-General in Council has temporarily assumed the administration of the Baroda State for the purpose of instituting a public enquiry into the truth of the said imputations, and of affording His Highness Mulharao, Gaekwar, an opportunity of freeing himself from the grave suspicion which attaches to him;

Therefore the Viceroy and Governor-General of India in Council appoints you the said Sir Richard Couch, you the said Maharajah of Gwalior, you the said Maharajah of Jeypoor, you the said Sir Richard John Meade, you the said Sir Dinkur Rao, and you the said Phillip Sandys Melville, Esquire, to be Commissioners for the purpose of enquiring into the truth of the said imputations and of reporting to the Viceroy and Governor-General in Council how far the same are true to the best of your judgment and belief. And the said Viceroy and Governor-General in Council appoints you the said Sir Richard Couch to be the President of this Commission, with full power to appoint times and places of meeting, to adjourn meetings, to adjust and arrange the method of procedure, to settle the course which the enquiry shall take, to call for and to receive or reject evidence documentary or otherwise, to hear such persons as you shall think fit on behalf either of the Viceroy and Governor-General of India in Council or of His Highness Mulharao, Gaekwar, and generally to guide the whole course of the proceedings of this Commission as from time to time shall appear to you to be proper for the purpose thereof.

And whereas certain other matters of importance pending between the British Government and His Highness Mulharao, Gaekwar, were enquired into and reported upon by a Commission appointed by the Viceroy and Governor-General in Council by orders dated 23rd October 1873; And whereas the enquiry which you are appointed to make is not connected with such matters; For the better understanding of your functions, the said Viceroy and Governor-General in Council hereby declares his desire that you shall not extend your enquiry to other matters than the offences imputed to His Highness Mulharao, Gaekwar, as aforesaid, and that you shall not permit any such other matters to be submitted to you for consideration or enquiry.

And the said Viceroy and Governor-General in Council desires that, in the event of any of your number being prevented by sickness or other cause from taking his place as Commissioner, or from remaining as Commissioner till the conclusion of your enquiry, you the other Commissioners shall nevertheless conduct and complete your enquiry in the same way as if the number of Commissioners present or remaining were the whole number appointed hereby.

And the said Viceroy and Governor-General in Council hereby appoints John Jardine, Esquire, of the Bombay Civil Service, to be your Secretary.

By Order of the Viceroy and Governor-General of India in Council,

C. U. AITCHISON,
Secy. to the Govt. of India, Foreign Department.

THE Mohurrum has commenced for the most part quietly enough. In Bombay the local Government has adopted extraordinary precautions against a disturbance; some of the "roughs" have been compelled to find sureties for their good behaviour, and others are under arrest.

THE *Indian Statesman* gives the following Calcutta police-report, dated the 15th, under the head of "Mohurrum Disturbances." It shows how necessary it is for a sharp eye to be kept on the conduct of the lower grades of Mahomedans at this particular time.

Two respectable Mahomedan butchers, of Gooreahmah's Lane, were charged by two others of the same profession and creed with having assaulted them with sticks, so severely, as to cause injuries to their head, necessitating their removal to hospital. Defendants pleaded not guilty, alleging that the injuries sustained were the result of a violent contact with a water-stand post which happened to be in their way when rushing to assault them. Mr. Inspector Linehan informed the Court that the defendants were the leaders of their clan; that the followers on each side numbered upwards of 300; that he anticipated a disturbance of a serious nature; that he therefore parted them in their procession and told his native officers to follow each party a short distance so as to prevent a second collision. Scarcely, however, had his back been turned than he heard cries for assistance, and on going up saw the defendants in custody. But for the presence of the Police several murders might have been committed.

HIS Grace Archbishop Steins has been seriously unwell of late, much to the grief of those who know him intimately. A few weeks back he had the misfortune to break a blood-vessel, since when, absolute repose has been necessary. This to a man of His Grace's energy and appetite for work has been a great burden, otherwise we believe there have been no serious consequences from the mishap. There is but one feeling among all classes of the community who take an interest in the Archbishop, a very hearty hope that he may soon be completely restored to his usual health.

IT has been rumoured that the indefatigable Lieutenant Governor of the North West Provinces Sir John Strachey will be obliged to go home on leave for half a year. We are afraid that he has been working much too hard, the fault of many of our leading officials. The Press grumbles from time to time at this measure and at that, but it is rare indeed to hear it said of any eminent civilian that he takes things easily. We notice the *Englishman* denies that Sir John Strachey is going home, but we do not feel quite sure that our well-informed contemporary is right in this instance.

THERE is some dissatisfaction, on the part of the law-agents of the Gaekwar, at Government not allowing them full swing in spending as much money as they would like in conducting the defence. Serjeant Ballantyne will have, however, plenty of assistance, at least so the public think.

REFERRING to the occupation of Herat the *Bombay Gazette* observes, "Sheer Ali's conduct in seizing and imprisoning Yakoob Khan will now probably be accepted throughout all Afghanistan as eminently wise and far-seeing; for with barbarians nothing succeeds like success." The policy of the Foreign Office has been remarkably sound and prudent through the whole of this Afghan business, and if it wanted any justification it has now received it.

WE are truly glad to hear that the natives of Madras intend to do honour to Mr. E. B. Powell, C. S. I., the retiring Director of Public Instruction. From the proceedings at a public meeting it appears to be likely that a statue will be erected in the enclosure of the Presidency College. This is a fine building from a design by Mr. Cnisholm, who has done so much for architectural progress in the South. Fronting the sea, the College is an important object in connection with the fashionable drive along the beach. The position would seem to be an admirable one in every way for the erection of a memorial to a gentleman who has won for himself the love of more than one generation of educated native Madrassees. In honouring Mr. Powell the Tamulians are doing honour to their own qualities of head and heart.

THE appointment of Sir Andrew Clarke R. E. to be Minister of Public Works has been well received by the Indian press and public. It is stated that Sir Andrew's pay as Governor of the Straits Settlements was £5,000 per annum, besides allowances and sundry little advantages. He will not find his new position exactly a bed of roses; but it is satisfactory that he is unlikely to encounter any factious opposition. His connection with the corps of Royal Engineers is in his favour, as it must ensure for him some degree of sympathy from his brother officers.

THE departure of Mr. J. Dacosta from Barrackpore for Europe has caused much regret in many circles of this neighbourhood. Well known, for a good many years past, to all the leading men in India, Mr. Dacosta has been greatly respected for his sound and extensive knowledge of the country, his kindliness of disposition, and his generous hospitality. As a writer on Indian questions Mr. Dacosta has long been prominently before the public. The readers of *Allen's Indian Mail* will miss the judicious letters that went to them from Barrackpore under the initials "J. D."

The Baroda correspondent of a contemporary writes:—

Had Mulharao been blessed with sons—or a son—in the early years of his married life, there would be no difficulty about the matter. His only son, however, is the one now nursed in the arms of Luxmeebaee. There is not only great doubts as to the legality of the marriage of Mulharao with that beauty, but there are those who doubt even the paternity of the child. If native opinion is to be consulted on this question it will be found pretty evenly divided. There are those who believe that if England recognise the claim of Luxmeebaee's child to the gadee, her non-annexation policy is a delusion, a sham, and a snare. Such a policy they maintain would simply be annexation under another name. On the other hand, several influential persons believe that such a policy on the part of England would be the best thing that could possibly happen to the State of Baroda. These would even prefer that the rights of adoption should be exercised sooner than that any flaw in the legitimacy of the child's birth should debar its right to rule. They believed that with an infant Maharajah the wisdom of the Paramount Power would select a regent who would not only rule wisely and well, but would train up the young prince in the way he should go. They refer constantly to the youthful Nizam of Hyderabad and the good fruits resulting from the discreet management of Sir Salar Jung.

Unless Luxmeebaee's child is selected as its father's or reputed father's successor, Mulharao will be in fact the last of the Gaekwars. Of course, on failure of natural heirs there is the right of adoption; but the selection made under this right need not be confined to the Gaekwar's kith and kin. It is quite sufficient if it be from the same caste as that to which the Gaekwar's family belongs. So far as the strict rule of hereditary descent is concerned, the light of the Gaekwar dynasty burns very dimly.

Indeed, it by no means follows that the Paramount Power, in speaking of a "Native Government," necessarily means Government by the Gaekwars. There is a precedent of a stranger being adopted to the exclusion of an immediate heir. When the Raja of Kolepore died, the next heir to the gadee was his brother, Chimna Sahib, who was at the time a State prisoner in Kurrachee for intriguing against the Raja. In consequence of that conduct he was overlooked by the British Government, and the Raja's widow was allowed to adopt a son, who was recognised as sovereign.

It must not be thought, however, that Mulharao has no relations. There are at least seven "distant relations." They call themselves cousins. These, though now in the background, are casting longing glances at the gadee. The natives have no very strong feelings on the subject of their claims. The Princes are quiet persons enough just now they say, but there is no saying what any one of them would do if he had the power. No one is more capricious than he who has suddenly become possessed of power, and it would hardly do to step from bad to worse.

IT can only be regarded as unsatisfactory by the friends of Sir Richard Couch that his term of office should have expired with a manifest understanding on the part of the Calcutta Bar to forbear from any exhibition of feeling on the occasion. His appointment to the dignified office of President of the Commission to try the Gaekwar will probably be some solace to his mind, for it shows that at all events he has the confidence of Government. Valuable as the approval of Government must be to Sir Richard, he would doubtless have been much better pleased, if he could, in addition, have taken away with him from Bengal the approval of a learned and clear-sighted profession, the members of which have had the best possible opportunities of estimating the character of the man.

AN interesting experiment is about to be tried in Bengal and Behar. Lord Northbrook has sanctioned the importation of skilled tobacco growers, and a systematic attempt will be made to improve both the cultivation and the curing of tobacco, under State supervision, in the districts of Rungpore and Tirhoot. In Rungpore land will be selected for the purpose, from one or other of the pergunnahs where the best varieties are now produced, and on one or two farms the imported skill will be concentrated so that there may be the best possible chance of success. It is known that Sir Richard Temple has fixed his eye on the Poosah stud-lands south of the Gunduck.

THE London *Athenæum* calls Mr. Clements Markham's new work, "A Memoir of the Lady Ana de Osorio, Countess of Chinchon and Vice-Queen of Peru, 1629-39," a dainty little volume. One chapter (that devoted to "The Chinchona genus") which enters into the history of the introduction into Europe of Peruvian bark, is specially worthy of attention from Indian readers. Mr. Markham tells us, "It was not until the French expedition of Condamine and Jussieu went to America in 1735 that the forests of Loxa were visited by scientific men, and a few years afterwards Condamine sent specimens of the quinquina to the great Swedish botanist, Linnæus, who was the first to describe it." Again, he says, "The name of a new and most important genus was then to be given by Linnæus, and he chose for it the most appropriate that could possibly have been selected, namely, that of the noble lady who had first made its healing virtues known, and gave the name of Chinchona to the genus," the word, however, being often mis-spelt and turned into Cinchona. The *Athenæum* fancies that botany and commerce will still adhere to the incorrect spelling, as, "after all, the world has accepted Cinchona as the botanical equivalent of Chinchona"; and our contemporary fears that Mr. Markham's elegant, chivalrous volume will do little more than immortalize the name of the fair Countess of Chinchon, and prove most agreeable reading. In an appendix is given "a complete list of all the species which have been named after the Lady Ana de Osorio, Countess of Chinchon," and the number reaches 142.

AT the meeting of the Council of the Governor General of India for the purpose of making Laws and Regulations, held on Tuesday, the 16th instant, the Hon'ble Mr. Hobhouse moved that the Lieutenant Governor be added to the Committee on the Bill to amend the law relating to Civil Appeals in the Lower Provinces of the Presidency of Fort William; this was agreed to. Mr. Hobhouse then presented the report of the Select Committee on the Bill to extend certain parts of the Code of Criminal Procedure to the Courts of the Police Magistrates in the Presidency Towns and to increase the jurisdiction of such Courts. A further Report of the Select Committee on the Bill to amend the law relating to Probates and Letters of Administration was next submitted. The Hon'ble Mr. Eden presented the report of the Select Committee on the Bill to regulate Fisheries in British Burma, and the report of the Select Committee on the Bill for the further amendment of the Burma Courts Act, 1872. Mr. Eden then applied for leave—which was granted—to introduce a Bill to declare the law relating to interests in land and to regulate the assessment and collection of land-revenue, capitation tax and other taxes in British Burma. On the motion of Mr. Ellis, the Maharajah of Vizianagram was added to the Select Committee on the Madras Salt Bill.

The *Indian Daily News* remarks that it is much to be regretted an act of treachery by the Nagas has led to considerable loss of life. Our contemporary suggests that it may have to be avenged in a way that will require another expedition to the Nagas, to teach them a lesson that seems to be still needed amongst them. We believe that this view is a correct one, and that it has become absolutely necessary to punish effectually the inhabitants of a certain village; a strong force will be needed.

OUR attention has been called by a reader to the fact that not long since we used some very unpleasant words in reference to the Hon'ble Mr. Hobhouse on whom we vented much indignation; he had persisted in carrying through the Legislative Council his Bill on Law Reporting notwithstanding the opposition of Bench and Bar in each district of India; and in justifying his haste he used considerations that were purely personal. It seems odd, perhaps, that we should have spoken of his line of procedure as "selfish," Mr. Hobhouse being beloved for qualities of a totally opposite character by those who know him intimately; but it will not seem so strange when we say that not the least allusion to the nature of the man was intended. Mr. Hobhouse took a personal standpoint, and we regarded that stand point as "selfish." There is nothing ignoble in such an aspect of the case. The most generous, refined, courteous, and enlightened of men may without any great inconsistency look at things from the stand-point of the Ego, when acting as a legislator; indeed the more upright a public man is, the more liable he may be to fall into a personal groove, since the truly conscientious man ever seeks an internal not an external approval.

THE FAMINE IN ASIA MINOR.

ALMOST daily *The Times* and other home papers give harrowing descriptions of the great Famine in Asia Minor. Although the Ottoman Government has spent considerable sums, and is employing its agents for the purpose of preventing the wholesale starvation of the inhabitants of the important famine districts, yet no less than one thousand families at Cæsarea are being preserved from day to day by charity doled out to them from the remittances sent from Constantinople by the European Central Committee.

The misery everywhere is, in fact, nothing less than dreadful, and, as the present funds of the Committee cannot last much longer, it is clear that unless the Government comes forward in a still more liberal spirit thousands will have died of hunger before the winter is over. The diary kept by the Agents of the European Central Committee show that at Deuek Madein, a village of four hundred families, and the residence of the Governor and Local Council of the Kirskin district, a hundred families only are likely to withstand the present winter, and that with the greatest difficulty. The rest, as well as the inhabitants of three Greek villages in the district, must inevitably perish unless the Government or private charity comes to their immediate relief. The village of Hassandede numbered last year seventy-five houses, inhabited by four hundred and twenty souls; forty-five houses are now left; the rest were pulled down and used for fuel last winter. The village possessed seventy pairs of bullocks and seven thousand sheep and goats. Five pairs of bullocks are all that are left, and only five families have possible means of supporting themselves till harvest time. Ahali was two years ago a well-to-do and comparatively wealthy village, with about one thousand and one hundred inhabitants. Four hundred and six deaths from starvation and the emigration of about one hundred and fifty villagers have reduced the population to little over five hundred. Seven thousand sheep and goats are all gone, and out of seventy pairs of bullocks only four pairs remain. Almost all the surviving inhabitants have nothing but couch-grass, cotton seeds, and dogs and cats to live upon. At Youva only two-thirds out of thirty-six houses have been spared from destruction. Out of three hundred inhabitants one hundred fell victims to hunger and forty emigrated. The rest are as utterly destitute as those of Ahali. The village of Coullow stands in a worse condition; a few houses remain, and most of the industrious villagers have either perished or emigrated. Karadjali numbered, two years ago, eight hundred souls, and possessed seventy-five pairs of bullocks and three thousand sheep. At least three hundred persons have since died of hunger, and one hundred emigrated; the sheep have disappeared, and fifteen pairs of oxen only have been spared. Some four hundred persons are now lingering upon herbs, grass, dogs' and cats' skins, with nothing in their houses which could be exchanged for bread. At Kirik one hundred and fifty persons have perished with all the sheep and oxen of the village.

Writing from Cæsarea an English gentleman states—"The number of families which we are aiding in this city now amounts to about a thousand, nearly equally divided between Turks and Rayahs. As our agents go among the poorer of the people, and search into the condition of the worst parts of the city, they are astonished at the amount and the degree of misery that exists. It is certain that people are actually dying of hunger. Bread is abundant, but prices are nearly four times their ordinary figure, and multitudes have absolutely nothing with which to purchase, were bread ever so cheap. Indeed, there is such an amount of poverty in this city of forty thousand people, that our efforts can be limited only by the means at our disposal. We continue our distribution in Talas and several neighbouring towns and villages, but now there comes to us a fearful cry from the starving in places more remote. We hope to reach some of those places this week. We have determined to aid all, so far as our means will allow, and so far as we have strength properly to oversee the work. We trust to the generous hearted in England and Scotland and the United States to furnish us with all the money that we can use prudently. Where can the money be better expended than in the use to which we would put it?" Think of a hale, strong man going down to the grave by slow but sure steps, and all because he cannot find a few shillings with which to buy bread. Can any torture be worse than this? And yet tens of thousands are so suffering.

Another correspodent writes,

"We are glad to report that the Armenians have been distributing money to the poor of their own community in Talas, and are preparing to do so in Cæsarea and the neighbouring villages. Whether the distribution will be repeated or not we do not know. The Greeks have also made a distribution of two thousand eight hundred and fifty okes of flour in Zinjirdéré, giving six okes to each person enrolled. The flour was furnished by the Greeks of Constantinople, Samsoon, Adana, and other places. In this distribution some twenty houses of Turks were included. The Government promises to make an immediate distribution, but we are still waiting with solicitude for the fulfilment of their promises. We learn, however, from reliable sources that it is contemplated to aid not more than one in four of those enrolled as the very poorest, so that the prospect of relief for the poor Turks is very small. We continue to distribute the funds committed to us very carefully, and only to the very poorest. We have expended in this vicinity this week a little over seventy liras, and have added to our list, to be aided next week, five new villages. We shall then be distributing with our own hands to the suffering poor in Cæsarea, Talas, Stephana, Zinjirdéré, Akja-Kaya, Endilik, Asarjik, Kuran-Ordoo, Erkelet, and Germir. Of these villages two are exclusively Turkish, and in all Turks are found. We can plainly see that the persons who came for aid are becoming weaker from want week by week, and the prospect is sad indeed. We desire to give more to each person, but fear we shall not have the funds. May we rely on the continued assistance of our generous friends in Constantinople, Scotland, and England?"

Can India do nothing for the sufferers?

MR. ROBSON ON HINDOOISM.

LAST week we noticed the important service rendered to Indian literature by the Rev. John Robson who has recently published a work entitled "Hindooism and its Relations to Christianity." We then gave a few extracts from his book showing some of the conclusions at which he had arrived, after a long residence in this country and an acquaintance by no means slight with the people of Rajpootana. We now have the pleasure to add some further extracts; it should, however, be stated that it is by no means easy to make a selection, the book being written in a singularly even style, so that it is almost impossible to say that any particular page contains matter of greater interest or value than another.

Mr. Robson thus describes the Boodhistic system. It appears that the Boodhists hold that it is possible to gain the heavenly state of *nirvana* by good actions, by meditation, and by a triumph over all desires and affections whether for things virtuous or base. The Brahmans, on the contrary, propose Liberation as the proper end of man.

They taught that this end was to be attained by austerity and penance, or by sacrifice and other religious ceremonies, which had become empty forms. Buddha having rejected God, could not accept worship as a means; he therefore adopted works, but he taught that these works were not penance, but fulfilling the moral law—which he taught both negatively and positively,—practising charity and benevolence towards all animated beings; honesty, chastity, truthfulness, and temperance. It is the glory of Buddhism that it has asserted this law as the great law of religion.

Mr. Robson, while narrating the early history of idolatry in connection with Hindooism, throws light on the analogies and contrasts presented by the mythologies of India and Greece.

There is, however, even in this early stage a marked difference between Indian and Greek mythology. In the latter the places and relations of the various gods are distinctly arranged; in the former the sentiment of there being one supreme God, who alone should be worshipped, seems to have remained, and made the worshippers of each god exalt him as such. In each hymn the god who is addressed is often spoken of as though he alone existed, and as though the writer were not conscious of any other. Sometimes he is not expressly identified with others. 'Whatever we offer in repeated and plentiful oblations to any other deity is assuredly offered to thee (Agni.) But, again, several gods are occasionally addressed in one hymn; and by degrees, as the conceptions become grosser, jealousies and quarrels take place among them. This is characteristic of the Hindu religion in the present day. Vishnu, Shiva, Ganpati, and other gods, are worshipped, but each is addressed by his worshippers as the supreme God.

Mr. Robson regards the lot of Soodras in ancient times as having been exceedingly ignominious as compared with that of Brahmans; but we are informed by a competent Brahman authority that Mr. Robson has taken an exaggerated view. In ancient times those Soodras who for good reasons were initiated in the sacred mysteries were allowed the thread of a Brahman. The position of matters cannot, then, have been quite so bad as Mr. Robson has imagined.

The position assigned to the slaves by the laws of the Southern States of America, was noble compared with that, assigned to the Sudras by the old code of Manu. No Southern planter ever dreamt of refusing to allow the negroes to the baptized; but in India, while the lordly Aryas were the *twice-born*, the Sudras were only the *once-born*. They could assume no sacred thread, the symbol of the second birth, admitting them to the privileges and hopes of religion, and they were menaced with death if they dared to engage in any of the acts of worship allowed to their superiors.

The following story from the Ramayana, one of the two old epic poems of India, will show the sentiment with which any attempts of the Sudras to rise into the religious sphere were then regarded. When Rama was reigning happily in Ayodhya, the modern Oude, a Brahman came into his court one day and complained that the kingdom was under a curse owing to his heedless rule, adducing as a proof that his son just five years old had died. Rama, unable to gainsay this evidence, proceeded, sword in hand, to search his kingdom to discover the cause. By the side of a lake he saw a man engaged in intense devotion, who, when interrogated, confessed himself to be a Sudra. For a servile man thus to seek admission to heaven was an iniquity quite sufficient account for the calamity which had befallen the kingdom. Rama by one stroke of his sword severed his

head from his body, whereupon, it is added, the gods expressed their delight by showering down flowers, and the son of the Brahman was restored to life.

It will be seen from this account that the Brahmans were at the head of the social system, and that it was their knowledge of the old hymns which was the foundation of their superiority. This knowledge had different effects, as it always will have on different minds. Some used it as a means of impressing their superiority on the more ignorant. Others were led into deeper speculation as to the meaning of what they learned. Hence arose the two classes, Brahman priests and Brahman sages.

It is well known that once upon a time Boodhism was nearly paramount in India. Mr. Robson thus accounts for the defeat of that religion.

The first step in the establishment of modern Hinduism was the revival of intellectual activity among the Brahmans. Appeal to the authority of the Vedas was now of no use to them. Their Buddhist adversaries required them to prove all things. They therefore strove to combat them with their own weapons, and in succession rose the six schools of Hindu philosophy. These all started with the professed acknowledgment of the Vedas as the rule of faith, but except one (which, strangely enough, while ignoring God, made the eternity of the Word its fundamental principle), they all practically ignore the Vedas, and found their systems on the deductions of pure reason. The Vedas are now, for the majority of the Hindus, only the shadow of a name; so that in this respect Buddhism has practically remained victor, while it again, by accepting a sacred canon of its own, may be said to have been vanquished by Brahmanism,—a fact which its opponents have not been slow to point out. I do not propose to give any account of these various systems, or of the dialectics by which they are supported, but will seek to exhibit their effect in moulding Hindu thought to the form in which we actually find it.

As a proof of the good that may sometimes be found in Hindooism, Mr. Robson quotes a couplet which runs thus:

'The rosary vain, and vain to call "Lord! Lord!" by day and night;
If false the heart, then vain the show; in truth doth God delight.'

Notwithstanding the enormous extent of the Hindoo pantheon it is in two main streams alone that the current of religious thought has found a channel. Hindoos for the most part may be divided into Vaishnavas and Saivas, that is to say, into worshippers of Vishnu, called also Hari, and of Siva, called also Har. This is nothing new; nor is it more so that the former class are distinguished by a *tilak*, or frontal mark, consisting of three perpendicular lines, the latter by a frontal mark of three horizontal lines. Nor does the reader require to be told of specific differences as to the construction of temples, the form of worship, the observance of feasts, &c. What, however, we have reason to thank Mr. Robson for is an explanation of those causes which have produced a strenuous antagonism between the two sects. That gentleman tells us one must have seen the kindling eye and quickening breath of a Saiva teacher when encountered by a Vaishnava teacher, the violent fury to which the preaching of the former excited a Vaishnava audience, exceeding anything which the teaching of Christianity produced, in order to become aware of the latent hostility between these people. The fact is the rival bodies represent those opposite tendencies of the human mind that are to be met with in all countries and in all ages. The Vaishnava looks to God as the author of all good, the Saiva believes that man can himself achieve his own salvation by appropriate works. As there has ever been in the Christian Church a line of demarcation between the upholders of Free Grace and of Works, of Antinomianism and Armenianism, so in India there has been perpetual strife between those who place reliance solely on faith and devotion, and those who build their hopes on a recognition of meritorious action. Certain tracts of Sivaism are shot through with Vishnooism, and *vice versa*. The range of controversy is also much narrower, in Mr. Robson's opinion, than it is in Europe, the extremest supporter "of good works" in India being a more rigid predestinarian than the extremest Calvanist, and the firmest Hindoo believer in the efficacy of "faith" regarding it as, of itself, meriting a recompense from God. In Vishnoo is typified, according to the authority before us, that form of religious thought which starts from God and considers Him the source of man's strength and salvation. Vishnoo worship starts from the idea of God condescending to man; Siva worship, on the contrary, is concerned with the elevation of man to the divinity. Vishnooism is especially employed in tracing out the *pervading* character of Brahmo, and detects the existence of the Spirit who created the world under the form of most of the great Indian heroes. Vishnoo being the sovereign source of power, all that is required from the worshipper at his shrine is a suitable recognition of him. Mr. Robson describes the votaries as going to his temples, and making a presentation there of "wealth, body, and soul." With too many no renunciation of any gain, pleasure, or sin is intended; the main idea is said to be paying to the idol the same respect that would be offered to Vishnoo if he were still incarnate as a prince on earth. "The idol takes the place of the king; the temple is his palace." "One of the worst developments of Sivaism has been the rise of secret, or as they call themselves, left-handed sects. These are sects that meet in private, when all rules of caste are for the time set aside, and all eat and drink together; when they meet in public, caste rules resume their sway." We are not quite certain to what extent Mr. Robson is justified in using the phrase "one of the worst developments." There is much reason to believe that in some cases the left-hand people are only desirous of getting rid of caste; it cannot be thrown off in the haunts of men, but something is gained when even in private it can be dispensed with. The prime characteristics of Vishnooism and Sivaism in relation to idolatry would appear to be on the one side a utilisation of transmigration by making Vishnoo inhabit, consecutively, the bodies of various heroes, whose idols are worshipped by the masses from an instinctive reverence for the sublime in human conduct, and on the other hand an acceptance of the primitive objects of worship among the various tribes, such objects being regarded as manifestations or servants of Siva. It is amongst the Saivas that the ascetics of India are most largely to be met with, self-denial in an exaggerated degree being one of the ways in which the Hindoo endeavours to carry out his doctrine of "good works." We have said enough to show that each sect has something good about it, that each clings fast to an idea which is based on an element of eternal truth, and that the way has been cleared for ascertaining where the strength of Hindooism really lies. We see that "hero-worship," lauded of Carlyle, exists in India largely, and that it forms a main ingredient of the Vishnoo cult. The Saivas wish to rise in the scale of being by a severe discipline. Surely here we have something firm and tangible to build on. Discipline, self-denial, and renunciation are true elements in moral progress. If Christian missionaries can persuade the people of India to recognize more fully than at present, that a religion is offered them which contains an abundant opening for all the hero-worship the human heart is capable of, and that at the same time it affords ample room for the practice of every reasonable kind of "works," something important will have been done.

"A MODERN CRUSOE."

AMONG the most adventurous and successful travellers of the present day may be classed M. M. Maklay, who, thanks to the generosity of the Grand Duchess Helen of Russia, has of late years discovered much concerning New Guinea and the Papuans.

Maklay's journies and doings have from time to time been noticed by the press of South-Eastern Asia, but the *Ausland* has been the first to give us any succinct account of them. At the outset he visited Astrolabe Bay, a recess in the North-East coast of unknown dimensions, which had been discovered in 1825 by the French Admiral, Dumont D'Urville, but which he had not had time enough to examine. Here Maklay hoped to light upon aboriginal Papuans of a purer breed, noticeable for a peculiar type of cranium and for curly hair. Through the help of the Grand Duchess he obtained a free passage on board the screw corvette *Vitas*, and left Russia on the 27th of October 1870. After doubling the southern extremity of South America, the Pacific was crossed, and at Samoa, one of the Navigator Islands, Maklay obtained the services of a Swede named Wilson and a Polynesian lad as servants. In September 1871 the corvette entered Astrolabe Bay, in New Guinea, and found that it extended for about 8 miles only inland. At the further end a protecting row of breakers formed a harbour, and Maklay, accompanied by his two servants, sprang, unarmed, into a boat, and was quickly rowed to shore. In spite of his friends' earnest dissuasion he penetrated into the forest, whither the natives had fled in terror, but it was not without difficulty that he prevailed upon two to accompany them, and those, on coming in view of the vessel, set up such a shrieking that he was fain to let them go. A neighbouring village was quite empty; all the inhabitants having taken to their heels. The place, however, seemed to please Maklay, and a space having been cleared of the ironwood and other trees encumbering it, a hut was erected for him, and at the end of a week everything was ready, not forgetting a series of mines round the hut, which could be fired from the outside in case of a seizure of the premises during the absence of the tenants. A few days afterwards, at daybreak, a procession of natives came down to the shore and brought some presents, including a dog and a porker, some bananas, cocoa-nuts, sweet potatoes, and other fruits. This token of friendship was accepted by the Russians, and in return they deposited some pieces of red calico, pearls, gold paper, empty bottles, buttons, and similar articles. But though the savages returned to bring fresh presents,

they forbore, with a delicacy which would be incomprehensible among civilized nations, to touch the Russian gifts. On one occasion some of the ship's officers fell in with some natives, and after pacifying them, made them understand by gestures that Maklay proposed to remain in the country, to which the men replied that he would be eaten if he did so. The villages were then visited, and endeavours made to come to some arrangement, but in vain, for the inhabitants had all decamped. Maklay related subsequently that these domiciliary visits were the cause of much unpleasantness being shown to him, for in that country there are neither locks nor doors, and it is reckoned an unpardonable affront for even a father to cross his son's threshold in his absence.

The traveller, after this, was lost sight of for twelve months, when the ship *Izumrud* —or Emerald—was sent in search of the *savant*. According to the *Ausland* an officer who had been on board of the *Vitas*, accompanied the expedition, but no sign of Maklay could, for some time, be seen. Suddenly an officer spied through the glass a Russian flag on a tree, and exclaimed that Maklay must be alive. The ship was accordingly brought inland, and Maklay was soon discovered sitting in a canoe with three natives. "A boat was put off and he was brought on board, and then, for the first time, the Russians saw the deplorable condition of their countryman. Though young in years, he appeared as weak and tottering as an old man; his face was seamed with wrinkles, which bespoke his suffering and ailments; his body and limbs were in wounds, and his clothing in rags. He was forthwith provided with necessaries, and enquiry was made for his servants. Maklay replied that the boy died three months after their arrival, and that Wilson was then lying almost at the point of death, he having rallied slightly on being told by the natives that they saw smoke issuing from the sea, and being assured by Maklay himself that it must be a Russian vessel. Wilson was of course fetched on board immediately, and every care taken of him." For five days the *Izumrud* lay at anchor, and several natives, with Maklay for an escort, mustered up courage to visit her. In deference to the Russians they appeared in European garb, but their costume created much amusement. One appeared in a cocked-hat and sailor's shirt; a second preferred his traditional nakedness, while a third lent striking variety to the group by figuring with nothing on but a highly-ornamented, old-fashioned, officer's tail-coat. The visit, however, went off pleasantly enough, and the Papuans returned dancing and singing to their homes. A little misunderstanding was unluckily created on the occasion of a second visit, by the sudden appearance on the scene of a live ox which was kept on board. The horns of the beast struck the most abject terror into the breasts of the Papuans, who immediately sprang overboard and swam to land. Before the departure of the vessel, however, they brought their wives and children, and showed the Russian officers their villages and houses. On the day of departure they entreated Maklay to return soon to them, and on his being compelled to refuse, sang a funeral dirge, accompanied by drums—an honour of an exceptional character usually paid to deceased chiefs. Maklay related that the same day that the *Vitas* left, the savages surrounded his house in great numbers, and with loud cries, keeping outside the circle of mines. On his pursuing his avocations, however, as if nothing was the matter, they began to disperse. His first overtures of friendship were made in the vicinity of his house and after an exchange of cocoanuts, sweet potatoes, and pieces of roast meat, for strips of red calico or sham pearls—knives and articles of greater value Maklay only parted with on very rare occasions for large accessions to his collections. He then visited their villages, having previously signified his approach by a shrill whistle, which gave them time to conceal their women and children. After three months Maklay had the misfortune to lose his boy, and being unable to dig a grave for him, the body was put into a sack, and with a large stone tied to it, consigned to the deep. He was anxious that the Papuans should not see this, as they would no doubt imagine that he had killed him. It was a dark night that he chose for the task, but he could nevertheless descry a large number of natives at a distance, engaged in fishing by torchlight, but the report of a gunshot effectually frightened them away.

We are told that except at festivals the natives lead a quiet and harmless life. Strangers are hospitably treated and dismissed with presents. The occupation of the men is hunting, fishing, and preparing weapons; that of the women tilling the ground, gathering wood, and looking after the house. Fish are transfixed by arrows, in the shooting of which, as well as of lances, the Papuans show great dexterity, being able to drive a lance two inches deep into a tree at forty paces. The wild boars are hunted down by setting fire to the jungle around them and spearing them as they rush out. Hunting is followed by a grand feast, after which sham fights between two sections of a tribe are not unfrequently got up. The only vegetable which requires cultivation in this productive country is the sweet potato or *taro*. The Papuans have a curious custom of preserving the lower jaw of skeletons and throwing away the upper portion of the skull. Maklay was thus unable to get perfect craniums, which he was especially anxious to obtain for Professor Baer of St. Petersburg; but Dr. Meyer, in his recent travels in the west of the island, has been more fortunate, and he will thus very probably be able to throw light on the ethnology of some of the races. Maklay has rendered important service to future travellers by compiling a vocabulary of no fewer than eight hundred Papuan words, of the correctness of which he has fully satisfied himself. They can only count up as far as six, and in some villages in the interior three is the limit of their arithmetic.

After his dangerous tour in New Guinea Maklay visited the Moluccas, Philipines, China and Batavia, and he is now in the Malay Peninsula, where, on the mountains of the interior, he expects to find a new race of human beings.

NEW ZEALAND.

THE Registrar General of New Zealand has obligingly sent us a blue-book containing the statistics of that colony for the year 1873, and we feel bound to notice the publication. As one might suppose it consists mainly of tables, but still there is a fair amount of explanatory matter in the form of a report, and from that portion of the blue-book we purpose taking a few of the more interesting facts. In the first place we are glad to find the period dealt with corresponding with the year 1873 as given in the almanac. Official years that are compounded of sections from two almanacs are a relic of barbarism, and it will be a great boon to the public when some reformer arises bent upon making governmental correspond with commercial and domestic divisions of time. One would have thought that when, a century ago, there was a clamour on the part of a few scientific agitators for the introduction of a New Style, more than that would have been accomplished, and that Parliament would have made an adjustment between the year of Grace and the year of Red-tape. If we do not mistake, such an adjustment, sooner or later, is inevitable, and our hope is that some sensible man in power will hasten the coming of a day which has been too long delayed.

The population of New Zealand on the 31st December 1873 was 295,946. The births registered during the year were 11,222, and the deaths 3,645, giving the natural increase, of population, as represented by the excess of births over deaths as 7,577, or 20·75 per diem. The English Registrar General's report for the year 1870 gives a total increase, by excess of births over deaths, of 277.458, equal to a daily increase, in a mean population of 22,457.366, of 760, equivalent to a daily percentage of increase of ·00338; whereas the daily percentage of increase in New Zealand for the year 1873, on a mean population of 287,753 was ·00721. The Registrar General of Wellington thus shows the relative proportion of increase:

In England and Wales	...	100·00
In New Zealand	...	213·31

One feature is very noticeable in connection with this subject, viz. the relative rates of infant mortality. In England in 1870, the births were 792,787 and the deaths of children, under one year of age, were 126,638; or, in other words, 15·97 per cent. of the children born died before reaching the age of one year. In New Zealand in 1873 only 10·81 per cent. of the children died before attaining that brief space of existence. In Victoria the percentage of such deaths was 11·3. We confess to a feeling of disappointment on reading these figures. Looking at the crowded state of England and the unhealthy conditions under which the lower orders are living, we had expected a contrast much more favourable to New Zealand.

The increase of the population of New Zealand by immigration during the year 1873 was 8,811 against 4,973 in 1872. There would seem to be a considerable emigration from New Zealand; the total immigrants were 13,572, so that a third of that number, or a body of people corresponding with a third, did not like the country, and went away. We conclude they emigrated for Australia or Tasmania. This is a circumstance that conveys an unfavourable impression. It is noticeable that of the 13,572 immigrants Government paid wholly or in part for the passage of 8,754, a figure that nearly corresponds with the balance of emigrants (8,811) staying in the Colony. Ought not one to infer from this that these

people, or many of them, would have left the Colony, like the perfectly free emigrants, if they had not been tied down by an obligation to Government?

One would expect to find in a flourishing Colony that there were numerous marriages; we find that in 1873 there were 2,276, being an increase of 403 on 1872, the number being more in proportion than the increase of population. This is a fact that speaks well; whether or not new arrivals in the Colony suffer from nostalgia, the place is evidently growing in prosperity. Of the 2,276 marriages in 1873, 753 were solemnised by the Scotch Church and United Presbyterians, 625 by the Church of England and Ireland, 300 by the Roman Catholic Church, 211 by the Wesleyan Methodist Society, 211 by registrars, and 177 by other religious bodies. Of the 2,276 marriages 1,924 were between bachelors and spinsters (including the marriage of a divorced male with a spinster), 154 between bachelors and widows, 134 between widows and spinsters, and 64 between widowers and widows. Of the 2,276 women married, 636 were under the age of 21, 854 between 21 and 25, and 394 between 25 and 30. The youngest wife was a girl of between 14 and 15 married to a man between 35 and 40. Two men of 65 to 70 were married; in one case the wife was between 30 and 35, and in the other case the wife was between 50 and 55. Judging from the signatures to the registers, the rudiments of education are more generally diffused among the people of New Zealand than among the people of England. Out of the total number of children registered in the Colony in 1873, 159 or 1·416 per cent. were registered as illegitimate. In England in 1870 the rate was 5·6; and in the six years 1863-68 the rate was 6·2 per cent. The rate of illegitimacy was highest in the Marlborough Province, viz. 4·824per cent.

Coming to deaths we find that of the total number in 1873, 48·42 per cent. were of children under 5 years of age. The Registrar General is concerned by these figures, and remarks, "This rate at first appears exceedingly high when compared with the English rate, which was, in 1871, 41·1 per cent. of the deaths; but in making the comparison it must not be overlooked that there is in England a very much larger proportion of the population over 55 years of age than there is in New Zealand, and that the deaths of persons above that age were in England in 1870 27·3 per cent. of the total deaths, whereas in New Zealand such deaths only comprised 11·41 per cent. of the whole number. If to the total deaths in New Zealand had been added a number of deaths of persons over 55 years, *viz.* 796, increasing the total number of deaths to 4,441, so that the number of deaths of persons over 55 should be in the same proportion to the total deaths as obtained in England, *viz.* 27·3, then the actual deaths of children under 5 years of age would only have been at the rate of 39·74 per cent. of the increased number of deaths, or 1·36 per cent. less than the English rate in 1871." Admitting the validity of Mr. W. R. E. Brown's reasoning (Mr. Brown is the Registrar General of New Zealand), we are still disappointed; the number of children dying in the Colony would appear from his argument to be relatively less than in England, but still the *diminution* is not what we should have expected from a Colony possessing a world-wide reputation for salubrity. Whooping cough appears to be the great bane to infant life in New Zealand; then come Atrophy and Debility; third in order is Diarrhœa; and fourth Convulsions. There is a good deal of diphtheria in the Colony, and much phthisis, but the presence of the latter is accounted for by Mr. Brown who makes the (probably sound) suggestion that it is brought to the Colony by persons suffering from the disease; invalids with delicate chests emigrate in large numbers to New Zealand in the hope of being cured by the sea voyage and a better climate; many of them discover that the step has been taken too late, and that they have reached the antipodes to find a grave. There is a good deal of typhoid fever in the Colony, and much rheumatism. In the Gaols diseases of the nervous system are most numerous, those of the digestive organs ranking next.

Leaving vital statistics we come to the Trade and Commerce of New Zealand, and are glad to find that the Colony, looked at that from that point of view, is in a truly flourishing condition. The total value of imports in 1873 was £6,464,687 against £5,142,951 in 1872, being an increase of £1,321,736, or 25·7 per cent. Direct importations from the Continental States of Europe decreased from £6,464 in 1872 to £924 in 1873. The total value of the exports of New Zealand in 1873 (excluding the value of imported goods re-exported from the Colony) was £5,477,979, against a similar total in 1872 of £5,107,186, being an increase of £370,793. The total value of gold exported was £1,987,425 against £1,731,261 in 1872. The total quantity of gold exported from the 1st April 1857 to the 31st December 1873 was 7,223,587 oz; the total value £28,071,685. There is a great decrease in the exportation of wool as shown by the figures of the year; but on examining the details of the trade Mr. Brown has discovered that, so far from a decrease, there is an increase; this serves to remind us how untrustworthy mere figures are, unless the facts they embody are well understood. The shearing season in New Zealand commences in the last quarter of the year, and the season's clip is exported in two different years; thus, early or late shipments of wool in any one season may disturb the comparison between the exports of wool of one year and another. In reality the actual production of wool for the season 1872-73 was 2,856,931 lbs. increase on the former year. Of the articles exported the pastoral interests yielded exports of the greatest value, amounting to £2,845,434; the mining interests yielded exports to the amount of £1,997,930; and the dairy and preserved meat exports amounted to £175,931.

Turning to Law and Crime we find that 159 Maoris were convicted of various offences during the year. Thirty-nine of the cases were for larceny, 61 for drunkenness, and 27 for assault. There was one case of horse-stealing; the rest were for various slight offences. *One Maori was convicted of lunacy.* This strikes us as being not a little odd. Two Maories, we see, were charged with being guilty of lunacy; one case, however, was dismissed. In the statistical tables, while felony and misdemeanour have columns to themselves. "Debt or Lunacy" (*sic*) are lumped together.

In the Colony of New Zealand there are 680 schools for the education of the European portion of the population, attended by 41,027 pupils, viz. 21,774 boys, and 19,253 girls; the teachers number 1,272 viz., 647 males and 625 females, so that of the population, other than the Maori population, on the 31st December 1873 13·86 per cent. were attending school as pupils. The number of schools established for the education of children of the Maori race amounted to 33, and the average number of Maori pupils attending these schools was 1,041, viz., 809 males and 232 females. It is noticeable how nearly balanced is the education of girls and boys among the Europeans, while there is a discrepancy greatly in favour of males among the Maoris. Such a fact ought to stimulate the native gentlemen of India to attempt more than they now do for the education of girls. It is not creditable to them "to row in the same boat" with a people who were in a savage state in the time of our grandfathers, and did not hesitate to eat one another whenever they had an opportunity. Various tests of civilisation have been proposed; *Punch* some years ago told us that a London cabman is convinced civilisation ends with the disuse of "hansoms." Our idea is that it ends where the education of females is neglected.

THE CHITTAGONG HIGHLANDERS.

SOME months ago we drew attention to the great good that might be done, politically and socially, by holding annual melas, or fairs, at which the hill chiefs of the Kookee, Mugh and other tribes living on the borders of Chittagong might be brought amicably together and in friendly contact with the white man, whom many of them still regard as the greediest and most evil-minded of all God's created things. We are glad to hear that Sir Richard Temple has lately sanctioned a proposal made by Lieutenant Gordon, Assistant Commissioner in charge of the Sungoo Sub-division of the Hill Tracts, to hold a Mela and Durbar of the Kookee, Mugh, and other hill chiefs at Ruma, the head-quarters of the Sub-division, with a view to the establishment of a bazaar at that station, and to the Bunjogee and Khoomee tribes of the Kookees being induced to spread their villages across the frontier east of Sungoo. His Honor has also authorised Lieutenant Gordon to incur, for the purposes of the Fair, an expenditure not exceeding Rs. 500, which will be met from the grant allotted in the Budget Estimate of the Chittagong Hill Tracts under head "Kookee Durbar Presents."

Mr. Power states that that the objects which Lieutenant Gordon has in view in getting up this mela are twofold: (1) to increase the influence he has obtained over the Bunjogee tribe of Kookees, and to obtain some influence over the Khumees, hoping among other things that, by seizing the right moment, he may be able to induce them to spread their villages across the ill-protected frontier country east of his sub-division, and thereby obviate the necessity for a line of police posts, or rather to supply some means of protection where at present there are none, and where, for financial reasons, none can be provided by Government for some time to come; and (2) to lay the foundation of a bazaar at Ruma, and so in time diminish the heavy expenditure entailed on

Government for provisioning that place. The population of the Hill Tracts is scanty and scattered, and the valley of the Sungoo forms no exception to the general rule. Mr. Power promises shortly to deal at length with the question as to the best means of establishing permanent bazars, but at present he thinks it is only necessary to mention that the mode in which the population of the Sungoo is supplied with some necessaries, and almost all the luxuries in demand among them, is by traders taking boats up the river at uncertain intervals, and selling their goods from the boats. Before a bazaar can be established this mode of trading, objectionable in many ways, must be put a stop to, and the traders obliged to sell their goods in a bazaar instead of ranging over the country at will. No opportunity could be more favourable to introduce a change than that presented by the proposed mela, where both the traders and their customers will be present, and where the reasons for the change can be fully explained to both. The change, though it will be unwelcome to both parties, will really inflict no appreciable hardship on either, while the results will be beneficial in many other respects than the mere establishment of a bazaar. If the trade by boats is stopped; it is by no means improbable that some of the temporary shops erected at Ruma for the mela may remain as permanent ones: in any case, the place will become known, and be connected in the minds of the visitors with pleasant associations,—no small matter among an imaginative people. A precedent for such fairs is not wanting. They used to be held annually at Kassalong; and Ruma bears much the same relation to the part of the district in which it is situated as Kassalong did some years ago to the country surrounding it.

Now as to the political object of the fair. Taking into consideration the end arrived at, the money certainly will be well spent. The northern portion of the district frontier is, thanks to the expedition of 1871-72 and the measures since taken for its protection, tolerably safe. The Sungoo portion, however, is exposed to attack by the Shendoos, whom the expedition did not reach, and who actually raided on the Sungoo while our forces were in the Lushai country to the north and north-east of them. Recent events show that some are evincing a desire for reconciliation, but no one really knows what the intentions of the remainder are. The fame of the mela is sure to have reached them through the Bunjogees, and perhaps a number, as Lieutenant Gordon anticipates, may come in to see it. He originally asked for Rs. 1,000, and "sends a list of articles to be purchased. It is certainly good policy to do a thing of this kind well, if at all. The estimate, however, is undoubtedly excessive, I (Mr. Power) have supplied him with some blankets, rugs, beads, &c., &c., from the articles remaining in store at Rangamuttee. Even supposing the mela to be fully attended, and a complete success, I do not think it should cost more than Rs. 700. Any surplus of food or liquor will sell well at Ruma, and the expenditure might thus be reduced. The Kassalong melas used to cost about Rs. 1,500 to 2,000, but they were probably on a much larger scale than that now proposed." There are, according to Lieutenant Gordon, no less than three distinct tribes of Kookees within the jurisdiction of the Chittagong subdistricts, as well as many other tribes of Mughs and Tipperahs, to each and all of whom the general or special orders of Government have from time to time to be made known. Written communications produce nothing but confusion and alarm among the people, for they can neither read nor understand them, and their purport may be, and often is, misrepresented by those entrusted with their delivery for their own ends. It is therefore most desirable, if not absolutely necessary, that the chiefs should meet the Government officer at least once a year, when his wishes or commands can be personally, and therefore clearly, explained to them. The good which such meetings may effect cannot easily be estimated. The relation between Government and the border tribes becomes year by year more firmly established; the annual mela grows into an institution of universal popularity; intercourse between the tribes is facilitated and encouraged; the Government officer becomes personally acquainted with each of the motley clans and tribes which constitute the population of the district; his influence is immeasurably increased, and the work of his administration becomes at once more interesting, and more easily performed; itinerant merchants erect temporary sheds for the sale of their wares to the hundreds attending the mela; the foundation of a permanent bazar is thus established, which will receive an annual impetus from the repetition of the gathering which gave it birth. The news of the mela will spread across the hills and reach the Shendoo village, and curiosity alone will tempt that savage tribe to send emissaries to see and bring news of the white man's *Ayu dru* (festival in Kookee). Thus a thin thread of communication will have been established, which by tact and management may be strengthened into mutual confidence, a profitable trade, and perhaps the permanent peace of the frontier.

It is Lieutenant Gordon's opinion that the tributary Kookie tribes of the border—the Bunjogee and Khumees—can be utilized in this matter, and with the best result. They should be induced to settle their villages along the border country—the Bunjogees stretching southward from the Kapitai, their present country, towards Polee guard, and the Khumees, in a like manner, extending northward from the Aracan border, their present country, towards Poleetye. These tribes would not by this arrangement be exposed to any greater danger of attack than has hitherto existed for them, but on the other hand, being in communication with the guard at Poleetye, would give the villagers a feeling of security which they cannot now be enjoying. Their homes are strongly stockaded, and they are always prepared for attack and ready for defence, so that a raiding gang could scarcely pass through them if in an extended line and well stockaded without being perceived. Thus the safety of the defenceless Mughs on the Sungoo and Matamoree rivers would in all probability be secured. To induce the tribes to make a general move of this kind (for to order them to do it would be equally impolitic and fruitless) will be a matter of the greatest difficulty. The proposition, which if made to them in a matter-of-fact-way would be at once rejected and doggedly opposed, will assume a more favourable aspect when contemplated by the bright light of festivity, and surrounded by the magical influences of the platter and the wine cup.

BARODA AFFAIRS.

MR. W. MARTIN WOOD, of Bombay, who has been so long before the Indian public as the editor of the *Times of India*, has published a pamphlet in reference to the position in which the Gaekwar finds himself. The value of the pamphlet consists in its being a retrospect; it contains a selection of letters and articles on the approaching crisis in Baroda affairs, commencing with the 28th July last and ending with the 11th September, and it shows how great has been the *zoolum* perpetrated by the Maharajah's minions. On the 2nd September a writer in the *Times of India* drew up a string of charges of which the following are the most important.

1. That most of the servants of the Gaekwar have not received their pay for many months.

2. That no payments of salaries, &c., have been made to the hereditary Sirdars, Mankaries, Siledars, Darakdars of Baroda, for nearly two years.

3. That the present Gaekwar has entertained in his service men dismissed by the Bombay Government for serious offences in spite of treaty conditions.

4. That the present Maharajah has re-employed persons who were convicted by the former Maharajah on grave charges, and who have no education or character.

5. That the revenues of the State have seriously and suddenly fallen from Rs. 1,50,00,000 to Rs. 86,00,000 through the defalcations, neglect, and mismanagement in the Revenue Departments.

6. That some hundreds of complaints of bribery are lodged with the Resident against the virtuous Dewan Nana Khanvilker.

7. That the daughter of the Moonsiff was detained by the minions of the Maharajah for wicked purposes for five or six days against her will.

8. That two innocent girls, being British subjects, were forcibly detained, and afterwards reclaimed only through the energy of the present Resident. Strange to say, they were found in or near the Maharaja's own palace, although his upright councillors have been steadily denying in writing all knowledge regarding them.

9. That one Vahivatdar is now in prison because he refused to give up a female member of his family.

10. That an exorbitant sum of money was extracted from old Gopalrao's heir as succession money.

11. That two Vahivatdars, Shankar Lala and Dala Khooshal, had given the *nuzzur* of Rs. 6,500 as alleged to the reputed Dewan, but were ousted soon after from their post, and the *nuzzur* money never returned to them.

Mr. Martin Wood concludes his pamphlet with an expression of confidence that under Lord Northbrook we have entered on a career in which the breaking of engagements will be unknown. We entertain precisely the same conviction. That the bold action of Government has been so successful is, we think, largely to be ascribed to the trust reposed in the Viceroy. He has the happy power of imparting to others perfect faith in his own steadiness of action and in his sincere desire to fulfil every binding obligation. In India the personal qualities of men in power are of paramount importance for weal or woe; and it is most fortunate that Lord Northbrook is a thoroughly honourable man, on whose veracity and uprightness there has never rested the shadow of a suspicion. It is not only the European community, but native leaders, also, who feel this moral sway. Napoleon by his mere presence with an army is said to have been an equivalent for 50,000 men. Lord Northbrook by a singularly valuable combination of qualities is in the same way worth any amount of soldiers in this country; only he possesses, what is better than a mere influence on armed followers, the hearts of the people. That his magnificent measures

of relief in connection with the famine, and his self-denial during a trying summer in the plains, account for some share of this great popularity, must be admitted. Again, too, his princely hospitality, the cost of which must reach an astounding figure, and his quiet, unobtrusive, but most expensive acts of charity, are additional reasons why he should be greatly respected. Still further, his unassuming disposition—an exalted position never having in the least degree spoiled his inborn amiability and natural respect for the rights of others, even for the lowest—have made him a host of friends; but, after all, these things, though they have done much, do not explain everything in connection with the potency of his rule. The fact is, he is believed in, every one knowing that the Queen has placed a nobleman at the head of affairs in this country who cannot possibly do a crooked thing, or carry out a deceitful policy. India is well off just now. The Secretary of State, Lord Salisbury, is universally regarded as a thoroughly good man. There is a natural loyalty to such men. That "an honest man 's the noblest work of God" is as apparent to the masses in India as it is elsewhere. True, the millions know little of Lord Salisbury. They are only conscious of the existence of a great Lord Governor Sahib. But the leaders of native opinion are well aware of the power wielded at the India Office, and the confidence they feel communicates itself, in undefined, but none the less effective, ways, to the strata of society below them. It is certain, or should be so, to one and all in this country, in any way interested in the action of Government, that every promise given in connection with Baroda will be faithfully observed. Undoubtedly matters could not have gone off so well as they have done at Baroda, had not Sir Lewis Pelly been a man of the right stamp. With admirable judgment he was selected for a most difficult part, and he has played it with equal brilliancy and skill. The durbars at Baroda are as well-conducted as any in the country; the soldiers have received their arrears of pay; and the faces of the ryots are bright with renewed hopefulness. The ryots have indeed reason for being happier than they were, for this was the condition of things as delineated by an eye-witness last August (we quote from Mr. Wood's pamphlet):

1*st Fact.*—In all the Gaikwari villages I visited, the one great subject of conversation with the topi-walla was their sufferings, of which they had many details to give. But the tale of misery was written in legible characters on their fields, their houses, their cattle, and in their own darkling and shrunk faces "Won't the Angrej raj come?"—"When will the Angrej raj come?" These were their exclamations.

2*nd Fact.*—In the English territory I noticed that, after the cereals had been harvested, a second crop of legumes was raised. These plants, called Popadi, are like French beans, and form a large portion of the winter food of the farmers who grow them. Tons are sent from Guzerat to Bombay in their season. Thus they are a source of comfort and profit, and are very popular. In passing through the fields of a Gaikwari village, I noticed a crop of these vegetables that was a complete failure, and inquired the cause of my guide. *Cause.*—"The poor fellow couldn't raise his rent in time." *Explanation.*—When the crops of these miserable creatures are ready for the sickle, and the time appointed by nature for the laborious farmer to reap the reward of his toil has come, down pounces the voracious Ejardar (farmer of the rents) with a *posse* of Durbari sepoys, and puts his interdict on any attempt at cutting the crops till the rent is in his pocket. Could a more injurious and iniquitous system of rent-collecting be devised? The part of the contractor, it must be said, he has agreed to pay a certain amount at all risks, and the probability is he has already paid the half of this to head-quarters; hence mercy or leniency are quite out of the question, and are neither expected nor granted. The wretched ryot has already run the length of his credit string to get the crops in, and keep soul and body together during the rains while cultivating his fields. If his crops are superior, he may be able to borrow the rent at a smart interest, but all will be swallowed up when he has to pay his debt; and he ends his years as he began it—in debt. But what of the unfortunate wretch whose crops are not particularly good, and who may be on the brink of insolvency? Where is he to borrow from? He sees his crops spoiling from over-ripeness. His wife and he could cut them down in time; but no—he must first pay his rent. In despair he wanders from *sahukar* to *sahukar*, only, perhaps, to be dunned for what he already owes, until he meets with some risking *marwari*, from whom, after pawning his crops, his bullocks, his ploughs, his all, he borrows at 40 or 60 per cent. the amount of his rent. But now it is too late for the cold season crop; he, however, tries it; it fails. While the English ryot has his vegetable curry as a relish for his *rotari*, this miserable Gaikwari serf can procure only an onion or chilli for his dry bread, and on such insipid fare he and his wife and children have to subsist.

His bullocks are sold by the *marwari;* and from a farmer he finds he has become a day-labourer. If prolonged misery has left any hope and energy, he bundles up the few brass cooking-pots he is master of in his *godadun* (quilt or bed), and this he puts on his own head, his wife takes the youngest child on her hip, and the little stock of *jawari* left tied in a cloth on her head (it was the reduction of this to about 20 seers that determined the step now taken), and thus equipped, and under the light of the propitious moon, they leave the sad place, and are off across the border to some English village.

My intention was to state the bare fact, but I have been led on to trace the consequences of it also. Many of your readers could have done this for themselves, but some who are unacquainted with country life need to have them pointed out.

3*rd Fact.*—Near Bardoli, a town not far from Nowsaree, I happened on a hamlet composed entirely of grass huts. It was in English territory. In such huts Kolis and other poor people are often found, but the occupants of these huts were Kunbis, people of a respectable class. They were refugees who had run away from Gaikwari *Zulam*. One man had been well-to-do in the world, but as *Zulam* increased he saw his goods diminish, until the oppression became such that it could be endured no longer. I visited the village from which they had fled. It was not a mile distant. The more respectable people had gone off in a body. The empty and fallen-in houses gave the village a dilapidated and desolate appearance. The bare soot-coloured rafters of the naked roofs looked like the ribs of a well-picked carcase. But one house I saw as it in construction. It was a large house of brick and mortar, and must have cost from 500 to 600 rupees to erect. It was in an unfinished state. The doors had not been inserted, but in their places large gaps were left in the wall through which the interior could be seen. No one was near it, and it seemed abandoned. Its story was that it belonged to one of the men who had fled. Poor fellow! he had, not foreseen the increased extortion (which, perhaps, his new house itself had suggested and warranted) and, after expending five or six hundred rupees, he forsakes all and flees. This, which I saw "with my own eyes," revealed and proved to me tales of oppression and misery it is impossible to learn from report. What must have been the extent of this farmer's sufferings before he abandoned his new house of brick and mortar for a miserable straw hut?—his patrimony of cultivated fields for a tract of jungle?

When a person leaves a Gaikwari village, he is compelled to abandon all his estate. He is not permitted to dispose of his house or to remove one stick from it. His land, of course, he could not sell. Both are given to the next comer. Should the land not be taken up, it is saddled, if possible perforce, on some of the remaining inhabitants. I once fell in with a family of tailors who had fled from a Gaikwari village. What! had the myrmidons of the Durbar increased to such an extent that clothes could no longer be made gratuitously for them? This was not the explanation. Some unfortunate Kunbi had deserted the village and left his land, and the Durbari remedy was simply that these tailors should *nolens volens* take it up!

Mr. Martin Wood remarks that there is one class of writers who, as soon as Baroda or any other native state becomes troublesome, would apply the once popular, and apparently profitable panacea of annexation pure and simple. "They would at once make the map 'all red,' and pension or 'polish off' sulky princes or refractory nobles. This course would speedly settle (for a short period) all troublesome difficulties about treaties or traditional attachment to native princes and indigenous rule. With the large number of easy-going persons who affect this dragoons' version of the *sua si bona norint* policy, Lord Northbrook's careful and explicit declaration that *he will faithfully* observe the engagements spontaneously made by Her Majesty in 1858 and not in any case proceed to annex the Baroda State, goes for nothing. In spite of Viceregal promises and solemn public declarations, they try to persuade themselves that a policy so pleasant to an imperious temperament, and, on the surface, so gratifying to the conquering race, must have revival. Yet those who have studied political history know that the stream of events is not a tide, but a flowing river, and that it is as vain to expect the renewal of the annexation policy, as it would be for Mr. Whalley to move the repeal of the Catholic Emancipation Act, or for the Duke of Richmond to set about re-enacting the Corn Law. Lord Northbrook has demonstrated—though this should not have been needed—that the British Empire in India has irrevocably entered on a new era, wherein, whatever other mistake we make, we shall not repeat the error of weakening our power by extending our territories or breaking our engagements; and it is high time that all in India who desire to take their share in practical politics should make up their minds to accept the situation, and loyally endeavour to work in it to good purpose." With these remarks of Mr. Martin Wood we heartily concur.

MR. SAMPSON AND "THE TIMES."

A contemporary is of opinion that as regards the famous Rubery case *The Times* has come off clear. "Mr. Grant had nothing to do with Mr. Sampson in the matter. Mr. Sampson denounced a speculation which deserved denouncing, and implicated Mr. Rubery by mistake. *The Times* knew nothing of what was going on, and when it found that Mr. Sampson had placed himself in a false position, dispensed with his services. The really awkward part of the affair is what incidentally came out—the financial relation between Mr. Grant and Mr. Sampson, in which Mr. Grant 'saw no harm,' but of which a different view is taken in the city—to the great discomfiture of *The Times*, as it does not hesitate to confess."

A discomfiture is sometimes a victory, and we do hesitate to say that every right thinking person is bound to sympathise with *The Times*. So far from the integrity of its management being under any cloud, there is so true a ring in the following utterances that they cannot fail to obtain a general conviction of the *bona fides* of the Editor in chief. He says:

"As between the *Times* and Mr. Rubery the recent trial gives us no uneasiness. But there was another

question raised in it—a question between the conductors of this paper and the late writer of its City Article, which we cannot approach without a feeling of profound and unalloyed mortification. The case of the plaintiff was that this attack on his trustworthiness was the result of a conspiracy between Baron Grant and Mr. Sampson; and though the jury did not give him a verdict on this point, the evidence extracted from Baron Grant revealed relations between him and our late *employé* which we have received with mingled astonishment and indignation. It is true that the evidence is that of Baron Grant *alone*; but, as Mr. Sampson had the opportunity, of which he did not avail himself, of subsequently attending and giving his own explanation of the transactions between him and his co-defendant, we are justified in taking the Baron's evidence as admitted by him. What then, did Baron Grant say? It was that in the year 1871—we use the Lord Chief Baron's summary—he had to the extent of £2,500 given sums to Mr. Sampson as *free gifts*, to recoup him for losses: and it must be added that in 1872 he had given him further sums, and could not say whether they did or did not amount to £5,000. The explanation of these gifts, volunteered by Baron Grant, is that Mr. Sampson had adventured in some speculations on his recommendation which had proved unsuccessful, and he had thought it fair to indemnify his friend against the losses he had sustained. The Baron's generosity is high-minded, yet is not indiscriminate. Many persons must have lost money in speculations recommended by him—some who could worse afford to lose it than Mr. Sampson—yet of all the unlucky men and women who had gone through this experience the one he selected to indemnify, was the writer of the Money Articles in the *Times*, he himself being by profession a man who, month by month, and week by week, introduced new ventures to the Stock Exchange. We need say no more. Whether Baron Grant hoped for anything and whether he got anything, we do not inquire. But this much we do feel at liberty and, indeed, under the necessity to say, that in allowing himself to enter into such relations of obligation to a financial agent, Mr. Sampson betrayed the unbounded trust that had been reposed in him, and that had any knowledge of these transactions reached us, there would have been long since a change in the authorship of the Money Articles of the *Times*.

The honour and independence of this paper must ever be above suspicion, and the humiliation we have suffered is hard to bear—a hardship compared with which the damages that have been awarded to Mr. Rubery are as a feather in the air. In connexion with this, too, we must protest against an observation made by Baron Grant in his evidence. Baron Grant said that Mr. Sampson was the Editor of the Money Articles of the *Times*, and entitled by reason of his position to allotments in new undertakings. If this means no more than that the City Editor of the *Times* is presumably a person of careful habits and responsible for his engagements, so that when he applies for shares they may be allotted to him, because he may be trusted to hold them as a *bona fide* investor, we do not know that we can quarrel with the statement,—the City Editor of the *Times* must have the same liberty of investing his savings as other people; —but when Baron Grant goes on to refer to the trouble Mr. Sampson had to undergo in his position we see that there is some ground for the interpretation that has been put on the language of the witness— that he was referring to gratuitous allotments by way of gifts of shares that were quoted at a premium before any allotment had been made. Without imputing this meaning to Baron Grant, we are at liberty to say that if such a suggestion had been made, we should regard it as offensive and insulting, and the acceptance of such benefits would immediately have determined the connexion of Mr. Sampson with the *Times*."

Such observations should be read everywhere, and we hope that one result of them will be increased confidence in the Press. It may be impossible for many editors to command the talents or capital that go to the making of a truly first class organ, but it is in every one's power to be as immaculate in motive as the Editor of *The Times*. It is highly satisfactory that the best of all newspapers leads in morality and tone, as capably as it leads in collecting matter of public interest and importance.

EPITOME OF NEWS.

Bengal and Calcutta.

— Sir Richard Couch left Calcutta on Saturday.

— The Maharaja Holkar is expected to arrive with his two sons and Sir Madhava Rao on the 22nd.

— The Maharaja of Vizianagram arrived on Saturday night.

— The total number of officers receiving Colonels' allowances in January 1873 was 112, and in 1875, 184.

— An effort is being made to get up a Scotch Society in Calcutta, and sixty gentlemen have already expressed their willingness to join.

— Mr. Grant-Duff and Mr. Rutson left Calcutta in the P. and O. steamer for Madras on Thursday. They arrived at Madras on the 15th.

— *Captain* Butler's party in the Naga Hills has been reinforced by a detachment of the 44*th* Regiment stationed at Golaghat.

— A violent shock of earthquake was felt at Hazareebaug on Thursday last, at 8-45 P. M. It was accompanied by noise resembling distant thunder.

— The Goalundo life-boat, procured from England in 1874, has rendered excellent service, having been the means of saving 37 lives from drowning.

— The Viceroy has appointed the Hon'ble Arthur George Macpherson to be Officiating Chief Justice of Bengal.

— It is reported that one of the planters in the Darjeeling Terai, in a quarrel with some of his coolies, was pulled off his pony, and severely assaulted.

— The jewels stolen from the Maharaja of Travancore were recovered within two days by the Police. The thief is an old offender.

— The Hon'ble Mr. Bullen Smith and Mr. Mewburn have been elected Directors of the Bank of Bengal, in place of Messrs. Patterson and Ogilvy.

— The last Duffla captive has been recovered, the Abors having given up the girl who was the only living captive remaining.

— The present Raja of Sikkim intends, it is said, to visit *Darjeeling this year*, to pay his respects to Sir R. Temple.

— The station of *Jubbulpore* will henceforth be a separate Executive Commissariat charge, with the stations of Saugor and Pachmuree as outposts.

— The petition to the Bengal Government in favour of continuing the Northern Bengal State Railway to the foot of the hills near Darjeeling, instead of stopping at Julpigooree is being numerously signed.

— The Commander-in-Chief has invested commanding officers of native *Infantry* regiments with the power of selection and appointment of native Adjutants, without reference to army head quarters.

— The Government of India has issued a circular to all local Governments and administrations, proposing to make subscriptions to a Provident Fund obligatory on the part of married Europeans in the Public Works Department, as a condition of appointment.

— Mr. Richard Garth, Q. C., the new Chief Justice of Bengal, is the fortunate possessor of £4,000 a year apart form his professional income, has an estate in the country, and is much addicted to country pursuits, *especially* the breeding of dogs.

— During last year, 31 new Jointstock Companies, with an aggregate capital of Rs. 1,12,70,000, were registered, by the Inspector General of Registration in Bengal, while nine Companies increased their capital to the extent of Rs. 16,08,000.

— The Government of India has disallowed the Lieutenant Governor's proposal to raise the emoluments of the Subordinate Executive Service by adding a new grade carrying a salary of Rs. 1000 a month.

— The Executive Committee of the Central Relief Fund, Bengal, expect to have a balance of £1,000 to £2,000, after settling with the Government for claims for rice used by the District Committes in charitable relief.

— On Lord Northbrook's leaving Calcutta for the North-West on the 15th instant, the Hon'ble Mr. Ellis will be gazetted President of the Council.

— Sir Richard Temple officially records in the warmest terms his high appreciation of the services for more than thirty-three years of Colonel Dalton, Commissioner of Chota Nagpore, who is about to quit India finally. Colonel Dalton's service in India was twice specially extended by the Secretary of State.

— It has been announced that the Government have granted Rs. 10,000 towards the object of securing observations of the total eclipse of the Sun in the East Indies on the 6th of April next. Mr. Hind has calculated that no other eclipse of the present century will be nearly equal to this in regard to length of totality and track, except that of April, 1893, which will be central in South America.

— Sir Richard Couch received the Attornies of the High Court in the Judge's Library, on Friday last when an address was presented to him. The Chief Justice replied in very feeling terms, and said he was glad to find from the expression in the address that he had realized a hope which he had always cherished of spending some portion of his life in this country for the public good.

— It is stated that the Admiralty have refused to accede to the request of Rear-Admiral Macdonald, the newly-appointed Commander-in-Chief on the East India station, that Capt. E. S. Adeane should be his flag-captain. Capt. Adeane, it may be remembered, was flag-captain to Rear-Admiral Randolph at the time the *Narcissus* and *Endymion*, two of the vessels of the detached squadron, went ashore last year.

— The Government of India has determined to erect a memorial tablet in the Museum at Calcutta to Dr. Stolickza, who fell a victim last year to his too ardent pursuit of science on the return journey from Yarkund of Sir D. Forsyth's Embassy. The Schools of the three Presidency towns will be allowed to compete, and a prize of Rs. 500 will be given to the artist whose design is selected as worthy to be carried out.

— The cocoa plants taken by the Cheif Commissioner from the Botanical Gardens, Calcutta, have, on the whole, done badly in Assam. In the Koolsee Plantation there were placed forty-nine plants, which received great care and attention, and for a short time seemed to thrive, but on the 9th of May only half of them were alive, and at the end of the month fourteen alone remained. At present only two are alive, and these are very sickly.

— The supply of pure water from Pulta has been found to be inadequate to the demand for it. Arrangements are being made to convey water for street-watering and conservancy purposes direct from the river, and this will liberate a larger amount of pure water for domestic uses. But it is anticipated that it will eventually become necessary to import a larger amount of pure water into Calcutta. Altogether 1,286 houses were connected with the water works in 1873, making a total of 7,160.

— One result of the geological and mineral survey of the Darjeeling Hill territory and Western Dooars is the discovery of an unlimited supply of lime in the hills which form the boundary of the Julpigoree district between the Rehti and the Teesta rivers. This range, about 20 miles long, and averaging, perhaps, a couple of thousand feet in height, is partly made up of a magnificent band of dolomite, 1,500 or 2,000 feet thick, and large masses of calcareous tufa occur along the base of the hills. The nearest point of the range is less than 35 miles from Julpigoree on the Northern Bengal State Railway, over a flat country all the way.

— In the course of investigations in connection with famine relief operations, it has been found that several villages exist in Durbhanga whose names do not appear on the census registers. It may be that some of those villages were, for the purposes of the census, regarded as part and parcel of other adjacent villages, but on this point no records exist to guide one to a true judgment. Independently of the existence of villages

unknown to the census registers, the result of the village-to-village inspection is such as to convince most of the circle officers that the last census was not, as far as this sub-division is concerned, an accurate one. It is believed that the population of Durbhunga is larger than it is supposed to be.

— Officers obtaining leave or furlough out of India are too much in the habit of overstaying their leave, not doubting that, on an explanation of the circumstances of their detention, an extension of the leave for the number of such days will be easily obtainable. The Commander-in-Chief has several times, in his General Orders, warned all officers against such overstaying of leave; and as the cases of late appear to have demanded still further notice, his Excellency, under instructions from Government, now reiterates his warning and informs all who deviate from the regulations of the service, that they lay themselves open to the penalties therein mentioned as to loss of pay, service and appointment, even if their leave is exceeded by a single day.

— The average rate of road cess hitherto struck by the district committees has been four pie in the rupee, or two-thirds of the full rate. At four pie in the rupee, road cess income on (£12,101,000 -£1,359,000=) £10,742,000 would amount to about £224,000. If to this be added £20,000, the estimated yield from the cess on houses, mines, and quarries, the total yield of the road cess may be expected to average about £250,000 a year at two-thirds of a full rate only. The income accruing to districts from ferries, from provincial grants in lieu of cattle-trespass fees, and from miscellaneous sources, may be expected to bring the total annual local income of the district road committees to about £300,000 for the whole of Bengal.

— The new port of Chandbally seems to be the best port in Orissa for passenger trade, and for coasting trade in country produce. Buoys and beacons have been placed at the Dhamra river entrance to Chandbally port, and the river has been surveyed. The chief port in Orissa for large steamers and seagoing vessels is False Point. Between the 1st January and the 30th June 1874, no less than 52 ships and steamers, aggregating 42,674 tons, visited this port. There is now a regular communication established between False Point and the ports of India by means of the British India Steam Company's vessels, and it is hoped that this will now be made permanent by the completion of the port station and of the Kendrapara and Dullunda canals from Cuttack, which are the necessary feeders for all inland produce.

— The trade in Indian Tea again showed last year decided signs of further development. The course of prices throughout was steady for the bulk of importations, but Fannings and Broken Teas fluctuated, and Green Teas experienced a serious decline. Contrary to the experience of 1873, the supplies of finest were small, and the proportion of Good to Fine very large; perhaps excessive in the case of Broken Pekoes. A noticeable feature was the scant supplies of leafy sorts, under 2/ and the high rates current for them, so much so that a decided falling off in the deliveries was apparent; towards the close of the year the quantity was less restricted, and an increase in the monthly deliveries showed itself. At one time the total export from Calcutta appeared likely to reach a much higher figure than in 1873-74, but owing to bad weather the estimates were reduced, and it seems probable that but little, if any, excess will be shown; exports up to date being on a par with last year.

— It was estimated at the time the last report on Administration of Bengal was written that there might then be about 80,000 Mahomedans receiving instruction in schools connected with the Education Department, and the returns of the last year show that this estimate was not far from the truth, the number on the rolls on the 31st March being 81,222 out of a total roll number of 400,721. These 80,329 Mahomedan pupils were distributed amongst the several divisions as shown in the list below, which also gives the number of Hindoo pupils in the schools of the same districts;

	Mahomedans.	Hindoos.

— "A Subscriber" writes to the *Times* to express his dissent from a proposition made by that journal in a recent article on the native army in India, to make superior officers of the natives, or to make each regiment of homogeneous materials. If, the writer says, you raise a native officer to the higher posts, you run the risk of creating another Hyder Ali. A clever native, with the command and confidence of the troops, would be a more dangerous antagonist that we have had yet. The very gist and cause of the mutiny was the homogeneous character of the Bengal regiments, mostly Brahmins; and the main reason why the Bombay and Madras troops did not join, was the various materials of which each regiment was composed. If we wish to restore the native army to a useful body, we must return to the old Company's principles again, giving a full complement of European officers, and recruiting from all castes and creeds, without giving an undue preponderance to any. The allowing a preponderance of one caste and gradually giving way to its prejudices sank the ship; still, taking experience from past errors to remedy the defects in it, a system that won our Indian empire is the right one to maintain the conquest.

— At least three-fourths of the deaths which occur in Calcutta and its suburbs are due to fevers and fluxes. The great majority of diseases falling under these heads come, there is every reason to believe, under the category of preventable disease—and are owing to remediable hygienic defects. It becomes, therefore, a question of immense importance what is the hygienic state of the city and its suburbs, and what is being done to improve it? It must be acknowledged that the sanitary state of Calcutta and its suburbs is in some respects as bad as it can be. Of first importance to the health of a community are the houses in which they live, and in this respect the poorer classes of Calcutta are perhaps worse off than in any other city in the civilized world. The *bustees* or native villages are infamous places of abode for human beings—hovels reeking with damp and filth, overcrowded, ill-ventilated, and poison-saturated. The health officer year by year raises his voice against their fœtor and pernicious stenches, and the chairman of the municipality admits the truth of his representations to the full, and acknowledges that "the existence of these receptacles for filth is most prejudicial to the health of the inhabitants of this city." Yet nothing is done, and the poorer natives are permitted to poison themselves and others with impunity.

— That a "three months'" trip to Europe—that is including the time to and fro—is conducive to health the *Indian Medical Gazette* does not believe. That people do so go and return, none the worse or even the better for the trip, is no argument in favour of such rapid changes being ordinarily advisable in a medical sense. It only evidences the inherent power of the European constitution to withstand the influences of such changes. "We will not deny that there are conditions, in which the three months' trip may be beneficial; as, for instance, to the man jaded and worn by sedentary office work, or by great and continued mental exertion. Then, provided the individual is a 'good sailor,' the period of freedom from monotonous occupation, and the mental relief thus obtained, with change of scene and society, probably invigorate and refresh all the powers of life, both mental and physical. But if a person is the subject, or has recently been the subject of any definite malady, the short trip home cannot, in the great majority of instances, be productive of the smallest benefit. We have known men spend their hardened gains in an expensive three months' search after health, which they too late discovered was not to be attained on any such terms. For many sick people life on board a crowded P. and O. ship is *not* the most desirable stage of existence. Then, if in any way able to withstand the fatigue, the short period at home will be spent in rushing at express speed from one part of England to another, visiting family or friends, or seeing sights which one can scarcely go to England without 'doing.' Then there is the rapid journey back again in another crowded vessel, and probably a long run up-country, landing the official at his station, in many instances rather worse in health than when he left it three months previously. It cannot, in our opinion, be too widely and generally known that thorough recovery from almost any malady contracted in India requires a lengthened period. Many of the principal diseases of this country have a decided tendency to recurrence, and this must always be a consideration when the time to be spent in Europe for the purpose of regaining health becomes the question."

North India.

— The working of the Wazeeree Roopee mines is shortly to be resumed.

— Heavy rain in the Punjab has greatly benefited the parched crops.

— Simla was visited by an unusually heavy fall of snow on the 7th instant. It is said that the ground was covered to a depth of from 16 to 18 inches.

— The Government of India has resolved to discontinue the grant for the destruction of venomous snakes in Oudh.

— Mr. Egerton, Financial Commissioner of the Punjab, was thrown from his horse on Wednesday last.

— It reported from Jhansie that a sepoy of the 25th Native Infantry has shot a native officer dead when at rifle practice.

— Lord Napier returned to Umballa on Saturday week last, accompanied by General Lumsden and other staff officers.

— The Horse Fair at Jhung will be held on the 2nd of March and three following days. Prizes will, as usual, be awarded from Government Funds.

— In the case of Harrington *versus* Harrington and Dunn, a rule *nisi* for the dissolution of the marriage has been decreed by the Allahabad High Court; the co-respondent paying all costs.

— In the North-Western Provinces and Oudh the pulses have suffered from frost, but except in the Meerut and Agra divisions, where rain is much required, the wheat crop is reported to be good.

— Up to the 8th instant, rain was wanted in the districts of Lucknow, Sitapore, and Kheree. Frost had also caused much damage in the first named district, as also in Barabunkee.

— There are 193 Judicial Officers in Oudh, 52 of whom are unpaid native gentlemen. Of the 61 paid European Officers, 21 are members of the Covenanted Civil Service, 21 belong to the Army, and 19 are Uncovenanted.

— On the 6th instant some robbers entered the house of the Native Doctor of the 12th Native Infantry, Lahore, and after tying his wife down, killed her husband, and took away all the cash and jewels they could find.

— Competitive designs are invited for the Canning College buildings, estimated to cost Rs. 1,20,000 and to cover 23,000 ft. contiguous to the Kaiser Bagh; provision will be made for a large examination hall, eight class rooms, and seven other rooms, including a library.

— The Maharaja of Putiala, the Rajas of Jheend, Nabba, and Chumba, and the young Nawab Malair Kotla, will all be present at the coming Delhi Durbar. Each chief is to be attended by special European officers appointed for the purpose. The Maharaja of Kashmeer has been exempted on account of

the distance he resides from Delhi. The Raja of Nahun will not be pressed to attend, as he objects to meeting Putiala on State occasions.

— The murderer of Mr. M. Reade at Goverdhun, near Muttra, has been sentenced to death, and his goods forfeited to the State. He never denied his guilt, and he pleaded guilty to the charge against him. He offered no excuse beyond saying that he had been punished the evening before for a very slight offence, and declared that he was so shocked by the result of his vindictiveness that he had meditated self-destruction, but lacked the courage.

Bombay.

— The unusually cold weather has continued, and the high rate of mortality has become still higher.

— Nearly thirty thousand camels entered Aden from the interior during the month of January.

— One effect of the recent visit of Sir Philip Wodehouse to Kattywar has been that the chiefs have agreed to contribute Rs. 64,900 a year, for ten years, for substantial roads in the Province.

— General Jose Tavaris d'Almeida has been appointed Governor of the Portuguese Possessions in India, and is expected at Bombay on his way to Goa to-day.

— Sir Jung Bahadoor continues to improve under Dr. Anderson's constant and watchful attendance, but it will take some time for him to recover from the shock of his unlucky fall.

— A serious accident has occured on the Sambhur line. A few days ago one of Messrs. Glover & Co.'s material trains accidentally ran off the rails, severely hurting the driver, killing the Christian guard and fireman and fracturing the leg of a kallassie.

— An official news report from Aden, extending from the 21st to 28th January, intimates that the Turks are still engaged in Yemen in subduing the Hashid tribes. Several small forts have been shelled and attacked and many Arabs are reported to have been killed.

— The Commander-in-Chief has returned to the Presidency after his three months' tour, during which time he has visited not only the whole of the stations in Rajpootana and Sind, but also many of the military stations in Bengal.

— Mr. James Flynn, Chief Interpreter and Translator of the High Court, has been appointed by the Government of India to act as Interpreter to the Commission that is to assemble on the 28th instant at Baroda for the investigation of the charge against the Gaekwar.

— The jemadar, to whose pockets the market-venders of Bombay have been made to contribute for five years, has been acquitted, perhaps because the chief part of the spoils accrued to him, while, on the same evidence, another man connected with the arrangement has been found guilty.

— It is reported that Beduwan Pasha has proceeded to Aintered to endeavour to effect a settlement between the Adau Madoba and the Yoosuf tribe at Kurrum. He went in a native boat with an escort of ten Egyptian soldiers, as the *Latief* cannot safely leave Berbera.

— Mr. Walker, C. S., Assistant Judge of Ahmedabad, who was spoken of some weeks ago as likely to be appointed Interpreter to the Baroda Commission, has now been appointed by Government to assist the counsel for the prosecution in conducting the case against the Gaekwar.

— During the late cold mornings experienced in the Deccan and Khandish, on many portions of the G. I. P. Railway line, rails were found to be broken, and in some instances the fishplates regularly sheared in two, owing doubtless to the great extremes of temperature, to which they were subjected within the space of a few hours.

— The Raja of Sattara, a nominal prisoner, has arrived from Kurrachee. The *Gazette* says:—"The object of his visit to Bombay does him credit, for he is about to pay his respects at the tomb of his mother the Ranee of Sattara, who died at Ahmednuggur a short time ago. He will be accompanied on his pious errand by a small retinue of retainers and one or two Government officials."

— The Commissioner of Police has been addressing 200 of the leading Mussulman inhabitants of the city, in reference to the preservation of the public peace during the present Mohurrum holidays. Mr. Edginton is said to have delivered a very practical address on the occasion, advising the Mussulmans to behave peaceably with the rest of the inhabitants and the police, assuring them that if they did not molest the police, the police would not molest them in any way in the celebration of their festivities.

— A contemporary writes that "about one hundred Mussulman roughs were called for, and attended before the Acting Commissioner of Police, who told them that, with a view to preserve the public peace during the Mohurrum festival, he considered it necessary that they should furnish securities for their good behaviour. About fifty of the men gave securities, and they were allowed to go with a caution that they would behave well. The rest who were unable to produce securities were not allowed to leave the police office, but they were told that they would be kept at the Mazagon Police chowkey, where they will be provided with everything necessary till the termination of the festival."

— The *Times of India* announces that considerable difficulties have been thrown in the way of the Gaekwar's solicitors, money for counsel's fee having been withheld. Sir L. Pelly requested the solicitors for the defence to send all communications to him through the solicitor for the prosecution, obviously an unfair arrangement. At first documents required for the defence from the Baroda Archives were refused. The Gaekwar's solicitors telegraphed to the Viceroy, and some of them have since been obtained, but several important ones have not yet been given. On Saturday last, Mr. Jefferson, one of the solicitors for the defence, was paid fifty thousand rupees, coupled with a condition that he would sign a receipt which bound his firm to abide by the judgment of the Government of India as to the necessity for the application of any portion of the sums that had been or would be advanced by Government towards the defence. The receipt was signed, but afterwards the rupees were returned, with a request that the receipt that had been passed should be returned. This was refused. All the arrangements for the defence have been most seriously interfered with. The solicitors, having no funds, are unable to retain Mr. Woodroffe. Three men, who were going about Baroda obtaining the signatures of the inhabitants to petitions for the Gaekwar's restoration, have been arrested.

Madras.

— A small reduction in the Madras native army is about to be made. One Regiment of cavalry will be abolished.

— Mr. David Duncan, Professor of Logic and Moral Philosophy, Presidency College, has been appointed Registrar of the University, *vice* Mr. Gordon.

— Messrs. Byard, Gair & Co. are closing their business, preparatory to the dissolution of partnership.

— Archdeacon Gorton returns home early in March. His successor is uncertain. The Bishop is still on tour.

— The Pier Committee have submitted to Government a Budget amounting to 2,859-14-6, for repairs actually necessary for the current year.

— In the Kookul Horale, Ceylon, there is still over 12,000 acres fit for coffee, although chenaing and gemming have ruined not a little of the land.

— The dancing season at Madras has been brought to a close by a large and brilliant party given by Lady Hobart at Guindy Park.

— A man has accidentally been shot at Uda Nuwara. He, while protecting his fields at night from the devastations of wild animals, was mistaken for a wild boar by a party of hunters.

— Under the orders of the Supreme Government, a Commission has been appointed to inquire into the causes of the decline of the traffic on the Madras Railway.

— The right of electing Municipal Commissioners is to be granted to the ratepayers of Trichinopoly, Salem, Madura, Bellary, Ootcamund, Calicut, Vellore, Combaconam, Negapatam, and Tanjore.

— The special establishment for the destruction of tigers under Major Caulfield, is to be broken up, and the Major has been directed to send in a report of his eighteen months' proceedings to Government.

— A Court of Inquiry, consisting of several military and medical officers at the station, assembled at the mess house of the 19th Regiment N. I., Trichinopoly, lately to investigate a charge of dereliction of duty preferred against Surgeon-Major Fitzgerald of the 2nd Regiment, Native Infantry.

— The crime of perjury seems to be very rife in the Nellore District, judging by the cases that were tried at the Sessions Court last month. There were altogether seven cases committed for trial, and in the whole of them the prisoners were charged with having given false evidence. In two cases the accused were Police Station officers.

— Lady Hobart, in distributing prizes lately to the principal Native Girls' School, founded by a native, said she was authorized to say that any measure proposed to Government to facilitate the training of female teachers will receive the fullest consideration. She further urged the proposition of the scheme to encourage native ladies to become teachers.

— A special telegram from Colombo, dated the 12th February, says: "Governor Gregory, whilst visiting the irrigation tanks in the northern districts, met with an accident. His horse bolted when he was mounting, the Governor being carried against a tree. He has sustained severe contusions, but no bones are broken. No serious consequences are anticipated."

— Mr. W. Clark, C. E., Drainage Engineer for Madras, purposes, from time to time, to send to the Secretary to Government, Public Works Department a Memorandum of the progress made with the scheme for the drainage of the city, on which, under instructions from the Government, he is now engaged. He will also give the views which he holds on the subject, in order that he may have the benefit of the suggestions and opinions of others.

— Letters are being received daily from almost every part of Ceylon setting forth the great rapidity with which cattle disease is spreading, and the immense loss and inconvenience that are thereby being occasioned to the planters and others. The murrain is now widely prevalent, and it will be no easy task for Government to stay the epidemic or eradicate the disease. This task it is more and more difficult to accomplish the longer it is delayed, but Government seems in no hurry to discharge its duty. Much dissatisfaction is expressed by planters and others on account of its apathy.

— Sir Coomara Swamy's countrymen in Colombo are bestirring members in the matter of getting a newspaper for themselves. They give their reasons for taking this step *as follows*:—The great weakness, as a class, of the Tamils of this Province, is the want of the means of expressing their opinion publicly whenever any question of importance arises and to make themselves heard by the Government and the people of Ceylon. Politically, therefore, we look very insignificant, though with a population of over 500,000 souls, and with our wealth, intelligence, and industry, we should be the last to occupy as a class such an inferior social position. It is high time that this evil should be remedied and it can be done by a newspaper *only*. It is therefore proposed to start a Tamil newspaper in Colombo, discussing Political, Mercantile and Literary Subjects—religion only being excluded.

— Ninety-three tigers and thirty-two panthers were destroyed in Coimbatore last year. Of those poisoned by baits, only thirty, or nearly one-half, were recovered. The search is generally a most difficult one, owing to the high grass, thick jungle, and other impediments, and consequently many may die without ever being found. The great difficulty the Collector has to encounter in

the destruction of tigers is occasioned by the low-caste carrion-eaters in combination with the herdsmen. There are villages inhabited by "Chucklers" in the neighbourhood of the jungles. These bribe the herdsmen not to report the death of cattle to the Village Magistrate; they come and remove the carcass bodily, and the consequence is that the hungry tiger returns and of necessity kills other cattle in succession and occasionally the herdsman. It is this custom of the country which often tends to produce a man-eating tiger. In one village a tiger has killed forty head of cattle, which were never reported and were probably so disposed of.

— The Madras Committee appointed to draw up a memorial on the improvement of the condition of poor Europeans and Eurasians have agreed upon the recommendations to be made to Government. They begin by asking Government to provide those classes with better means of education than are now available for them. With this object in view, they ask that schools for that purpose should receive exceptional treatment, in the way of regulations that they could not well comply with not being invariably insisted upon, and in the establishment of scholarships; also that industrial and agricultural schools should be established to train poor European and Eurasian boys to the mechanical arts, and to farming of a superior sort. They ask that a local military corps should be established, into which such boys could enlist; and they suggest that the British India Steam Navigation Company, which is subsidized by Government, might be induced to take a certain number as apprentice engineers. The memorialists also propose that a compulsory service fund should be established for the uncovenanted service, and for all military servants whose families are not now adequately provided for; and they also pray for an extension to this country of the system of Government life assurance and annuities for small amounts.

— In the megalithic chambered graves in Coorg it is not unusual to meet with complete sets of pottery of the forms commonly found in them, but all in miniature, giving the idea of toy-pottery. Similar tiny vessels are said to have been found in such tombs in other provinces, but we cannot just now find a reference to any instances. In Coimbatore and southern districts Mr. Walhouse has often found various small vessels, but he cannot say they were so small as to be evidently miniature, or smaller indeed than some occasionally now in use. At page 479 of Rude Stone Monuments, Mr. Fergusson, remarking upon the little box-like sham kistvaens formed at the present day by the mountain tribes of Travancore on occasions of death, observes, "The people having lost the power of erecting such huge structures as abound in their hills and on the plains around, from which they may have been driven at some early period, are content still to keep up the traditions of a primæval usage by these miniature shams. There seems little doubt that this is the case, and it is especially interesting to have observed it here, as it accounts for what has often puzzled Indian antiquaries. In Coorg and elsewhere, miniature urns and miniature utensils, such as one sees used as toys in European nurseries, are often found in these tombs, and have given rise to a tradition among the natives that they belong to a race of pigmies; whereas it is evident that it is only a dying out of an ancient faith, when, as is so generally the case, the symbol supersedes the reality." But there seems room for doubt whether the Coorg vessels really were miniature, or intended to be so; they are not smaller than many tea and coffee cups, especially such as are used by several Eastern nations, and Mr. Walhouse has seen clay and metal vessels almost similar amongst the various Hindoo castes, especially Brahmans. Mr. Fergusson says that miniature utensils have been also found with them, which would certainly strengthen his view; but Mr. Walhouse has not met with any, and indeed the custom appears to have been more or less local. He thinks Mr. Fergusson is mistaken in supposing that this tiny earthenware suggested to the natives the idea that the tombs belonged to a race of pigmies, but that it arose from the holes or apertures so generally occurring in the slabs at one end of the structure, and which are regarded as doors or entrances to what are popularly called houses, for the natives have no idea of their being sepulchres.

Feudatory.

— The health of the Raja of Kuppoorthalla has much improved.

— Sir Jung Bahadoor has had to abandon his intention of visiting Europe.

— The Raja of Bhurtpore will also be present at the Delhi Durbar.

— The Maharaja of Kashmeer will visit the Viceroy at Simla in March.

— The Maharaja of Travancore left Calcutta on Sunday.

— It is reported that matters are still very complicated on the Sind Frontier.

— The Bogties are at their old tricks again, and have lately made a raid into Kutchee, carrying off 100 head of camels and killing 4 men.

— It is rumoured that the man who personated the Nana died at Gwalior a few days after he had been given back to Scindia.

— There will be no festivities at Gwalior on the occasion of the Maharaja's marriage which takes place on the 15th instant at his Camp of Exercise. He leaves for Baroda on the 18th instant.

— It has been ordered that whenever any communication, either verbally or in writing, is made to a Native ruler by an official acting under instructions, a copy of the communication so made shall be forwarded at once for the consideration of the Governor-General in Council.

— Sir Lewis Pelly has received so many applications for employment at Baroda, that he has considered it necessary to intimate to intending applicants "*that there are no vacancies to be filled up*," and advertisements to that effect appear in the Bombay papers.

— The Mahratta agitators, who are getting up a case for the Gaekwar and native administration generally, interviewed Sir Jamsetjee Jejeebhoy the other day, asking him to join in their cry. But the Parsee Baronet reminded them that when he wanted them to help him in the case of the Parsee-Moslem riots last year they held aloof.

— Sympathy with the Gaekwar is openly expressed at Baroda. Numbers express their willingness to contribute to a defence fund, but are afraid of being arrested. The Sirdars say they could raise sufficient funds in Baroda in one day, but are afraid of offending the Government. The Mahomedan population of Baroda have suppressed their annual taboot procession out of sympathy with the Maharaja.

— Arrangements have been completed for the introduction of gas into Jeypore, while the water-works scheme will be in operation before next July. The cost of this latter project is estimated at five lakhs. A bund has been thrown across the small Amani Shah River, about a mile above the city, whence the water is conveyed in pipes and pumped into a large tank on a hill-top close by, seventy feet higher than the highest elevation in the city.

— The weekly programme of pleasures at Baroda is as follows:—Monday and Wednesday, Band of the 9th N. I., and Badminton at the Gardens; Tuesday and Thursday, Resident's Band and Badminton at the Residency; Friday, Badminton at a private house in Camp; Saturday, 22nd N. I. Band and Badminton at the Gardens. Badminton still holds its fascination through the fact of ladies and gentlemen mingling in the game on equal terms.

— It is rumoured that a survey party, consisting of the Superintending Engineer of the Chanda Railway and his staff, will shortly survey the country lying between the capital of Hyderabad and the British frontier, with the ultimate object of constructing a line of railway to facilitate the interchange of traffic between His Highness's territory and the British possessions on the east coast.

— A correspondent writing from Hyderabad reports that "a wrangle in the city on the night of the 3rd, between an Arab and a Rohilla Sikh, ended in a fray, in which several (it is difficult at present to ascertain how many) lives were lost." The Nizam's police, supported by the presence of a troop of Nizam's Cavalry, restored quiet. Some of the more bloodthirsty, however, went outside the city, and renewed the battle. There is no fear of further disturbance, Sir Salar Jung having taken prompt measures.

— Since Sir Lewis Pelly has taken charge of Baroda, the following individuals have been arrested on one or other charge:—Gaekwar Mulharao Maharaj; Prutinidhee Nana Khanwelker; Sir Sooba Harriba Gaekwar; Khangiwalla Damoder Punth; Nayadhish Bulwantrao Dev; Diwan Bulwantras Rahookor; Napab Sir Sooba Narrayanbhai; Nayadhish Martundrao; Fouzdar Babajee Yeshwunt; Nayab Appa Sahib (his son) Vakeel Govind Rao Mama; Jeweller Martee Nana Vithal; Treasurer Basant Rambhawoo; Naique Yeshwant Rao Shekey; Jailor Bhoozing Rao; Pagadar Bapoojee Suddasive; Narragyn Rao Wankaker; Gojaba Soobedar; Moro Panth Sadreker; Hackemjee; Residency Jamadar Nursoo; Rowjee an Aya.

— This is what a well-known English military paper says about the arrest of the Gaekwar: Temporary deposition! The thing is a mockery of reason and justice. The princes and people, not of Baroda merely, but of all broad India, will believe that *we* have been the base conspirators—*we* the concoctors of this plot—*we* the contrivers of a transparent scheme to get hold of the revenues of the State of Baroda, and fill our coffers with the wealth of another victim to imperial cupidity. If there be any truth in these suspicions, as sure as there is a just God in Heaven, we shall rue the day that our greed tempted us to trample the good name of the Empress of India in the dust, dishonour our race, and cover the Christian faith with degradation. That Lord Northbrook should seek to revive the policy of Lord Dalhousie is not astonishing—that he should be permitted to do so by Lord Salisbury and the Home Government must be deeply deplored. It may meet with the approval of the official classes in India, and may be condoned by those who would be horrified at the idea of sanctioning such violence and injustice in a European State but "the temporary deposition" of the Gaekwar and the assumption of the Government of Baroda by Lord Northbrook on the grounds stated in the telegraphic intelligence on which we are commenting, is a scandalous exercise or perversion of power—it is the condonation of a felony in order to seize the felon's purse and enjoy his gains.

Burma.

— A robbery has taken place at the house of the head master of the S. P. G. Mission School, Mandalay, all the valuables belonging to the inmates having disappeared.

— The King of Burma, in a fit of displeasure, recently gave orders for the construction of a jail near the new fortifications at Amarapoora, into which all Englishmen could be thrown at once at a given signal!

— Colonel Sir Andrew Clarke, C. B., is about to exchange the Governorship of the Straits Settlement (£5,000 a year) for the office of Minister of Public Works in India (£9 600 a year). His only war service is that he was employed on special seivice in 1848 in New Zealand, and in command of a party making a detailed reconnaissance within the disturbed districts, in presence of and engaged with the enemy.

— The news from Achin is meagre. The Dutch forces have succeeded in capturing several important stockades from the Achinese at Longbatta, which

were inimical to the safety of the Dutch stronghold. This is now said to have been rendered secure, and the successes of the Netherlanders have, the despatches state, so dispirited the people of Pedir, one of the most hostile states, that they desire to tender their submission.

— A foreign Commercial firm has presented to the King of Cambodia a requisition for the concession of two provinces, subject to eccentric conditions. The petitioners desire to obtain the absolute monopoly of the trade of these two provinces, to the exclusion of all other merchants who might wish to establish themselves there, and those who would be rash enough to compete with them should be liable to be expelled from the provinces without any legal proceedings whatever.

— The latest news from Siam is more re-assuring. It appears that the second King was the only one concerned in the disturbance there and was so badly supported that he was driven to take refuge in the British Consulate. The "Kalahome", who was absent up country when the outbreak occurred, hastened back to Bangkok to the King's assistance. General indignation is said to have been felt in Bangkok at the British Consul's conduct in giving protection to the second King, and it remains to be seen whether our representative was justified in doing what he did.

— The Sultan of Perak, following in the wake of the Sultan of Salangore, has issued a general proclamation inviting people to come and settle in his territory and develop its agricultural and mineral resources, under the protection of the British Resident. Land is offered free of cost or taxes for three years, and minerals may be worked according to the laws and customs of the country,—presumably on paying a royalty of one-tenth of the produce. Recently, the present and ex-Sultan have formally met and amicably adjusted their differences, and great feasts were held in honour of the reconciliation.

— According to private advices from Achin up to the 23rd December, the country in the direction of Longbatta was then still unfit for military operations, owing to its being under water. Colonel Pel's diary of operations comes down to the 10th December, and is chiefly taken up with a description of the ravages of the floods at Kotta Rajah. On the 26th November, a spy brought word to him that vessels arriving at Gighen from Penang had been conveying gunpowder concealed in boxes containing clothing, and that 10 kegs of cartridges had been taken to Qualla Gighen two days previously. On the 12th January the following telegram dated the 9th instant from Colonel Pel, the Military Commander at Achin, was officially published at Batavia :—"In Longbatta on the 31st Dec., nine forts and four pieces of cannon taken. Great resistance. The Pendite Mosque and Lampu-u occupied; a Lieutenant Quartermaster and 21 privates killed, 3 officers and 61 privates wounded. Enemy's losses, 171 killed. Enemy still daily harassing our convoys, 4th January, South Longbatta occupied; . . . . . left for the West Coast on the 2nd January. From 20th to 31st December, state of health improved remarkably. Since the latter date it is somewhat less favourable. Part of Pedir offers to submit."

Asia.

— Attempts are being made to recover the treasure from the wreck of the *Japan*.

— A magnificent tiger has been captured at Ningpo measuring 8 feet 2 inches from nose to tail.

— The attack of small-pox under which the Emperor of China suffered is reported to have been of the mildest character.

— The number of applications for bonds of the Chinese Imperial Government Loan was 20,171, although the number to be allotted was only 3,000.

— An enormous cuttle-fish, the body of which measured 12 feet in length, was recently captured off Yokohama.

— A large harbour is to be constructed at the town of Tuapse, on the north-eastern shore of the Euxine. The excavations by which the harbour is to be formed have already begun.

— From Foochow it is reported that the telegraph line to Amoy is progressing. At Amoy everything is ready to carry a cable from the mainland to Kulangsu Island; the Mandarins await instructions from Pekin.

— The Ameer of Cabul has given notice in his territory that no one is to go to Herat at present. Any one travelling to that city will be shot. Four breach-loading guns, manufactured by the Ameer, have been sent to the Peshawur Commissioner for inspection.

— The Khan of Khiva has sent another instalment of the war contribution imposed on him in 1873. It amounts to 21,400 roubles, and arrived at Fort Petro Alexandrowsky on the 14th of December. The Khan has also promised to send the balance in three weeks. The rumours that the Slave Trade had secretly recommenced in Khiva are officially contradicted.

— It is reported that the son of the Prince Chun has been elected Emperor of China, under the title of Kwang Su. It is possible that the birth of a son to the late Emperor, an event shortly expected, may upset this arrangement. In the meantime the mother of the Empress and Prince Dowager are appointed regents.

— The Central Committee for the Relief of the Famine in Asia Minor begs the English and American Press to draw the attention of their readers to the extreme want of further subscriptions. The £7,000 received by the Committee has been expended, and the distress is still augmenting. Several hundred thousand persons must be provided with clothing, food, and medical attendance until June next.

— The most strenuous efforts are being made to avert the spread of small-pox in Japan, and the natives are now submitting themselves to vaccination and to re-vaccination in large numbers. The prevalence of the disease among the pupils of the Kaiseigakko has alarmed the foreign teachers, who are stated to have "struck" work in consequence. Dr. Ritter, professor of Chemistry and Natural Philosophy in the Imperial College at Yedo, has died from the disease.

—A proclamation has been issued by the Comptroller of the Chinese Imperial Household, intimating that there would be at the end of last month, "a great concourse of poetry," wishing a happy new year to the Imperial family. Officers, daimios, samurai, priests, peasants, and in general "all who feel themselves capable of writing poetry," were invited to send their contributions, by post, for examination, to the Minister of the Imperial Household, —the sending by post being adopted for the first time.

— A China paper says a gentleman representing the Calcutta Opera Troupe has visited Hongkong to see if arrangements could be made for a series of performances in that Colony. As, however, he wanted a guarantee of $19,000, and the secretary of the City Hall expressed serious doubts of his obtaining it—while the agent refused to consult any of the leading houses on the matter—the idea has been given up. "It was supposed in Calcutta that 300 persons to guarantee $64 apiece could be found in Hongkong without difficulty."

— A memorial in the Peking Gazette of 15th December shows that the Chinese still maintain a semblance of suzerainty in their relations with Loochew, although the Japanese have formally taken the islands under their protection. True, the junk with tribute arrived at Foochow in the end of 1873 before the Formosan difficulty arose; but a year before that it had been officially intimated to foreign powers that the sovereign of the islands had been reduced to the position of an ex-daimio and assigned a residence at Yedo. The departure of the junk on her return voyage is now noticed: and according to precedent, the duties on Chinese merchandise shipped by her have been remitted. In acknowledgment of the graciousness of the "Sacred Ruler" to the man from afar, however, the Envoy, followed by his attendant officials and the crew of the junk, has had to perform the ceremony of the *kotow*, at the Custom house!

— The prevalence of small-pox in Canton is accounted for by the medical faculty (native of course) by the Emperor having it himself. However loathesome foreigners may consider the disease, the Chinese regard it as a matter for congratulation, for they speak of the person affected with it as "Enjoying the felicity of the heavenly flowers." This is the term employed in the imperial Edict announcing the illness of the Emperor with that horrible disease. The small-pox being the "Flowers of heaven" and the Emperor the Son of Heaven, and all his subjects subservient to him, it is only natural to look upon the extensive affection of his subordinates for the disease as a natural sequence. The fact of the eruption of the Emperor breaking out on the day of the transit of Venus is looked upon as significant, he being likened to the sun, as the sun was obscured by a dark spot (the contact of Venus) on the day in question.

— After a temperance meeting held by the Rev. Wilton Hack, at Hiroshima recently, a native was so impressed with what he had heard that he went straight home, emptied the contents of his *saki* bottles on the floor, and then proceeded to smash the bottles. This incident caused Mr. Hack to think that a temperance society might be successfully worked among the natives. The idea was soon practically carried out, and a society formed, conducted by Japanese, for the purpose of opposing the drinking customs of the day. There are at present eleven members. Mr. Hack has preached through a native interpreter successfully, 13 Japanese having professed the Christian religion and been baptized publicly. Negotiations are pending for the erection of a church at Hiroshima, capable of holding 1,000 persons.

— The Chinese army, by the most recent advices is composed of 670 companies of Mongolian Tartars, 106,000 Chinese cavalry, 500,000 native infantry and 820,000 irregular militia—making a total of over 1,500,000 fighting men. This immense army, with little organization and less discipline, is spread over the eighteen provinces constituting the Chinese Empire. It has to do police duty over nearly 400,000,000 of people in a state of chronic anarchy or of open insurrection. Little is known concerning the revenues of the State. According to an official report, published in 1844, they amount to £63,000,000, or over $300,000,000. Of this large sum, however, between the Court expenses at Pekin and the peculation of Mandarins and other subaltern officers, there remained but a small fraction at the disposal of the Army College, or what we should style the War Department.

— The Shah's visit to Europe has occasioned many alterations in the external appearance of the upper and middle classes in Persia. Shoes are worn, the baggy trousers are reduced, the chin is shaven—an innovation obnoxious to the orthodox Mahomedans—the cap is not so high, and the whole dress is a mixture of Armenian and European fashions. But chairs are not adopted; they are used only for European visitors, while the natives fold their legs on the cushion or footstool. In religious matters the old fanaticism is less frequently displayed, and the missionaries enjoy great liberty. The numerous Armenian Christians are conscious of the protection of the Russian Ambassador, and their influence is materially increased by many of the foreign residents marrying their daughters, as European wives often go to Europe, and are a burden rather than a comfort to their husbands, while the Armenian women are not inferior in looks to their English sisters. The old abuses in the Government still exist. The army is a real plague spot. Only day labourers and the poor are enrolled, the rich purchasing exemption by presents to the officers. Three marks a month are punctually paid to the men, but all allow-

ance for clothes is curtailed; so that the soldier in order to live is driven to plunder, in which he only too gladly indulges in the most brutal fashion. The tendency to dishonesty is an ineradicable element of the national character, and is only repressed in Teheran under the immediate eye of the Shah. There alone the lower classes breathe freely, for they do not suffer from the general tyranny of officials of all grades, and the soldiers dare not invade the houses and fields and take what they please without payment. The famine of 1872 has inflicted serious wounds on the country. The English arbitrators who traversed Seistan during the time of the greatest distress to settle the boundaries of Persia, passed days without seeing a child or hearing a song. They estimated the mortality at 1,500,000, more than a quarter of the population. The railway projected by Baron Reuter is at a standstill. It is hoped that an equivalent will be found for it, as the Shah is very anxious for improved communications, and recently ordered a survey for a horse railway from Teheran to Schah Abdul Azim, while he has summoned Post Office officials from Austria to organise a postal service.

Literary.

—It is decided that Dr. Hunter is to carry on the work of compiling the Imperial Gazeteer in England.

— The chief military authorities have at length adopted the Hunterian system of spelling some of the cantonment names.

— Oriental art will, among other things, be represented at the International Exhibition at Philadelphia next year, by a choice collection of jewellery designed by natives of Trichinopoly, and executed under the superintendence of Messrs. P. Orr and Sons, of Madras.

— The processes for preparing clays and materials for modelling are simpler and cheaper in India than in England, though the principles are the same both in theory and in the chemistry of the mixtures. One is astonished, however, to find that both the Hindoos and Mahomedans have acquired a good knowledge of the delicate chemistry of clays for modelling, and also for pottery and porcelain, with the colours employed in painting, glazing, and even in enamelling pottery and porcelain. These refinements in the arts were introduced from China about 300 years ago by an enlightened Raja of Amber, who founded the city of Joypore, in Rajpootana, and introduced numerous other improvements in science and education. The art of making pottery and of modelling in clay was known in India before the Christian era. The manufactures of porcelain and enamelled pottery are still kept up in a small way in Rajpootana, Hyderabad, in the Deccan, and in Sinde. There seem also to have been manufactories of enamelled tiles at Golconda, and remains of the art at Bangalore, Seerah, Arcot, and Vellore, for enamelled tiles, pipes, and hookah bottoms are still made in a buffcoloured pottery at these stations.

— A second work of fiction, by the author of *Pandurung Hari*, has been dug out of the submerged forest of circulating-library literature, after having been overwhelmed by the waters of oblivion for nearly half a century. The romance, so full of reality, which Dr. George Birdwood brought to light, and for which Sir Bartle Frere stood sponsor, has led to the resuscitation of *Tales of the Zenana*, published in 1827, and now newly introduced to a discriminating public by Lord Stanley of Alderley. The preface, written by Sir Bartle Frere, to the preceding volume, was in itself a pleasant bit of composition, imparting genuine knowledge, coloured, no doubt, by the accomplished baronet's somewhat optimist views on things Indian, yet, nevertheless, in itself a substantial piece of work. Under the circumstances, a less incomplete account of Mr. Hockley, who wrote these notable books, would have been acceptable. All that is supplied by the noble editor is a dry statement informing us that Mr. Hockley was born in 1792, that he went to Haileybury in 1812, and to Bombay in 1813; that in 1821 he was dismissed from his judgeship; that he was tried at Bombay in 1823, and acquitted; that Mr. Ayrton, father of the late Commissioner of Public Works, defended him, that the East India Company allowed Mr. Hockley £150 a year, and that in 1860 he died.

— Surely the introducer or herald of *Tales of the Zenana* might have informed us what charges were preferred against Mr. Hockley, and why, although acquitted, he was sent away with a paltry annuity. Bombay is not very remote nowadays, and some record must remain among the Government papers, if not on the files of the Court, of the transactions which brought Mr. Hockley under the inquisitive eye of the law. Lord Stanley of Alderley seems to "regret that Mr. Hockley did not serve under some office less vigilant than that of the East India Company;" and we regret that his lordship did not tell the public what the vigilant Company discovered, and alleged, but failed to prove against Mr. Hockley. We quite agree with the remark that the *Tales* are "equal to many in the *Arabian Nights*," and that Englishmen may profit by reading them; but we must still hold that when he complied with a request to write an introduction, he would not have committed any breach of propriety, nor, perhaps, have run any risk of being confounded with the fraternity of authors, had he regarded his task as a duty, and had he brought before us a picture of Hockley himself and his brief career, or at the least, a sufficient summary of the incident which cut short in its prime the official life of a remarkable man.

— The following is a translation of a curious old Kanarese song:

"He who leaves his wife alone (not thinking that she might yield to temptation) is a fool;

He who lends money to relations is a fool;

He who entrusts a person with his money-bag is a fool;

He who is an impudent fellow is a great fool, O master!

He who sells his own daughter to sustain himself is a fool;

He who lives in the house where his wife has been born is a fool;

He who uses bad language when poverty comes on is a fool;

He who has no fixed mind is a great fool, O master!

He who in his old age takes a wife is a fool;

He who plays with a serpent is a fool;

He who does not support the twenty-one families *(kula)* is a fool;

He who does not say 'O father Vithala!' (*i. e.* Krishna) is a fool;

He who milks the mother the calf of which has died is a fool, O master!

He who lends money without a pledge is a fool;

He who is brooding over eighty subjects is a fool;

He who uses bad language against his own mother is a great fool;

He who betrays the house in which he has eaten is a fool;

He who utters calumnies is a fool;

He who sees the glorious Purandara Vithala with the white-lotus eyes and does not worship him is a great fool, O master!"

Ecclesiastical.

— The proposed new Methodist Church in Lucknow is to be neat, plain, and substantial, seating about two hundred and fifty persons, and will supply a great need long left by the English congregration worshiping at the American Mission Chapel in Ghasiyari Mandi. The foundations of the new church will probably be laid during the next rains and the enterprise will then be vigorously prosecuted to its completion.

— The returns of the South India Mission of the Church Missionary Society for the year ending Sept. 30, 1874, show the number of European Missionaries to be 30 and Native clergymen 55. The districts embraced are: Madras and Ootacamund, Tinnevelly, Travancore and Cochin, Krishna and Godavery. The congregations are 650; communicants, 12,540; baptized, 46,620; able to read 16,821; contributions, Rs. 15,292; scholars 18,172. The increase in the number of communicants was in 1873, 1,091; in 1874, 899.

— The number of members in connection with the various Methodist churches of this country, organized by the Rev. William Taylor within the past two or three years outside the bounds of the North India Methodist Conference, are given below. In the first column are placed the number of members "in full connection," in the second those not yet admitted to all privileges but still kept for a season on trial to see if they are properly qualified.

— The Rev. J. Long writes thus about an "Enlightened Monk" at Moscow. "I was invited to attend a meeting in Moscow of the Society for Spiritual Enlightenment. It was held in a monastery; the upper rooms were occupied by a good library, the lower ones by a book-shop, in which the Scriptures and religious books were for sale. I was introduced to the meeting, and I recognized in the President a priest whom I had met nine years before at the Princess Lieven's. A paper of mine, on 'Missions in India,' was translated for the meeting into Russ, by Monsieur Sukhyatin, one of the most distinguished laymen of the Russian Church. After my lecture was finished, I invited the members to ask questions, and I was particularly struck with the intelligence and acuteness of a monk, who put a number of queries relating to the Brahmas and sects of India, and the work of the English Church there. He was head of a seminary in the Donskvi Monastery, and invited me to visit him. I spent several very profitable and interesting evenings with him. He had nothing of the sourness or stiffness of the monk about him. On my going in he said, 'I present you a religious magazine, which I publish in Russian. You will find in it a translation of your Bishop Milman of Calcutta's lecture—'Eclecticism and Brahmoism; or, an Evening at Calcutta'—which I have translated from 'Good Words,' November, 1870, a periodical I regularly read.

— The Rev. A. W. Murray has written an interesting description of the first missionary voyage made by the *Eilengowan*, which steamed away on the 23rd September towards the coast of the mainland of New Guinea. Close to the island of Ugar (Stephen's Island) they passed a wrecked vessel. The crew, ignorant of the improvement which had been recently effected in the character of the natives, had abandoned the ship. "There is not," says Mr. Murray, "at the present date a single island, except, *possibly*, Prince of Wales,' where a shipwrecked crew would be in any danger." On nearing Boera, in Redscar Bay, a canoe with a large crew of natives, and one of the teachers, Rau, came out to welcome them. On Sunday the 27th September a public religious service was held under the shade of a cocoa-nut grove at Anuapart. Mr. Murray found that many of the natives are kind to the teachers, sharing with them what they get in fishing and hunting, and that the desire for teachers continues to spread. On the following day he remonstrated with the chiefs on some violations of the pledge that nothing should be stolen from the teachers; one of the chiefs expressed regret for these occurrences, and in a few hours some of the stolen articles were restored. At Darnley Island he found that the mission had acquired a firm friend in Jack (Amani), the principal man, and liberal presents were brought of sweet potatoes, yams, sugar-cane, and bananas. Speaking of Machik (York Island), Mr. Murray says—"When I visited the island in March last, the Sabbath was only partially observed; now, none of the people go about their ordinary

occupations on that day. All attend the services and school which the teacher holds; and during the week a daily school is held for the children. The bulk of the people live close to the teacher's house, and assemble morning and evening at his family worship. In one case the head of the family conducts family worship in his own house. The people show something of a spirit of inquiry on religious subjects, but nothing indicative of real spiritual concern yet appears."

— We find from the paper on Islam by the Rev. T P. Hughes in the *Christian Intelligencer* that the regular form of Mahomedan prayer begins with the *Niyyat* and is performed as follows:—The Niyyat, said standing with the hands on either side. "I purpose to offer up unto God, with a sincere heart this morning (or as the case may be) with my face—Qibla-wards two (or as the case may be) rikat prayers Farz (Sunnat or Nafl.)" The Takbir-i-Tahrimah, said with the thumbs touching the lobules of the ears—

"God is great!"

The Qiam or standing position. The right hand placed upon the left, below the navel and the eyes looking to the ground in self-abasement. During which the Subhan is said as follows:—

"Holiness to Thee, O God!"
"And praise be to Thee!"
"Great is Thy greatness!"
"*There is no God but Thee!*"

The Tauz is then said as follows:—

"I seek refuge from God from cursed Satan."

After which the Tasmiah is repeated. "In the name of God, the compassionate, the merciful." Then follows the Fatihah, *viz.*, the first chapter of the Quran.

"Praised be God, Lord of all the worlds!"
"The compassionate, the merciful!"
"King on the day of reckoning!"
"Thee only do we worship, and to Thee do we cry for help."
"Guide Thou us in the straight path,"
"The path of those to whom Thou hast been gracious;"
"With whom Thou art not angry."
"And who go not astray. Amen."

After this the worshipper can repeat as many chapters of the Quran as he may wish; he should, at least, recite one long or two short verses. The following chapter is usually recited, namely, the Surat-i-Ikhlas or the CXII chapter:—

"Say: He is God alone:"
"God the Eternal!"
"He begetteth not,"
"And is not begotten;"
"And there is none like unto Him."

— The Takbri-i-Ruku' said whilst making an inclination of the head and body and placing the hands upon the knees, separating the fingers a little.

"God is great!"

The Tasbih-i-Ruku' said in the same posture.

"I extol the perfection of my God!"
"I extol the perfection of my God!"
"I extol the perfection of my God!"

The Qiam-i-Sami Ullah, said with the body erect but unlike the former Qiam, the hands being placed on either side. The Imam says aloud.

"God hears him who praises Him."

The people then respond in a low voice

"O Lord Thou art praised."

Takbir-i-Sijdah, said as the worshipper drops on his knees.

"God is great!"

Tasbih-i-Sijdah, recited as the worshipper puts first his nose and then his forehead to the ground.

"I extol the perfection of my God the most High!"
"I extol the perfection of my God the most High!"
"I extol the perfection of my God the most High!"

Then raising his head and body and sinking backward upon his heels and placing his hands upon his thighs he says the Takbir-i-Jalsa.

"God is great!"

Then, whilst prostrating as before, he says the Takbir-i-Sijdah.

"God is great!"

And then during the prostration the Tasbih-i-Sijdah as before.

I extol the perfection of my God the most High!
I extol the perfection of my God the most High!
I extol the perfection of my God the most High!

Then, if at the close of one rikat, he repeats the Takbir standing when it is called Takbir-i-Qiam, but at the end of two rikats, and at the close of the prayer he repeats it sitting, when it is called Takbir-i-Qa'ud.

"God is great!"

Here ends one rikat or form of prayer. The next rikat begins with the Fatihah or 1st chapter of the Quran. At the close of every two rikats he recites the Attahiyat, which is said whilst kneeling upon the ground. His left foot bent under him he sits upon it, and places his hands upon his knees and says,

"Praises are to God, and prayers, and good works."
"Peace be on thee, O Prophet, with the mercy of God and His blessing."

Then raising the first finger of the right hand he recites the Tashhaud. "I testify that there is no Deity but God, and I testify that Mahomed is the Messenger of God." The Darud is said whilst in the same posture. "O God have mercy on Mahomed and on his descendants, as Thou didst have mercy on Abraham and on his descendants. Thou art to be praised, and Thou art great. O God bless Mahomed and his descendants as Thou didst bless Abraham and his descendants." Then the Du'a—"O God, our Lord, give unto us the blessings of this life and also the blessings of life everlasting. Save us from the torments of fire." He then closes with the salam. Turning the head round to the right, he says, "The peace and mercy of God be with you." Turning the head round to the left, he says—"The peace and mercy of God be with you." At the close of the whole set of prayers, that is of Farz, Sunnat, Nafal, or Witar, the worshipper raises his hands and offers up a "*Munajat*" or supplication. This usually consists of prayers selected from the Quran or Hadis. They ought to be said in Arabic, although they are frequently offered up in the vernacular.

TELEGRAMS.

THURSDAY, FEBRUARY 11TH.

At the elections for the Departments of Seine-et-Oise and Cotes du Nord, the Republican candidates have succeeded in obtaining majorities over the Bonapartists.

Advances of the Royal troops against Estella have been checked, and operations suspended.

FRIDAY, 12TH.

The Committee of Ways and Means in Congress have agreed upon the draft tariff for taxing cotton and woollen manufactures, iron, steel and sugar, but leaving tea and coffee untaxed.

Prince Leopold is progressing, and has sufficiently recovered to sit up for short time. Daily bulletins to be discontinued.

The Troopship *Jumna* is detained at Gibraltar owing to defect in screw.

Don Alphonso has entered Pampeluna.

Sir Andrew Clarke has been appointed Director of Public Works in India under the act of last Session.

SATURDAY, 13th.

It is announced that Khiva has paid the remaining 18,000 roubles of war indemnity imposed by Russia.

Lord Elcho has introduced into Parliament a bill for creating a county municipality of London.

The Troopship *Crocodile* has left Portsmouth for Bombay.

The Assembly by 322 votes against 310 have decreed that same electors shall choose both senators and deputies. This is considered to jeopardize the constitutional laws.

Don Alfonso has issued an order for the levy of 70,000 troops.

MONDAY, 15TH.

The Government to-day, on behalf of Marshal MacMahon, communicated to the Assembly their condemnation of yesterday's vote. Amid a scene of great excitement the Assembly voted the radical clauses, but ultimately rejected the whole Senate Bill by 357 votes against 345. The motion for dissolution was put forward and rejected by 407 votes against 266.

The House of Commons has refused to suspend the issue of the writ for the Stroud election.

The British Expedition fitted out to observe the forthcoming eclipse of the sun in April sailed last Thursday in the *Surat* for Galle and Singapore.

MacMahon condemned the vote of the Assembly on Thursday, on account of its depriving the constitutional laws of their conservative character. The conflicting votes were owing to the abstention of the Legitimists in the earlier stages of the debate. All the deputies voted at the final issues.

TUESDAY, 16TH.

A *Times'* special telegram announces that Major the Hon'ble Walter Harborel, of the 7th Hussars, has been cashiered for cheating at cards.

The Ministry have tendered their resignation. MacMahon has consulted de Broglie, but the formation of a ministry is impossible until after final vote on the constitutional laws.

Mr. Gorst, a conservative, has been elected for Chatham.

WEDNESDAY, 17TH.

The Lockout of 25,000 weavers is announced from Dewsbury.

England has recognized Don Alfonso who is about to return to Madrid.

Sir Arthur Kemball has been appointed British Commissioner for the settlement of the Turco-Persian frontier.

The Assembly has voted revision of all Bonapartists' pensions. Fresh projects for creation of senate are being framed.

EUROPE.

THE NATIVE ARMY OF BENGAL.

(Spectator.)

We do not quite see the object of parading long columns of statistics as to the strength of the Armies still maintained by the Native Princes of India. It is quite true that the 120 or so great Mussulman and Hindoo nobles—whom we call Princes, because they retain, as the Duke of Argyll once did, territorial jurisdiction—do maintain among them 350,000 soldiers, though they leave to us the work of external defence both by sea and land; that they have endless cannon of sorts; that they have very excellent cavalry, and that they could, if in revolt, multiply their armies by three. And it is also true that the fighting races of India number fifty millions; that they are all fairly brave, and some as brave as Europeans; that they are accustomed to arms; and that all, if thoroughly united and earnest in the cause, could expel or slaughter the British rulers in a single campaign. But when was not this as true as it is now? We conquered India in spite of all these things, and we *must* retain it in spite of all these things, or consent quietly to depart. To talk as if it were possible to provide against a universal uprising of the Princes and warrior races of India, determined to thrust us into the sea, is to waste breath, to squander brain, to paralyse not to develop energy. We could do no more against such an uprising than we could do against the Atlantic if it rose 100 feet in a night, and it is folly even to think of such precaution. No conscription would give us the men, no taxation the treasure, and no possible cause a moral justification for engaging in such a slaughter of millions. What we can do and must do is, to keep up a force sufficient to meet any usual combination of Indian enemies, any army such as any leader not accepted as Avatar or Imam could, in the best judgment of statesmen, bring to bear against us. According to historians, experts in warfare, and experienced Indians, the force we have is amply sufficient if thoroughly organised for this work, and the single point to be ascertained is whether it possesses the needful organisation.

As regards the White Army in India, we believe it does. We spend on that army somewhat too much, mainly to gratify the Horse Guards. We have composed it too exclusively of general service regiments, mainly to soothe a regrettable, though natural panic, which arose suddenly in high places. We have not provided sufficiently for its hygiene, mainly because we have not learned what the Natives learned long ago,—how to house soldiers in the tropics under the healthiest conditions. But nevertheless the White Army is a good army, sufficiently strong, well commanded, and only too eager to be led against any rebel who may need putting down, or any invader who may require driving out. Whether the auxiliary army of Native soldiers is equally good—as partly from cli-

matic considerations, and partly from the danger which any disorder in our own ranks must always involve, it ought to be—is equally well organised, is the point to be decided, and we greatly fear, decided in the negative. There is much exaggeration, no doubt, in some of the statements on the subject, some trace of panic, and a faint desire, for a reason which we feel sure could be justified, to make the worst of things, but still a large body of evidence points to these two facts. The Native soldier, particularly in the Bengal Army, is insufficiently paid. Prices have risen on him, and wages around him, till the Sepoy, from being the best-paid artisan in India, is paid about 30 per cent. less than his non-military brother. Being a mercenary, or as that word has too invidious a meaning, being a soldier who serves for pay, he is naturally discontented, looks round for better service, is disposed to be querulous about privileges, and does not heartily care to see the system work well. That is not a good condition of mind in any army, and least of all in that of Bengal, where the soldier is to all intents and purposes a free man, who enlists because he chooses, stays at his own discretion, and in peace time goes home with as little trouble as a domestic servant. He can, in fact, strike, though he cannot combine to strike; and if his wages are below current rates, equally valuable men may not be forthcoming to fill his place. Moreover, this man thus discontented is not very efficiently officered. His White officers are seven per thousand, too few to do the actual daily work, as Prussian officers, for example, do it, and too many to allow Native officers to rise to responsible positions. Moreover, these officers are appointed on a system which has by nearly universal consent broken down,—that is, they are selected from a huge body of officers employed on most miscellaneous duties, from governing provinces to weighing rice in a famine, and called the "Bengal Staff Corps." That corps, originally founded to utilise the unemployed officers of the Army which mutinied, is so constructed that young men dislike to enter it, that part of it is never employed, and that at least half the remainder are unsuited, either by too much rank, or fixed habits, or discontent, for the positions they fill. The whole corps is enormously costly; its cost, as its 1,100 members grow older, becomes every year heavier, and it does not provide any youngsters to profit by its experience. The Native Army of Bengal consists in fact, to speak broadly, of 100,000 under-paid men, governed by 600 officers, who are over-paid for being through no fault of their own out of place.

Clearly this state of affairs, if accurately described—and we can hardly doubt the substantial accuracy of the accounts—must be remedied, but how? Certainly not by the adoption of any cut-and-dry scheme improvised by a Member of Parliament or an English politician, or a military or other journalist. We maintain—and that is one reason why we have avoided details—that the remedy can be found only in trusting, the Viceroy and his Council with power to carry through a complete reform, with as little control from Parliament or "opinion," as it is possible to secure. Nobody except the Head of the Indian Government has the knowledge, or the authority, or the means to carry out the plan, which, to succeed at all, must first of all secure his hearty assent. The Commander-in-Chief would be too professional, the Military Member of Council has not the authority, the "Army" itself is too inorganic,—nobody but the Viceroy has all the needful requisites, and the assistance also of his very few possible competitors. He alone is in a position to know what the immediate dangers are, what the Army will stand, and what the Treasury can endure, and he alone has a complete, undivided, and personal responsibility for all three. Even if the Viceroy were only a politician, the task would have to devolve on him, for real power in India can belong to no one else; but as it happens, Lord Northbrook is well fitted for the emergency. If he knows anything thoroughly, it is the organisation of an army; if he cares about anything heartily, it is to carry out reforms in as thrifty a way as possible; if he is anxious about anything, it is to illustrate his administration by founding something which shall stand the test of time. It is the very opportunity for the very man, and he ought, as we conceive, to be allowed to take advantage of it. At all events, if he is not, the work will never get itself done. It is as impossible for Lord Salisbury to do it, as for one painter to tell another in letters how to produce a magnificent portrait of a man whom the first painter has only heard described; it is as impossible for the Cabinet to do it, as for a Cabinet to govern a man-of-war; it is as impossible for Parliament to do it, as for a mass-meeting to carve a statue out of marble. It must be done by a single man, on the spot, with many counsellors and no masters, and able to pursue a plan of which he himself is proud; and there is only one man in that position in India, and that is the Viceroy. How he is to do it, how he is to get rid of that Staff Corps without crushing the Treasury, or cleave it in two, and remodel the lower half into a sufficient frame-work for the Army, we honestly admit ourselves unable to conceive. It seems to us that under Colonel Sykes's proviso, which is law, reform will cost as much as the abolition of Purchase, and still leave the Native Army imperfectly officered but there is no reason why we should see a practicable plan. The broad facts are that a plan must be found, that no one but the Viceroy can find one, and that when found no one can make it useful but the same man. The remedy for the disease of the Bengal Army is to order it to be cured, and make the Viceroy the doctor. The patient may die even then, but he certainly will die if his cure is left to quacks.

CONTINENTAL ARMAMENTS.

(Pall Mall Gazette.)

The German Landsturm Bill has passed its second reading, and in a month, we are told, it will become law. In a month, therefore, the present rulers of Germany will have committed her to an increase of armament which, when effected, will raise the disposable force of the Empire to 2,800,000 men. The nature and contingencies of this new enrolment are, as the *Times* truly observes, no mere "fictions on paper." The Landsturm will be "Germany in arms, as distinguished from the standing army of Germany." The so-called reserve, moreover, are far from enjoying the special immunities and exemptions which England associates with a reserve or a local force; on the contrary, it seems even more at the beck and call of absolute power than the line. "The orders given in the contemplated emergency are not to be published; so that the German malcontents or partisans may know as little as the foreigners and the foe who are called to arms, how many, and where. The Government may call out the reserve of one State and not of the next; the youth of a province immediately threatened with invasion; the older men of one not so threatened; in a word, whatever it pleases, without being bound by any rules of slavish uniformity. The whole reserve is immediately to have its arms, if not the newest, those that were new the other day." Such is the description which the *Times* gives of "the enormous, the preposterous armament" to which Germany now stands committed. The country is to be converted into one vast military machine, terrible alike in its aggregate dimensions and in the perfection of its minutest details, in the overwhelming force which it is able to exercise, and in the complete subordination of that force to the direction of a single hand and the impulse of a single mind. And what Germany is doing that also France and Russia have done and are doing, and the smaller Powers are following in their wake. "France now commands under all heads about a million and three-quarters of men; Russia more than three millions and a third; Austria, Italy, Denmark, Holland, and Switzerland are arming as fast as they can."

Such is the spectacle which Europe offers us at the beginning of this year of grace 1875, and the prospect is one which we are not surprised to find, eliciting a note of warning even from an unexpected quarter. The pretence of a defensive necessity as a justification for armaments on so prodigious a scale, and, as it would seem, for immediate employment, is one which, viewing the general condition of the nations which surround Germany, we cannot possibly accept. It is impossible, indeed, to believe that there is not a strain of irony in the plea advanced by the *Times* in the earlier part of its article, to the effect that though "Germans do not generally like fighting, they like it better than being killed in their beds, or made beasts of burden, or carried into captivity." The European burglar who is able and ready to break into the German house and stab the timid inmates in their sleep is a purely imaginary being; the conqueror who is to carry the German tribes into captivity and to make them hewers of wood and drawers of water to their captors has yet to be born. No; the real meaning of the "preposterous armament" is less recondite, and the *Times* is not long in applying it. It is that since Germany has "tested the *delights* of riches honour, and dominion," she has become "a different being, with a new and nobler consciousness, and not content or satisfied on the same easy terms as before.' And this truth may be expressed in even plainer language. A man whose head has been turned by, success has acquired a "new" if not a "nobler consciousness," and this is the present condition of those who guide the destinies of Germany. They are mad with the madness with which the conqueror has so many times in history been stricken. The fury of domination is upon them, and they can no more rest content with their present gains than could those nations who have trodden the same path before them. Europe was bidden to rejoice that power had departed from those irascible, domineering French, with their military swagger and offensiveness, so disturbing to homely peaceful Germans and others; what has the conquest of France given to Europe instead? And how much better is the outlook now than in the *time* of Napoleon III. and his military adventurers? Why should Germany "now shrink from an appeal to arms which cannot but give it more than ever"? Why indeed? Why in fact, should it not provoke such an appeal? But if this question can be thus plausibly asked by Englishmen, it surely becomes time for them to look to their own preparations, and ask themselves in what condition the "appeal to arms" will find them? And even the *Times*, the sworn foe of alarmism, cannot but do this in face of the threatening picture which it has just drawn. Military rivalry with the Continental Powers is out of the question: "The navy is our one arm in the scale of Continental war. Here we are beyond rivalry, and have only to remember that we have little else but ships, and must make the best of our single defence. . . . We are, or should be, one great port for ironclads, sufficiently strong and well equipped to maintain the mastery of the sea, not only in our narrow straits, but wherever the British flag marks the path of commerce, emigration, or discovery. We cannot allow jealous rivals or scarcely concealed foes to dictate to us the element or the exact form and manner in which we shall play our part in the great work of the world. The navy is our strong point, and navies, it must be remembered, have often given the command of the land as well as of the sea." Let us take care that this strong *point* of ours is kept up to its proper strength, so that 'the great war, when it comes—*if* it ever comes—may not find us unprepared," but "secure and well guarded at all points, and even able to do some trifling service to our friends." Excellent advice in truth, but—*O si sic omnia!* We can only trust that in future the *Times* will stick to so admirable a text. At no distant date we shall have an opportunity of testing its consistency. We shall have soon to take stock of our naval strength, and to do so in the light of the fact that the very Power which is leading the "wild sword-dance of nations" on land, is building ironclads also, and aiming at a place among the first naval Powers. When that occasion arises we trust that those who now agree with the *Times* will not find themselves rebuked by the *Times* of a month or six weeks hence; that the apprehensions which now are admitted to be just and reasonable will not then be ridiculed as groundless "panic;" that, in a word, that large section of easy-going, comfortable Englishmen whom the *Times* influences may be induced to look a now admitted danger in the face, and not stint their preparations to meet it.

SOLITARY GAMES.

(Spectator.)

Why is a man interested in a game, say, of cards, in which he has no antagonist and no spectators? That is a very curious intellectual puzzle, more especially as it is doubtful whether the fancy for such games depends on any particular quality of mind, while it is certain that it is not quite a universal taste. The writer is acquainted with one man, a politician of the foremost rank, who can wile away half an hour most pleasantly to himself by playing "patience" in the popular form of that game—that is, by trying to place the suits in a shuffled pack of cards in their sequences—and who is quite gleeful if, after three efforts, he can put them down all right. The statesman has a decided sense of victory when he wins, and something of that faint glow which follows the performance of a self-sacrificing, but highly virtuous action. The writer also knows a man of science who can play away at a difficult variety of the same game

with a kind of dry enthusiasm of the most comic kind, who always wants to win, but who gets so excited that he is sure, if half beaten, to ask permission, say of a spectator, or of his own conscience, or of a favourite cat, to "cadge,"—that is, to beg—that is, to break his own rules rather than be beaten by the unseen adversary. And that scientific man, though he cannot bring himself to endure defeat unalleviated by "one more" chance, would probably consider himself a bad form of cheat, would for a moment lose his self-respect, if he condescended to "cadge" more than once. He knows a man also who can play cup-and-ball in a room unobserved with hearty interest, who can keep every rule without compulsion, and who has a distinct interest, which is not scientific at all, in the law which he supposes to govern success, namely, the perfection attained in the weighing of the ball and in the holding of the string. The string ought to be kept straight by the weight of the ball, and ought to be so held that it will of itself, when spun, keep away from the bottom of the toy, which, nevertheless, must be held upright. The popular idea of catching the ball on the turn is, he suspects, a delusion, as anybody can test who tries to catch the ball on the point, not on the cup, without spinning it at all. Again, the writer knows a shrewd old lady who can play that most annoying of games, Solitaire—the gradual removal of little balls by rule from a perforated board till only one remains, and that in the centre—with the most excited interest and enjoyment, generally, as he observes, increased by frequent failure. That old lady, genial always, becomes under that form of torture philanthropic and radiant. She loves mankind best when the little balls positively defy her. And finally, he asserts the following fact. He has seen an old solicitor in a county town, a player of the third force, but as a man of the third force a very good player, play chess with himself for hours, and as far as careful observation could detect, play fairly. A friend who knows chess says this is impossible, as a chess-player would know his own plan, and would never defeat it; but the fact of the play is certain, and we believe that it was fair, the player playing slowly, and conditioning with himself at each move that he would use his whole strength, including his knowledge of his adversary's plan, for that single move on either side. This condition limits the game a good deal, but the mental decision is possible, as any chess-player knows who has ever suffered that intolerable annoyance, a habit of dreaming chess after an evening's play; and to those who can play it, single-handed chess is one of the most fascinating of solitary games. The taste for some of these games, or their hundred variations, is universal, but to three men, say, in every four, they are distasteful; yet still it must be widely diffused, for books have been written and sold upon the laws of such games. One was issued in English only this week, Mr. Pole says he has heard of two in French, and he himself, in this month's *Macmillan*, poses as the "Cavendish" of Patience, describing varieties of that game, and making rules of his own intended to bring them all within the limits of fair-play. Fate, whom he takes for the unseen adversary, is not to win more than two games out of four, if the human being plays properly, an arrangement which, besides being unphilosophic, for the *Adrishta* cannot be controlled, is perhaps a little hard, as Fate, for aught Mr. Pole knows, may be an unequalled player, the Deschapelles of Patience, and entitled to win. We always thought the Italian who, according to Philidor, beat the Devil at chess, for all his wit and ingenuity, was a "mean cuss," fit only to play euchre on a Mississippi steamer, and assassinate his adversary if he lost. He had covenanted for wealth and long life, agreeing in return to surrender his soul in the usual way, but had made a stipulation that before the Devil could claim his bargain he must beat him in three games of chess. The Devil won two, of course, but as the third drew to a close the Italian asked his adversary if he were bound by the rules of the game, and being informed that he was, quietly remarked that the first rule of chess was unmolested time for consideration, and that he should be happy to play the next move ten years hence. A true player of Patience, or Solitaire, or any other exasperating game, would be ashamed of such an excuse as that.

We have wandered, though not from our purpose, which is to inquire why men otherwise sane, and even able, play Patience, or Cup-and-ball, or Solitary Chess, and find in the seemingly useless occupation an amusement. It is not merely to wile away the time, for the practice is usually a practice of the busy; nor is it a development of the taste for guessing by rule, for that is very nearly universal, while the capacity for playing Patience certainly is not. It is not a mere nervous relief, like whistling, or whittling, or twiddling the thumbs, or twisting buttons, or counting objects as you walk, for that impulse is always on you, and is not limited to moments of the day. It is not a form of that desire to contemplate apparently accidental changes which induces many men to watch the sea with a sense of enjoyment that never ends, or to study the strange movements of forests, or corn, or grass under wind, with an interest apart from delight in the picturesque. It is, as we believe, a development in a most bizarre way of the desire for self-conquest which so governs a section of mankind. Mr. Pole argues that the enjoyment derived from Patience is identical with the pleasure derived from all other games of cards, and that the player is so conscious of his adversary, Fate, as to be amused with his never-ending eccentricities. He says, "It may be asked, since the essence of gaming is gain and loss, some players winning what others part with, how a *game* can exist when there is only one person to play, having no adversary? At Billiards, a player may sometimes match his right hand against his left, to compare the skill of the two, but it is difficult to conceive the applicability of such a principle to games of cards. The explanation is, that a card game for one person is, so to speak, a match played with Fate, the adversary being, in reality, the element of chance which enters into the game by the shuffling of the cards." And again, "The player is thus, really, playing against Fate, and the interest of the game consists in the observation of the adversary's tactics, which are often very eccentric and amusing. This sort of interest is by no means unworthy of an intellectual person; we have seen one of the most active-minded men we know, a professional man who has eminently distinguished himself in one of the scientific walks of life, amuse himself at these games by the hour together." This is subtle, and when the player is a man interested in mathematics or the laws which govern accidental combinations, is possibly true; but as regards the mass of those who play Patience is no explanation at all. They are not conscious of any adversary whatever; if they were, they would delight most in games in which chance was the only element, which is notoriously not the case. We do not know a single solitary game in which skill will not make an appreciable difference. Very few could play roulette by themselves with no stakes, and those few would be men interested in trying whether they could, by incessant observation, guess accurately or not. We suggest that the explanation is exactly the reverse, and that the player is delighting not in the eccentricities of his unseen opponent, but in his own perseverance, and in a less degree, his skill. There is in some men a silent delight in perseverance, in, as it were, conquering their own reluctance to go on, which amounts to a distinct note of character, and a very admirable one. A child who enjoys solitary shooting at a mark may be an ordinary child, because he is pleased with success, and hopes by and by to gratify vanity; but a child who, all by himself, can determine to win a solitary and difficult game, say, "old patience," without Mr. Pole's most objectionable improvements—which are calculated to make every player's character pulpy—or to make a cork dance steadily above a quill blow-pipe, or to make solitaire come right, will rarely fail to get on in life, or to develop sufficient of self-sustaining will. The solitary game is not a mode of indulging self, but of beating down self, of cultivating that mastery of instinctive impatience which is the first condition of habitual serenity. The world, our Western world at least, has come to undervalue serenity; but when it rests again, and learns to pay more attention to the science of living, it will seek again for this bliss-giving quality; and we know of no cultivator for it better than the habit of strong self-control which comes from the games Mr. Pole has discussed, and which to those who cannot enjoy them seem almost irritatingly silly. The man who can play Patience may be a fool, but he will rarely or never be found a feeble one.

THE LEADERSHIP OF THE LIBERAL PARTY.

(Pall Mall Gazette.)

As the time approaches when it will be necessary for the Liberal party to choose their leader, the multitude of counsellors, in whose numbers wisdom is said to dwell, is increasing around them. The advice given is, however, of a conflicting nature, and some of it seems to us uninformed by a just appreciation of the political position. We are not, indeed, without a suspicion that this is one of these numerous cases in which the persons most nearly concerned understand their own business best; and that Liberals in and out of the House of Commons are likely to take a more accurate view of the situation than many of their monitors in the Liberal press. We are to a certain extent confirmed in this view by what we think the mistaken tone of much of the criticism upon Mr. Gladstone's retirement. Our own opinion of that step was, and is, that, Mr. Gladstone being what he is, his retirement can scarcely be regarded as a voluntary act. In saying this, we do not mean to imply that Mr. Gladstone was under any external compulsion to retire, or that the position in which he finds himself is one which all statesmen would have considered as a justification for the course he has pursued. On the contrary, there are some statesmen upon whom the situation would have produced an exactly contrary effect. A statesman of less "earnestness" but of more patience and tenacity than Mr. Gladstone might have seen in the broken fortunes of his party only an additional claim upon his services, and would have cheerfully undertaken the troublesome and thankless duty of rallying and reorganizing the forces which he has led. But Mr. Gladstone, as even his warmest admirers have admitted, is constitutionally unfitted even for attempting such a task, and it is more than doubtful whether if he did attempt it he would be successful. He has none of the qualities necessary for playing an uphill game, and it is his impatient consciousness of the fact which has dictated his retirement. The step, we repeat, is, in this sense, a necessity. He and the situation being what they are, it is the necessary result of their interaction.

These considerations, as it seems to us, operate to an extent not sufficiently noticed to restrict the choice of his successor. The question who is to lead the party must not be discussed, as it too frequently is, without constant reference to the state of the party which has to be led; and a glance at its condition will show that the causes which compelled the late leader's retirement conspire to exclude various possible candidates for the vacant post. To select a leader to take the head of a united party is a task quite different from the selection of a leader under whom the two sections of a divided body may agree to serve. Qualities which are the highest recommendation of a candidate in the former case may constitute an absolute objection in the latter. The more prominent a politician is, the more likely he is to be identified with one or the other of the two conflicting sections, and thus to be an object of suspicion to its rival. Mediocrity, in fact, becomes a virtue in such a case as the present, and the less enthusiasm an aspirant excites in any one fragment of the party, the more probable it is that he will be accepted by the whole. If we apply this test to the actual situation it will be found to exclude one at least of the candidates who have been generally mentioned for the vacant post, and another whose claims, though less frequently brought forward, it is not safe altogether to overlook. Whatever other capacities Mr. Forster possesses for the leadership, he fails to fulfil what we hold to be the essential condition of fitness. He is identified with the Radical section of the party; and under him its other sections, the Whig and the Moderate Liberal element, on the Opposition side of the House, could not be brought into permanent cohesion with the more advanced wing. The converse, we believe, would be the case were the choice to fall upon Sir William Harcourt. His recent speech leaves at least no doubt as to his future political action, and it is clear enough that it will be in decided opposition to most, if not all, of the projects which find a place in the Radical programme.

The removal of these two candidates (for we may dismiss the suggestion of Mr. Goschen as a mere *mauvaise plaisanterie*), practically leaves the field open for Lord Hartington; and, in the absence of competitors, it is not worth while to enter upon the somewhat forced encomia which have been pronounced in some quarters on his political capacity. The advantage which circumstances give him is so great as to supersede the necessity of considering his personal claims. It is idle to discuss the proficiency of the "head boy" when he is the only one in

the class. Granting that he possesses all those qualities of "common-sense," "discretion," "aptitude for business," and the rest of that list of cautious compliments which together constitute the analogue of the epithet "amiable" as applied to a plain young lady, it will still remain that if he displayed all these gifts in an infinitely less degree he would still possess that prime qualification for leadership of being a person whom the led will consent to follow, and of being, moreover, the only such person whom it seems at present possible to find. And besides the probability that Liberals and Radicals in the mass may agree to follow a leader who is neither one nor the other very decidedly, there is another circumstance in Lord Hartington's favour in the fact that he will unite individual rivals under him as well as conflicting parties. His position as next in succession to a peerage eminently adapts him for a stopgap under whose temporary rule opposing ambitions may fight it out. Thus while both sections of the Opposition are likely to concur in the selection of a colourless politician as their leader, rival aspirants for the succession may well consent to defer the settlement of their claims until the removal of Lord Hartington to the Upper House. Each party will think that before that time arrives it will have convinced the country that it is the true exponent of the national opinion, while each competitor for the leadership may hope before that time to have proved his superiority to his opponents. It would be affectation to deny that Lord Hartington falls very far short of the standard of English political leadership; but it is useless to dwell upon the defects of the choice when it seems the only choice possible. The claims both of men and parties are as evenly balanced as in France, and the "Hartingtonian Septennate" appears the only solution.

LITERARY GOSSIP.

(*Athenæum.*)

We understand that the new poem by Mr. Robert Browning, of which we made mention twelve months ago, is now in the hands of his publishers (Smith Elder & Co.), and will soon be published. The title is 'Aristophanes' Apology,' including a transcript from Euripides, being 'The Last Adventure of Balaustion.'

Mr. Charles G. Leland has in the press a work entitled 'Fu-Sang, or the Discovery of America by Chinese Buddhist Priests in the Fifth Century.' It will be published in London and New York simultaneously.

The *Guardian* has thought fit to contradict our statement that Mr. Gladstone is the author of the article on Bishop Patteson, which appeared in the *Quarterly Review* last October. We need hardly say that the *Guardian* is mistaken, and that our paragraph was quite correct. So great, we may take this opportunity of mentioning, has been the demand for the present number of the *Review*, that the first edition was disposed of within three hours of its publication last Saturday, and that the second edition was exhausted by Wednesday.

The author of 'Poems by E. S. H.' and 'Nathan the Wise,' a matrical translation of Lessing's drama, two volumes that just appeared, is the Countess of Harrington.

Mr. Hyde Clarke has in the press a volume treating of Prehistoric Comparative Philology, the common origin of culture in the old world and America, and the relations of the Accad of Babylonia to the languages of Inde-China and America.

Mr. Hayward, it is generally said, is the author of the article on the Greville Memoirs in the current number of the *Quarterly Review*.

Sixteen Reports and Papers are included in the Monthly List of Messrs. Hansard for December last, of which the most important are, the Report on the Health of the Royal Navy for 1873, and the Return of Local Taxation for the year 1872-3. The Papers by Command are thirteen in number, comprising the Fifth Report of the Rivers' Pollution Commissioners; the Reports of the Inspectors of Mines for the year 1873; the Eighth Report of the Standard Weights and Measures Department of the Board of Trade; and four thick volumes of Reports on the Vienna Exhibition of 1873, with a volume of maps and plans. A List is subjoined of ninety-two Commercial Reports from H. B.M. Consuls, published during the year 1874; and of three volumes of Reports from H.B.M. Secretaries of Embassy and Legation, and eighteen on Manufactures and Commerce. It deserves note how much fuller are the Consular Reports upon the provinces of the Turkish Empire than upon any other part of the world. Bulky volumes bear the names of Beyrout, Crete, Jaffa, Jerusalem, Salonica, and Thessaly, one of which contains as much matter as all the Reports respecting the United States added together.

Dr. Schneider is the author of the elaborate criticism of Mr. Irving's Hamlet, which appeared in the *Cologne Gazette*, and was reproduced in the *Times* on Monday.

A 'Bibliography of Lancashire Literature,' edited by Col. Fishwick, of Carr Hill, Rochdale, will shortly be ready for the press. Col. Fishwick has been engaged on the work for a considerable period, and has had access to a large number of private libraries, by which he has been enabled to supplement the information obtained from the public libraries, such as that of the British Museum, the Bodleian, &c. In most instances a copy of the title-page of the book recorded is quoted, and when very scarce books are named, it is indicated where they can be seen.

Mr. Mortimer Collins has just completed a three-volume novel, entitled 'Sweet and Twenty.'

Mr. S. R. Townshend-Mayer has become the editor of the *St. James's Magazine*.

A new comic and satirical journal, chiefly devoted to City men and City things, is about to appear, under the title of *Gog and Magog*.

The Paris *Figaro* of January 15 published a correspondence from Madrid, describing the state of parties there, with the (perfectly serious) note, that "the editor had preferred to wait for the post, rather than to invent an imaginary correspondence out of the telegrams."

We may add to the list of Primers, edited by Mr. J. R. Green, which we published last week, 'Primer of Greek Literature,' by Mr. R. C Jebb.

The widow of D. Joaquin Francisco Pacheco has presented to the Spanish Academy a curious catalogue of the Spanish manuscripts in the libraries of Rome, the preparation of which was the work of several years' residence in that capital.

The second volume of Mr. Macleod's *Principles of Economical Philosophy* will be published next week.

The new German periodical, *Deutsche Rundschau*, which has met with such success, announces among its forthcoming attractions not only letters and new communications concerning Heinrich Heine, but actually promises some hitherto unpublished poems. It will also give a life of Heine's mother, and some of her letters.

A volume of sermons preached in Rugby School Chapel by Dr. Hayman, will shortly be published by Messrs. Henry S. King & Co. The volume will be dedicated to the Committee of the Hayman Defence and Testimonial Funds.

PUNCH.

TALLEYRAND REDIVIVUS.

Epicurus (dining at his Club, is surprised at the presence of his domestic Green-grocerial Waiter). "Eh! what! Why, is it you, Warts! Well, I'm glad to see you're getting on!"

Warts (unmoved). "Thank you, Sir, yessir, wich I 've 'eard say 'the Man as can Wait, is the successful Man,' Sir. Stilton or Cheshire, Sir?"

Becomes a Licensed Victualler, and dies rich!

IN GOOD COMPANY.

ON his return to London from being present at the great sight in Paris, the Lord Mayor, with peculiar appropriateness, gave an account of his visit at a dinner of the Spectacle Makers.

A LINGUISTIC LIFT FOR DR. LIDDON.

DR. LIDDON is in want of a preposition to express the sense of a word. Would his purpose be answered by the combination "Præadcontrasubantepostobinterultracitraextrainfrasubtersuperstantiation."

CRUEL!

SMITH *(usually a shy, reserved, and silent man) tells a rather long, but otherwise entertaining, story, about an Orange, which meets with great success.*

Brown (when the laughter and applause have subsided). "Bravo, Smith! Capital, old man! But, I say, you told it better one night at Jones's, a few months ago!"

Jones. "No, no! Where he told it best was that morning we breakfasted with *you*, Brown, somewhere about the beginning of the year before last!"

Robinson. "Ah, but don't you recollect the way he told it after that Supper I gave you Fellows at Evans' in 'Fifty-one'? How we *did* laugh, to be sure!"

LIDDON'S MYCOLOGY.

CANON LIDDON has been driven by Monsignore Capel to disclaim certain doctrinal statements occurring in Ritualistic books of devotion as "fungi." A mycologist would perhaps like to know what particular fungi the Canon means. As the statements in question are rank Popery, it may be suggested that they are all so many varieties of the *Boletus Romanus*. Of course Canon Liddon cannot regard them as common mushrooms, or any other sort of esculent fungi, and, if he were a stanch Protestant, would class them with the *Russula emetica*, the *Amanita verna*, the *Lactarius torminosus*, and the other poisonous toadstools.

A CUSTOMER FOR MR. RICE.—A Chinamaniac in the country writes to ask if the Big Bed of Ware is of Worcestershire or Staffordshire, and if it is likely to be put up to auction when the Babes in the Wood have no further use for it?

NURSERY RHYMES FOR THE TIMES.

A PIE sat on a pear-tree,
A very shrewd Old Pie,
Watching the little boys and girls
To school go gravely by.

"Those boys," he said, "will mostly be
Conceited little prigs;
And I 'd rather have girls in frocks and curls,
Than in Doctors' gowns and wigs."

II.

O RARE HARRY PARRY,
If ever you marry,
Be sure you don't marry a fool
Who 's cram-full of learning,
And constantly burning
To turn your home into a school.

Æsthetical notions
And psychic emotions
Are apt to be bores in a wife;
Remember Minerva
Was left to preserve a
Sad celibate state all her life.

III.

LITTLE JACK HORNER
Sat in a corner,
Seeking for reasons why
The circle and square
Are *just what they are*,
And can't be aught else if they try.

When, after thinking
Days without winking,
He had not found the reasons why,
From his seat he arose
And cocked up his nose,
And said, "What a wise boy am I!"

IV.

JACK SPRAT
Could eat no fat,
His wife could eat no lean;
This way went Sprat,
His wife went that—
Both crooked ways, I ween.

To Church Jack went,
As he was bent,
His wife she went to Mass;
That they fell out,
Was just about
What soonest came to pass.

MATTER AND ACCIDENTS.

IN one of the letters lately addressed by Monsignore Capel to the *Times*, the subjoined definitions are quoted from a work whose author was the late Dr. Neale, advanced Ritualist. The Monsignore adopts them as a "clear exposition" of a dogma—with which *Mr. Punch* has nothing to do. In themselves, however, they are simply statements concerning science, a subject which is quite within the province of *Mr. Punch*:—

"All matter is divided into the accidents and substance. Accidents of matter are those which make a thing appear to be what it is. Substance is that which makes a thing to be what it is. The accidents remain; the substance is changed."

Now *Mr. Punch* begs to submit the following questions to Monsignore Capel, or anybody else who thinks he can answer them.

If substance is that which makes matter to be what it is, then is substance anything else than power? And then is not the substance of matter immaterial?

Are accidents of matter absolutely and invariably those which make a thing appear to be what it is? Do not certain Doctors, including Doctor Capel, on the contrary, most strenuously maintain that accidents may possibly, and occasionally do, make a thing appear to be what it is not?

What are the substances, respectively, of a piece of bread and a piece of beef? Is there any such thing as a simple substance of either? Are not the only known or conceivable substances of beef and of bread certain substances supposed to be elementary, principally carbon, oxygen, hydrogen, and nitrogen? What difference is there between bread and beef other than that of the chemical and mechanical arrangement and relative quantities of those substances in the beef and in the bread? If bread is converted into beef, as through being eaten by an ox, what change from bread to beef takes place besides the decomposition of the elementary substances of bread and their recomposition in the form of beef?

Is not the science which divides matter into substance and accidents as above defined, science of the same character as that which once divided it into four elements, earth, air, fire, and water? Lastly, as to the accidents of matter, has matter really any accidents at all, except those which it is liable to meet with, such as the breakage of cups and saucers, glasses, dishes, plates, windows, heads, limbs, ribs, collar-bones, and all the other various casualties too numerous to mention, which are wont to befal, annoy, exasperate, hurt, or damage, men, animals, and things.

SOMETHING LIKE A WORK OF ART.

CANOVA'S is a name famous in Fine Art, but of all Canova's works where is there one to be compared with the re-erection now in progress under the auspices of that famous name at Madrid, with the title of "Government ousting Anarchy."

A RARA AVIS.

Jones. "Who is that Girl all the Men seem so anxious to be introduced to?"

Brown. "O, that's Miss Pynke. Wonderful Woman, Sir!"

Jones. "What has she done?"

Brown. "Never written a Novel, or contributed to a Magazine!"

DIAGNOSIS.

"I can tell you what *you're* suffering from, my good Fellow! You're suffering from *Acne!*"

Ackney? Why, that's just what the *t'other* Medical Gent he told me! *I only wish I'd never been near the Place!*"

Here we Go "Up, Up, Up,!"—The most successful example of "*Levitation*"—the *Daily Telegraph.*

DISCERNMENT.

Young Lady (*who has missed "The Meet"*). "Do you know where the Hounds are, Robins?"

Old Keeper (*compassionately*). "Y'are just too late, Miss,—the Gentlemen be all gone!"

AN ANCIENT CLERK.

LAW.—Wanted by a Clerk with (twenty years' experience), a permanent Situation. Advertiser is acquainted with Conveyancing, Accounts, Book-keeping, and the General Routine of a solicitor's office; also competent to conduct magisterial business in the occasional absence of the principal. Aged ninety-three, married; salary moderate.'—*Law Times.*

This venerable gentleman must have discovered the Elixir of Life, and in the most unlikely place for it—an attorney's office! At ninety-three he *still* seeks a *permanent* situation! He ought, certainly, to be an authority on "long leases" and "life interests." But of all the undesirable "tenancies for life," we should have imagined a managing clerk's stool in an attorney's office about the most untempting. The application is all the stranger as the applicant's experience of similar situations only extends over twenty of his ninety-three years, so that he must have been sixty-three when he began office-work. Perhaps his sense of right and wrong was already too strong to be shaken, or his sensibilities were so blunted by age that he did not feel any conscience-prick from the work he must have had to do.

MEMO.

THE *Pall Mall Gazette* informs us that a Form of Prayer is to be read out on the launching of Men of War and a Service specially compiled for the purpose by His Grace the Archbishop of Canterbury. We understand that Woolwich Infants are in future to be christened, torpedoes to be sprinkled with holy water, gunpowder to be blessed by the ton, and shells by lots of fifty.

BON MOT.

(*To be read Sardon-nically.*)

QUELLE bonheur pour la race humaine—
A Paris on supprime *La Haine!*

A FACT FOR DARWIN.

"A fact for Darwin!"—where pray, can one see
Of Man's Development a proof completer?—
By his Infallibility Decree
Peter's Successor has out-Peter'd Petre.

DESIGNS FOR CANNING COLLEGE LUCKNOW.

COMPETITIVE designs are invited for the proposed Canning College at Lucknow, estimated to cost one lac and twenty thousand Rupees, including out-offices. The building, including Verandahs, will cover about 23,000 feet, to be distributed as detailed below :—

	Including walls.	S. feet.
Examination Hall, ...	100 × 60 =	6,000
Eight class rooms	160 × 60 =	9,600
European Professors, ...	25 × 30 =	750
Principal	25 × 30 =	750
Native Professors	25 × 30 =	750
Bath rooms	10 × 30 =	300
Office	25 × 30 =	750
Library	60 × 30 =	1,800
Graduates' room	25 × 30 =	750
Total ...		21,450
Add for Verandahs &c. ...		1,550
Grand total, Superficial feet,		23,000

The building will be erected contiguous to the Kaisur Bagh buildings, and the character of the design must be in general keeping with the architectural features of these buildings.

A premium of Rs. 2,500 will be paid to the successful competitor in one sum on the submission of the general drawings—plans, elevations and sections with specification and approximate Estimate, together with the working and detailed drawings.

The plan of the site, photographs of the adjacent buildings, and other particulars will be available for intending competitors on application at the office of the Superintending Engineer, Public Works Department, Oudh. Each design will bear a distinguishing mark, device or motto, and the same, with name and address of each competitor in a separate sealed cover, will be forwarded to the address of the Superintending Engineer, Public Works Department, Oudh. Lucknow, with the designs, which will be received up to 1st May 1875, and to no later date.

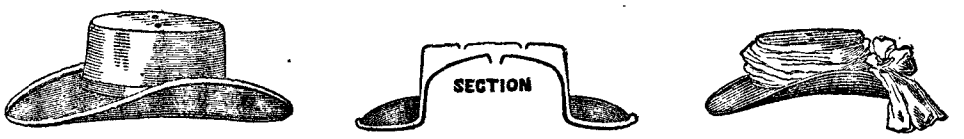
THE "TERAI" HAT,

FOR LADIES AND GENTLEMEN.

A SOFT DOUBLE HAT FOR WARM CLIMATES.

Can be folded and closely packed without damage. Especially adapted for travelling purposes.



ANDRE AND CO., HATTERS,

127, NEW BOND STREET, LONDON,

Direct the attention of Ladies and Gentlemen to their New "TERAI" Hat, now much worn in all the northern provinces of India, and highly recommended. FORWARDED RETAIL POST FREE TO ANY PART OF INDIA, PRICE 23s. 6d. THE DOUBLE HAT.

SIR,—I am happy to be able to speak in the highest terms of your Terai Hat for EASE, COMFORT, CONVENIENCE OF PACKING AND DURABILITY. Although the Hat is hardly a sufficient protection for the head in the extreme heat of the Plains of India, YET FOR ALL WORK IN THE HILLS AT ALL SEASONS, FOR JOURNEYS, AND FOR GENERAL WEAR IN THE COOLER WEATHER IN THE PLAINS, it is admirably adapted. The late Earl of Mayo constantly wore your Terai Hat, which was recommended to him by Colonel Ramsay. I remain, yours faithfully,

O. T. BURNE, late Secretary to his Excellency the late Earl Mayo.—*16th July*, 1873.

Gentlemen,—I have found your Terai Hat a first-rate Hat. I never wear anything else when in the district. It is a wonderful protection from the sun, and is, in my opinion, not ONLY FITTED FOR THE COOL SLOPES OF THE HIMALAYAS, BUT FOR THE SEVERE HEAT OF THE PLAINS OF INDIA. I wear it in May, at Poona, the hottest season of the year, and find it preferable to the ordinary felt Helmet. The Lady's HAT IS PRONOUNCED TO BE PERFECTION AS A RIDING HAT.

I am, Gentlemen, yours faithfully,

AYRTON PULLAN, Capt. Dept.-Supt. G. T. Survey of India.

4th June, 18..

ANDRE'S NEW PATENT PITH AND FELT SOLAR HATS,

(Known as Beake's Patent,) WELL VENTILATED, SUN AND WATERPROOF.

These new Hats are remarkable for their superiority in respect of quality, finish, lightness and comfort, are made in various shapes for Ladies and Gentlemen, and are likely to supersede the plain felt Air Chamber Hat hitherto worn.

TRADE ORDERS PROMPTLY ATTENDED TO.

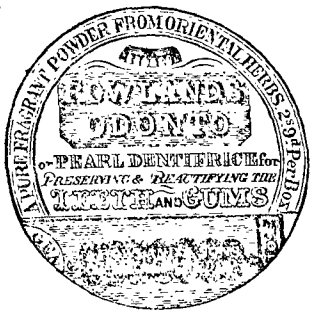
(G)



THE DECAY OF THE TEETH

Arises from neglect, and the use of tooth powders, pastes and washes, which containing mineral and other deleterious acids, utterly ruin the enamel.

ROWLANDS' ODONTO

Is entirely free from all injurious elements, whitens and preserves the teeth, prevents and arrests their decay, strengthens the gums, and gives a pleasing fragrance to the breath.

ROWLANDS' MACASSAR OIL

Prevents the hair falling off or turning grey, strengthens weak hair, causes it to grow on bald patches, and makes it beautifully soft, pliable and glossy.

ROWLANDS' KALYDOR

Removes all freckles, spots, and cutaneous eruptions, and realizes a healthy purity of complexion.

ROWLANDS' ESSENCE OF TYRE

Produces immediately a perfect change in red or grey hair, whiskers and eyebrows, to a glossy and permanent brown or black, which colour neither washing or perspiration will remove. GREAT CARE must be taken to ask for Rowlands' Articles, at 20, Hatton Garden, London, and to see that their signature, A. ROWLAND & SONS, is in RED ink on the wrapper of each, no others being genuine. Sold by all Chemists, Perfumers, Druggists, and at all Bazaars throughout India.

(442)

"FOR THE BLOOD IS THE LIFE."

AGENT FOR RANGOON.

The Rangoon Medical Hall.

(135)

UNIVERSAL LIFE ASSURANCE SOCIETY.

Attention is particularly requested to the Regulations of this Society, respecting its large abatements of Premium. The scale of Premium is based upon data carefully re-investigated by eminent Actuaries in London, at the expense of this Society. The result established the fact that the present Indian rates are as moderate, with reference to the risk incurred, as is consistent with perfect security to the Assured, and to a Society which returns to its Policy-holders no less than Three-Fourths of its whole Profits from English and Indian business, at its Annual Investigations and Divisions. It is most important that all intending Assurers should consider well, not only the rate of Premium primarily charged, but also the percentage of Profits actually applied (annually by this Office) in reduction of such Premium; the large Profits thus returned to the Policy-holders of the "Universal" in the last 40 years having greatly exceeded the proportionate Profits in other Indian Life Offices, and having proved the real ultimate economy of Assurance with this Society.

INSURANCES EFFECTED FOR WHOLE TERM OF LIFE, OR SHORT PERIODS,

WITH OR WITHOUT PARTICIPATION IN PROFITS: THE MEDICAL FEE IN ALL CASES PAID BY THE SOCIETY:

PREMIUMS PAYABLE YEARLY, HALF-YEARLY, QUARTERLY, OR MONTHLY, AT OPTION OF ASSURED:

REDUCED RATES OF PREMIUM DURING RESIDENCE IN EUROPE:

PARTICIPATING POLICIES SHARE IN PROFITS AFTER SIX YEARS:

LAPSED POLICIES REVIVED ON SPECIAL TERMS:

MILITARY LIVES INSURED AT SLIGHTLY ENHANCED RATES, WITHOUT EXTRA PREMIUM WHILE ENGAGED IN ACTUAL SERVICE:

AND AT REDUCED CIVIL RATES DURING RESIDENCE IN EUROPE:

FEMALE LIVES TAKEN AT ORDINARY CIVIL RATES:

NO EXTRA RATE FOR UNIMPAIRED WHOLE-TERM LIVES IN INDIA.

Available Funds, £971,942-10-10.
Annual Income, £169,497-15-8.

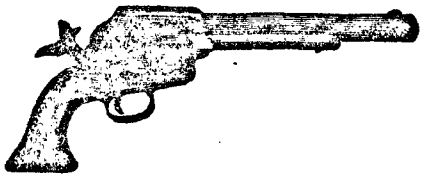
Claims promptly adjusted on proof of Death.

TOTAL OF CLAIMS PAID SINCE 1834, £2,070,348-17-1.

Copies of the last Report, Proposal Papers, &c., on application to the Society's Sub-Agents in the principal Mofussil Stations, or to

GISBORNE & CO.,
Agents & Secretaries,
40, Strand, Calcutta.

(463½)



COLT'S NEW GOVERNMENT ARMY REVOLVER,

as recently adopted for the United States Cavalry, takes the ·450 central fire service Boxer Cartridge. It equals a rifle in range and in accuracy of fire, and is unequalled for durability of construction. It can be easily loaded and unloaded when dark, and can be carried with perfect safety when loaded. It far surpasses in efficiency and quality of make the numerous cheap pistols of various make which now flood the market.

COLT'S LARGE BORE BREECH-LOADING DERINGER,

for the waistcoat pocket, shoots hard and straight.

COLT'S DERINGER REVOLVER,

for personal and house defence, fires a larger ball than any other Revolver of the same weight and size.

To be had through any respectable Gunmaker or Dealer in Arms, or from

Colt's Fire Arms Manufacturing Company,

14, PALL MALL, LONDON, S. W.

(335)

ESTABLISHED 1840.

CHURCH OF ENGLAND.

LIFE ASSURANCE INSTITUTION.

HEAD OFFICE, 9 & 10, KING STREET, CHEAPSIDE, LONDON.

WHITMORE'S

Compound Liniment of Arnica.

A specific for the cure of

Rheumatism, Lumbago, Sciatica, Sprains, Confusions, Weakness of the Joints,

Chilblains, &c.

It is also an excellent remedy for stimulating application to the surface of the Chest and Back in Bronchitis, Inflammation of the Lungs, Pulmonary Consumption, and Hooping Cough. When the Liver is inactive, rubbed over it, its stimulating properties have a beneficial effect, and in all cases where counter-irritation is desirable, it will be found invaluable.

In bottles, small, medium and large.

WHITMORE'S

Stomachic and Liver Pills.

No Pill is so efficacious in promoting DIGESTION, strengthening the STOMACH, correcting ACIDITY, preventing or removing HEADACHE, GIDDINESS, &c., arising from a COSTIVE HABIT, DEBILITATED STOMACH, or TORPID LIVER.

They require no change of DIET, and those of the MOST DELICATE CONSTITUTION may take them with safety.

Taken as an adjunct with WILKINSON'S SARSAPARILLA with the greatest success.

LEA & PERRINS'

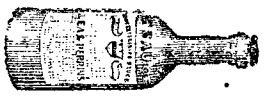
CELEBRATED

WORCESTERSHIRE SAUCE,

DECLARED BY CONNOISSEURS

TO BE

THE ONLY GOOD SAUCE.



CAUTION AGAINST FRAUD.

The success of this most delicious and unrivalled Condiment having caused certain dealers to apply the name of "Worcestershire Sauce" to their own inferior compounds, the Public is hereby informed that the only way to secure the genuine is to

ASK FOR LEA & PERRINS' SAUCE,

and to see that their names are upon the *wrapper*, *labels*, *stopper*, and *bottle*.

Some of the foreign markets having been supplied with a spurious Worcestershire Sauce, upon the wrapper and labels of which the names of Lea and Perrins have been forged, L. and P. give notice that they have furnished their correspondents with power of attorney to take instant proceedings against *Manufacturers* and *Vendors* of such, or any other imitations by which their right may be infringed.

Ask for LEA & PERRINS' Sauce, and see Name on Wrapper, Label, Bottle, and Stopper.

Wholesale and for Export by the Proprietors, Worcester: Crosse and Blackwell, London, &c., &c.; and by Grocers and Oilmen universally.

To be obtained of

BISSONAUTH LAW & CO.,

(39) *Calcutta.*

TESTS FOR SELECTION OF A LIFE OFFICE.

The Tests recommended by the Board of Trade.

"Taking insurance business as it exists in this country, the public cannot be misled if, when seeking an office in which to effect an insurance, they select one which transacts its business at a small percentage of working cost, and does not anticipate its profits."—*Extract from Report by the Assistant Secretaries to the Board of Trade, ordered to be printed by the House of Commons.*

How these Tests are fulfilled by the "Royal."

"It is exceedingly satisfactory to see that, *of all the English provincial offices, and all the Scotch offices, the Royal's ratio of expenses to its income is the lowest*, and to complete the requirements of the official standard that it may be added that the Company has *never anticipated a single shilling of profit.*"—*Extract from the Speech of the Chairman at the Annual Meeting, 7th August*, 1874.

Terms of Proposal, Tables of Rates, &c., forwarded on application to

WOODSTOCK SCHOOL FOR GIRLS,

LANDOUR.

Will re-open on the 1st of March, 1875.

Address,

REV. D. HERRON,

Dehra.

MARAVILLA COCOA.

TAYLOR BROTHERS (the largest Manufacturers of Cocoa in Europe), having the EXCLUSIVE Supply of this UNRIVALLED COCOA, invite Comparison with any other Cocoa for Purity—Fine Aroma—Sanative, Nutritive and Sustaining Power—Easiness of Digestion—and especially, HIGH DELICIOUS FLAVOUR. One trial will establish it as a favourite Beverage for Breakfast, Luncheon, and a Soothing Refreshment after a late evening.

N. B. Caution—"MARAVILLA" is a registered Trade Mark.

MARAVILLA COCOA.

The *Globe* says, "TAYLOR BROTHERS' MARAVILLA COCOA has achieved a thorough success, and supersedes every other Cocoa in the market. Entire solubility, a delicate aroma, and a rare concentration of the purest elements of nutrition, distinguish the Maravilla Cocoa above all others. For Invalids and Dyspeptics, we could not recommend a more agreeable or valuable beverage."

For further favourable opinions vide *Standard, Morning Post, British Medical Journal*, &c., &c.

HOMŒOPATHIC COCOA.

This original preparation has attained a world-wide reputation, and is manufactured by TAYLOR BROTHERS, under the ablest HOMŒOPATHIC advice, aided by the skill and experience of the inventors, and will be found to combine in an eminent degree the purity, fine aroma, and nutritious property of the FRASE NUT.

SOLUBLE CHOCOLATE.

MADE IN ONE MINUTE WITHOUT BOILING.

THE ABOVE ARTICLES are prepared exclusively by TAYLOR BROTHERS the largest Manufacturers in Europe, and sold in tin-lined packets only, by storekeepers and others all over the world. Steam Mills, Brick Lane, London.

EXPORT: HICORY MILLS, BRUGES, BELGIUM.

GRATEFUL—COMFORTING.

EPPS'S COCOA.

BREAKFAST.

"By a thorough knowledge of the natural laws which govern the operation of digestion and nutrition, and by a careful application of the fine properties of well-selected cocoa, Mr. Epps has provided our breakfast tables with a delicately flavoured beverage which may save us many heavy doctor's bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—*Civil Service Gazette.*

MANUFACTURE OF COCOA.—"We will now give an account of the process adopted by Messrs. James Epps and Co., manufacturers of dietetic articles, at their works in the Euston-road, London."—See article in *Cassell's Household Guide.*

Made simply with boiling water or milk.

Sold only in ¼-lb. and 1-lb. tins, labelled thus:—

THE WEEK.

HIS HIGHNESS THE MAHARAJA HOLKAR arrived on Monday afternoon shortly after four o'clock at the Howrah Railway Station with his son. In accordance with the official arrangements, he was met there by the Under-Secretary in the Foreign Department and an aide-de-camp to the Viceroy.

IT is stated that the train which brought H. H. the Maharajah of Indore to Calcutta on Saturday last had a narrow escape from a serious collision. While travelling through the Raneegunge station the driver saw some waggons ahead. With much presence of mind and activity he succeeded in stopping his engine within a few yards of the obstruction.

LAST week we noticed the illness of Archbishop Steins. The gratifying news now reaches us that all dangerous symptoms have entirely abated, and that there is every probability of the Roman Catholic prelate being able to take his accustomed place in society in the course of a few days.

MR. FRANKLIN PRESTAGE, the Agent and Manager of the Eastern Bengal Railway, leaves India to-day for a visit to Europe. During his absence Mr. Calder will act as chief officer. Mr. Prestage is sure to receive a hearty welcome from the Board of Directors in England. Applying every test to the management of the Line, its position, as vouched for by Mr. Bain's tables, is sound and satisfactory.

A Correspondent of the *Indian Daily News* thus describes a remarkable visitor to Madras: "*The Rev. Sholto Douglas, Vicar of All Saints, Derby, who is now on a visit* to Madras, his own church being closed for repairs, has just *held* a week of special mission service at Christ Church *on the Mount* Road. The services commenced on the evening of Sunday, the 10th January, and were continued on eight successive evenings, the final service having been held on Monday, the 18th, when the Holy Communion was administered to a congregation of 87 communicants. The services during the mission week consisted of a short form of prayer, selected from the Prayer-book, followed by a sermon from Mr. Douglas, whose gifts, as a preacher, are extraordinary. He holds a congregation in breathless attention for an hour, or even an hour and a quarter, the prevailing feeling, when he ceases, being one of regret that the address has ended so soon. The characteristics of his preaching are earnestness and point; there is no verbiage; there are no wordy effects, nothing whatever to please the ear; no attempt at finish or elegance. Occasionally he reaches a fine climax, but this is clearly beside his purpose, an accidental episode introduced, as it were, unconsciously, and springing naturally out of the fervency of the thought he is trying to impress home on the hearts of his hearers. The message he has to utter, and the momentous issues involved in its acceptance or rejection —these evidently outweigh with him all desire after mere popularity as a preacher."

DR. CHARLES has made a representation to Government, as to what is essentially necessary in selecting young native women for instruction in practical midwifery. Only Hindoo and Mussulmanee women between the ages of twenty and thirty years are required and not Christians, as the latter can be procured without the aid of district officers. The women are allowed nine rupees a month, and out of this have to pay the rent of a room, their food, and their books. It is absolutely indispensable that they should be able to read in their own vernacular, either Bengalee or Urdoo.

A military officer in a Non-Regulation Province has favoured us with an essay vigorously attacking a public speech which has annoyed him. We have not the slightest objection to publish anything really well written from his particular point of view, but it would be a pity, for the sake of his own cause, to print what he has sent; we feel little hesitation in assuring him that it would not be difficult to handle the subject more skilfully than he has done. No one *exults* that military men, simply as military men, are not needed so extensively, as they once were, in the administration of the country. The fact is India is becoming rapidly reduced to orderly control, and it is a condition of such a state of affairs that civil business should be entrusted to civilians, and military matters to military men. The only justification for civil affairs being in the hands of so many military men as at present, lies in the *fact that* we have scores of officers in India who are military *only* in name, and are just as much civilians, so far as habits and modes of thought go, as any men can possibly be who have come from Haileybury or have passed the ordeal of the Indian Civil Service Examination.

WE have not hitherto noticed the *Calcutta Review* for the present quarter. It is a very good number, and contains interesting articles by Mr. G. R. C. Williams, Captain C. Wodehouse, Mr. J. D. B. Gribble, Mr. Macauliffe, Major R. D. Osborn, Dr. Clive, Mr. C. A. Kelly, and others. Mr. Gribble writes on the poetry of the Tamulians, and tells us their rhyme is invariably at the commencement of a verse, and that they compress their language so much as not to be easily intelligible even to well-educated men. Mr. Gribble says that at Tamul betrothals the couple walk three times round an altar dedicated to the Unknown God (ariada devanie). We have some doubts whether Mr. Gribble has rightly interpreted this expression; but taking it for granted that he has, we must differ from him when he declares it to be melancholy that the number of idols does not satisfy the people; we should think it melancholy if any number of idols did; but from the context Mr. Gribble's meaning gains in clearness; he is grieved that the longing of the people for something different from their own idolatry remains unsatisfied owing to a non-acceptance of his faith.

THE Governor-General in Council has informed the Government of Bengal that he concurs with the Lieutenant Governor, that the teachers of the Medical College can acquire no better distinction than a Medical degree. Lord Northbrook is of opinion that for special cases no more suitable title could be conferred on these officers than that of Rai or Khan Bahadoor.

THE Governor-General in Council has ordered that Dhoobree, as an experiment, be made an additional place of embarkation for labourers proceeding to the tea gardens in Assam, and that Mr. A. C. Campbell, the Assistant Commissioner in charge of the sub-division, be appointed Superintendent of Emigration and Embarkation Agent, with a native assistant surgeon as medical inspector.

IN writing to the Government of India in reference to the establishment of Dhoobree as an additional place of embarkation for laborers, Mr. Rivers Thompson made the following observations:

Under the provisions of the Labor Districts Emigration Law (Act VII B.C. of 1873), batches of not more than twenty emigrants accompanied by a garden sirdar, are allowed to find their way to a labor district, without passing through a depot; in cases in which the number exceeds twenty, the emigrants have, after undergoing the necessary medical examination prior to registration, to be passed through a licensed contractor's depôt, and there to be subjected to medical inspection immediately on arrival, and to medical observation for at least four days prior to embarkation for conveyance to a labor district. In the despatches from the depôts too due provision is made for the proper care and treatment of emigrants during their passage to a tea district. If the total number of emigrants and their dependants to be despatched is below fifty souls, the sirdar or agent in charge of the party has to be provided by the contractor with a few simple remedies in cases of sickness on the road. When the number exceeds fifty souls and is below two-hundred, a medical officer duly licensed for the purpose by the Medical Inspector of Laborers, together with a sufficient supply of medicines, accompanies the party throughout its journey from Calcutta; and for despatches of two-hundred emigrants and upwards, a medical officer, who is a licentiate of medicine, or who is declared to be duly qualified for the duty, has to be appointed to the charge of the party. The Lieutenant-Governor is of opinion that with the adoption of the proposed experiment, the number of emigrants with their

dependants proceeding together from Rajmehal to Dhoobree, should not exceed 100 souls in all in any one batch. There are always risks from cholera, especially in the hot season, and as the line of road to be traversed is not much frequented, difficulties will exist at first in providing proper food and shelter for large numbers of coolies at halting places. The Lieutenant-Governor would next suggest that camping places with sweepers attached to them, and with a sufficiency of food and wholesome drinking water should be provided at stated intervals on the road. These camping places should, in the interests of the large towns through which the route lies, be situated outside their boundaries. As in the case of troops on the march, provision should perhaps be made for supplies, fuel, &c., all of which should be ready awaiting the arrival of the emigrants at the stages on the road.

DR. COATES, the Sanitary Commissioner for Bengal, has suggested that it would be easy to bridge the greater number of the rivers between Calcutta and Assam; all indeed except the Ganges and the Teesta. The boat bridges lately used in Tirhoot are easily put together, and are safe and effective. Dr. Coates thinks their presence would greatly increase the traffic of the districts that keep them in order, and there can be little doubt that an advantage would accrue to the public health. Gangs of coolies *en route* have often to stay exposed on river-banks many hours waiting to cross, and either fast altogether, or eat uncooked food, raw vegetables, &c; from these causes they are frequently attacked with cholera.

ONE of the immigrant coolies imported into Trinidad from Bengal, a Mr. Ajoone Saw, has recently won some prizes at the annual races in that island. Some time ago we took notice of the fact that he was the owner of two remarkably fine horses which he contemplated running, and now it appears he has been successful. The Governor, in addressing Mr. Ajoone Saw, when introduced as the owner of the winner of the Governor's Cup, said, "I have great pleasure in congratulating you on being the winner of this Cup, as you have raced simply for the purpose of sport. I assure you that I take a great interest in these Races, feeling convinced that such sports tend to improve the breed of horses. That pleasure, on the present occasion, is increased by the fact that the Cup has been won (here he turned to the assembled crowd)—by one who arrived in this Colony as an indentured Immigrant, and yet has attained such a position as to enable him to participate in this national sport, and (again addressing Mr. Ajoone) I trust it will show to your countrymen in India,—when you write home to them and tell them of this day's proceedings,—that there is a great field for them in this island, and that they are well cared for. I regret, that owing to my recent arrival in the Colony, I have not had time to get out the Cup from England, and am therefore not able to place in your hands to-day, but so soon as it arrives, I shall hope to have the pleasure of presenting it to you" His Excellency's address was interpreted by Mr. Bugros of Chaguanas, and at its conclusion Mr. Ajoone salaamed to the Governor, and, after thanking him, called for three hurrahs for His Excellency which were re-echoed everywhere. The Ladies' Purse, which was collected by Mrs. Bushe, and contained forty-eight guineas, was then presented by that lady to Mr. Ajoo e Saw, the owner of *Wild Dayrell*, Mrs. Bushe accompanying the gift with a few graceful remarks.

AT the Meeting of the Council of the Governor General of India for the purpose of making Laws and Regulations held on Tuesday, the 23rd instant, the Hon'ble Mr. Hobhouse moved that the Select Committee on the Bill to consolidate and amend the laws relating to the Procedure of the Courts of Civil Judicature be re-constituted. The following gentlemen were made members of the new Committee, Mr Bayley, Mr. Inglis, Mr. Dalyell, Sir Douglas Forsyth, the Maharajah of Vizianagram, and Mr. Hobhouse.

THE Hon'ble Mr. Ellis presented the report of the Select Committee on the Bill for regulating Inland Customs' Duties on Salt and Sugar, and for other purposes, and moved that the Bill to secure the repayment of a loan by the Government of India to Sir Jamsetjee Jeejeebhoy, Baronet, be taken into consideration; this was agreed to.

HIS Highness the Maharaja of Vizianagram then presented the Report of the Select Committee on the Bill to establish a uniform age of majority of persons domiciled in British India.

The Hon'ble Mr. Eden moved that the Report of the Select Committee on the Bill to regulate Fisheries in British Burma be taken into consideration, and that the Bill as amended be passed; agreed to.

Mr. Eden then introduced the Bill to declare the law relating to interests in land and to regulate the assessment and collection of land-revenue, capitation-tax and other taxes in British Burma, and moved that it be referred to a Select Committee with instructions to report in two months; agreed to, Sir William Muir, Mr. Bayley, and Sir Douglas Forsyth being added to the Select Committee.

IN another column we give Lord Salisbury's speech to the Manchester Chamber of Commerce. The following is the address to which that speech was a reply.

"To the Most Hon. the Marquis of Salisbury, Her Majesty's Secretary of State for India.

"My Lord Marquis,—We, the directors of the Manchester Chamber of Commerce, having long recognized the great interest in India and knowledge of its affairs which your Lordship has evinced, avail ourselves of this opportunity to express our satisfaction that the functions which your Lordship is called upon to discharge in the present Administration have relation to the government of that great Empire.

"Your Lordship's accession to office occurred at a time when the Government was confronted by the famine in Bengal, with all its appalling difficulties and dangers, and we cannot doubt that the people of this country will unite with their Indian fellow-subjects in testifying to the Government, both at home and in Calcutta, their high appreciation of the zeal and ability displayed in lessening to the utmost extent the existence and continuance of human suffering.

"We feel assured that the experience of this as well as of previous visitations of a like nature will demonstrate the necessity of increased means of irrigation and communication throughout the whole of India.

"The paramount importance of agricultural industry to the people of India and the abundant return which rewards its development may be illustrated by the following official returns of exports:—

	Year 1868.	Year 1872.
Coffee ...	33,189,134 lb.	56,817,153 lb.
Tea ...	7,811,429 ,,	17,460,138 ,,
Cotton ...	614,059,049 ,,	809,246,087 ,,
Rice ...	12,257,224 cwt.	16,990,890 cwt.
Wheat ...	299,385 ,,	637,099 ,,
Jute ...	2,057,442 ,,	6,133,813 ,,
Spices (1866) 14,970,973 lb....	(1867-8 no return)	32,279,296 lb.
Indigo ; ...	86,162 cwt.	115,414 cwt.
Hides and Skins	No. 9,487,464	No. 20,043,959

Thus the exports of coffee have increased 71 per cent.; tea, 123 per cent.; cotton, 31 per cent.; rice, 38 per cent.; wheat, 112 per cent.; jute, 198 per cent.; and of hides and skins, 110 per cent. It is indeed a matter of satisfactory reflection that these productions, while employing and maintaining the vast population of India, invite also a profitable interchange of the commodities of other nations.

"We seek, from no selfish motives of local interest, to accord prominence to the commercial side of Indian affairs.

"Your Lordship has said that while 'India is governed mainly or entirely for the benefit of those who inhabit it, the great means to do that, and the great means to unite India and England, is to push to the uttermost the commercial relations between them.' We have pleasure in acknowledging the substantial effect which your Lordship has recently given to these expressions by the appointment of a commercial member of the Council of India.

"Both as guardians of important trade interests and as directors of a Chamber striving to base its actions on sound economic principles, we have received with profound satisfaction your Lordship's admission that the duties now levied on the imports of cotton goods into India are irreconcilable with such principles and also your Lordship's assurance that those duties will be abrogated as soon as the financial exigencies of the country may permit. We acknowledge in these declarations a just recognition of the manufacturing interests of this district, and the best safeguard against loss and disappointment to those who may base their enterprise on the continuance of protective duties.

"In conclusion, we beg to assure your Lordship of the confidence and satisfaction which the public statements of your Lordship's views and policy on Indian affairs have at all times afforded the directors of this Chamber, and to express the hope that your Lordship's administration may be productive of increased prosperity and advancement both to India and England.

"Signed, for and on behalf of the Manchester Chamber of Commerce, "RICHARD JOHNSON, President.
"THOMAS BROWNING, Secretary.
"Manchester, Jan. 22, 1875."

THE *Englishman* has the following remarks on Mr. Hobhouse, "The unquestioning obedience rendered by his colleagues to Sir Henry Maine; the enormous dialectical superiority with which all opposition was borne down by Mr. Fitzjames Stephen, and the stolid unimpressibility which enables Mr. Hobhouse to defy argument, are but diverse illustrations of the one great drawback attending the appointment of specialists to seats in the Council—the tendency of their department to become, through the awe of their opponents, or their own arrogance, an *imperium in imperio*. There can be no question that the Government Reports Bill was pushed through the Council the other day, not by the force of argument, but in spite of it; and though Mr. Hobhouse had the best of the argument in last Tuesday's debate on the Merchant Seamen's Act Amendment Bill, he displayed a lack of temperance, not to say courtesy, in his treatment of the Lieutenant-Governor of Bengal, which was very justly, if not altogether prudently, resented."

FEW caterers for the amusement of the public are better known in India than Dave Carson, and we are glad to learn that he has established his company in Chowringhee. Good singing and clever mimicry constitute the staple of their performances.

NAGA TREACHERY.

WE learn that on the 7th instant Captain W. F. Badgley, of the Staff Corps, who is an Assistant Superintendent of the First Grade in the Great Trigonometrical Survey of India, and who has charge of No. 6 Khasia and Garo Hill Survey, was at Jyepore, a few marches to the east of Seebsaugor, and about the same distance south-east of Debroogurh. He had with him there the remnant (116) of a party of 196 officers and men, in command of whom he had advanced a short time ago into the hill country lying south of the Bramahpootra river and the Assam valley. From Jyepore Captain Badgley has written a report to the Head of his Department, Lieutenant-Colonel H. L. Thuillier, Surveyor General of India, giving most interesting particulars of the wanton and treacherous attack made on him and his party, on the 1st instant, by the Naga occupants of a village named Ninu. In this lamentable affair Lieutenant W. A. Holcombe, of the Staff Corps, Officiating second grade Assistant Commissioner of Luckimpore, and also 79 subordinate members of the expedition lost their lives. Captain Badgley and 50 others were wounded, 66 of the party only escaping uninjured. It is worthy of notice that of 16 Nagas, who were with Captain Badgley as guides, no less than 12 were killed and 2 wounded by their countrymen. Prompt chastisement must needs be bestowed on the treacherous villagers. This is what Captain Badgley says:

I have the honor to inform you that on the 1st February 1875 we arrived at Ninu, an Abor village four marches from the plains. I was detained as usual by survey work on the road, and did not pass through the village till some time after Lieutenant Holcombe and the rest of the camp. The people seemed sulky, but Lieutenant Holcombe said they were frightened, and did not come out of their houses at all as he passed through. In the evening some of the headmen brought a small present of rice, fowls, and roots. They were told not to be afraid to bring more in the morning, and that the whole village was to come to see us. About sunrise next morning there were a number of Nagas in camp. Sitting in my tent I heard one of the headmen say to Lieutenant Holcombe—"The Raja (village headman) is there, but is afraid of the gun." Lieutenant Holcombe took the rifle from the sentry and gave it to the Naga, who then began to laugh and dance with the rifle on his left shoulder, while he flashed his dao in his right hand; Lieutenant Holcombe then turned apparently to draw the sentry's bayonet, when one of the young men felled him with a blow from behind on the side of the head: there was a yell raised all through the camp. I sprang up to draw my pistol hanging to the back pole of my tent as several of them rushed in. I fired into them and made my way out behind (my tent providentially being made to open at both ends), and was followed by two of them, whose blows I avoided as well as I could, firing meanwhile, when at the moment I fired the fourth shot I tripped over a stump and fell.

When I got to my feet again the Nagas had disappeared, and a wail was rising from the camp, instead of the cries and shouts of a moment before. Running to where Lieutenant Holcombe lay I found him with two crossed cuts on the right side of the head exposing the brain, the sentry near him with his head hanging by a strip of skin. I ran to the sepoys' lines, where I found a few men firing at the retreating Nagas, and getting a rifle did what I could. I did not know till it was all over that I had not escaped scot-free, so little do sharp cuts pain at first, but I found that I had a cut on each arm and on each leg, the worst on the inside of the right thigh which I expect will keep me quiet for some time to come. My escape I can only suppose to have been through having killed the leading man attacking me with my last shot, when his second, seeing me fall, and thinking I was done for, carried him off according to Naga custom.

I encouraged the men, and the camp was searched for wounded, arms, and ammunition. Each person was told to take a little rice with him. The unwounded carriers were told off to carry the wounded and such things as it was important to save, and I called on the men to advance with me against the village. But they had been too much shaken, and refused, and entreated me to lead them in the opposite direction. As whatever was to be done must be done quickly, I was obliged, which I shall always regret, to give over reasoning with them and to choose to retire (though now on consideration I think that that was the wisest course). We seemed a mere handful overladen with spare ammunition and encumbered with wounded and coolies, and the arguments against attacking the place, that more than half the guns had been taken, that we were nearly all wounded, and that the village would have been specially prepared for defence were not to be answered. There was a spur to the west leading down to the Disang above where we crossed it on our march from Sanua to Ninu, which was for the most part cleared for cultivation, and I saw my way to getting by a pretty open route up to and past Sanua.

The Nagas followed and surrounded us, but we killed some and drove them off, and dispersed a last party who were making a rush at us when we reached the wide bed of the Disang, after which we saw no more of them, which I think proves my suspicion that an ambush was prepared for us on the direct path to be correct.

The march along the winding and stony river was most slow and toilsome, and we did not get to the Sanua spur till nightfall. Two of the wounded had died on the way. We cut our path up for some way through the jungle to where the spur was clear, and after following the cultivation path as far up as was safe turned to the left to pass under the village. All this took much time, the jungle was thick, and the side of the hill very steep and of loose slippery shale, and when the morning star rose I saw that it would be impossible to pass unobserved, so gave the party an hour's sleep.

At dawn we took up a good position near the village and were soon seen from all sides. The Sanua men swarmed down, but I warned them through a Naga with me not to come near, and they gave way as we went on. They tried to persuade me to pass through the village, even going through the pantomime of executing their headman to induce me to do so. Passing round the village we found at our old camp a kalassy and three coolies of the survey who had brought up a post. Here I had intended to have halted and waited for relief, sending off the wounded, but fortunately one of the three coolies was strong enough to carry me (which was indeed most fortunate, as my wounds had become stiff and painful, and had given me fever and a swelling in the groin so that I could not have walked further), so after resting from eight to two we marched and encamped near Bor Bang Sang. On the fourth we passed through Bor Bang Sang and Bormuthun (where we got food for the first time); continuing through the night we reached Borwasali on the afternoon of the 5th and arrived at Jaipoor next day. Here the wounded were attended to by Dr. McKay of the 44th from Debrooghur. One of my kalassies died on the night of the 6th, a sepoy on the 4th, and several other sepoy carriers and a servant are, I am grieved to say, beyond recovery.

The following is a list of the party as it went in and as it is now:—

	1st February.		7th February.	
	No.	Killed.	Wounded.	Unwounded.

Servants „ ...	5	1	4	0
Total	197	80	51	66
			117	

The attack was a preconcerted plan of the Sanua and Ninu people, who were assisted by men from Noka (a Ninu village), and as I hear, when returning, by Niow. My escape without attack by Sanua, I attribute to my having said that I intended to halt at the camp near for several days. I heard that Sanua had sent to a village close by who had agreed to help in destroying us, and they probably considered my march the same afternoon a stratagem. They soon discovered that we had gone and some followed us shouting. I hope that the punishment of these people will soon be taken up.

THE PRESS OF BENGAL.

LAST year the Bengal Secretariat turned out an unusually large amount of work, Sir George Campbell's collection of specimens of Indian languages, including those of several aboriginal tribes, and Captain Lewin's grammar of the Looshai tongue, holding the first place among the philological publications. The provincial dialects of Chota Nagpore have been elucidated by two useful works by Missionaries serving in that division: one, by the Rev. Oscar Flen, is an introduction to the language of the Uraons, or Kurankhs, a tribe belonging to the Dravidian race; the other is a primer of the Mundaree dialect spoken by the Mundas. Both these tribes inhabit Chota Nagpore, and the books are dedicated by the authors to Colonel Dalton, C. S. I., the Commissioner of that division.

In the Statistical Department, Mr. Westland's well-known report on Jessore has been revised and reprinted; and the re-

ports of Baboo Ram Sunker Sen on the agriculture of Bagirhaut and the Sunderbuns, in the Jessore district, and of Baboo Gopal Chunder Das on the statistics of the Rungpore district, have been published. Both these officers were specially deputed to collect the information contained in these volumes. The report on the cultivation of trade in jute in Bengal, by Baboo Hem Chunder Ker, one of the members of the commission appointed by Sir George Campbell to investigate the subject, has also issued from the Secretariat Press. It is a work of much value and interest to the Government, and to the mercantile and agricultural public. On the subject of frontier affairs, an interesting report on a visit to Sikkim and the Thibetan Frontier, by Mr. Edgar, may be mentioned. The results of the investigations of the commission appointed to investigate the subject of snake-poisoning, and its possible remedies, have appeared in the form of a valuable book of reference entitled "Indian and Australian snake-poisoning."

There were fifty-four vernacular papers published during the year, four being daily, one bi-weekly, thirty-one weekly, thirteen bi-monthly, and five monthly. Seven stopped circulation and twenty were started. At present eight are published in the Dacca, two in the Assam, two in the Burdwan, three in the Patna, nine in the Rajshahye, one in the Bhagulpore and five in the Presidency Division (excluding Calcutta); two are published in the town of Chandernagore, two in Chinsurah, and twenty in the town of Calcutta. Sir Richard Temple is glad to be able to say that the general tone of the Vernacular Press (though disfigured by occasional excesses) is decidedly loyal and well disposed towards Government, although the numerous newspapers are distinguished by a "remarkable independence of criticism." It is noteworthy that the Native Press has consistently recognised and appreciated the exertions made by Government in averting famine from the country, and has evinced the utmost gratitude for the results which have been attained in this behalf. In addition to the newspapers mentioned, a *Jewish Gazette*, entitled "*Maebussaer*," or "*Glad Tidings*," was started in Calcutta during the year. It contains general information regarding the Jews and their affairs in all parts of the world, and is circulated among the Arabic-speaking Jews in all parts of Asia.

THE BUTESUR FAIR.

AMONG the many fairs and melas held annually in India that held at Butesur, on the last day or full moon of Kartik, stands prominent. The meeting was originally instituted in honour of an image of Mahadeo said to have been found under a *bar* tree by Sursen, the grandfather of Krishna. From this the place derives its name, the literal meaning of Butesur (Buteswur) being the tree-god. It also has other claims to sanctity on account of the Jumna flowing due west and of its possessing two "okhals." In its religious acceptation, this term is used to designate a spot where bathing has the effect of completely expunging the result of all former actions, whether good or bad. Budun Sing, 13th Raja of the Bhudouria Thakoors, who sat on the *guddee* from 1618 to 1656 A.D, and was contemporary with Jehangeer and Shah Jehan, founded the horse and cattle fair, which is now probably the largest of the kind in India.

In a sketchy report on the mela, drawn up by Mr. F. Baker, Assistant Magistrate of Agra, we find that the village of Butesur is situated on the right bank of the river and is distant 46 miles from Agra by road, and 12 miles from the Shekoabad Station on the East Indian Railway. Soorsen's well and "khera" are still pointed out at an older site some distance off, where there are remains of Jain temples of great antiquity, and the traces of what must have been a very extensive village. A remarkable feature of the place is the Bisranth, or stone embankment, built by the Budun Sing before mentioned along the river side. It is 1,250 yards long, and on it stand 41 temples in all, 38 of which are sacred to Mahadeo. In the chief one in the centre, the image found by Soorsen is placed. It is apparently a block of perfectly smooth stone, cylinder-shaped, and about two feet high. Thirty-six flights of steps lead down to the water's edge, some of which have been seriously damaged by the force of the stream. The fair is held in a long, narrow valley, formerly an old course of the river running from the Bisranth to the Naringhee Bah Ferry, a distance of about two miles. The nature of the ground makes it appear, at first sight, as if the embankment had diverted the course of the Jumna, so as to make Butesur be on the right bank instead of on the left. There is a popular tradition that Budun Singh one day, when intoxicated, told the Emperor Akbar that Butesur was on the right bank, and afterwards built the Bisranth to avoid the stain of falsehood. The real solution is that this valley for about six hundred yards is a cutting made by him through some high ground which alone prevented Butesur from being completely surrounded by the river. The cause of the loop being forsaken by the stream is another cutting made many years after by Aurungzeb, or a daughter of his, at Naringhee Bah (Naringhee is a corruption from Aurungzeb.) In the rains the valley naturally serves as an outlet for the floods, but the water hitherto has always flowed off in a short time without leaving any trace behind it. Last year the rise of the Jumna was quite unprecedented, and the site of the fair cut up so badly as to make it doubtful whether it would be possible to hold it in the usual place. Several large excavations were hollowed out to a great depth, and much of the ground was little better than a mere swamp from which the water kept oozing up to the surface almost as fast as it was carried off by evaporation. The roads were levelled and made even at the expense of the Fair Funds; but it was left to each individual to smooth the space selected by him for his own occupation. Most of the shopkeepers keep to the same spot year after year, and nothing short of absolute necessity would induce them to change.

Before 1866 no attempt was made to preserve any order amongst the horses, and only two main roads, running down each side of the fair, were marked out. Now the ground is divided into parallel plots of 30 feet wide, with a space of ten feet left clear between each. In the former the horses stand in rows and the latter serves as a path, so that each animal can be easily inspected. This arrangement has been found to work admirably and prevents crowding or confusion. The usual attendance is about 1,50,000, two-thirds of the whole visiting the place during the last two days. Mr. Baker says that on the evening before the bathing day all who have lost a relative during the year put three or four oil lamps on a little raft of straw and float them down the stream. The bathing begins when the moon reaches its full and goes on all day. Each bather offers a lotah of water with a mixture of sandal-wood, *dhup*, *nariyal*, *belputr*, and rice to the image in the chief temple, and makes at the same time a small present in money. The Bhudouria Raja's contribution is five maunds of rice and Rs. 25 in cash. The total offerings amount to Rs. 1,500, and are divided amongst the Jogees, who are the hereditary custodians of the temples. A Brahmin family also has a share in defiance of the rule laid down in the Shastras that the offerings to Mahadeo are to be taken by Jogees alone. It is said to have been formerly very numerous in Butesur, but has now dwindled down to a solitary widow, on whose death it will have become extinct. Another story is that a Bhungee once went near the image, which turned yellow, and did not resume its proper color for three months, during which Brahmins kept constantly praying to Mahadeo and reading the Vedas. The horse and cattle fair must have been at first a mere local mart to supply the wants of the Bhudouria Raja and his followers, and then have gradually gone on increasing in importance, especially under the security afforded by the British rule. Formerly horses of the highest breeds used to be brought, which sold for enormous prices, but the fair now is chiefly supported by the Native Cavalry Regiments, who purchase a large number of remounts every year. They require a good strong, sound, serviceable animal, about 15 hands high, from 4 to 6 years old, and at a price of from Rs. 200 to Rs. 250. A few more valuable horses may still be seen, but the demand for them is very limited. The greater number come from the districts in the Meerut Division and the Punjab; comparatively few are bred in the immediate neighbourhood, and those mostly of an inferior class. At the last fair no fewer than thirteen cavalry regiments were represented, one of which is stationed near Peshawur, and another beyond the Indus, showing the notoriety Butesur has attained. The bargaining between officers and the horse-owners is chiefly carried on through *dallals*, and a great deal depends on securing the services of an efficient one. Native buyers and sellers have a way of their own of setting the price, unknown to bystanders, by putting their own hands under a cloth and carrying on a kind of dumb arithmetic by feeling the points of the fingers. No purchase is considered complete till one rupee earnest-money has been given, when neither party can recede.

The horses, we are informed, are generally fed on drugs and spices beforehand to bring them into condition. Unsoundness in almost every shape and form is terribly prevalent, but more especially from curbs, splints, and spavins. "They originate from the colts being ridden at too early an age, from the sudden and violent turns they are made to go through, and from the way in which they are always kept tightly reigned up and taught to per-

form fantastic tricks. The horses are left entire, which necessitates their being confined and tied up too soon. Fillies, which are allowed to retain their liberty longer, are much more free from defects. At the Rawul Pindee fair prizes are given for the best horses in various classes, and every effort is being made to encourage the practice of gelding colts when young, as in England." Considering the important position Butesur holds as a horse fair, it seems strange that nothing has hitherto been done in this way. Mr. Barker suggests that the example set at Rawul Pindee should be followed, so as to try to induce the natives to adopt a more rational system of rearing and breaking than that which at present prevails.

JEHANGEER'S THRONE AND AKBAR'S TOMB.

In continuation of a very curious collection of inscriptions from Agra—which we noticed at the time—Professor Blochmann has given, before the Asiatic Society of Bengal, a number relating to Jehangeer and Akbar.

Jehangeer's black marble throne in the Agra Fort has often been seen and described by travellers, but Professor Blochmann has been the first to give us a literal translation of the inscriptions this strange relic bears. The stone is a historical record of Jehangeer's rebellion against his father. While Akbar was in Khandesh, Shah Selim —the title Jehangeer had as a Prince—proclaimed himself Emperor at Allahabad, and it was there in 1011 that he gave orders for the cutting of the stone. From Allahabad it was subsequently taken to Agra as will be seen from the following passage from the *Tuzuk-i-Jahangiri* (p. 85, Sayyid Ahmad's edition):—"Daulat Khan [a eunuch, who afterwards was Faujdar of Allahabad and Sirkar Jaunpore], whom I had some time ago sent to Allahabad to fetch the black stone throne, arrived on Wednesday, 4th Mihr, 1019 [August, 1610] with the stone all safe and uninjured. It is, indeed, a fine slab of stone, very black, and very shining. Many believe that it is a kind of touchstone *(sang i muhak)*. It is 3⅞ ells *(dara')* long, and 2½ dara' [3½?] 1½ tasu broad, and its thickness is 3 tasu. I ordered clever stone-cutters to engrave upon the sides suitable verses. They have also made feet for it of the same kind of stone. I sit very often on it." The following is a translation of the inscription:

(He is) a king whose sword cuts the head of the enemy into two halves like the Gemini.

May this auspicious throne be a seat (pr. a place to lean on) for the generous king,

A touchstone for the grandees (who form) the basis of the kingdom, and a test for the sun and the moon upon gold and silver.

It is like a shining moon in the darkness of night; a priceless pearl like a unique gem.

I was lost in thought searching for a *tarikh* for it, seeking help from God, the Judge,

And it (my thought) said, 'As long as the heaven ... the throne of the sun, the throne of Shah Salem shall remain.'

"A test for the sun and the moon upon gold and silver," means a test for gold and silver, in allusion to Jahangeer's opinion that the stone was a kind of touchstone *(kasauti)*. The stone is called "a touchstone for the grandees, the basis of the kingdom," because their gathering round it proved, in the eyes of the rebellious Shah Salim, their faithfulness. The above five distichs run round the whole four sides of the thickness of the stone; but they are separated by two hemistichs in the Mujtass metre, one in the centre of the north face and the other in the centre of the south face—

May the throne of his Majesty Sultan Salim, son of Akbar Shah, be for ever illuminated by the light of God's sun.

When the stone was subsequently brought to Agra, Jahangeer, perhaps ashamed of his rebellion, put the following distichs on the right and left pedestals.

When Shah Salim, as heir to the throne and the signet, sat on the throne under the rejoicings of the world,

His name, auspicious like his nature, became Jahangeer, and his title from the light of his justice became 'the light of the faith' [Nuruddin].

Mr. Carlleyle says—"A hitherto unobserved portion of the inscription on this black 'marble' throne occurs in smaller letters below the inscription on the eastern side facing the river. It appears never to have been noticed hitherto, except by the Rev. Mr. Tribe, when chaplain of Agra, and by myself, and is engraved in the stone, while the rest of the inscription round the sides of the throne is in raised letters." Mr. Carlleyle reads—

The illustrious name before the accession (was) Shah Salim, and after it Nuruddin Muhammad Jahangir Padishah i Ghazi.

Sikandra, where the remains of Akbar lie, is well known, but the following passage from the *Tuzuk*, however, may be new to some. "On Monday, 17th Rajab 1017 [17th October 1608], I went on foot on a pilgrimage to the Mausoleum of his late majesty. If possible, I would walk on my head and (sweep the road) with my eyebrows; for my august father walked, in order to obtain an heir, *viz.*, me, on foot from Fathpore to Ajmeer, a distance of 120 *kos*, in order to pray at the tomb of Khwajah Mu'inuddin i Sijiz i Christi. Hence, if I walk to my father's tomb, I shall after all not have done much. When I entered, I saw no building over the tomb such as I would approve of; for I had expected to see an edifice which travellers would pronounce to be unrivalled in the world. But whilst the building was being erected, Prince Khusrau rebelled, and I was obliged to go to Lahore. The architects in the meantime went on building after their taste. Afterwards, various sums had to be expended, till the whole amount estimated for had been spent. They had been three or four years at work, when I ordered clever architects, who were assisted by experienced people, to build up several parts as I had before directed. Gradually a noble edifice arose, and a splendid garden was laid out round about the mausoleum. Gates of great height, with minarets of polished (*pardakhtah*) white marble were also made. In all, 15 lakhs of Rupees, *i. e.* 50,000 tomans as current in Persia, or 45 lakhs Khanis, as current in Turan, were spent on the building. People called the building after me." Akbar's tomb is in a vault below the ground floor, and bears no inscription. The mortuary hall is nearly 38 feet square, and is surrounded by other chambers of smaller size containing tombs of less distinguished members of the Imperial family. Mr. Beale mentions the tombs of Aram Banu and Shukrunnisa Begum, both daughters of the emperor; but there are several others without name. The marble enclosure on the top of the building contains the *jawab* of Akbar's tomb, made of a single marble block, with the words *Allahu Akbar* and *jalla jalaluhu* inscribed on the head and foot, and round about it are the "ninety-nine beautiful names of God" (*asma i husna*). The inscription on the walls of the enclosure makes no mention of the Prophet, and thus harmonizes with Akbar's religious views, whilst it at the same time completely refutes the story of Akbar's "conversion on the deathbed." It consists of 36 distichs—

In the name of the King of kings, the ruler of eternity, whose being is exempt from non-existence!

All kings on earth hold crown and throne and signet from Him.

Out of non-existence He produces existence; His nature reveals justice and generosity.

Great and small, in consequence of His goodness, are solicitous of His bounty; His throne is the cynosure of the elect and the people.

He designed the essence of water and of earth; he created the pure nature of the soul.

He created two worlds in His eternal kindness; one He concealed and the other He showed.

At the same time He bestowed the transitory world upon kings together with the crown, the royal cap, and the treasury,

So that through their justice flourishing ages might surpass the bloom of a garden in spring;

And, whilst choosing the path of justice, they might look upon strangers as upon themselves.

A king who in his age lives in this manner, is indeed the shadow of God.

It was in 962, that Shah Akbar, the glorious,

Sat on the golden cushion, which on his throne became a lower heaven.

He adorned the world with his justice and equity, and the hearts of the people of the world became glad through him.

At the foot of his throne eminent men of all nations gathered.

If he cast in love a glance on the ground, its (the ground's) essence became better than that of the pure soul.

He took kingdoms in war on the first attack, and in the twinkling of an eye again gave them away at feasts.

As God's kindness, so was his kindness general; and his eye perceived the end of every affair.

Whoever took refuge at his throne, rose like thought (rises) from the fish to the moon.

His fame filled so entirely the whole world, that no one's heart could conceal a secret.

He rendered the face of the earth so bright, that even the Creator praised him.

He thus ruled for more than fifty-two years on earth;

And because by means of his justice he had rendered this world prosperous, he went a bright spirit to the next world.

Before, he was a king of the seven climes; he has now subjugated the eight paradises.

In the eyes of wise men of sense, this perishable world is a Sarai.

Do not expect to find kindness in fate; for in the end fate shews kindness to no one.

Fate is spiteful, do not love it; for love is wasted on the spiteful.

The world is like the wave you see in a mirage: it can never satisfy the thirsty heart.

Fate has kept faith with no one, but breaks its promise at the time of need.

No one remains for ever in this world, and no one has freed life from death's grasp.

How well said the eloquent sage [the poet Sa'di], in the ewel of whose wisdom he found a treasure,

"The world, O brother, remains with no one: cling with thy soul to the Creator, and that is enough."

But although the age through the justice of Shah Akbar, the fortunate, became like the highest paradise,

And although the world was happy in his time, and earth and age yielded to his rule,

Unfeeling and word-breaking fate spitefully removed its love to him from its heart.

However, fate's want of love led him to eternal life.

May his soul for ever rejoice in his Creator, may the world of holiness brighten through him!

LONDON LETTER.

LONDON, *January 29th*, 1875.

MR. GLADSTONE has resigned the leadership of the Liberal party and announced his resolution to pass the remainder of his days —he is only 66—in peace and quiet, and in the walks of literature. He does not, however, relinquish his seat in Parliament, and will appear in the House, occasionally, when there is any question that interests him. His mind has taken a strong polemical turn, and if the session is to be ecclesiastical we shall often have the benefit of his eloquence. The Liberal party, which was dislocated by the dissolution, is for the time still farther weakened by the sudden loss of its leader, and for the last three weeks has been bewildered in searching for one. Lord Granville is, of course, the head of the party, and if he were in the House of Commons there would not be a moment's hesitation in electing him Mr. Gladstone's successor, in every sense of the word. He will, of course, be the leader in the Upper House; but who is to be the head of Her Majesty's Opposition in the most important of the two chambers? Among Mr. Gladstone's lieutenants, there is Mr. Lowe, Mr. Goschen, Mr. Forster and Lord Hartington. Of these Mr. Lowe is unquestionably the ablest and the foremost, but he is disqualified by his temper and consequent unpopularity. Mr. Goschen has a large support, and is considered as fit as any who could be mentioned, as the Liberal premier, but he does not seem at present to have a preponderance of suffrages. The choice seems just now to lie between the Marquis and Mr Forster. The former is a good man of business, a fair speaker, a statesman of moderate abilities, and above all at the head of the great and powerful Devonshire interest. Mr. Forster seems to have the preference, if any one has. He has done good service in the House of Commons; he is, however, a heavy man, and an ungainly speaker, and as for statesmanship not above the calibre of Spencer Percival or Lord Goodrich, and the mention of his name as successor to two such first-rate men as Lord Palmerston and Mr. Gladstone shews how poor the Liberal phalanx is in talent. Mr. Foster did as much as any man to disintegrate the Liberal party by alienating the Dissenters, among whom he was born and bred, but towards whom he subsequently contracted a very strong antipathy. They objected to the 25th Clause of the Education Act, which was intended to support Denominational Education, and he never would give it up. Last year, four of his colleagues in the late Ministry voted against it, and he was the only cabinet minister to support it. If he is chosen leader, he cannot unite the party while he so pertinaciously insists on maintaining the obnoxious clause. As they say in the Nursery tale, "Sister Ann, Sister Ann, do you see any leader coming?" "Nobody," but doubtless when the five years' lease of power, to which the Conservatives are now entitled, has expired, some strong vigorous-minded leader will arise and secure the support of the Liberal party, and then we shall get into the saddle again. Meanwhile, any choice must be temporary and tentative. Sir W. Harcourt is known to aspire to this high office, and his recent speech at Oxford is considered in the light of a bid for it, but he has not been as yet prominently named, though as a speaker there is no comparison between him and any others who have been mentioned. He is coming on, and it will be no matter of surprize if he should come to the front eventually.

Parliament meets this day week, but the programme of the session has not yet oozed out; only we know that constitutional questions are to be eschewed, and attention will be confined to social and domestic matters, of which there is an abundant crop, which the House cannot evade. To all present appearance it is likely to be a dull session. Without Mr. Gladstone for an antagonist, there will be little occasion for Mr. Disraeli's brilliancy. There is a general impression that polemics will take the place of politics, which all who care for the welfare of the Church deprecate. Mr. Russell Gurney has undertaken to bring the subject of doctrine into the House of Commons, and upon this question there is an irreconcilable difference between the Evangelical party and the High Church and Ritualistic party, and any controversy will be inevitably marked by the odium theologicum in the highest degree. Convocation has received authority from the Crown to revise the rubrics, but even on this question there is a spirit of bitter antagonism in the Lower House, and it is not likely that the two Houses will come to any unanimous conclusion. The probability therefore is that when Lord Penzance comes to open his new ecclesiastical court on the 1st July, he will have to decide the cases which will crowd into it, upon the antiquated and obsolete ritual which is habitually disregarded every Sunday, but which being the law he must rigidly enforce without any compromise. To an outsider, it seems preposterous that there should be all this pother about a few feet of distance at the altar, and the shape of the vestments, and the quantity of ornaments which they may be loaded with,—but then these two points are symbolical. The ritualists are understood to be about to petition Convocation to modify the rubrics, and to sanction the eastern position and the gorgeous sacramental vestments; and 5,300 clergymen, including a great many dignitaries, have on the other hand signed a memorial to the two archbishops deprecating any such change of the ritual. Such is the peaceful prospect of this ecclesiastical session.

Mr. Sergeant Ballantyne has just sailed for Bombay with a fee of one lac of Rupees to defend the Guicowar in the *cause celébre* which is to open on the 15th February; he is accompanied by a whole staff of shorthand writers to take down the evidence. Lord Northbrook has the credit of having acted with the most exemplary justice in this case as in that of the Nana. By the fair trial he gives the Prince in the face of the whole country where it will be universally criticized, he vindicates the honour of the British Government before all the princes and the people of India.

The most remarkable event of the last fortnight, and I may also say the most auspicious in reference to the welfare of India, is the speech of Lord Salisbury at Manchester last week. It is marked by that sound judgment, and by those large and liberal views for which he is pre-eminent, although there were one or two remarks which require reconsideration. I allude to the remark that there was no break of gauge in the Government of India; and whether the Secretary were Whig or Tory there was unbroken continuity in its policy; whereas it was on the question of the break of gauge, that he reversed the proceedings of his predecessor. But it was in reference to the question of irrigation that his speech was most valuable. You are well aware that eight or nine years ago the Government was persuaded by some of its officers, that any amount of expenditure on works of irrigation would be wise and justifiable. Last year's famine was represented as giving ten-fold force to these views, and we were assured that the only way to prevent the calamities of famine throughout India was to embark on a universal system of irrigation works, although it would have brought the empire to the verge of bankruptcy. Lord Salisbury stated that he had imbibed the same opinion, but that both he and Lord Northbrook had now seen the utter fallacy of it, and had abandoned it, and that these canals would, in future, be executed with more jealousy and frugality. This dangerous fallacy may, therefore, be considered as finally and definitely discarded. But you will doubtless publish his speech in extenso; it will be read with avidity, and convince you that there is as much wisdom and vigour at the head of the Government in England as there is in India.

M.

LORD SALISBURY'S SPEECH.

IN deference to the judicious suggestion of our London correspondent we have the pleasure to give the Secretary of State's speech in extenso. Mr. Hugh Mason, one of the speakers at Manchester on the occasion of its delivery, remarked that "an abler and more statesmanlike speech upon British India was never spoken to the Manchester Chamber of Commerce, or even to Parliament, and he felt that the noble Lord had laid upon them and upon that great industrial Community the deepest obligation."

Mr. President and Gentlemen, it is, I need not say, a matter of the greatest gratification to me to be so kindly honoured as you have honoured me by the expressions of your confidence and approval—expressions which naturally derive tenfold weight and value from the competence of those from whom they fall. I know that in this room, better than in any other place in the United Kingdom, the policy of the Indian Government can be judged and sympathy with its difficulties can be obtained. You have referred in your address to the recent change of Government. Indian politics, I am happy to say, are different from all other politics in this, that in regard to them we know no distinction of party. A change of Government does not in itself mean a change of policy. Opposition on other matters does not mean opposition on Indian subjects. I was well satisfied with the policy of the Duke of Argyll during the time that I was in Opposition. I never expressed any dissatisfaction with it, and I am glad to be able to follow it out now that I have acceded to office. I observe that in some parts of the country it is now the subject of political comment—in fact, most of the political speeches seem to take it for their basis, that there is no substantial difference between the policy of the present Government and the last, and political controversy is very much becoming a controversy, not as to the future, but as to the copyright of measures that are proposed. This is not a political assembly, and therefore I shall not say what I might in another place have to say on that subject of the copyright of measures proposed. But that which is a taunt with respect to other parts of English policy is our object and aim with respect to Indian policy, and our most earnest desire is—to borrow a figure that has been a good deal in controversy in the consideration of Indian questions—that there will never be any "break of gauge" observed in the Government of India. Refer-

ring to this matter, I must do justice in passing to my predecessor. You have kindly congratulated me upon the efforts which we are making for the improvement of the machinery by which cotton is prepared in India and sent to this country. I heartily join in the interest which you have expressed in those experiments, and I earnestly hope that, through the able agency of Dr. Forbes Watson, we are conducting them to a successful issue. But the credit of them does not belong to me. They were instituted I am not sure whether by my predecessor or my predecessor's predecessor, and I have only come in to reap the harvest which others have sown. One of the first subjects to which the address you have presented to me alludes is the terrible famine by which the district of Bengal and Behar has been recently threatened and the successful efforts which the Indian Administration has made to guard against it. I thoroughly agree with you that this is a matter of deep congratulation for Englishmen; for never were English talents of government more splendidly displayed than they were in meeting this dreadful crisis. Lord Northbrook of course deserves the first praise, but under him men like Sir George Campbell and Sir Richard Temple displayed abilities of which this country may well be proud, and every man throughout the official hierarchy, and many that were without it who were brought in suddenly and without notice to take their part in duties for which they never were prepared, manifested on that trying occasion all those qualities for which in other dangers our race has become so famous, and which were on this occasion displayed, not as formerly, for the destruction, but for the saving of human life. There is nothing to my mind more marvellous than the qualities which are displayed by our countrymen in the East. You have not picked your men with any singular care. You might almost without exaggeration say that you take educated Englishmen at random, and place them in positions of high command, and you find that when the emergency comes nine out of ten, or a far larger proportion—men in whom at home you would have seen no peculiar or conspicuous abilities—will display those splendid qualifications of courage, of calmness, of resource, and of discernment which have justly enabled Englishmen to claim for themselves the title of an Imperial race. This natural power of command we have vindicated for ourselves by a uniform display of command of our countrymen in the East, and I do not think that a more brilliant instance of their exhibition has been yet written in the pages of history than that which has been recorded by the Famine in Bengal. Doubtless, if you ever look at the Indian papers, you have heard suggestions from men who took no part in these exertions that because the crisis had been successfully overcome, therefore its dangers had never existed. I have no doubt that you are sufficiently well-informed to have treated these suggestions with contempt. Lord Northbrook has himself been lately over all the districts that were recently distressed, and he has satisfied himself by close personal scrutiny that the danger was very frightful, and that but for the enormous efforts which the British Government has made, millions of lives would have been sacrificed. Gentlemen, in your address you justly speak not only of the efforts made in the past, but of precautions necessary to be made against future dangers of the same kind. You speak of the necessity of encouraging projects of irrigation and projects of communication. It has been so old and common-place a matter, at least here, to support a policy for the encouragement of works of this kind that it is not necessary I should tell a twice-told tale by recounting their advantages to you. But what, perhaps, it may be desirable that I should do is to point out that, as time has gone on and our experience has increased, our estimate of the relative value of these two means of mitigating distress and promoting prosperity has very much changed. Some eight or ten years ago the belief in irrigation was universal and boundless. Partly led thereto by the enthusiastic representations of some gentlemen of great ability who had made themselves its advocates, we had in this country conceived the idea that it was almost impossible to undertake any scheme of irrigation which should not succeed, and that any expenditure of money on works of that kind was justifiable and wise. That was my own belief eight years ago, but I see that belief is very much shaken in the mind of Lord Northbrook and of the Councillors who surround him; and though, of course, my own opportunities for observation are much smaller than his, still my study of the subject has led me to the same convictions. The difficulties which surround the question of irrigation are very great. We can scarcely yet be said to have had one genuine instance of financial success. The irrigating projects that have been carried out, if they have had for their basis the former works of Native rulers, have in many instances been a financial success; but then, of course, that favourable appearance of the account has been obtained by not charging the former expenditure of the Native Ruler. In those cases where we have begun the projects of irrigation for ourselves we have not reached, I believe, in any one instance the desired result of a clean balance-sheet. At present the Madras Irrigation Company I believe does not even pay its working expenses. The Orissa company pays a little more than that, but something very far short of the interest upon its capital. The great successes of the East and West Jumna Canals were founded in some degree at least upon the works of previous rulers and the same is the case with some works in the Presidency of Madras to which frequent attention has been called. One of the difficulties is a difficulty which, perhaps, we ought to have foreseen, and that is that, although you may provide the water, the cultivators will not take it; and of course irrigating machinery where people will not irrigate naturally does not answer. The people are slow to believe in anything of this kind, and slowest of all to believe in anything that their rulers do. Their first idea—I suppose it is the idea in most countries,—certainly it is in India—that anything that is done by the Government is some subtle device for getting money out of their pockets and they cannot be persuaded—partly their natural torpor, partly their suspicion prevents them—to take the water which is brought to their fields. Of course the suggestion has been made that if they will not take it you might force them to do so on the principle that you force a man to pay his rates for lighting or paving though he may never go out and may never use his eyes. But of course a confusion of this kind involves political questions of very serious character. It is said to involve even questions of breach of faith. I should be sorry to sanction the latter view, for I myself doubt whether it is true, but it is necessary in considering irrigation schemes to bear in mind that until you have obtained the consent of the people to the use of the irrigation it is useless to expect that any return upon the capital can be obtained. There are one or two other difficulties of a curious and yet of a serious character. It is found that in irrigating a district, as might be expected, you are apt to turn it into a marsh; and however good a marsh may be for rice, it is not equally good for human beings, and the result has been that in some districts where we have paid an enormous sum to bring water in we have to pay an equally enormous sum to take the water out again. The effects, though admirable, when vegetation are so bad in some places upon the population that a very large additional expense to the original estimate has to be incurred for the purposes of drainage. There is another now obscure difficulty which we have to bear in mind, and that is that in one or two places irrigation, instead of being a fertilizer, has turned out to have an actually opposite effect. It produces an efflorescence of alkaline salts upon the soil which will turn fertile land into a desert. Whether this is a difficulty peculiar to the soil irrigated, or which arises from a peculiarity of the water in use in these districts, has not yet been ascertained, but it is one of the difficulties that have alarmed some high authorities in India, and one of those which makes us accept all projects of this kind with caution. Therefore, although it is our intention still to pursue a policy of irrigation where we see good cause for it, and where we have thoroughly reliable grounds for hoping for a return, undoubtedly we shall pursue it with more jealousy and more frugality than was our inclination some years ago. Now, in your address I see that you have put the question of communication by railways last. You will not be surprised, after what I have said, to hear that I am rather inclined to give to it the first place. I believe that the financial future of India depends upon the due development of her railways. Of course, like all other operations in a country which is not rich, it must be done with caution. You must not overburden your capital account. But still we have no such financial difficulties to fear as have attended us in the matter of irrigation. There is a popular notion that railways in India have not paid at all, or paid exceedingly badly, and as a financial fact there is no doubt that we have to pay a guaranteed interest of some £1,500,000 or £1,700,000 every year to make up the deficiency. I believe that result is in a great measure due to the mistakes which attended the original construction of the railways. It was a new matter; many blunders were made, and, though many men gave all their earnestness and all their ability to the task, still it was not to be hoped that they should escape from every kind of error; and to show how much of the comparative failure of railways is due to accidental causes I will mention just one fact which I had brought out by calculations made the other day. The money for all these railways in India was raised by a guaranteed interest at 5 per cent. I inquired what the difference would have been if, instead of raising the money by guaranteed interest the Indian Government had raised the money by borrowing from time to time, as its credit stood at the time in the open market. I found that we should have saved the payment of £600,000 a year by simply altering the form of our financial action. If, instead of adopting the system of guarantees, we had adopted the more orderly system of borrowing money as we wanted it, we should have saved that enormous sum. At the present rate of interest that presents a capital of £15,000,000, and my impression is that that £15,000,000 would go very far to supply all the railways which India now wants. At all events it would supply a very large number of them. So that you see the difficulty about our railways has been to a great extent accidental, and that we may pursue that policy with more confidence than the figures which appear on the surface of our financial accounts may lead you to entertain. There is one hopeful sign with respect to railways, and that is that the confidence in them is not confined to ourselves, as the Native Princes have taken them up with considerable earnestness. Holker has had his railway under construction for some time, and you saw in the papers the other day an account of the opening of the railway of the Nizam. Scindia has also undertaken to make a railway, and when told of the sentiments which had been expressed at home in conformity with the recent policy which was pursued about the narrow gauge—3ft. 3in.—he at once declined to have anything more to do with it. He said he would have a railway of the largest gauge or none at all, and the result was that, in order to carry the line through his dominions, it was necessary to abandon the policy which has for years been adopted with respect to branch railways and to give him a railway upon the full gauge. I mention the anecdote to show the keen and lively interest which is taken in these matters by the native Princes of the larger sort, and how much we may hope from their enlightened assistance in carrying through their dominions a system which will add so much to their wealth as well as to ours and the general security of the Empire. Gentlemen, there is one other matter in your address which I ought not to pass without a word, and it is that which concerns the duty upon cotton goods and yarns. I have already had the pleasure of conferring with you, Sir, and a deputation at the India Office upon this subject. I am sorry to say that I see by the comments which have been made in India upon what passed at that meeting that there is an impression that I was merely giving you an official answer, and putting you off without having the slightest intention of trying to remove the grievance of which you complain, and I think there is an idea that perhaps it would have been better to have told you at once that you were not to have what you wanted, and that I merely thought it would be well to put you off with any excuse at all. Now, I wish that there should be no misunderstanding on this matter. I have a very strong conviction that the duty ought to go and—though I am fully alive, as everybody who has charge of matters of such magnitude must be, to the necessity of attending to qualifying circumstances, and above all, those financial exigencies which, least of all in India, we can ill afford to disregard—we will do our best to get rid of it. Last night I ventured to say that when Manchester was urging her own interests she was urging the interests of India as well. There is no case where the truth is more obvious than in the present. I will not merely urge upon you what I may call the common-places of Free Trade doctrine, a doctrine which was originally born here and triumphed here before my concern with politics began. It is not merely the interest of the consumers—a much more important interest than the interest of the producers, for your consumers are 250 millions of people, and your producers are much fewer than that; but in India there is a further consideration. You have the remarkable phenomenon to which I begged, Sir, to call your attention on a previous occasion. You have the cotton grown upon the spot. You have the consumers buy-

ing the manufactured article on the spot. You have cheap and abundant labour, and labour that in respect of delicateness and softness surpasses anything that you can obtain in this country. And you have a very large supply of coal right under the feet of the people in that country. Yet how is it that manufactories are not springing up with rapidity? One thing is wanted; that one thing is capital. Capital will go, as we well know to any part of the world. It will face any difficulties and dangers in seeking employment. But there is one thing which frightens it back, and that is any great uncertainty as to the conditions under which it is to be employed. If it knows the worst, it can adapt itself to the worst; but if there is the probability of some great change of uncertain scope and import, upon which some attach a large importance and some a small importance, the calculations become altogether so uncertain that no man of capital likes to risk his money in the venture. It is precisely this state of things which is produced by the existence of this cotton duty in India. Everybody knows it must go. Everybody knows that a free-trade country like England cannot permanently maintain a duty of this kind. But the time when it will go must be a matter of uncertainty, and the effect of its going is equally a matter of dispute. My own belief is that the effect will not be very great, but some people think it will be a matter of much importance. Of course, the capitalist in England shrinks from building a mill and setting up machinery when a political change may at any moment happen, which in the judgment of persons upon the spot will produce the largest effect upon the returns of the venture he is making. Therefore I believe if it were possible for us to abandon this duty to-morrow we should be taking a step more important than any other we could take for promoting the growth of such manufactures as can properly and healthily flourish in that country. I don't mean to say that a large class of cotton manufactures in India can ever compete, even in her own market, with Manchester; I don't believe that to be the case, but most of those in this room will agree with me there is another large class in which such a competition may very reasonably be expected. I don't think there would be any greater boon to the cotton industry than to place it upon a secure, sound, and certain footing, so that everybody might know exactly what he was about. I confess I heartily sympathize with the phrase which I see in the address regretting that any undue encouragement should be given to men who are basing their hopes upon a protective duty. Undoubtedly that is very unjust; and if men are basing their hopes and expending their money in the hope that this duty will last I warn them that any evil consequences which may ensue will be upon their own heads. But now you will say, What are the reasons why practical effect cannot be immediately given to these views? I am happy to say that since I had the pleasure of meeting the deputation, the Viceroy has appointed a Special Committee to consider the possibility of modifications in the tariff, and he has specially directed their attention to this subject of cotton, and has at the same time noted for their guidance that the Indian Government is not to pursue a protective policy, and that any duties that are levied must be levied purely and simply as a matter of finance. He has thus laid down the lines upon which our policy proceeds. What the result of it may be I cannot at this moment say; and of course I can readily see the difficulties which lie in the way of an immediate alteration. The truth is, that you in this country have your minds thoroughly pre-occupied with the enormous successes which financial remissions have had in England, and there is a feeling which it is difficult for an Englishman to get rid of, that if we would only dispense with the duty the trade would pay us back for the sacrifice we made. Just as other nations have found to their cost that you cannot export English institutions, and that if you attempt it you will fail, so I fear it is equally true that you cannot export English maxims of finance. In order to apply the bold principles of our recent English finance you must have the English people to deal with. If you have a community more torpid, less wealthy, less enterprising, and less elastic, you must not expect that remissions of duty will have the effect upon the revenue to which we have been accustomed among ourselves. I have recently examined the effect that has come from modifications in the tariff during recent years. There have been many such modifications, but you may look over the list of trade exports, or trade imports, or revenue returns, and you never will be able to discover any of the elastic rising of a trade after the reduction of duty which has been so great an encouragement to financiers in England. The thing does not exist, and we must not count upon it, and the claims upon the Indian Exchequer are very large. I have dealt with these public works which it is so necessary we should do. We must never forget that there is still a very large amount for us to perform before our task is done. We have many blots in our Indian financial system to remove. We have those internal Custom-houses, which do not depend entirely upon ourselves but to a great extent upon the help of our native allies, but which we are still deeply anxious, whenever we are able to do so, to modify. And then, gentlemen, there is in India the military question. Recent events in many parts of the world must have taught you that the Indian Government can never allow itself to be surprised. Military vigilance is necessary in all parts of the world, but it is necessary in India in a very different sense than that in which it is necessary in England; and combined with the necessity for a stern and watchful state of military preparation is that constant necessity to provide for the health of your soldiers, which is a growing and imperious requirement pressed upon us, and one which we can least afford to disregard. I have gone over, I am afraid at some length, but I thought it my duty to do so, the principal points touched upon in your address, both to show that we were fully alive to their importance and also if possible to remove any misconceptions as to our views which may have existed either in your minds or in the minds of those who may read these proceedings at a distance. I will only conclude by earnestly hoping that, whatever Secretary of State may from time to time have to submit his conduct to the ordeal of your judgment, it may meet with your favourable consideration, and that you may recognize in the policy of the Indian Government that feature which its origin ought to make enduring, a regard to the commercial intercourse of the two countries as one of the first objects of solicitude which the Government can bestow. That commercial intercourse should be encouraged not only in justice to the material interests of the two peoples, but for much higher reasons. It is only by the increase of the agricultural industry to which you have pointed in your address, and which depends upon the closeness of our commercial ties, that civilization can make its true progress in India; that those enormous multitudes over whom Providence has set us to rule can be awakened from their ancient and secular torpor, and it is only by close and constant intercommunication which a vigorous commercial intercourse produces that a sense of community of interest, a sense of community of nationality, can be brought into existence between these two great peoples, which is the one link that is still wanting to secure the pre-eminence and the prosperity of this mighty and this united Empire.

HINDOO LOGIC.

On several occasions lately we have alluded to the valuable work which has just been produced by Mr. Robson. We now give from the appendix to his book an illustration of the Indian system of reasoning, from which it appears that the Hindoo syllogism is divided into five parts. They are as follow.

1*st*, The Proposition (*pratagya*) as:	The mountain is fiery.
2*nd*, The Reason (*hetu*),	Because it gives forth smoke;
3*rd*, The Example (*Udaharna*),	For whatever is smoky is fiery, as a culinery hearth;
4*th*, The Application (*Upanaya*),	But so is this mountain smoky:
5*th*, The Conclusion (*Nigaman*),	Therefore it is fiery.

Mr. Robson tells us "The last three members of this syllogism correspond very much with the Aristotelian, and either the first two or last two seem superfluous. The advocates of Hindoo Logic defend it on the ground that it is rhetorical rather than philosophical, designed to convince an adversary, to display a truth already discovered rather than to investigate the truth itself. But this is its great vice. There is no canon for the investigation or discovery of truth. It is obvious that its weakness lies in the third member, the example. If this were always made a true induction or a carefully tested example, it would be legitimate. But it admits of a simple instance establishing a universal conclusion, or the most distant analogy being taken for an instance in point. This is the defect of the syllogism, and it is the defect of all Hindoo reasoning. I once asked a pundit to state logically his argument that man's spirit was sinless, which he did as follows:—

> Man's spirit is sinless,
> Because it is distinct from the sin which man commits;
> For all things are distinct from that which they contain, as the water of a muddy stream is distinct from the mud which it contains;
> But so is the spirit of man distinct from the sin which it may be said to contain:
> Therefore it is sinless."

In the pundit's answer we have an attempt to put into a logical form a very favourite argument with the Hindoos—Spirit is free from sin as water is distinct from all the dirt which may be mingled with it.

THE SYSTEM OF BOODHA.

Mr. Robson thus concisely analyses the religious views taught by Sakya Moonie, whose influence on Oriental systems of thought has been so great that it is of the highest importance to realise what it was he desired his followers to believe and do. The teaching of Boodha may be divided into two parts—Doctrinal and Practical. The former consists of what is known as the 'Law of the Wheel,' or the Four Great Verities which he discovered under the mimosa tree. These are—

1*st*, Suffering exists wherever animated being exists.

2*nd*, The cause of suffering is desire, *i.e.* a craving for what is only a temporary illusion.

3*rd*, Deliverance from suffering can be effected only by deliverance from desire, or by attaining Nirvana.

4*th*. Nirvana can be attained only by following the method of Boodha.

The method included in the fourth verity consists of eight paths leading to Nirvana. Of these the first four applicable to all are—1*st*, right vision or faith (*of* Matt. vi. 22); 2*nd*, right judgment or thoughts; 3*rd*, right language; 4*th*, right actions. This is a simple enough statement, that Boodha's disciples must have the right faith, and seek to be perfect in thought, word, and deed. The remaining four paths are applicable especially to the priesthood, and show the influence of his false conception of man's end, or Nirvana. They are—5*th*, right means of livelihood, or the profession of a recluse; 6*th*, right application of the spirit to the study of the law; 7*th*, right memory, or freedom from error in recollecting the law; 8*th*, right meditation, which conducts the intelligence to a quietude nearly approaching Nirvana.

The Practical part of his system has the same double aspect both in its negative and positive injunctions. The negative part has five commandments binding on all: 1*st*, not to kill—extending even to animal life; 2*nd*, not to steal; 3*rd*, not to commit adultery; 4*th*, not to lie—this extends to the using of improper language; 5*th*, not to use strong drink; and five binding specially on priests: 1*st*, not to take repasts at improper times; 2*nd*, not to look at dances and plays; 3*rd*, not to have costly raiments, perfumes, &c.; 4*th*, not to have a large bed or quilt; 5*th*, not to receive gold or silver.

The positive part of the moral law consists in enjoying six virtues on all—Charity, purity. patience, courage, contemplation, science. Of these the first—charity—is the most important, and includes caring not only for man, but also for all animate beings down to the smallest insect. Twelve observances are further enjoined on recluses: 1*st*, to use cloths made only of rags picked up in burying-grounds or on the road; 2*nd*, to have only three such coats all sewn by the wearer's hands; 3*rd*, to have a cloak of yellow wool to cover all, prepared in the same way; 4*th*, to live only on food given in charity and without asking; 5*th*, to take only one meal daily; 6*th*, never to eat or drink after mid-day; 7*th*, to live in the forest or jungle; 8*th*, to have no roof but the foliage of the trees; 9*th*, to sit with the back supported by the trunk of the tree; 10*th*, to sleep sitting and not lying; 11*th*, never to change the position of the carpet or quilt when it has once been spread; 12*th*, to go once a month to burying or burning grounds to meditate on the vanity of earth. These are rules which Boodha is said to have followed himself, and which are enjoined on his disciples.

EPITOME OF NEWS.

Bengal and Calcutta.

— The Bengal Government is about to establish a reformatory for juvenile offenders at Howrah.

— The Viceroy will leave Calcutta on the 15th proximo for Delhi.

— Five hundred men proceed against the Naga Hill tribes.

— The condition of the Calcutta Dockyard is to be investigated by a committee appointed by the Viceroy.

— It has been decided that the new district lately created in Tirhoot is to be called the Durbhunga District, and the remaining portion the Muzufferpore District.

— A report is becoming prevalent that Government contemplate appointing no fewer than twenty-three natives to zilla and additional judgeships in Bengal.

— The Hon'ble A. G. Macpherson, a Judge of the High Court of Judicature at Fort William in Bengal, took his seat as Officiating Chief Justice of the Court on the afternoon of the 13th instant.

— Colonel A. E. Osborne officiates as 1st Examiner in the Military Pay Department when Colonel Hamilton goes on leave, and Captain C. F. Thomas as 2nd Examiner in the place of Colonel Osborne.

— Major Austen has made a request to General Stafford, who has referred the matter to Government, to be allowed to remain in the Duffla country for another six months, in order that he may push his surveys as far as the snows.

— On appeal the sentence of a fine of Rs. 500 and three months' imprisonment passed on Baboo Sasipada Banerjee, for libel, has been commuted to a fine of Rs. 50 only. The sentence of three months' imprisonment upon the other defendant has also been set aside.

— General Stafford and Colonel Keatinge have full authority to act vigorously against the Naga tribes concerned in the recent massacre. They expect to have a force in the Naga Hills by the end of this month.

— It appears that Mr. R. G. Melville, alias Sheik Abdool Rehmon, who was lately dismissed from the Bengal Civil Service, applied for a refund of the subscriptions he had paid to the Bengal Civil Fund but he was informed that, under the rules, such refund could not be allowed.

— The actual collections from irrigation works in Bengal during the year 1873-74 fell below the current expenditure to the extent of Rs. 1,43,268, which, added to the loss on this account in previous years, raises the total deficit on account of current expenditure to Rs. 6,53,994.

— The Faculty of Arts of the Calcutta University, at a meeting held on Saturday last, elected the Hon'ble Mr. Justice Markby, President of the Faculty for the ensuing official year, and Mr. Atkinson and Rev. Mr. Dyson representatives of the Faculty in the Syndicate.

— About 566,258 acres of ungranted waste lands situate in the Sunderbunds, south of the district of Jessore, containing forests yielding *sunder* timber, "the preservation of which is important in the general interest of the country," have been set aside by order of the Lieutenant-Governor as a reserved forest tract.

— The construction of the Hastings Bridge is likely to be delayed longer than it was, at first, supposed, when the plan and estimates were prepared and submitted to Government. It has now been proposed, on economic grounds, to order iron girders from England instead of getting them manufactured in India.

— A certain Mr. Le Blanc has had to pay the Lunatic Asylum a two weeks' visit in consequence of attending the Methodist Meetings in Calcutta. Mr. Le Blanc, it seems, holds views of his own about the Bible, and has been accustomed at these meetings to give free expression to them. He was made to enter the Asylum by a ruse and could not obtain his liberty till four Justices had pronounced him sane.

— There are in Bengal ten Government colleges and high schools and five aided colleges, besides the unaided colleges of La Martiniere, Serampore, and the Doveton College, for those students who have passed the University Entrance examination. Of the Government institutions, only four at present teach the entire course for the B.A. degree; the instruction at the others being limited to the standard prescribed for the First Examination in Arts.

— The number of candidates at the University Entrance examination of December 1873 was 2,544, being an increase of 400 over the previous year. Of these, 2,099 were from Bengal, but only 640 succeeded in passing; and it is evident that many students were allowed to present themselves who ought to have remained at school for another year. From the schools of the Dacca division, only 70 candidates passed out of 272; from Patna 26 out of 134; and from Bhagulpore 10 out of 60. On the other hand, the Orissa schools succeeded in passing 13 candidates out of 20, and from Calcutta there were 458 candidates, of whom 194 passed.

— Mr. John Stewart, Managing Proprietor of Doolahal Factory, North Luckimpore, Assam, has sent to the Agri-Horticultural Society a specimen of tea shoots with ten separate buds instead of one, as never having seen the like before, he thinks it may be uncommon and of some interest. Mr. Kurz, of the Royal Botanic Garden, reports that "such growth is not unusual, and in most cases the result of rich soil and vigorous vegetation. It is simply cohesion between the branches themselves, which thus form apparently a simple steam, with increase of leaf bud, according to the number of the branches united. The present case is an approximation to fascination, indeed intermediate between simple cohesion of axial parts and true fascination, where numerous buds are produced in close apposition, so that the branches become more or less compressed."

— Under the Brahmo Marriage Act (Act III of 1872), during its first year of operation, 1872-73, six original marriages were solemnized. Last year there were only four Brahmo marriages in Calcutta, Rungpore, Dacca, and Backergunge. It is noteworthy that three of these cases were widow marriages, and two were also intermarriages of different castes. In all the cases both parties were adults, and, except in the case of one female of low caste, were able to read and write. Although the Act is not so much resorted to as might have been anticipated, the possession of the Act has given great satisfaction to the Brahmo community, and the marriages that have been solemnized under its provisions are, in the present state of Hindoo society, of much social interest.

— The Steamer *Mary Grant*, which foundered at sea on the 25th August 1874, had been surveyed on the 4th August by the Government Surveyor, and her engines and machinery had been examined on the 6th August by the Chief Engineer of the Dockyard. These officers considered her sound and in good order, and a certificate under Section 4, Act V (B.C.) of 1862, was accordingly granted to her for a period of fifteen days from the 6th August. She was plying between Calcutta and the Orissa ports. She went to sea from Calcutta on the 19th August, when only two days remained of the period covered by her certificate, and she foundered on the return voyage from Orissa to Calcutta, after the term of the certificate had expired. In the Surveyor's report upon the vessel it is stated that she had three boats. But she went to sea with two boats only. It is, however, to be observed, that the loss of life which unfortunately accompanied the loss of the vessel, was not attributable to any deficiency in the number of boats, as the two boats which the ship carried could have contained the crew and the passengers.

— It appeared to the Lieutenant-Governor that the circumstances which attended the loss of this ship showed the necessity for some revision of the existing rules for regulating the survey of steamers under the Act. It could not, his Honour thought, have been contemplated by the law, that certificates should be granted for such a period as fifteen days. If a vessel is not in a condition which would justify the Surveyor in granting a certificate for three months at least, she is not fit to go to sea at all. The practice of granting certificates for such short periods as fifteen days is also likely to lead to carelessness on the part of surveyors. It also appeared necessary to provide in the rules against a vessel's being allowed to go to sea with a smaller number of boats than she had carried when the Surveyor's certificate was granted to her. The Lieutenant-Governor was also of opinion that explanation was necessary from the Surveyor, who was shown to have given a certificate of soundness to a vessel which foundered three weeks afterwards without having met with any accident, and without having even encountered a gale of wind. The Lieutenant-Governor having considered the recommendations of the Master Attendant has directed that the following additions be made to the rules previously issued under Section 8, Act V (B.C.) of 1862. At the end of the present Rule 13, the following words are to be added:—

"Provided that no certificate shall be granted for a shorter period than three months."

After Rule 13, the following new rule will be introduced, the numbering of the subsequent rule being altered accordingly:—

"14.—The Surveyor shall in all cases specify in the column of remarks of the certificate, the number and capacity of the boats carried by the vessel."

— The new garden of the Agri-Horticultural Society at Alipore was opened on the 1st July last for the distribution of plants to members. One hundred and sixty-two members indented, but only 152 availed themselves of delivery orders. From returns made by the gardener, it would appear that 4,520 ornamental plants, including roses, have been distributed; besides 1,130 grafts and seedlings of fruit trees, and 5,942 cuttings of ornamental shrubs and rose plants. So far as meeting the wishes of members, generally, the distribution has not proved so satisfactory as the Council could wish, particularly in respect to new plants and roses. Of the ordinary more popular plants, the garden was well-stocked previous to the arrival of the gardener in 1873, and the fruit grafts were supplied from the Society's old orchard; and so, in these particular plants, the requisitions of members have been fairly responded to. The Council regret to report that the experiment of throwing open the garden to the general public for the sale of ornamental plants,

as a means of making the garden in some measure self-supporting, has proved a failure. The whole question of the economy of the garden is now under consideration and revision by the Garden Committee.

— The Punniar colour, belonging to the Buffs, has been laid aside for ever. The *Dragon*.—A paper published by the regiment—thus notices the event: Interest was doubly aroused when an old and very soldier-like looking man, dressed in civilian clothes, but wearing three decorations on his breast, stepped out from amongst the spectators, and advanced towards the colour. Then all knew at once that Mr. G. Stratford, quartermaster-sergeant of the Buffs in years gone by, had come to carry for his old regiment the colour he helped to win for it, and that the hope expressed by us some months ago was not doomed to disappointment. As Mr. Stratford took the colour, the band and escort under command of Sergeant-Major Pepper moved up, and Mr. Stratford took his place in the centre. Then, finding himself once more in the ranks of the Buffs, and as the first note of the old and well-loved "quick step" sounded in his ear, the weight of seventy-five years seemed to fall from his shoulders, and he marched down the front of his old corps with as smart a step as any man in the escort, and with as bold a front as he showed on that day five-and-thirty years ago, when the colour he now bore yet waved unwon over the ranks of its courageous followers. In this goodly fashion was the Punniar colour borne on its last day with the regiment, and it will now henceforth lie in the case in which Mr. Stratford laid it on the 1st of February, 1875.

— Messrs. Finlay Muir & Co. have brought an action against Messrs. Avdall & Co.. to recover the sum of Rs. 12,778-11-3, being the amount of damages stated to have been sustained by the plaintiffs by reason of the failure on the part of the defendants to pay for a cargo of coal at Rs. 21 per ton. It transpired in the course of the inspection of documents that a letter was discovered dated the 23rd January 1874, in which the plaintiffs informed their Glasgow firm that the coal had been sold at the risk of the purchaser and that they had bought it in for themselves. It appeared in evidence at the trial that the coal was advertised by Messrs. Mackenzie Lyall & Company only one day prior to the sale, and that the broker, who purchased it in the name of Gris Chunder Mookerjee and Brothers, received his instructions from Mr. Williamson, the manager of the plaintiffs' firm. It also appeared in evidence that the coal was shortly after the sale re-sold in small quantities by the plaintiffs, to other parties at considerably advanced rates—rates higher in fact than that agreed to be paid by the defendant. On these facts appearing, the Court without calling on the defendants delivered its judgment. The presiding Judge, Mr. Justice Macpherson, said "I think, the plaintiffs have failed to prove their damages; if they had dealt with the coals, after due notice and advertisement, they would have been entitled to charge the defendant with the loss. Their course of action, in this matter is most peculiar. and such as I have not met with in all the years I have been in this court. They hurried on the sale with the least possible publicity, and then bought them at the auction at Rs. 13 per ton, and afterwards re-sold at considerably advanced prices. It seems to me perfectly clear that if a vendor declines to accept goods which he has bought, and they are sold on his account and risk, and if the vendor buys them in, he renders himself accountable to the person on whose account he has sold. It is contrary to the commonest principles of equity to make a profit by damages when the goods are bought at low price, at a sale which the purchaser has himself brought about. If the person, who bought at the sale was a stranger, a line may be drawn as suggested. But the circumstances of the whole of this re-sale are peculiar and highly unsatisfactory. On the 16th January 1874, the coal was advertised for sale. Mr. Owen as a coal broker received instructions from Mr. Williamson to purchase the coal in the name of Mookerjee Brothers, and I think it was nominally bought for the plaintiffs. Even admitting that there exists a partnership between the plaintiffs and the nominal purchasers, indeed, I think, it is exceedingly doubtful whether the purchase was not substantially and in fact the plaintiffs' purchase. Their letter of the 23rd January to their Glasgow firm distinctly states that they were the purchasers, though Mr. Williamson now says that that was a mistake. Why should I believe Mr. Williamson now, more than his own statement in the letter which was written at the time of the transaction?"

North India.

— The Mohurrum has passed off at Lahore without the least sign of a disturbance.

— The demand for houses at Simla this season is said to be unprecedented.

— The Viceroy arrives in Simla about the 7th of April, after visiting Dehra Doon, Roorkee, Nahun, and other places.

— It is rumoured that the Indus Valley State Railway is to be constructed by the Scinde, Punjab and Delhi Railway Company.

— This has been at Kumaon a singularly cold and bleak winter, with severe frosts, which have considerably affected the tea bushes.

— A native is reported to have been killed at Peshawur by a European officer belonging to the Artillery.

— A fine female rhinoceros was shot in the Bettiah jungles not many days back; the first seen there within any one's memory.

— Lieutenant G. W. Anson, of the Jhansi Commission, is to be Private Secretary to Sir John Strachey —a capacity in which he served the last Lieutenant-Governor.

— Captain Molloy's latest diary speaks highly of the treatment of the British Agency in Yarkund, and mentions the recent arrival of some Russian merchants in Kashghur with consignments.

— On the 2nd of this month, Lieutenant Conran, of the 29th N. I., was shot at while sketching near Fort Michni. The shot was well directed, but as the distance was four hundred yards, the ball fell short. The shot was fired within our territories.

— The Dhurmsala Municipality announce that they intend, for the better preservation of game-birds in the neighbourhood of Dhurmsala, to levy a license-tax of Rs. 5 per season from all shikarees and others who may wish to shoot in the local forests.

— In the North-Western Provinces rain is reported from all stations except Benares, Jhansi and Hameerpore: it has been of great use. Good and abundant rain has much improved the prospects of the spring crops in the Punjab. The fall appears to have been general throughout Central India: hail fell at Gwalior, and heavy rain at Bhurtpore and Ajmere. Agricultural prospects are generally excellent.

— Active preparations are in progress for the Viceroy's Durbar at Delhi. The attendance will be considerable, while the elephant procession—in which the Chiefs present will pass through the streets of the Moghul capital in the suite of the Viceroy—will, according to the *Pioneer's* Delhi correspondent, "be a sight worth coming far to see." As the Viceroy arrives in Lent and departs in Easter, there will be no balls given or attended by His Excellency.

— The same paper reports that a case of suttee was recently performed by a widow in a village in the Azimgurh District. The widow first tried to starve herself and the child, but, finding his process too slow, or too open to observation, she secretly accumulated a great heap of straw and wood, placed a charpai on the heap, lay down with her infant in her arms, and set fire to the straw. No one appears to have had the faintest intimation of the wretched woman's purpose.

— The sepoy who lately shot the Subadar of his company while at musketry practice, at Jhansi, has been sentenced to be hanged. A correspondent of the *Delhi Gazette* says that there was a strange similarity between this murder and that of Captain Bird at Aldershot last summer; for just in the same way that no one of the many present there actually saw the murderous rifle raised and discharged, so in this case, though all the men of the company were standing about, and a European officer was superintending the practice, no one saw the deed committed.

— The Government of the N W. Provinces having been called upon by the Government of India for an expression of its opinion on the subject of educating poor White and Eurasian children, has replied, after reference to the Director of Public Instruction. that the Lieutenant-Governor concurs in the views expressed by one of the late Viceroys, that if the Government did not take steps to educate these classes they would, in time, prove a source of danger to the State. He has, anticipating sanction, authorized the Director to open free elementary schools of instruction, but Sir John Strachey would make it conditional that everybody obtaining Government employ must educate his children. If he cannot afford to do so, Government will undertake the duty, but to parties in such employ the education shall be compulsory.

— Last year the generality of the Courts-Martial charges were, among the European soldiers, drunkenness and insubordination accompanied with violence to superior officers; the cases were—of drunkenness alone, one; of insubordination and violence, without being under the influence of drink at the time of such commission, eight; of causing death, one; of grievous hurt, one; of attempt to commit homicide, one; and of drunkenness and loading his carbine for unlawful purposes, one. There were three officers tried during the year; a medical officer for gross neglect of duty, of which he was acquitted; a captain for borrowing money from a native officer of his regiment, for which he was sentenced to be severely reprimanded; and a lieutenant, for scandalous conduct unbecoming an officer, which resulted in his being cashiered. Among the native courts-martial, four of the criminals were Jemadars, brought up on a charge of manifesting conduct unbecoming the character of an officer: of these, one was found not guilty, one was sentenced to dismissal but his sentence was not confirmed by the Commander-in-Chief; and the other two were placed under suspension from rank, pay and allowances for a time. A sepoy was tried for assaulting his superior officer, for which he was sentenced to imprisonment with hard labour for three years. There were fifteen sentences of penal servitude, of 5, 7, 10 and 15 years' duration and four of imprisonment with hard labour for periods varying from 84 days to five years.

— The *Pioneer* gives the following version of the capture of Herat by the Ameer's troops. Our telegrams from Peshwur have already informed the reader that former gloomy accounts of the state of Ayub Khan's affairs at Herat were not without foundation. Further information has now reached us. The expedition against Shahghazi Shere Dil, undertaken by General Fakir Mahomed, appears to have been in earnest, as the General attacked and captured Ghorian, and killed Din Mahomed Khan. Immediately after this, however, he appears to have returned to Herat, and then to have given up all hope, and to have started for Meshed with his family accompanied by Sirdar Mahomed Hussan Khan. The next day Ayub Khan, who was apparently at Pul-i-Subzwar, sent his troops into the citadel at Herat, and then himself fled to Meshed. On the flight of these chiefs their followers appear to have given up all hope of resistance, and Herat was immediately and peacefully occupied by the Ameer's adherents, Shahghazi Ata Mahomed Khan being apparently the first to enter the city, followed soon after by Shahghazi Shere Dil Khan and Khan Ata Jamshedi. The Cabul troops, under Mustaufi Habibula Khan, the Commander-in-Chief, and Mahomed Umar Khan, reached Furrah two days after Ayub Khan's flight, and, on hearing of the fall of Herat, immediately pushed on a detachment to assist in the occupation of the place, under Adbula Khan. Everything, however, seems to be quiet, and affairs are

likely to be arranged without any bloodshed, except that the Cabul authorities appear to be incensed at the death of Din Mahomed Khan. The Ameer has arrested Mir Akbar Madad Khan, the father of General Fakir Mahomed, and has confiscated his property.

Bombay.

— Sir Jung Bahadoor left for Nepal on Wednesday.

— From the 1st March next the mail-train from Bombay for Calcutta will leave at half-past four in the afternoon, instead of in the morning.

— At Tanna one Rama has been sentenced to death for killing a woman whom he believed to have caused the death of members of his family by sorcery.

— Several enterprising Parsees have started an enormous raffle at Poona, with a stock of "ten thousand prizes," ranging in value from rupees two hundred to two annas.

— Mr. James Flynn, who has been appointed chief interpreter to the Baroda Commission, will be paid Rs. 100 a day from the time he leaves Bombay up to his return.

— The steamer *Woodburn*, about the fate of which some anxiety has been felt, has been heard of, she having entered the Canal on the 4th instant. It appears that the delay in reaching Suez arose from calling for coals at Jeddah.

— A serious gunpowder explosion took place at Kirkee on Friday. One serjeant and four natives were killed, and the barracks severely shaken. The explosion took place in the press-house, containing a thousand pounds of gunpowder.

— The intense cold, in the upper part of the Persian Gulf, still continues; and we learn that it is greatly in excess of any that has been known for the last 25 years. Seven persons have died from exposure at Maakil, a few miles north of Bussorah. All the roads are blocked with snow and rendered impassable for traffic, so that no merchandise has been brought to the sea-ports for some time back.

— The twenty-one prisoners connected with the Market Frauds' case may be thus accounted for:— one. Chand Cassum, the havildar standing next in position to Jemadar Ali Mahomed, has been sentenced to be rigorously imprisoned for nine months; nine others, who were guilty of passing bad meat, have been sentenced to six months each; seven to four months each; one, who was recommended by the jury to mercy, to two months; while only three have been discharged.

— One day last week, over eight hundred natives proceeded from Poona to Parbuttee to implore a most sacred deity, to leave his celestial abode and be present at Mulharao's trial, there in co-operation with Sergeant Ballantine, to put the Special Commission to utter confusion, and induce the Viceroy, whom they believe to be suffering from the pangs of a guilty conscience, not only to restore the guddee, but also to cede a little fresh territory to the suffering and much-injured Mahratta despot.

—Serjeant Ballantine arrived at Bombay on the 18th instant. The signal of the approaching mail steamer which was known to carry the learned counsel to these shores, drew a large number of natives to the Bunder, all of whom were anxious to have a look at the eminent member of the English Bar, into whose hands has been entrusted for a time (as the members of the Maratta race imagine) the destiny of Mulharrao and of Baroda. As the boat with the Serjeant approached the Bunder steps, the crowd rushed forward to see what the Gaekwar's leading counsel was like. He left for Baroda two days later.

— In May last the ship *Vanora* stranded at False Point Divi, and after having been advertised for sale, has been got off, and will shortly proceed to Calcutta. The stranding of the vessel is attributed to the gross and culpable carelessness of her commander, Captain George Gray, and of Edward Moss, chief mate, "inasmuch as no precautions were taken to ascertain the ship's position after the land was seen. No lead hove; no log hove to ascertain distance run; no attention paid to the instructions as given in Horsburgh's Directory in navigating this part of the coast; no attention paid to the chart so as to prick off the ship's position when the bearings of the land were taken; and although Point Divi had been seen by many members of the crew between 4 P.M. of the 19th May and the time the ship went ashore, the captain and the mate are the only persons who say they did not see it." The master's certificate has been suspended, and that of the mate cancelled.

— The annual practice of the iron-clad Turret-Ships *Abyssinia* and *Magdala* has proved very successful. The *Abyssinia* went out on the 3rd and 5th instant, with Colonel Bond, R.A., Captain Young, Lieut. Barker, Lieut. Boddam, and 46 Artillerymen to try the guns, the turrets, machinery, and manœuvring powers of the ship, generally. She accomplished her prescribed task of firing 20 rounds of shot each day. The practice was at various distances, ranging from 1,500 to 3,900 yards, and some excellent hits were made. One shot was sent through the flag that was set as a target. To see the ship moving in circles, both turrets revolving with officers, men and guns, and everything working uniformly was a satisfaction to all concerned. A shot was fired from one of the turrets, while it was revolving very slowly which well illustrates the great perfection of modern guns and the way they are served, for it hit the mark as if the gun had been at rest. A man standing about 10 feet on one side of a gun when it was fired had his hat taken clean off his head owing to the rush of air caused by the high initial velocity of the shot which weighs 448 lbs.

Madras.

— The abkarry contract for Mysore for five years has just been let for Rs. 2,80,000 a year.

— The subscriptions to the Powell Testimonial Fund already amount to Rs. 7,515.

— A heavy seizure of revolvers, &c., landed from an Italian ship, was made at Galle on the 30th ultimo.

— A riot has been caused at Dimbula by the "rising" of a hundred coolies who were interfered with by the Police because of an alleged assault on a boy. Fifty-nine arrests were made.

— A duel took place on Wednesday week last at Pondichery between the Magistrate and a Captain of the Army. The former gave the challenge, and chose rapiers. Honour was declared satisfied after one of the combatants had been scratched.

— Colonel Cookson, commanding a regiment of native cavalry at Secunderabad, was lately removed from his command, on the report of General Blake, commanding the division, on the ground of 'defective vision.' A medical board now declares Colonel Cookson's sight to be excellent.

— Information has been received from Mr. V. Ball, M. A., of the Geological Survey, that a coal-field has been discovered by him. It is said to commence near Hirakhuda, or the Diamond Island, where the river adjoins the Mahanuddee and to extend for eight miles beyond. Nothing, however, is said about its depth.

— A well known sowcar of Bellary has been sentenced by the Deputy Magistrate of Harpanpully Division, to one month's simple imprisonment, and to pay a fine of Rs. 200 for removing certain stone lions and other idols from the ruined temples at Humpey on the banks of Toombudra river, for his *chattram* at Hospett, without permission.

— Considerable anxiety is still being felt in Madras about Mr. John Broughton, the Government Quinologist, who left Ootacamund in December, it is believed with the intention of coming down to Madras, and in possession of a good deal of money, and has not since been heard of. The Police are instituting a search, fearing that some accident has befallen him.

— The Executive Committee of the Bangalore Anglo-Indian Aid Association have submitted a memorial to the Secretary of State, praying. 1. That Anglo-Indians who are found to be fit on medical and other grounds may be admitted into the English regiments of cavalry and infantry, and into the artillery. 2. That a Company of Anglo-Indians may be raised and attached to the Sappers and Miners. 3. That Anglo-Indians may be again enlisted as drivers in field-batteries of artillery. 4. That one or more regiments of Anglo-Indians may be raised for each Presidency to replace the old European regiments.

— From whatever point of view we may regard it, the Madras Race Meeting of 1875 must, says the *Mail*, be considered something more than a success. Many of the events resulted in a good struggle for the first place, while one in particular ended in as fine a race as could be seen any where; this, however, is not much more than can be said of many a good meeting. That which constituted the speciality of this season was the large fields, the cause of which was a novel feature in the programme for which the public in general and owners in particular should feel themselves much indebted to the Stewards.

— To give an idea of the state of the District of Madura, "the land of pilgrims and thieves" as it has been called, a correspondent has furnished the same paper with particulars of some of the more bare-faced robberies that have recently been perpetrated there, the actors in which are at large. 1st. An Assistant in the Telegraph Department, while in camp, was robbed at night, of a box which was taken out of his tent and rifled; but as the thieves found only blank telegraph forms and other documents equally valueless in a pecuniary point of view, they deliberately followed him to his next halting stage, and the following night relieved him of his cash and watch, which he had locked up in his cash-chest, and which chest he had, for security's sake, fastened with a rope to the leg of his bed. 2nd. The Special Assistant Collector was robbed, also in tent and at night. His cutcherry box, containing his gold watch, money, and valuables, was removed through a hole made for the purpose in the tent; and the box was broken open and plundered. The loss is estimated at Rs. 700. The dexterity of the thieves may be inferred from the fact that the gentleman in question is a remarkably light sleeper, and had a loaded revolver under his pillow. 3rd. A lady, the widow of an American Missionary, while travelling at night, was stopped by a gang of thieves, who, after examining her to see what property she had on her person, abstracted her brooch, worth Rs. 10, which was the total amount of 'loot' that they obtained on this occasion. 4th and most recent. The cash-chest of the office of the Revenue Survey was broken open the other night, and its contents, *viz.*, a Bank Note of Rs. 100, and half-notes for Rs. 700, were purloined. These half-notes were subsequently returned to the head of the office, in a 'bearing' letter with an intimation from the sender that, as the half-notes were now so obligingly returned, he trusted that the officer in question would not make any fuss regarding the note that had been retained.

— It is remarkable how ancient and widely spread the notion appears to be of snakes bearing in their heads stones of beautiful or magical properties, the obtaining of which is a feat of the utmost difficulty and danger. The idea is doubtless of Eastern origin, and is generally connected with the belief in the guardianship of concealed treasure, and sleeplessness, and intensity of sight, that in popular imagination have always characterized the dragon—the beholder, the creature that sees—a belief springing from the fascinating influence always ascribed, and apparently with truth, to the eyes of serpents. The snake of Persian tradition has a small stone, called *Mohrah*, in its head, by which it sees concealed treasure. In the Life of Apollonius Tyanæus there are some marvellous stories of huge Indian serpents, which are divided into those haunting marshes, plains, and mountains respectively; and the way in which the Indians destroy them is told as follows: "They spread a silken robe inwoven with golden letters

before the entrance of the serpent's cave, and those letters, being magical, bring on sleep, so that the eyes of the serpent, although exceedingly hard (they are said to sound like brass when the creature moves—another instance of the idea of sleeplessness), are overcome, and then with powerful incantations they so allure the serpent as to be able to cast over it the magical robe, which induces sound sleep. Then, rushing on it, the Indians cut off its head with an axe, and take out certain small stones found therein. For the heads of the mountain-serpents are said to contain small stones very beautiful, and endowed with a peculiar lustre and wonderful virtues. Such a stone was in the ring that Gyges is said to have possessed." This account is most probably a wildly exaggerated version of the Indian snake-charming, and one of the earliest notices of it.

— The ring of Gyges, it will be remembered, conferred invisibility; beliefs respecting snakes usually have especial reference to the eyes, and at the present day, on the western coast at least, sore eyes are ascribed to the anger of serpents, and a snake is the worst omen a Brahman can behold. Baboo Raj Chandra Sandel of Banares tells us that in Bengal it is a popular belief that the cobra bears a diamond, "learned men imagining that as that poisonous reptile lives a long life, the effect of time matures its carbon to a diamond. Some people say it sometimes emits light, which has perhaps led them to believe this." As in some degree connected with this, we add a strange bit of folklore from the Rev. G. Richter's *Manual of Coorg*, where (at p. 166) we are told that according to Coorg belief, the cobra lives a thousand years. After passing the meridian of its long life, its body begins to shrink and brighten till it shines like silver, and measures three feet or less at the age of six or seven hundred years. Still later it shines like gold, and is only one foot in length. At last it shrinks to the size of a finger. Then some day it flies up high in the air, dies, and sinks upon the ground, where it disappears. The spot is called Naka, and is marked by a little stone enclosure. Should any one unawares set foot upon it, he will be attacked by incurable skin disease, and rot away by degrees. In Kanara if any one points at the sculptured serpent-stones so often set up under trees, it is believed the hand will rot. Returning to the subject of the talismanic stones borne in the head, the cobras are everywhere believed to bear on their heads the famous snake-stones which will adhere to any venomous bite and extract the position. When taken from the reptile's head he is no longer venomous. Charmers will often pretend to extract this stone from the head of a snake they have caught, but of course it is all a sleight of hand. These stones, as is well known, are dark-coloured and shining, the size and almost the shape of a horse-bean, or sometimes pale and semi-transparent, made apparently of sandarach or false amber. Though adhering for a time to bites, they have no curative properties, as has been largely proved by experiment.

Feudatory.

— Scindia's Camp of Exercise was broken up on the 17th. There have been about 5,000 men under arms.

— Sir Salar Jung has engaged Mr. Sowerby C. E. late Local Funds Engineer at Broach, to undertake a mining Survey of Hyderabad.

— The report that the prisoner who represented himself to be the Nana had died at Gwalior is contradicted.

— The President of the Baroda Commission appointed eleven o'clock on Tuesday morning for the commencement of the investigation.

— The solicitors to the Gaekwar state that Serjeant Ballantine has accepted a retaining fee of 5,000 guineas, and that it is estimated that his further fees will probably amount to another 5,000 guineas.

— The Maharaja of Rewah has addressed a communication to the Supreme Government requiring to take over the administration of his t[illegible], for the remainder of his reign and for the minority of his successor.

— Serjeant Ballantine, with his son, two barristers and a pleader, left for Baroda on Saturday. All the stations on the way up were crowded with natives, who gave him an enthusiastic reception, especially at Broach, Surat, and Nausaree.

— Colonel Phayre arrived at Baroda on the 15th and was enthusiastically received by the natives. After very cordial greetings, roses were thrown mixed with silver flowers by the crowd, and thus Colonel Phayre found with great difficulty his way to the steps. Outside the station torches by pairs were placed at suitable intervals and the crowd thronged around the carriage on both sides, which made the vehicle move slowly for nearly half a mile.

— Statements have appeared that the Mahomedans at Baroda as a mark of sympathy with the Gaekwar would refrain from dipping their taboots, and that the Gaekwar is not allowed even changes of linen. These statements are mischievous fabrications. The Gaekwar has more clothing than he probably knows what to do with. Every taboot was dipped as usual. Even the Gaekwar assisted in the ceremony as far as practicable by sending sacred threads to be dipped. In future there will be no difficulty about supplying funds for the Gaekwar's defence. All reasonable expenditure will be allowed. This has been the desire of the Government of India all along.

— The result of the conference lately held at Calcutta on frontier politics in Upper Sind is that the policy of Sir William Merewether has been definitively abandoned, and that which Colonel Phayre, in alliance with Captain Sandeman of the Punjab Commission, for a long time vainly advocated, has now been formally adopted by the Government of India. It is now arranged that no reliance shall henceforth be placed on that worthless ally, the Khan of Khelat who will be left to manage his own affairs, and reduce to obedience his rebellious vassals, if he can. The British Government will, on its part, try to keep peace on the border by dealing directly with the chiefs of the Murree and Bogtee tribes, who will be kept in order, partly by petty subsidies and partly by being brought under the control of a strong police force which will be stationed along the frontier.

— A number of daring robberies have lately taken place not far from Indore. One of the sufferers is Mr. Cheyne, the Engineer-in-Chief of the State Railway. He was "puckarowed" and kept in custody by a couple of Bheels with drawn swords, while the rest of the gang helped themselves to the whole of his property. But it is not natives who are the only transgressors in this line; for last week, at Mhow, a robbery took place in the quarter guard of H. M.'s 68th Light Infantry, some Rs. 3,000 being found wanting on opening the treasure chest kept in the guard. Luckily, a man of the regiment, who was absent, on being confined, confessed to the robbery; he is a capital mechanic, and made a key to open the chest, the lock being a Chubb's; this he did whilst on guard, and took the money, and hid it, digging holes in the grounds not far from the barracks. He pointed out the spot, and nearly the whole amount has been recovered.

— The Baroda correspondent of the *Bombay Gazette* writes:—One of the most abominable pieces of cruelty perpetrated on a human being that ever I heard of has lately been brought to light. It appears that one of Mulharrao's courtiers, who was in great favour with His Highness, was looked upon with jealousy by some of his fellow courtiers. So, to get him into trouble with the Maharaja, they reported to His Highness that the favourite had been casting amorous glances at the Queen. The poor devil was then seized under (as I hear it will be satisfactorily proved) the orders of the Maharaja and cast into prison. Special fetters and manacles were forged for him. I have seen them. A great iron bar nearly as thick as your wrist and about 18 inches long, with thick heavy rings fitting on it for the hands to go in to secure the arms. These things alone weighed 22 pounds. An iron ring of great weight was put round his neck and a chain was, I believe, attached to it. Huge iron bars with rings attached, altogether weighing 35 pounds, were fastened to his legs, so that it must have been impossible for the poor devil even to walk a yard. He could neither stand, sit, nor lie down. I am told the weight of the iron attached to his hands must have been almost always on his chest and the iron round his neck must have bent his body down, so that his sufferings must have been terrible. But they discovered a way of adding to them. For about 16 days they fed him on chutney made of chillies and gave him salt water to drink. At the end of this time he died. Everyone who has seen these fetters feels sick at the very thought of what the wretch must have suffered. All this time there was no charge made against him, and there is no reason to suppose that any notice would ever have been taken of the circumstance, if it had not been for the enquiry which has been ordered to be held. The accounts, it is said, show that the cost of these infernal instruments was paid for by the Gaekwar and with his cognizance. I fancy when the affair becomes publicly known the feeling of indignation against Mulharrao for this horrible piece of cruelty and shameful abuse of power will be more intense than it will be if the charges against him for trying to get Colonel Phayre poisoned are fully proved. They say here that the case has been carefully gone into by Mr. Richey and others, and that they are forced to come to the conclusion that Malharrao was personally responsible for it.

Burma.

— Another agent has been sent to Calcutta by the King of Burma to purchase, for the use of the royal sawmills, a large amount of plant.

— Advices from Rangoon state that the steamer *Dacca* has been in collision with the ship *Macheilion*. The former is slightly, and the latter badly, damaged.

— A serjeant's wife, named Maria Quinn, has been brought up before the Rangoon Magistrate on a charge of stealing a chignon from the premises of Messrs. Rowe and Co., and sentenced to one month's rigorous imprisonment.

— The Rev. J. E. Marks writes thus to a Rangoon paper: "Nearly eight years ago the kindness of many friends in Rangoon, enabled me to commence an Institution for the education and maintenance of orphan children, and the then Chaplain of the Town, the Rev. W. West, was its first Treasurer. On my return to Rangoon I find 12 orphans (10 boys and 2 girls) in the Home, and the total of the subscriptions for the last month only Rs. 23. The children are in sad want of clothes and other necessaries, and without a great increase of means we shall be quite unable to continue their support, and yet since my return I have been asked to receive several other deserving orphans. The Rev. Welbore MacCarthy, the newly appointed Town Chaplain, has most kindly consented to act as Treasurer, and by him and by myself donations and subscriptions will be very thankfully received. Our present wants are very urgent but these supplied, monthly subscriptions would be more useful to us than donations."

— The results of the introduction of the Act and Cantonment Rules into British Burma for the prevention of contagious disease are very favourable. In the two cantonments in which these measures have been adopted, the percentage of cases of venereal disease upon the total strength of the garrison has been :—

	1871.	1872.	1873.
Thayet ..	10·5	4·54	2·4
Rangoon ...	19·54	11·96	9·36

while in the several dispensaries in the six stations in which these results have been observed the figures have been as follows :—

	1871.	1872.	1873.
Rangoon ...	1,513	980	494
Bassein ...	97	82	57
Prome ...	232	216	103
Thayetmyo ...	74	56	31
Akyab ...	160	84	136

The Rangoon Lock Hospital, although worked under Act XXII. of 1864, is under the control of the civil authorities, and Mr. Eden considers that it would be well if the Thayetmyo Lock Hospital were treated in the same way. The Rangoon Lock Hospital is an admirably-managed institution, and, to judge from the remarkable increase of registration and inmates, is not unpopular; whereas that at Thayetmyo seems of little or no use. The number of registered women at that station is ridiculously small, the Lock Hospital is generally empty, and it is notorious that there are many unregistered public women.

Asia.

— The news published by some foreign journals of preparations being made for a new expedition against the Turcomans on the left bank of the Amoo Darya is inaccurate. All that has happened is the usual despatch of small expeditions to protect the frontier.

— The Cabul correspondent of the *Delhi Gazette* writes: Moostoufee Hubeebulla Khan, says an official of the Ameer's Durbar, has written to the Ameer to have two thousand dogs killed and to use their skins in making caps. It is said that the Moostoufee after the fall of Herat intends to punish the faithless Herat force by making them wear the dog skin caps, as dogs are considered unclean animals by them.

— Every country has its peculiar superstitions which cling with a force that even education fails completely to remove. It can therefore furnish no matter for surprise that they should be all-powerful among a people so peculiarly susceptible to their influence as the Japanese. Pilgrimages to certain well-known localities are very commonly undertaken by believers for purposes of prayer and of making offerings, be it at ancient trees, stones or shrines, of pictures, sprinklings of salt or old sandals, each possessing its reputation as a specific for some physical or mental malady. If, on the 8th day of the 4th month, a certain grass known as *pen pen gusa* be gathered and hung within the paper lanterns, it is said to protect the possessor from insects. An incantation is also used which, however, is untranslateable. If the dew on the grass be gathered on the 1st day of the 5th month it will cure sores on the feet. Farmers believe, that if they attach a *namako* (beche-de-mer) to a string and draw it round their fields the moles will desert them. Seven of the small red beans named *azuki* for males, and double that number for females, if swallowed with water on new year's day, are a prophylactic against disease. If a small spot above each ear be left unshaven on the heads of young children they will be secured against a scrofulous disease of the scalp. If a traveller before undertaking a journey, be it on horse-back, ship, vehicle or chair, writes the character *shin* (red) on the palm of his left hand and licks it off he will be preserved from harm. If a tiresome visitor causes inconvenience by the length of his call the broom is inverted, a towel thrown over it and the supposed effigy is energetically fanned. Should this charm fail to effect its purpose moxa is applied to the visitor's clogs or sandals.

— In order to produce dreams of an absent friend or lover, it is recommended to turn the sleeves of the bed-quilt to the foot of the bed. The rice boiler is said to vibrate with such violence at times as to give forth a loud humming noise. If this begins faintly and grows afterwards stronger it is said to indicate good luck; if loudly, the reverse is predicted, but in such cases it should at once be stopped by enveloping it in the under-clothing of a female, a virgin if possible. It is believed that a bean dropped into the well for each day a journey is supposed to last will preserve the traveller's feet from foot-sores. In order to secure fine weather for any proposed journey, girls make a figure of paper known as *teri-teri-boz*, which they suspend by a piece of thread to a tree of the belladonna species called *naruten*. After making offerings of rice and throwing *sake* over it they set it adrift in the nearest stream. Jealous women employ this charm to avenge the infidelity of their husbands or lovers. Dressing herself in white, her hair hanging loose behind, a tripod (usually one of those used in cooking) on which three lighted candles are placed, on her head, while in her mouth she holds a torch of bamboo and pine roots lighted at both ends, and round her neck a mirror, the slighted fair one rises at the hour of the Bull (about 2 A. M.) and taking an effigy of the faithless one, or, as the case may be, of his frail companion or of both, nails it to a tree within the grounds of some shrine. At whatever part of the effigy the nail is driven, there injury will be inflicted upon the original in the flesh, but if she should meet the ghost of an enormous bull and exhibit terror at the apparition, the potency of the charm is lost, and can only be revived with incantation and imprecations on the offending pair. The common mode of bewitchment is to form a lay figure of straw, pierced with nails, and to bury it beneath the place where the person to be punished usually sleeps. Amulets and other charms are very numerous, and the entrance gates of private residences or the fronts of towns-people's houses are covered with numerous specimens. Each family has its patron saints and favourite *kami*, for whom labels are periodically provided for a trifling fee; but the members of the family who make pilgrimages, which are as a matter of fact mere excuses for holiday excursions, return provided with tickets from the places they have visited. These are for Yedo: Tomioka Hachiman; Fugiko; Narita-no Fonda; Hori no Uchi Soshi; Dai Shi; Nikko Gongen; Aki Ha, to which a host innumerable of others may fairly be added.

Literary.

— There are two modes in which authors are rewarded in Oudh: (1) by publishing the book at Government expense, and sending a certain number of copies to the author as a reward; (2) by rewarding the author in cash. Whenever an author is rewarded in either of these two forms, the copyright of the book for which the reward was given is considered the property of Government. During the last official year the sums expended under each of the above heads were as follow :—Rewards to authors in books, Rs. 31-14, Rewards to authors in cash Rs. 396-10-3.

— The following translation of the famous Hindostanee song is taken from the *Calcutta Review*: It is a song inculcating the love of wine and pleasure and redolent of joy. As compared with the literature of Hindostan, it is a green spot in a wilderness; it is the champagne cup flowing over at the cheerless banquet; yet the native, with his natural imperturbability, betrays no emotion of pleasure, and looks as grave as if assisting at devotions to Sir Krishna or at the apotheosis of the Prophet. The following is a translation, in the measure of the original, of the famous song of Hafiz,—

Singer, O sing with all thine art,
Strains ever charming, sweetly new;
Seek for the wine that opes the heart,
Ever more sparkling, brightly new!
With thine own loved one like a toy,
Seated apart in heavenly joy,
Snatch from her lips kiss after kiss,
Momently still renew the bliss!
Boy with the silver anklets, bring
Wine to inspire me as I sing;
Hasten to pour in goblet bright
Nectar of Shiraz, soul's delight,
Life is but life, and pleasures thine,
Long as thou quaff'st the quick'ning wine
Pour out the flagons's nectary wealth,
Drink to thy loved one many a health.
Thou who hast stole my heart away,
Darling, for me thy charms display,
Deck and adorn thy youth's soft bloom,
Use each fair dye and sweet perfume.
Zephyr morn, when passing by,
Bow'r of my love, this message sigh,
Strains from her Hafiz fond and true,
Strains still more sparkling, sweetly new!

— The London *Athenæum* has a favourable review of the Rev. Lal Behari Day's clever novel *Govinda Samanta*, or the history of a Bengal ryot. Govinda Samanta presents the best and truest picture we possess of the life of the poor agricultural labourer of Bengal. The only other books which have treated, with any marked success, of the same subject are Dr. Hunter's 'Rural Bengal' and 'Nil Darpan' but in 'Govinda Samanta' we have a tale which if it does not appeal to the intellect, as Dr. Hunter does with his picturesque diction and philosophic disquisitions, or to the passions, like the vivid scenes in the indigo-lands in 'Nil Darpan,' yet is unique in its way, a simple narrative, wonderfully complete, and intensely realistic. If 'Nil Darpan' were likened to a severe sculpture, and Dr. Hunter's work to a florid painting, 'Govinda Samanta' would fitly be compared to a photograph, clear and distinct in every part, the shadows and spots on which are but the results of a minute reproduction of nature. Considered as a novel, as we understand that term, 'Govinda Samanta' is insignificant; as an accurate copy of a humble phase of human life, it deserves great praise. There is a hero, and there is a heroine. The former is born in a hut, lives a hand-to-mouth life all his days, and dies as a coolie, engaged in one of the recent famine-relief works in Burdwan :—

Work without hope,—there was no life in it.

The heroine marries her husband before he has courted her, and after the marriage we hardly read a line further about her, except that she duly bears children. The chief characters in the book die off, like dogs, by snake-bite, or by fever, or are murdered in village brawls. Of plot there is hardly a vestige. There are no startling events to diversify a poor Hindu agricultural labourer's life. The sombre sadness of it, only lit up by gleams of domestic joy; its comparative uneventfulness; its patient, subjective character, all are reproduced with fidelity in 'Govinda Samanta.'

Ecclesiastical.

— A telegram announces the death of Archdeacon Schrader at Galle.

— The English plough has been in active use in the Christian village of Ahmedabad under the care of a gentleman of the Irish Presbyterian Mission.

— It is said that the Rev. M. Taylor will shortly proceed to London, where he is to assist Mr. Moody in his revival movement.

— A learned Shastree of Nassick, named Govind Shastree Lele, sixty years old, has embraced Christianity. This is said to be the first conversion of an old learned Brahmin in Western India.

— Forty-five parishes of the Bishopric of Siedletz, Poland, containing 50,000 inhabitants, with the whole of their clergy, have bodily joined the Greek Orthodox Church. The public reception was presided over by the Orthodox Archbishop of Warsaw.

— The St. Petersburg clergy are much pleased with the conversion of a great Boodhist priest on the frontier of Tartary. He was the Chief Lama of Northern Mongolia—in rank only second to the Dulai Lama of Lassa, and the Bishop of Irkoutsk, Monsignor Benjamin, naturally thinks that this conversion will have immense influence in Tartary.

— Simultaneously with the decay of Islamism there has been awakened in the Ottoman mind a disposition favourable to the Gospel. The reports of the agents of the British and Foreign Bible Society furnish a multitude of interesting facts connected with the circulation of the Turkish Scriptures, which in many instances are purchased, and have produced powerful convictions on the Moslem mind.

— Archdeacon Gorton has been disallowed furlough during the extension of five years after the completion

of his chaplain's twenty-five years' service. The Government of India ruled that extension of service implies only extension of the period of actual work, and terminates if he proceeds home. This was confirmed by the Secretary of State. The Archdeacon resigns next week.

— Under the head of "Ecclesiastical (Exclusive of Establishments)" the Government of Ceylon has for many years made annual grants of £100 to the Church Mission, the Roman Catholic Mission, the Wesleyan Mission, and the Society for the Propagation of the Gospel. Although the amount continues to be provided in the Supply Bill, the Wesleyan Mission has not claimed its share since 1872. The Baptist Mission has never accepted the grant.

— The question of additional Bishops for India seems still on the *tapis* in reference to the diocese of Madras, but the elaboration of the scheme and the form which it is to take occupies considerable time. The subject was before the Home S. P. G. Committee in December, and the *Mission Field* gives us the following as their minute on the subject:—Read letter of Bishop of Madras, November 3rd, in reference to a proposal to consecrate a Coadjutor Bishop in his diocese. Resolved that the Society will gladly co-operate towards securing Suffragan Bishops for India, provided that each Bishop is appointed to minister within definite territorial limits, and that such territory shall not be defined so as of purpose to include only the stations occupied by one Society. Resolved also to apply to the Colonial Bishopprics' Fund to undertake the payment of the salary of such Bishop, on the understanding that the Society would pay to the Treasurers of that Fund an annual sum equivalent to a Missionary's full stipend and allowances: also to ask the S.P.C.K. to join with this Society and the Council of the Colonial Bishopprics' Fund in raising the salary of the proposed Bishop."

— Lieut. Conder has made a special survey and plan, on an enlarged scale, of Tell Jezer and the adjacent country, where M. Clermont Ganneau discovered the two inciptions of the Boundary of Gezer. It appears that they are 480 feet apart, in a line pointing some 12 or 13 degrees out of the direct north-west line. They do not lie on any road or highway, which is probably the reason of their preservation. On the north and west of the Tell it is hopeless to expect to find anything, because the soil is ploughed over every year. The south has been searched, but nothing has been found. The impossibility of fixing a point on Tell from which measurements might be taken, makes it at present impossible to look to this discovery as a means of clearing up the difficulties connected with the Levitical boundaries. There are, in all, four inscriptions, lying nearly in a line. The first two, found by M. Ganneau, have the Greek and Hebrew words already published; the third, lying between them, consists of four Arabic characters; the fourth, found by Dr. Chaplain, contains two letters only, which may be Hebrew. Lieut. Conder's Report on the subject is accompanied by photographs taken by Lieut. Kitchener.

— Speaking at a recent meeting in America Wong Chin Foo, a Confucian Missionary, said that Confucius had left no directions as to the future, replying, when asked concerning it, that men did not know how to conduct themselves in the present, and therefore they ought not to attempt to look into the future. The rule which he laid down was: "Do ye not unto others as ye would not that others would do unto you." The whole empire has become imbued with the teachings of Confucius. The people are industrious, happy, and God-fearing. Thus we seldom ever see in China public benevolent institutions and poor houses, because the spirit of humanity fills the hearts of all. Then with regard to murder; China, with a population of 450,000,000 people crowded together, does not have as many murders as are committed in many countries where the population is less than 40,000,000; and yet the latter pride themselves upon their beautiful religion and civilization. Every man in China is taught to entertain a deep religious feeling. Following Confucius, the Chinese empire has been raised from degradation, and the people have been happy and prosperous for 2 000 years. "Therefore," said the speaker, "I hope that this religion of Confulcius will be carried out in this country as well as Asiatic countries. It is a religion which will do every one of you good. I have the honour to be the first missionary from China, but I hope that I may be followed by others abler than am, and that you will embrace the religion, for none better can be found."

TELEGRAMS.

THURSDAY, FEBRUARY 18TH.

John Mitchell has been elected for Tipperary without opposition. Government last night moved as an objection the certificate of his conviction for felony. The motion was adopted. A motion that a new writ be issued will be put forward on Thursday.

The Army Estimates for 1875 amount to £13,500,000 net.

Dr. Kenealy has been elected Member of Parliament for Stoke-upon Trent. Mr. John Mitchell landed at Queenstown to-day. Refusal of England to attend St. Petersburg congress has produced unpleasant impressions in Russia.

Select Committee appointed on motion of Lord Hamilton's to enquire into working of compensation scheme of 1866 will consist of the following members, Lord George Hamilton, Sir George Balfour, Colonel Jervis, Sir Henry Wolff, Sir Henry Havelock, Lord Elcho and Messrs. Fawcett, Brassey, Campbell-Bannerman, Denison and Hermon. The army estimates provide for a total of 128,994 men including 62,850 troops for India. There is a diminution of 773 men in staff brigade depots; otherwise there are no important changes. Sir William Jervis will succeed Sir Andrew Clarke

FRIDAY, 19TH.

The *Journal* of St. Petersburg attributes the refusal of England to send a representative to St. Petersburg conference to reasons outside the objects of the Brussels' conference. Sir Garnet Wolseley proceeds to Natal to take over the administration pending arrival of a successor to Lieutenant-Governor Sir Benjamin Pine, and to advise upon several important points connected with native affairs. The Royal Commission on army promotion held a meeting at the War Office yesterday.

SATURDAY, 20TH.

The Prince Imperial has passed the examination at the Royal Military Academy, Woolwich, and has assumed the direction of the Imperialist party.

King Alfonso has formally received the French, Russian, and Austrian Ambassadors.

When the House of Commons assembled last night, Kenealy entered without being introduced, whereupon the Speaker intimated that two sponsors were required to introduce a new member. The Commons, on the motion of Mr. Disraeli, waived the rule.

A motion was adopted, declaring that John Mitchell was unqualified to *sit in Parliament*, and ordering a new writ for Tipperary.

In consequence of the tardiness of Spain in affording satisfaction to Germany, on account of the Carlist's having fired on the German brig *Gustav*, Germany is preparing a naval expedition against the Carlists.

The weather throughout America has been intensely cold. The Potomac and Chesapeake rivers are frozen over. All island and the water communication is interrupted.

MONDAY, 22ND.

The Indian Officers' Compensation Committee met yesterday; and an early termination of its labours is expected.

In the House of Commons, Dr. Kenealy has announced a motion relative to the Tienborne prosecution.

Lord George Hamilton, replying to Captain Dalrymple, said no despatch had yet been received concerning the Leave Rules of the Indian Uncovenanted Civil Servants; but, replying to a telegram from the India Office, the Indian Government announced a despatch on this subject next mail.

The Emperor of Germany is indisposed. Rumours are current in Berlin that Prince Bismarck contemplates retiring shortly.

TUESDAY, 23RD.

The Hon. Mr. Robert Hill Pinhey has been gazetted Judge of the High Court at Bombay.

Mr. Marling, Liberal, has been elected member for Stroud, defeating Viscount Bury.

After protracted negotiations, a Senate bill has been framed, in which it is proposed that Departments Elect 225 members, a third of whom retire triennially, the remaining 75 to be elected for life by the Assembly. MacMahon waived the right of nomination. Gambetta's warnings against Bonapartism have secured the support of the Left.

WEDNESDAY, 24TH.

The Heavy Mails *via* Southampton which left Calcutta 22nd January reached London yesterday.

The Pope has issued a bull to the German Bishops, which forbids their acceptance of benefices from the State under pain of excommunication.

The Assembly has voted the Senate bill by 422 against 261.

The Commons have passed the se cond reading of Mr. Hardy's regimental exchanges bill by 282 against 185 votes.

Mr. Mitchell again stands for Tipperary.

Prince Leopold is reported convalescent.

Huddleston Q. C. is appointed Judge of the Court of Common pleas in succession to Sir Henry Keating who retires. Virginuss affair finally settled. Obituary—Sir Charles Lyell.

ARRIVALS OF PASSENGERS.

BOMBAY.

Per S S *Asia*:—

From Genoa.—Mr Connell.

From Naples.—Rev Spens.

From Port Said.—Mr and Mrs Clare Clarmonte, and Mr and Mrs Fischer.

From Suez.—Mr Caellet, Mr Flallow, Mr Vita and Mr Lampol.

From Aden.—Ensign and Mrs Judd and 7 children, Mr and Mrs J Wright and 5 children, and Mr and Mrs Balloo Madoo and 4 children.

Her Majesty's Troop-ship *Malabar* arrived in Bombay harbour on Wednesday 17th February from Portsmouth, which port she left on the 15th January, calling at Malta, 27th January, Port Said, 31st January, and Suez 2nd February. She brought 70 officers, 12 ladies, 10 children, 1,043 men, 105 women and 138 children. During the voyage she experienced fine weather, and on the 11th, 12th and 13th instant, the sea appeared of a milky appearance. There were two deaths on board during the voyage. The following are the names of the officers:—

Col the Honble D M'D Fraser, 4th Bde R A, Lieut-Col T C Crowe, 4th Bde R A, Major P Fitzroy, 1-5th Regt, Major W Carey, 4-R A, Major W Smith, 11-R A, Major W Manderson, 19-R A, Major F E Lewes, R A, Major G E Maule, 4-R A, Major E H Dyke, R A, Capt G W Thompson, 2-1st Regt, Capt E Le B Butler, 1-14th Regt, Capt F G Gyll, 4-R A, Capt T B Taylor, 4-R A, Capt R F Morris, R E, Capt R J Hezlet, 4-R A, Capt C Skinner, 2-19th Regt, Capt H S Higginson, R A, Capt C H Spragge, R A, Capt C E B Leacock, R A, Capt A H Des Barres, 4-R A, Lieut W P Georges, R A, Lieut G C Paley, R A, Lieut H F Smyth, R H A, Lieut J G Stone, R A, Lieut R R Hannay, 4-R A, Lieut J F Harman, R H A, Lieut J M Gordon, 1-21st Regt, Lieut P Blackburn, 4-R A, Lieut W J Clarke, R A, Lieut A N Rochfort, 4-R A, Lieut H V Hunt, R A, Lieut H Berkeley, 83rd Regt, Lieut W G Bowyer, R A, Lieut W G Phillimore, 4-R A, Lieut H W Smith, R E, Lieut J W H Potts, 4-R A, Lieut F M Banister, 4-R A, Lieut J C L Campbell, R E, Lieut W J Lister, R E, Lieut C Longridge, 4-R A, Lieut R C Hamil-

ton, R E, Lieut E V Hughes, 4-R A, Lieut W R M Daunt, 4-R A, Lieut W G De Jessey, R A, Lieut C F Hadden, 11-R A, Lieut W D B Fenton, 8-R A, Lieut J M S Brunker, 19th R A, Lieut H Cowan, 8-R A, Lieut T T Vaughan, 11-R A, Lieut A H W Brett, 4-R A, Lieut F S Cunliffe, R A, Lieut W H E Dobie, R A, Lieut F W Stansfield, R A, Lieut W Oliver, 4-R A, Lieut A W Rendle, 65th Regt, Sub-Lieut W C Faithful, 1-6th Regt, Sub-Lieut T C Stephenson, 56th Regt, Sub-Lieut G E Even, 66th Regt, Surg-Major E McGrath, 4-R A, Surg-Major A J Ferguson, A M D, Surg S K Ray, 40th Regt, Surg W Jobson, 4-R A, Surg W Finlay, A M D, Surg J J Grune, A M D, Vty-Surg J Anderson, R H A, Vty-Surg M Mitchell, R H A, Vty-Surg W B Spooner, 4-R A, Riding Master E Stannard, 4 R A, Quarter Master C W Gillard, Sub Inspr W Robinson, Army School Master, and Apothy, J Lawrence, Bombay Establishment.

Per Messrs R Rubattino and Co's S S *India*:—

From Genoa.—Rev Shirt, Mr Bonnevialle, Mr Chandler, Mr Turner, Mr and Mrs Geo Sibille, Mr A Fiori, and Mr Fouquet.

From Leghorn.—Lady Hall and friend.

From Messina.—Mr Sausa *Hacile*.

From Aden.—Mr Bajee Dada, and Mr and Mrs St J D Snodgrass.

Per P and O Co's S S *Australia*:—

From Southampton.—Captain Heming, Miss Boyd, Mrs Turton, Mr and Mrs Clutterbuck, Mr and Mrs Watchman, Captain and Mrs Muir, Mrs Fox, Colonel and Mrs Baillie, Miss Meane, Mrs Oliphant, Mr Young, Lieutenant Lowe, Lieutenant Cunninghame, Mrs Barnes, Mrs Mainwaring, Mrs Chanter, Mr Dunkerley, Mr Sillings, Mr and Mrs Rose, Miss Harvey, Miss Beckett, Mr Hampton, Kirthee Singh, Mrs Baddeley, Mr Jefferies, Mr Payne, Khodabux Abdulla, and Ismail Mahomed.

From Venice.—Mr Brombley, Mr Bentley, Col & Mrs Fletcher, Capt and Mrs Novene, Mr & Mrs Worke, Mr J Campbell, Capt R Tait, and Mr and Mrs Halliday.

From Brindisi.—Col E J Wild, Mr E Kappelar, Mr Maxwell, Serjeant Ballantine, Mr W Ballantine, Capt Jack, and Mr Baker.

From Suez.—Mr C F Wait.

From Aden.—Mr E Mungarin, Jukurrees, Abdcol and Friend, Mammohamed, and Jumalkurreen.

DEPARTURES OF PASSENGERS.

BOMBAY.

Per P and O Co's S S *Tanjore*:—

For Southampton.—Mrs Ramsey and 2 children, Mrs Dalgleish and 2 children, Miss Paterson, Capt F H Woodgate, Mrs. Smyth and infant, Dr F J Coombe, Mr and Mrs W J Jones, Mrs Adamson and 2 infants, Major and Mrs Winson, Mrs Mellor, Mr Cadart, Mrs Bowack, Mrs Smart, Mr C Godd, Mr W L Brown, Mr T Bolton, Mr D Parker, Mr J Cherry, and Mr G Cantain.

For Brindisi.—Mr W Jackson, Rev Mr F Caboo, Mr J Dods, Major Phillips, Col Macdonald, Mr O Bernard and Mr A Landale.

For Venice.—Mr G L Reid, Major and Mrs Osborne, Mr H T Powell, Mr G Green, 2 Misses Green, Mr Boyson, Lieut G N Wyatt, and Capt C D J Grame.

For Suez.—Mr H Loftus, and Rev Mr W Ashmore.

For Aden.—Mr George Almond.

CALCUTTA PUBLIC LIBRARY.

19*th February*, 1875.

The following new books have been added to the Library:—

Greville (C. C. F.) Journals of the Reigns of Geo. IV and William IV, 3 vols.

Hansard's Parliamentary Debates, 221st vol, with General Index to Session 1874.

Martin (Theodore) Life of the Prince Consort, vol 1.

Livingstone (David) Last Journals of, in Central Africa, from 1865 to his death, 2 vols.

Nasmyth (J.) and Carpenter (J.), The Moon.

Davies (Maurice), Mystic London.

Masson (David), The Three Devils.

And the Magazines and Periodicals as usual.

(481)

EUROPE.

THE STATESMANSHIP OF THE FUTURE.

(*Pall Mall Gazette.*)

The difficult task which now lies before the Liberal party in the choice of a leader has been the subject of much more or less sagacious comment in the press and elsewhere; but it is somewhat strange that one of the most obvious reflections which the situation suggests should have been overlooked. How comes it, we may ask, that the difficulty—which in its present dimensions at least is absolutely without precedent—has ever arisen? How comes it, in short, that Mr. Gladstone's successor is not as unmistakably designated as was Lord Palmerston's in Mr. Gladstone himself, or as have been the successors of many other party leaders, years, perhaps, before the post they were destined to fill became vacant? A superficial answer to this question is, of course, ready enough to hand, and many persons are satisfied with the purely verbal explanation which it conveys. It contents them to reply that times are changed, and with them our old methods of party government and organization. The system under which Mr. Gladstone qualified himself for and actually succeeded to the leadership of his party—the system, in fact, which is now being for the first time practically superseded—was a survival from the times of close boroughs and "government by the great houses." Mr. Gladstone is the last of the party leaders reared and trained from their youthful days for official life. His education for the work of government dates from the period of aristocratic monopoly; and if his subsequent career has made him also the "choice of the people," it is none the less true that he owed his early political training to the patronage of that shrewd oligarchy who were ever on the look-out for an opportunity of recruiting their ranks with "promising young men" of the commonalty. Power passed finally from the hands of this order at the passing of the first Reform Act; but the operation of the old system continued, and they were able to bequeath their nominees to the nation, and thereby to perpetuate, as it were, one of the features of the extinct system until such time as these men should retire from public life. With that retirement, however, the new order of things comes into operation. The new party leader is to be nominated no longer by a coterie, but by the whole nation. He is to be no longer selected from that knot of promising young men in whom the experienced eye of some old politician may have detected the seeds of future greatness; but is to be a man who has won his way to the front through the stress of open competition, whose capacity has not been guessed by a clique, but proved by himself in the open field of public life, and to the satisfaction of the whole body of his countrymen.

Complete as this answer may appear, it is hardly necessary to remind those who look closely into things that it is no real answer at all, and that it merely amounts to the restatement in a slightly different form of the problem to be solved. The real difficulty of the present situation is not that of applying for the first time an unfamiliar system, but that of finding fit materials within the operation of the system itself for its own sustenance. The present confusion of counsel is not owing to the Liberal party having to select a leader by a new method, but in their inability to discover any leader worthy of selection by the established method. There is no reason in the nature of things why this should be so; and, indeed, it was the confident assumption of the Reform party of thirty years back that the exact contrary would be the case. It was assumed that the right man for the place of leadership would be sifted from his fellows by a process at least equally sure and much more wholesome than that by which he was designated under the old corrupt system. The successor of a retiring party leader would, it was assumed, be indicated in the natural course of things by the general judgment of his countrymen exercising itself intelligently upon public affairs; while the expectation that the leader so selected would be the equal in political capacity of one chosen under the old and very narrow system was held to transcend the limits of moral and approach those of arithmetical certainty. The Reformers never doubted that the leader would be forthcoming, any more than they doubted that it was better to select him from the combined intelligence, wealth, and culture of the country than within the limits of a small privileged class. Nor, as we have said, does there appear to be in the nature of things any reason why they should have been mistaken. The theory, as a theory, was excellent and even convincing; it is only now when we are about for the first time to apply it to the facts that we have begun to have misgivings. For when we come to look for the party leader who was to be evolved by an exhaustive process of natura selection, what do we find? We find two men standing prominently forward as "favourites" for the post of leadership, a third slightly in the rear, and next behind him, but *longo intervallo*, a fourth. Of the two leading candidates one may be at once dismissed. Lord Hartington is heir to a dukedom first and a politician afterwards; he is in no sense a product of the new system, but in every sense a survival from the old; and his fitness or unfitness for the post of leader will therefore not affect the question under discussion. If Lord Hartington is chosen as leader, it will not be, his best friends will admit, on the ground of pre-eminent capacity, but as a mere concession to certain exigencies of party combination. Putting him aside, then, for the present, the "first favourite" for the Liberal leadership bred and trained under the new system is Mr. Forster. Surely we may be forgiven for saying that this, as the best result of thirty years of middle-class government, is something not to be contemplated with satisfaction. We wish not to fail in the respect which is undoubtedly Mr. Forster's due. We willingly admit that as a departmental chief he has displayed great qualities; that he has zeal, thoroughness, discretion, and administrative capacity. But to speak of Mr. Forster as a statesman, as the leader of a great party, as a ruler of men in a word, is to use language which affects us at least with an almost ludicrous sense of inappropriateness. Not only is he personally unfit, but he has not even that popular reputation for fitness which is only second in importance to qualification in fact. Outside Parliament, indeed, he has not even the prestige of his actual qualities. Beyond that section of his countrymen of whom he has been unfortunate enough to make bitter enemies, he is nearly unknown. In short, the choicest outcome of what may fairly be called public competition is not thought much of by the public itself. And yet we must admit him to be the most considerable politician on the Opposition side of the House, and, certain temporary political exigences apart, to be the fittest successor to Mr. Gladstone. Behind him we find Sir W. Harcourt, whose case again it is unnecessary to discuss. If he has risen in and by the new system, his true affinities are with the old. He has not risen from the "great middle class," under the open competition system. He is an aristocrat, born, for his original sin, out of due time, having missed the days when the great houses looked out for "promising young men," and having been doomed to ascend to eminence by the steeper path, which he has not yet had time to climb. Sir W. Harcourt, then, must be excluded, so that next to Mr. Forster—but at how great a distance we need not say—comes Mr. Goschen. A thirty years' experience of middle-class government, free parliamentary competition, "la carriere ouverte aux talents" and the rest of it, has given us this result—a race for the leadership of one of the great parties of the State, in which Mr. Forster comes in first, and Mr. Goschen second.

The remarkable, if sometimes perverted, ingenuity of a weekly contemporary will no doubt enable it to find an explanation—possibly a choice of several explanations—of this unsatisfactory state of things. We, for our part, are content to call attention to it, and to appeal to all impartial judges to say whether our view of it is not correct. We are now about to reap, or attempt to reap, the crop which we sowed, or thought we sowed, in 1832; and lo, all is barren. The failure of the crop may be explicable; it is possible that it will be triumphantly demonstrated to be a quite accidental and exceptional circumstance, and that the most plenteous harvests may in a few years be confidently expected. This may be so, but in the meantime the country is politically starving, and has no better prospect, but rather a worse one, already. There is at present an absolute dearth of statesmanship of the higher kind; and we have no reason, other than may be furnished us in the possible ingenuities above referred to, for believing that the dearth will be hereafter supplied. Why, indeed, should we suppose so? How much longer time is to be allowed for the experiment of 1832 to operate, or under what better conditions can it be tried than it has been during the last thirty years? During that time the middle class has enormously increased its wealth, its numbers, its consideration. It has developed many new forms of social ambition, that of acquiring a seat in Parliament being amongst the most marked. The number of rich middle-class men who have poured into the House of Commons has become proverbial; and though many of them are taxed, and not unjustly, with being sixty years of age, yet it must be remembered that they were only thirty when political life was thrown open to their order, and that they have had time to produce and to rear the promising young men of whom not one is at this moment visible. Whether they themselves have been thirty years in acquiring only that lower form of political ambition which is contented with the suffix of the letters M.P. to the surname, or whether, having cherished nobler ambitions all that time, they have failed to develop any political capacity of the higher order, the result is the same, and in either case equally deplorable. In either case it would seem to show that the classes to whom the government of the country has been transferred have failed to produce from among them men fit for the task of governing.

PRINCE BISMARCK AND SPAIN.

(*Economist.*)

We have seldom read an announcement with more astonishment than that which the *Times* made on Tuesday, apparently on authority, as to Prince Bismarck's views in relation to the recognition of the new Government in Spain. "We have reason to believe," it writes, "that Prince Bismarck has caused it to be intimated to the Spanish Government that Germany will defer her recognition of the new King of Spain until the Government acting provisionally in his name has repealed the decree suspending the publication of two Protestant journals, and has permitted the re-

opening of a Protestant chapel at Cadiz." If the *Times'* reason for its belief was as good as it evidently thought it, this is a new apple of discord which Prince Bismarck has cast into Europe. It is difficult to conceive a worse principle to lay down than that any European power should regulate its recognition of another power by the wisdom or folly, the agreeableness or disagreeableness of the latter's internal statesmanship. If we were to omit to recognise a Government till its policy became, in our view, reasonable and wise, we should probably recognise very few Governments indeed, and moreover what Governments, we might choose to recognise would depend not so much on their absolute wisdom, as on the fastidiousness and fancifulness of the Foreign Office of the moment. Once let it be granted that we have a right to make conditions as to the national policy of a State before we trust its Government as the proper representative of its people, and the question of recognition becomes a question of political taste; and as it is useless disputing about tastes, there would be no ground of reproach against Russia for not recognising Turkey, or against England, during the *régime* of slavery, for not recognising the United States. Indeed, if it is in any sense reasonable for Germany to defer her recognition of the new Government in Spain till the Protestant religion enjoys full liberty again, no one can deny that it would be quite as reasonable for Spain to defer her recognition of Germany till the Roman Catholic religion enjoys full liberty again. If the Pope were to write to the Catholic powers, begging them to withdraw their recognition of Germany till the Roman Catholic faith should cease to be persecuted in Germany, Prince Bismarck would write a despatch that would be quite sublime in its common-sense wrath, and we should all of us read it and admire it, and wonder that even the Pope should have given Prince Bismarck the chance of so easily showing up the imbecility of ecclesiastical ideas. But we must say that if he has really given the instructions conveyed in the *Times*, he has laid himself open to as much remark as that to which, in the case supposed, the Pope would have exposed himself. Of course, as there are real reasons for doubting the strength and permanence of the new *regime* in Spain, there is nothing absurd in itself in the delay of the recognition. But the reason assigned for that delay is quite as absurd as the reason which we have supposed the Pope to assign for asking Catholic Governments to withdraw their recognition of Germany. In fact, all that the excuse really means, when stripped of mere outside, is this: "We wont admit that your Government really acts for Spain until it ceases to approve an internal policy which is vexatious and irritating to us." It would be just as reasonable to tell Spain she should not be recognised till she had accepted financial reciprocity with Gremany, or enacted a Spanish edition of the Falck laws, or agreed to support the Prussian policy for the election of the next Pope, or promised to adopt any other of Prince Bismarck's favourite recipes for promoting the peace of Europe and the predominance of Germany.

The truth is that the recognition of a new Government by other governments generally means, and always ought to mean this, and this only: that the Government in question is really strong enough and stable enough to act on behalf of the country, with such authority and such power to compel obedience as Governments ought to exert. If that be so, then the only effect of not recognising such a Government is to introduce an unwarrantable confusion into the dealings between the two nations. If you decline to recognise the real manager of a company, you cannot transact the business which may arise between you and that company in the ordinary way; and you induce other people, moreover, to suppose that the manager of that company has not the authority and position which ought to belong to a manager. Precisely similar is the result of not recognising a Government which is really governing, and the only one which is really governing, the nation. It prevents the commercial and other social transactions between the two nations from taking place under the most regular and satisfactory conditions, and being protected by the full guarantees of civilised European habits, and it induces other Governments to treat with needless distrust and suspicion a Government which is thus openly ignored by a powerful State. The sole justifiable reason for refusing to recognise a Government is that that Government does not really enforce order and wield authority. When that is so, when there are [illegible]etitors for the functions of Govern[illegible], though there are no other competitors, the Government of the moment has so little real control of the people that it is defied with impunity and can look only for a short life, it is right, as well as inevitable, for settled Governments to withhold their recognition till some authority emerges from the chaos with adequate claims on their respect. By recognising every ephemeral power that chooses to call itself a Government, foreign States might be drawn into the unpleasant position of receiving injuries and grievances from a power quite too weak to be called to account; nay, so weak that it may have disappeared long before any indemnity can be demanded from it. And worse, an appearance of recognition might lead other States into treating it with a confidence that it did not deserve. For this reason it has been the wholesome practice of all self-respecting Governments to await the signs of real power—the evidence of adequate political responsibility—before entering into relations with new-born or revolutionary Governments.

No doubt, however there have been occasional instances in which the withdrawal of political recognition has been used as a kind of diplomatic penalty, or mode of indicating quasi-belligerence, in the case of petty States which have acted in a way displeasing to the Government which thus withdrew their envoy. That, as it seems to us, uuless really meant as the preliminary of war, is a very unwise sort of proceeding, borrowed, without any justification, from the rules which guide the intercourse of society. Now it is all very well for individuals who do not like each other to break off intercourse with each other, and to cease from signs of mutual recognition. That affects no one but themselves; and as formal social relations without good feeling at the bottom of them are of little value to any one, there can be no reason at all why people who do not think well of each other should not choose to meet as strangers, if they prefer it. But when the interruption of diplomatic relations is used as a sort of secondary penalty for an unscrupulous little Government, a great deal of harm is done to a great many people of both nations who are entirely innocent of the offence given and yet who are very seldom likely to have any power to remove the cause of the offence. As a rule, too, a great deal more suffering is inflicted on the citizens of the more powerful than on those of the less powerful State, for the former are left entirely unprotected in a little country which has not sufficient self-respect to treat them generously, while the latter are pretty sure not to suffer, even though they visit the land of their opponent, since a larger view of right and a more permanent standard of civil justice protects them from any petty revenge. It seems to us, therefore, that the plan of withdrawing envoys simply as a mode of saying, 'You have offended me, and are acting like a State of no principle and no breeding," is a thoroughly vicious one. It punishes the wrong people, when it punishes any one at all, and leaves the offending State at even greater liberty to follow its own caprices than before.

In regard to Spain, we cannot but feel that almost all the European powers, except, perhaps, Russia, have acted without sufficient regard to principle. They waited to recognise the new Government till it should prove itself to be fairly established, but actually recognised it for a very insufficient cause at a very unfortunate moment, when it was just tottering to its fall; whereas it is at least possible that if they had recognised it sooner the moral support gained would have given the Republic a chance of permanence, which, in fact, it never had. As a rule, England has been very chary of recognising a new Government that does not show ample signs of gaining the support of the whole nation. The Confederate Government of the Southern States was never recognised by us. It was very long before we recognised the Governments of the South American Republics. And if we had acted on the same principle this time, we certainly should not have recognised the Governnent of Marshal Serrano at a time when he was confessedly acting without the concurrence of the popular power, and when he represented a hybrid kind of Government without any constitutional type, and was obstinately assailed from the Northern provinces by the army of a pretender. There was a better case for acknowledging the Government before the Cortes was dissolved than there has ever been since. But on the traditional policy of Great Britain there has never been any good case at all—least of all at the moment when the irritation of Prussia at the execution of Captain Schmidt set the example, which England and France somewhat meekly andincoherently followed. As it has proved, we have made a signal blunder by recognising a purely provisional Government on the very eve of its decease. Russia, who stood aloof, was, in fact, far better justified in her action than we who tendered our moral support too late to be useful to the Spanish Government, too soon to be safe as regards our own dignity. There is something to be said for early recognition of such provisional Governments on the theory—a very doubtful one—that this sort of sympathy or moral support tends to strengthen the weak hands and feeble knees of a new Power. There is much more to be said for judging of the solidity of a Government by its power to restore order and to stamp out internal opposition; but the Powers which recognised Marshal Serrano's Government went by neither test They were not in time to lend it a new prestige at the moment when it had most chance of popularity. They had, too, no sort of evidence of true stability, and so it happens that within a few months of our act of recognition we have to consider the whole subject again.

But whatever principle our Government may choose to adopt, at least let it not commit the fatal error of which Germany is said to have set the example—of letting any political tastes of our own decide us in tendering or withholding our recognition. If that practice is once to begin, there will be no end to the follies and caprices into which it will lead European States. We might as well withdraw our Ambassador from Constantinople till the Sultan puts down polygamy, as make it a reason for ignoring the Government of Spain that it is silly and bigoted enough to prohibit Protestantism. If that sort of test is to prevail, we shall soon have every strong government trying to rule indirectly over one or more weak governments, by specifying an internal policy which shall be the sole condition of its favour. A more mischievous division of power and responsibility, a more shocking moral anarchy, than such a system would lead to, it is hardly in human power adequately to conceive.

MR. GLADSTONE IN RETIREMENT.

(Pall Mall Gazette.)

The reasons assigned by our Liberal contemporaries for regretting Mr. Gladstone's retirement do not appear to us altogether satisfactory. The question whether Mr Gladstone would, in point of act, have continued to lead the Liberal party has been too much left out of account. We make all allowance for the loss of Mr. Gladstone's commanding abilities, and we fully admit the disadvantage under which an Opposition labours whose spokesman habitually closes a debate with a halting speech. We put aside the defects of purpose and management which too often neutralized the late leader's power in discussion. The question still remains whether Mr. Gladstone could have retained his old position. To us it appears that his relations to two great sections of his party are of such a nature that it must have broken to pieces if he had stayed at its head. He is on terms a great deal too friendly with the pure Nonconformists, and on terms of the bitterest hostility with the Roman Catholics. We cannot doubt that the agitating Dissenters drew the proper inference from his conduct on the Public Worship Regulation Bill. Mr. Gladstone has not openly, perhaps not even consciously, quarrelled with the Church of England as an Established Church, but he sets no value on Establishment. The Dissenters have, therefore, the strongest expectation that a new turn in his opinions will bring him to Disestablishment, and this persuasion, if he had continued to lead, would have strengthened their delusions about the importance of their pet projects, most of which are simply hateful to the country. The difficulty caused by Mr. Gladstone's relations to the Roman Catholics would have been equally great and much more pressing. A place must be found somewhere in English party organization for Irish and Catholic opinion. It is probable that in the end the weight of the Catholic vote will be given in Great Britain, as in all other countries, to the Conservatives; but the traditions of the English Conservative party will probably cause it to be long years before the change is worked out, and for the present the most practicable alliance is between the Roman Catholics and the Liberals. But Mr. Gladstone's recent writings have been of such a complexion that even the frigid form of arrangement called a *modus vivendi* could scarcely be established between the Irish members of Parliament and the party which avowedly followed him. His quarrel with them is

far more serious than if it had been simply political. They know how to bear with a statesman who thwarts their policy while he speaks respectfully of their religion. But Mr. Gladstone, after making them a number of political concessions, of which some have, to us at least, seemed dangerous, has unmasked a battery against their faith, occupying, indeed, a very narrow strip of ground, but fighting from it with red-hot shot. Those who have some knowledge of the peculiar theological spirit which animates the Roman Catholic leaders of the present day are aware that they have been hit by Mr. Gladstone in their tenderest parts. First, in the *Contemporary Review* he told them their conversions were worthless; next, in the pamphlet on the Vatican Decrees he took a leaf out of their book and pushed them, as they are fond of pushing weak-kneed Protestants, to a logical extremity; finally, in the *Quarterly Review*, he has raised a laugh against the Pope.

But, while we consider Mr. Gladstone's retirement, temporary or final, to have been practically inevitable, we think that the reasons he has assigned for it and which our contemporaries have mostly accepted render it a bad precedent. It seems to us he may be justly charged with having acted on the very principle with which he reproaches the Roman Catholic Church under the regimen of the Vatican Decrees. He has preferred his religion to his country. Very extreme cases have to be put before the bearing of the decrees on civil allegiance can be illustrated and made intelligible; but Mr. Gladstone, still in the vigour of his powers, tells us that he leaves the public service to write theology. There have been Sovereigns, statesmen, and generals who before now have quitted active life for the cloister; but then they had reasons for it, like the great Emperor's gout; and, in fact, these retirements have been honourable retreats from work which could no longer be done. The exact form of retirement which Mr. Gladstone has chosen is certainly one for which it is not easy to find a parallel; the seclusion from public labours which is occupied with writing fierce theological manifestoes is probably of a kind which could only occur to an English politician. But the step has a general resemblance to the acts of extreme religious enthusiasts, and this form of religious enthusiasm is distinctly founded on preference of religion to country.

We cannot again unreservedly admit the plea that Mr. Gladstone entered public life at twenty-two and is now sixty-five. Such a career, long as it is, is not so long as to excuse an English statesman from further labour, unless the actual decay of his powers forbids it. The men who, born to ample or sufficient means, enter public life in extreme youth, and quit it only in extreme old age, are almost the most valuable class in the country. It has been justly observed that one of the most unfortunate results of an extended and evenly distributed suffrage has been greatly to diminish the supply of such men, and to fill their place with middle-aged provincial notabilities too old to learn the alphabet of states-manship. The great respect of the country for public servants who have reached something more than maturity is, on the whole, of clear advantage to it. No doubt every now and then a statesman is tolerated after his faculties have declined, but the world in our day is full of evidence that successful government is the product neither of ability nor of theory, but of experience well used; and, on the whole, it remains true that experience only accumulates with age. Maturity of years ought to be especially valuable in the leader of the Liberals, since they are more than their opponents under the influence of abstract principle, which finds its proper corrective in the distrust of *à priori* assumption and loss of illusion which age brings with it. Mr. Gladstone at sixty-five is dangerously impulsive. At seventy-five he will probably speak as well as ever, and find his way as easily as ever through jungles of fact and figure; but, beyond this, he will probably be a much wiser man unless he has ruined his faculties by theological excesses.

Finally, we think Mr. Gladstone's retirement to be regretted, as in one respect a memorable instance of self-deception. We cannot doubt that he leaves political debate for polemical controversy, not only because he has a strong fancy for the last, but because he thinks he excels in it. There could not be a grosser mistake. Mr Gladstone is a very poor writer; and it is only by careful study, and by throwing aside the greater part of one's associations with good writing, that one can find traces in his productions of the powers which make him a master in debate. No doubt, at first sight, there is a an answer to this in the enormous circulation of his recent pamphlets. But the fact that near 150,000 of them have been sold only proves the more conclusively that he is leaving a field in which he is strong for a field in which he is weak. For Mr. Gladstone is read not because he is a telling writer, but because he is an orator so distinguished that he led a great political party. It is the ex-Prime Minister, not the pamphleteer, who has been read by so vast a multitude. His publications certainly do show a certain kind of ability. As we said above, he knows where to hit an adversary, and this trick was, of course, learned in parliamentary fence. But otherwise he is obscure, ponderous, and confused; and we venture to think that, if he lives long enough for his great parliamentary ascendency to be forgotten, and goes on writing all the while, he will be scarcely read at all. Such a declension for the man who possesses almost in perfection the one talent most valued under the institutions most characteristic of our country is melancholy indeed. Mr. Gladstone become a pamphleteer can only be compared to Richelieu busy with tragedy or Frederick occupied with Alexandrines; but then, at all events, the Frenchman continued to administer and the German never wearied of war.

LITERARY GOSSIP.

(*Athenæum.*)

Mrs. Procter will publish the autobiography left by Mr. Procter (Barry Cornwall) in the course of the year. As Mr. Procter knew all the distinguished men of the present century, the book is likely to be of interest.

The short obituary notice of Mr. Kingsley in the February number of *Macmillan's Magazine* is by Sir Arthur Helps. It will interest some of our readers to know that it was at the express desire of the Prince of Wales that Sir W. Gull last week visited the Canon during his illness; and we may take this opportunity of saying that, although Mr. Kingsley, alone of the Westminster Canons, was present at the discourses delivered in the Abbey by prof. Max Müller and Dr. Caird, he is understood not to have approved of the innovation. Mr. Kingsley was buried on Thursday, at Eversley, in a spot which he had himself chosen for his resting-place.

The second volume of Mr. Lewes's 'Problems of Life and Mind,' which is to appear in a few days, will, it is said, complete the examination of the conditions of knowledge by an exhibition of the Principles of Certitude and of the logical processes by which we pass from the Known to the Unknown. "These Problems are followed by three others on the *summa genera* of what is known, namely, on Matter and Force, Force and Cause, and on the Absolute in the correlations of Feeling and Motion."

The first volume of Lord E. Fitzmaurice's Life of Lord Shelburne, the Minister of George the Third, which takes in the years 1737—1766, will be issued shortly. The others will follow at no distant date. This biography will bring forward a good deal of new matter relating to the negotiation, with America, which took place during Shelburne's Ministry.

Messrs. Macmillan have also in the press a History of Eton College, by Mr. H. E. Maxwell Lyte. It will be very fully illustrated, under the superintendence of Mr. Philip H. Delamotte, and will be issued before the end of the year.

Mr. Tegetmeier has in the press a small shilling primer on Household Management and Cookery. The publishers are to be Messrs. Macmillan.

A new quarterly, devoted to psychological matters, and called *Mind*, is announced.

PUNCH.

"LE JEU NE VAUT PAS LA CHANDELLE."

Old Gent (*having had to pay his omnibus fare twice.*) "But I'm positive I handed you the Money! It may probably have dropped down the slit in the Door!"

Conductor. "Slit in the Door!—Well, tain't likely I'm goin' to turn the Bus upside-down for Sixpence!"

NURSERY RHYMES FOR THE TIMES.

SING, sing, what shall I sing?
Of Lawyers' wigs and gowns,
Of costs, costs, and still more costs,
And shillings charged as crowns!

Sing, sing, what shall I sing?—
Of one sane bird who saw
That, play, play how you may,
To win is to lose, at Law.

II.

BOYS and girls, come out to play;
Kriegspiel is the game to-day!—
Bring your books and bring your brains,
Boys and girls, and plan campaigns.

III.

ROBIN-A-BOBBIN was scarcely ten,
But knew enough for a score of men;
His sole delight was going to school,—
Yet was Robin-a-Bobbin next door to a fool.

OVERWORKED AND UNDERPAID!

(*Dialogue between two Episcopal Labourers in the Vineyard.*)

First Labourer. I don't know how it may be with *you*, brother, I know *I* am worked to death. Revision meeting this morning; Rubrics' Committee this afternoon; Total Abstinence platform on Tuesday; chair of the Borrioboolooga Shirt-extension and Introduction of Pocket-handkerchiefs Association Dinner of Wednesday; the dear Duchess of Omnium's morning-party on Thursday; and on Friday a rush into my diocese for two confirmations in the course of the day, and to get to Lord Reredos's, half a county's breadth from the second, in time for five o'clock tea! Killing work, brother. They 'll miss us, perhaps, when they 've used us up in this frightfully improvident and unfeeling fashion!

Second Labourer (*sighing*). Let us hope we may have some leisure after Government has increased our numbers!

First Labourer. Let us hope so (*facetiously*). If the Government improve our position, the Liberationists will say we owe it all to the Labourers' Union.

Second Labourer (*in the same tone*). We 're like them in one respect, at least. We also have an Arch at our head.

First Labourer (*following up the joke*). Two—Canterbury and York! Ha! Ha! But I mustn't keep the Revision Committee waiting. Good *morning!* my dear Lord!

Second Labourer. Good morning, my *very* dear Lord.

[*Exeunt severally.*

NEW VERSION OF AN OLD PROVERB (*vide* RUBERY *v.* SAMPSON).—Tell truth, and—pay the damages!

COMFORT FOR LIBERAL COMMONS. (*In lieu of* W. E. G., *late* "*pa ent; guide, philosopher, and friend.*")—A Forster-*father.*

"OMNE IGNOTUM PRO MAGNIFICO!"

(*A fascinating young Irish Lady, with a lovely brogue, is warbling characteristic popular ditties in the Neapolitan dialect, encouraged thereto by the consciousness that her enraptured audience doesn't* KNOW A WORD *of even ordinary Italian.*)

Enthusiastic Youth. "How awf'ly beautaf'ly your Sister sings, Mr. O'Dowd! How awf'ly vividly she recalls to one's mind the—a—the—the *Chiaja*, you know,—and *Vesuvius*—and—*the deep blue Italian Sky!*"

Mr. O'Dowd. "Ah! thin *doesn't* she, Sor! Ye 've been in Italy, Sor?"

Enthusiastic Youth. "A—a—a—n—n—no!"

Mr. O'Dowd. "No more have Oi!—No more has me Sistor!"

TO MR. ARTHUR CHAPPELL.

(*On his incomparable Monday Popular Concerts.*)

I think, as the Hall of St. James' I enter,
Were there many such Chapels, I 'd turn a Dissenter.

"SYNONYME SEPTENNAIRE."

THE Parisian Correspondent of the *Times* maintains that the Duc de Broglie, and not Marshal Macmahon, is virtually ruler. No wonder the Septennate is rapidly becoming an Im-Broglie-o.

VERY MUCH WANTED.

LEADER. Wanted, in a Nobleman's and Gentleman's Family, where a permanent "Whip" is kept, a thoroughly responsible person to take the place of Leader. He must be circumspect in his policy, temperate in his language, and understand, in all its branches, the art of making himself generally popular. He must be a member of the Church of England, but on religious matters his views must be strictly moderate. The terms will be Liberal, and the highest political and social references will be required. For all further particulars application to be made immediately at the Reform Club. A fine opening for a young man of high rank, tact, good manners, and amiable character.

ON READING AN EMINENT FRENCHMAN'S VIEWS OF ENGLISH LITERATURE.

OUR English critics their dull wits keep straining;
When "Enter Taine!"—and all is entertaining!

CITY AND ARCHITECTURAL.—The proper height of a *Times* "Money" *column*—above suspicion.

SOMETHING LIKE A MOVE (*in the Spanish game*).—King to his own square: *Cheque*—to everybody!

NOTE FOR DR. NEWMAN.

IT may be hoped that Dr. Newman's reply to Mr. Gladstone's pamphlet will satisfy Mr. Gladstone, and not only him, but likewise Lord Camoys and Mr. Henry Petre. In answering the attack of the ex-Premier, Dr. Newman will probably be found to have poured a quantity of oil on the troubled waters which it has raised. That is to say, if the Pope will vouchsafe to endorse his answer. Infallibility itself alone can authoritatively explain itself. Dr. Newman, although Doctor Doctissimus, is still merely a private doctor. Perhaps, then, it may please His Holiness to certify the explanations of Dr. Newman, and consecrate his oil.

But *Mr. Punch* must say that he would not stand having his own infallibility explained away as Dr. Newman has explained the Pope's. If *Punch* were the Pope, and could not read any more than he now can between Dr. Newman's lines, he would, with all his admiration for the skill exerted in composing them, simply excommunicate their author for his pains; at least, as soon as he would Lord Acton.

But that is neither here nor there. Regarded from a purely critical point of view, Dr. Newman's vindication of Roman Catholic loyalty is replete with his usual charms of style, which render it delightful reading for any thinking person, how widely soever he may dissent from the premises of the writer's dexterous argument. It is a work which not only ought to lie upon every gentleman's table, but might also be a companion to the boudoir of any lady with reasoning powers and a taste for serious subjects.

To suggest the alteration of so much as a single word in a writing of Dr. Newman's would be, for any living mortal, the height of presumption. *Mr. Punch* has, nevertheless, not the slightest hesitation in proposing for the consideration of Dr. Newman and his readers the replacement of one little monosyllable by another in the following passage:—

"BASIL, on the Imperial Prefect's crying out, 'Never before did any man make so free with me,' answered, 'Perhaps you never before fell in with a bishop?'"

Mr. Punch ventures to suggest a conjectural emendation of the text quoted, of course exactly, by Dr. Newman. For "Perhaps you never before fell in with a bishop," suppose we read, "Perhaps you never before fell out with a bishop." Surely it was rather when anyone fell out with a bishop of the fourth century that the bishop would be likely to tell that person his mind.

WELL NAMED.

BY help of the *Court Circular* we follow with great interest the movements of the Grand Duke Serge, fifth brother of the Duchess of Edinburgh, now visiting our Island. "Serge" does not sound a particularly Imperial name, but how appropriate to a brother of our own Russia Duck!

SUGGESTED CHANGE OF NAME (*in view of recent events*).—Footpaddington.

AN INCORRIGIBLE INFANT (*now admitted everywhere!*)—Europe in Arms.

BIRDS OF A FEATHER.

THE resignation of Mr. Gladstone of the Leadership of the Liberal Party, in order that that eminent Statesman may be able to devote the remainder of his life to peace and quietness, having given rise to many rumours, *Mr. Punch* has much pleasure in making the following announcements:—

There is no truth in the report that King Alphonso will immediately abdicate the Throne of Spain, with a view to completing the studies he recently commenced at Sandhurst.

There is no truth in the report that Marshal McMahon intends to give up the Presidentship of the French Government, in order that he may become qualified for a Commission in the Prussian Army.

There is no truth in the report that Prince Von Bismarck will resign the Imperial Chancellorship of Germany, so that he may be appointed Private Secretary to Count Harry Arnim.

There is no truth in the report that Mr. Alderman Stone purposes retiring prematurely from the office of Lord Mayor of the City of London, in order that he may give his undivided attention to the production of a new French Grammar for the use of Schools.

There is no truth in the report that Mr. Whalley is about to retire from the Representation of Peterborough, in order that he have leisure to devote his energies to the preparation of an Essay upon the Orton Trial suitable for publication in either the *Tablet* or the *Catholic Standard*.

There is no truth in the report that Dr. Liddon will soon cease to be a Canon of the Church of England, in order that he may become a "big gun" in the Theological Establishment presided over by Monsignore Capel at Kensington.

There is no truth in the report that Mr. Samuel Plimsoll, M.P., will retire from Parliamentary agitation, in order that he may become a partner in a firm of rather "unfortunate" shipowners.

There is no truth in the report that Sir Wilfrid Lawson will shortly relinquish the position he at present holds in one branch of Public Life that he may become the managing director of a famous distillery.

There is no truth in the report that the Board of Directors of the Great Western Railway Company are about to resign office in order that they may become the founders of a new Accident Insurance Association.

There is no truth in the report that Mr. Chatterton, of the Theatres Royal Princesses, Adelphi, and Drury Lane intends to retire from theatrical management that he may have time to publish an elaborate pamphlet in defence of the London music-halls.

There is no truth in the report that Lord John Manners will retire from the Post Master Generalship in order that he may be able to accept the Chairmanship of the Civil Service Agitation Committee.

Lastly, there is not the slightest vestige of truth in the report that Mr. Disraeli, at the opening of Parliament, will relinquish the Premiership in order that he may give his cordial co-operation to Mr. Gladstone in the task (so difficult to a veteran statesman) of speaking to nobody and doing nothing — except writing!

PLUS DE MANCHE!

THE Tunnel under the Channel is to be an accomplished fact, money, machinery, human and horse-power, the pluck of England and France, and the bottom of the Straits of Dover permitting. A convention is concluded between English and French Companies for driving the preliminary drift-way, and the requisite Bill is to be laid before the Chambers at once. "*Sic vos non vobis.*" M. Thome de Gamon suggested a Channel Tunnel five-and-thirty years ago, and was pooh-poohed as a dreamer. He is still living, in old age and poverty. *Then* the idea of tunnelling the Channel was voted all *gammon*, now it is "only a question of money." Poor old M. Gamon may say, "I did not Gammon? I have been out-Gammoned!"

"A MERE TRIFLE."

First Liverpool Rough. "I soy, Beel, what 'll thee git for this 'ere?"

Second Liverpool Rough (*who has beaten his Wife within an inch of her life*). "Foin o' ten Bob maybe, same as 'ad for walloping thay jackass, though ah 've gived it to 'er smarter-loike!"

FEMALE THEOLOGIANS.—"Caroline Divines."

"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley, for the above named Pills, for wind in the stomach, from which I suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted. —I am, Sir, yours truly, HENRY ALLPASS.—To the Proprietors of NORTON'S CAMOMILE PILLS."

(476)

ESTABLISHED IN 1820.

C. LAZARUS AND CO.

(Incorporated with Shearwood & Co.,)

CABINET MAKERS, UPHOLSTERERS,

Billiard Table Manufacturers,

BY APPOINTMENT

To His Excellency the Viceroy and Governor-General of India,

AND

His Royal Highness the Duke of Edinburgh

CALCUTTA.

THE NEW PATENT

ELECTRIC BILLIARD MARKER.

C. LAZARUS & Co. beg to draw the attention of Clubs, Messes, and the public in general, to this wonderful and very ingenious adaptation of the great principle of

ELECTRICITY

As applied to the noble recreation of

BILLIARDS.

One of the greatest inconveniences attendant on this scientific game and the one most felt by players, is the interruption to play by having continually to run to the wall marking board to mark the score, and the liability to mistakes in so marking. By this new invention mistakes are impossible, and annoyances and inconveniences are done away with, and the interest in the game is doubled. *Every player can now mark his score without leaving the table and from the cushion he is standing near.*

The apparatus itself is so simple in construction, that an Amateur can put it together in half an hour, without the assistance of an Electrician. The Battery will last for months, without being refilled, and when it needs to be renewed can be done at any time, for a few annas.

The extreme simplicity of the ELECTRIC MARKER and the low charge for the same will, C. L. & Co., are satisfied, make it as popular with the Billiard-playing community of India and the East, as it has already become in England and on the Continent. C. L. & Co. have at present only a very limited supply of the ELECTRIC MARKERS, but are expecting fresh consignments shortly. Meanwhile all orders will be registered for execution.

The MARKERS can be seen in full work, and all particulars may be ascertained from C. L. & Co., who have been appointed by the Patentees sole Agents for India and the East. They cannot therefore be procured elsewhere.

MIRRORS.

THE Mirror has undoubtedly, in this Country, long been esteemed and sought after as a beautiful and Appropriate Embellishment to the Indian Mansion. Knowing that Mirrors hold such an important position in Decorative Art, C. Lazarus & Co. have made arrangements for the supply of Mirrors from the most celebrated manufacturers. They have just received, and have now on view at their show rooms,

A Magnificent and most varied Assortment of

Plate Glass Mirrors,

Of every design and size, by far

THE HANDSOMEST AND LARGEST

Ever imported into this Country, and which for brilliancy of reflective power, truthfulness of reproduction, and Style of Mounting have never been surpassed. The Silvering also of these Plates is on a new and most approved principle, not so liable to deterioration as the old method of Mercurial Silvering.

C. L. & Co. earnestly and respectfully solicit an inspection, satisfied that, what they would here desire to pronounce, *viz.*,—An opinion on the Intrinsic Excellence of the Mirrors, will be better done by those who may favour them with a visit than by any description in a trade Advertisement, which must of necessity fail to convey to the mind an adequate idea of these really superb works of Decorative Art.

In order to effect a speedy sale with a view to further importations, C. L. & Co. are prepared to offer these Mirrors to the Public at exceptionally low rates, being in fact very little over manufacturer's prices.

Billiard Tables.

The numerous flattering testimonials received by C. LAZARUS & Co. from all parts of India, China, Burma, Persia, Java, Ceylon and the Straits, prove that their tables are now considered the best manufactured and are the only ones appreciated in the places enumerated.

(213)

DR. J. COLLIS BROWNE'S CHLORODYNE.

THE ORIGINAL AND ONLY GENUINE.

ADVICE TO INVALIDS.—If you wish to obtain quiet, refreshing sleep, free from headache, relief from pain and anguish, to calm and assuage the weary aching of protracted disease, invigorate the nervous media, and regulate the circulating systems of the body, you will provide yourself with that marvellous remedy discovered by Dr. J. COLLIS BROWNE (late Army Medical Staff, Member of the College of Physicians, London,) to which he gave the name of

CHLORODYNE,

And which is admitted by the Profession to be the Most Wonderful and Valuable Remedy ever discovered.

CHLORODYNE is the best remedy known for Coughs, Consumption, Bronchitis, Asthma.
CHLORODYNE effectually checks and arrests those too often fatal diseases—Diptheria, Fever, Croup, Ague.
CHLORODYNE acts like a charm in Diarrhœa, and is the only specific in Cholera and Dysentery.
CHLORODYNE effectually cuts short all attacks of Epilepsy, Hysteria, Palpitation, and Spasms.
CHLORODYNE is the only palliative in Neuralgia, Rheumatism, Gout, Cancer, Toothache, Meningitis, &c.

CAUTION.—BEWARE OF PIRACY AND IMITATIONS.

From LORD FRANCIS CONYNGHAM, Mount Charles, Donegal, Dec. 11th, 1868 :—"Lord Francis Conyngham, who this time last year bought some of Dr. J. Collis Browne's CHLORODYNE from Mr. Davenport, and has found it a most wonderful medicine, will be glad to have half-a-dozen bottles sent at once to the above address."

*** EARL RUSSELL *Communicated to the College of Physicians that he had received a despatch from Her Majesty's Consul at Manilla, to the effect that Cholera has been raging fearfully, and that the* ONLY REMEDY *of any service was* CHLORODYNE.—*See Lancet, Dec.* 31, 1864.

J. LOWE, M. R. C. S. E., Missionary in India, states—"In nearly every case of Cholera in which Dr. J. Collis Browne's CHLORODYNE has been administered in the earlier stages of the attack the patient has recovered. Every traveller in India should carry a supply."

Extracts from the GENERAL BOARD OF HEALTH, LONDON, as to its efficacy in Cholera :—"First Stage or Premonitory. In this stage the remedy acts as a *charm*. One dose is generally sufficient.

From DR. THOMAS SANDIFORD, Passage West Cork :—"I will thank you to send me a further supply of CHLORODYNE. It was the most efficacious remedy I ever used, affording relief in violent attacks of Spasms within a minute after being taken. One patient in particular, who has suffered for years with periodical attacks of Spasms of a most painful nature, and unable to obtain relief from other remedies, such as opium, &c., finds nothing so prompt and efficacious as CHLORODYNE."

DR. M. MILLMAN, of New Galloway, Scotland :—"I consider it the most valuable medicine known."

DR. GIBBON, Army Medical Staff, Calcutta :—"Two doses completely cured me of Diarrhœa."

From DR. B. J. BOULTON & CO., Horncastle :—"We have made pretty extensive use of CHLORODYNE in our practice lately, and look upon it as an excellent Sedative and Anti-spasmodic. It seems to allay pain and irritation in whatever organ, and from whatever cause. It induces a feeling of comfort and quietude not obtainable by any other remedy, and it seems to possess this great advantage over all other Sedatives, that it leaves no unpleasant after-effects.

CAUTION.—VICE-CHANCELLOR SIR W. PAGE WOOD stated that Dr. J. COLLIS BROWNE was, undoubtedly, the Inventor of CHLORODYNE; that the story of the defendant, FREEMAN, was deliberately untrue, which, he regretted to say, had been sworn to.—See *Times*; July 13, 1864.

Sold in Bottles, at 1*s.* 1½*d.*, 2*s.* 9*d.*, 4*s.* 6*d.*, and 11*s.* each. None is genuine without the words "Dr. J. COLLIS BROWNE'S CHLORODYNE" on the Government Stamp. Overwhelming Medical Testimony accompanies each bottle.

(447) Sole Manufacturer—J. T. DAVENPORT, 33, Great Russell Street, Bloomsbury, London.

DESIGNS FOR CANNING COLLEGE LUCKNOW.

COMPETITIVE designs are invited for the proposed Canning College at Lucknow, estimated to cost one lac and twenty thousand Rupees, including out-offices. The building, including Verandahs, will cover about 23,000 feet, to be distributed as detailed below :—

	Including walls.	S. feet.
Examination Hall, ...	100 × 60 =	6,000
Eight class rooms	160 × 60 =	9,600
European Professors, ...	25 × 30 =	750
Principal	25 × 30 =	750
Native Professors	25 × 30 =	750
Bath rooms	10 × 30 =	300
Office	25 × 30 =	750
Library	60 × 30 =	1,800
Graduates' room	25 × 30 =	750
Total ...		21,450
Add for Verandahs &c. ...		1,550
Grand total, Superficial feet,		23,000

The building will be erected contiguous to the Kaisur Bagh buildings, and the character of the design must be in general keeping with the architectural features of these buildings.

A premium of Rs. 2,500 will be paid to the successful competitor in one sum on the submission of the general drawings—plans, elevations and sections with specification and approximate Estimate, together with the working and detailed drawings.

The plan of the site, photographs of the adjacent buildings, and other particulars will be available for intending competitors on application at the office of the Superintending Engineer, Public Works Department, Oudh. Each design will bear a distinguishing mark, device or motto, and the same, with name and address of each competitor in a separate sealed cover, will be forwarded to the address of the Superintending Engineer, Public Works Department, Oudh, Lucknow, with the designs, which will be received up to 1st May 1875, and to no later date.

THE DECAY OF THE TEETH

Arises from neglect, and the use of tooth powders, pastes and washes, which containing mineral and other deleterious acids utterly ruin the enamel.

ROWLANDS' ODONTO

Is entirely free from all injurious elements, whitens and preserves the teeth, prevents and arrests their decay, strengthens the gums, and gives a pleasing fragrance to the breath.

ROWLANDS' MACASSAR OIL

Prevents the hair falling off or turning grey, strengthens weak hair, causes it to grow on bald patches, and makes it beautifully soft, pliable and glossy.

ROWLANDS' KALYDOR.

Removes all freckles, spots, and cutaneous eruptions, and realizes a healthy purity of complexion.

ROWLANDS' ESSENCE OF TYRE

Produces immediately a perfect change in red or grey hair, whiskers and eyebrows, to a glossy and permanent brown or black, which colour neither washing or perspiration will remove. **GREAT CARE** must be taken to ask for Rowlands' Articles, at 20, Hatton Garden, London, and to see that their signature, A. ROWLAND & SONS, is in RED ink on the wrapper of each, no others being genuine. Sold by all Chemists, Perfumers, Druggists, and at all Bazaars throughout India.

JAMES WALTER LOWE, Esq., Barrister-at-Law.
JOHN MATHESON LYALL, Esq., of Messrs. Lyall, *Rennie & Co.*

ASSURERS under the participating scale share in the Society's profits after six years' premia have been paid, and thus receive back each and every year thereafter, either in the form of an addition to the original sum assured, or of a reduction of the next year's premium, at their option, a Bonus, the amount of which is governed by the annual valuation of the Society's Assets and Liabilities.

This principle was adopted on the establishment of the Society in 1834, and it is manifest that on a business where *stability* is the first necessity, an undeviating rule which limits the distribution of all profits to the existing condition of the Society's affairs in each year, is the true and *only principle on which stability can be guaranteed*, whilst the assured are relieved from the payment of any higher premium than is absolutely necessary from year to year to maintain that stability.

During the past eleven years, Policy-holders so assured in the Universal Life Assurance Society have been thus relieved to the extent of 50 *per cent. of their yearly Premium*, the sum allotted for Bonuses this year being £34,065.

COLT'S NEW GOVERNMENT ARMY REVOLVER,

as recently adopted for the United States Cavalry, takes the ·450 central fire service Boxer Cartridge. It equals a rifle in range and in accuracy of fire, and is unequalled for durability of construction. It can be easily loaded and unloaded when dark, and can be carried with perfect safety when loaded. It far surpasses in efficiency and quality of make the numerous cheap pistols of various make which now flood the market.

COLT'S LARGE BORE BREECH-LOADING DERINGER,

for the waistcoat pocket, shoots hard and straight,

COLT'S DERINGER REVOLVER,

for personal and house defence, fires a larger ball than any other Revolver of the same weight and size.

To be had through any respectable Gunmaker or Dealer in Arms, or from

Colt's Fire Arms Manufacturing Company,

14, PALL MALL, LONDON, S. W.

LEA & PERRINS'

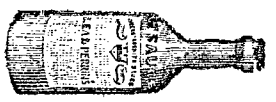
CELEBRATED

WORCESTERSHIRE SAUCE,

DECLARED BY CONNOISSEURS

TO BE

THE ONLY GOOD SAUCE.



CAUTION AGAINST FRAUD.

The success of this most delicious and unrivalled Condiment having caused certain dealers to apply the name of "Worcestershire Sauce" to their own inferior compounds, the Public is hereby informed that the only way to secure the genuine is to

ASK FOR LEA & PERRINS' SAUCE,

and to see that their names are upon the *wrapper, labels, stopper*, and *bottle*.

Some of the foreign markets having been supplied with a spurious Worcestershire Sauce, upon the wrapper and labels of which the names of Lea and Perrins have been forged, L. and P. give notice that they have furnished their correspondents with power of attorney to take instant proceedings against *Manufacturers* and *Vendors* of such, or any other imitations by which their right may be infringed.

Ask for LEA & PERRINS' Sauce, and see Name on Wrapper, Label, Bottle, and Stopper.

Wholesale and for Export by the Proprietors, Worcester: Crosse and Blackwell, London, &c., &c.; and by Grocers and Oilmen universally.

To be obtained of

BISSONAUTH LAW & CO.,

TESTS FOR SELECTION OF A LIFE OFFICE.

The Tests recommended by the Board of Trade.

"Taking insurance business as it exists in this country, the public cannot be misled if, when seeking an office in which to effect an insurance, they select one which transacts its business at a small percentage of working cost, and does not anticipate its profits."—*Extract from Report by the Assistant Secretaries to the Board of Trade, ordered to be printed by the House of Commons.*

How these Tests are fulfilled by the "Royal."

"It is exceedingly satisfactory to see that, *of all the English provincial offices, and all the Scotch offices, the Royal's ratio of expenses to its income is the lowest,* and to complete the requirements of the official standard that it may be added that the Company has *never anticipated a single shilling of profit.*"—*Extract from the Speech of the Chairman at the Annual Meeting, 7th August, 1874.*

MARAVILLA COCOA.

TAYLOR BROTHERS (the largest Manufacturers of Cocoa in Europe), having the EXCLUSIVE supply of this UNRIVALLED COCOA, invite Comparison with any other Cocoa for Purity—Fine Aroma—Sanative, Nutritive and Sustaining Power—Easiness of Digestion—and especially, HIGH DELICIOUS FLAVOUR. One trial will establish it as a favourite Beverage for breakfast, luncheon, and a Soothing Refreshment after a late evening.

N. B. Caution—"MARAVILLA" is a registered Trade Mark.

MARAVILLA COCOA.

The *Globe* says, "TAYLOR BROTHERS' MARAVILLA COCOA has achieved a thorough success, and supersedes every other Cocoa in the market. Entire solubility, a delicate aroma, and a rare concentration of the purest elements of nutrition, distinguish the Maravilla Cocoa above all others. For Invalids and Dyspeptics, we could not recommend a more agreeable or valuable beverage."

For further favourable opinions vide *Standard, Morning Post, British Medical Journal, &c., &c.*

HOMŒOPATHIC COCOA.

This original preparation has attained a world-wide reputation, and is manufactured by TAYLOR BROTHERS, under the ablest HOMŒOPATHIC advice, aided by the skill and experience of the inventors, and will be found to combine in an eminent degree the purity, fine aroma, and nutritious property of the FRESH NUT.

SOLUBLE CHOCOLATE.

MADE IN ONE MINUTE WITHOUT BOILING.

THE ABOVE ARTICLES are prepared exclusively by TAYLOR BROTHERS the largest Manufacturers in Europe, and sold in tin-lined packets only, by storekeepers and others all over the world. Steam Mills, Brick Lane, London.

GRATEFUL—COMFORTING.

EPPS'S COCOA.

BREAKFAST.

"By a thorough knowledge of the natural laws which govern the operation of digestion and nutrition, and by a careful application of the fine properties of well-selected cocoa, Mr. Epps has provided our breakfast tables with a delicately flavoured beverage which may save us many heavy doctor's bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—*Civil Service Gazette.*

MANUFACTURE OF COCOA.—"We will now give an account of the process adopted by Messrs. James Epps and Co., manufacturers of dietetic articles, at their works in the Euston-road, London."—See article in *Cassell's Household Guide.*

Made simply with boiling water or milk.

The only real test—universal medical experience during twenty-five years—has conclusively proved DR. DE JONGH'S COD LIVER OIL to be, beyond all comparison, the purest, the most palatable, the most easily digested, and the most rapidly efficacious of all kinds.

SELECT MEDICAL OPINIONS.

SIR G. DUNCAN GIBB, Bart., M.D., LL.D.,
Physician and Lecturer on Forensic Medicine, Westminster Hospital.

"The experience of many years has abundantly proved the truth of every word said in favour of DR. DE JONGH'S Cod Liver Oil by many of our first Physicians and Chemists, thus stamping him as a high authority and an able Chemist whose investigations have remained unquestioned."

DR. EDWARD SMITH, F.R.S.,
Medical Officer to the Poor Law Board of Great Britain.

"We think it a great advantage that there is one kind of Cod Liver Oil which is universally admitted to be genuine—the Light-Brown Oil supplied by DR. DE JONGH."

DR. EDGAR SHEPPARD,
Professor of Psychological Medicine, King's College.

"DR. DE JONGH'S Light-Brown Cod Liver Oil has the rare excellence of being well borne and assimilated by stomachs which reject the ordinary Oils."

SIR HENRY MARSH, Bart., M.D., T.C.D.,
Physician in Ordinary to the Queen in Ireland.

"I have frequently prescribed DR. DE JONGH'S Light-Brown Cod Liver Oil. I consider it to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

DR. LETHEBY,
Medical Officer of Health and Chief Analyst to the City of London.

"In all cases I have found DR. DE JONGH'S Cod Liver Oil possessing the same set of properties, among which the presence of cholaic compounds, and of iodine in a state of organic combination, are the most remarkable."

DR. GRANVILLE, F.R.S.,
Author of the "Spas of Germany."

"DR. DE JONGH'S Light-Brown Cod Liver Oil produces the desired effect in a shorter time than other kinds, and it does not cause the nausea and indigestion too often consequent on the administration of the Pale Oils."

General Debility and Emaciation.

In cases of EXHAUSTION and PROSTRATION produced by exposure to the debilitating influence of tropical and unhealthy climates, DR. DE JONGH'S OIL is much more safe and useful than the ordinary stimulating tonics, and it has been resorted to with the most beneficial effects after the whole range of these had been tried in vain. By its administration the natural appetite is revived, and the functions of digestion and assimilation are improved, reanimated, and regulated; the muscular power and activity are sensibly and rapidly increased; and, when its use has been steadily persevered in, its peculiar nutritive and reparative properties have entirely restored health and strength to the most feeble and deteriorated constitutions.

BENJAMIN CLARKE, Esq., M.R.C.S., F.L.S., *Author of "Notes and Suggestions on Cod Liver Oil and its Uses,"* writes:—

"Having myself taken both the Pale and Light-Brown Cod Liver Oils for debility, I am able, from my own experience, to remark upon their effects and comparative usefulness as remedial agents. After the Pale Oil and all other remedies that I could think of had failed. I tried, merely as a last resort, DR. DE JONGH'S Light-Brown Cod Liver Oil. I received immediate relief, and its use was the means of my restoration to health. In their sensible properties and chemical constituents, the Pale Oil and DR. DE JONGH'S Light-Brown Oil are distinct medicines; and, from my observation of their mode of action and effects. I must believe that I have seen many patients die, both in hospital and private practice, some of them of juvenile years, and others in the prime of life, who, in all probability, would have been cured, if the medical properties of DR. DE JONGH'S Light-Brown Cod Liver Oil had been known as they are now, and its use prescribed."

ROWLAND DALTON, M.R.C.S., L.S.A., Esq., *District Medical Officer at Bury St. Edmund's,* writes:—

"In giving my opinion of DR. DE JONGH'S Light-Brown Cod Liver Oil, I have no hesitation in saying that I have not the slightest confidence in any other kind. The effects of DR. DE JONGH'S Light-Brown Cod Liver Oil are sure and most remarkable, especially in that broken down state of health and strength which usually precedes and favours tubercular deposit; and I never recommend any other sort. The Oil I have had from you was for my own use, and it has certainly been the only means of saving my life on two occasions, and even now, when I feel 'out of condition,' I take it, and like it, unmixed with anything, as being the most agreeable way. I could wish that DR. DE JONGH'S Oil would come into general use, and entirely supersede the Pale and other worthless preparations."

The Wasting Diseases of Infancy and Childhood.

In those severe disorders, *Infantile Wasting and Rickets*, from which children suffer so extensively, and which destroy so many infants, the good effects of this Oil are incontestably established, its operation being often-times so very remarkable as to cure the disease when every other remedy had failed, and all hope of saving life had been abandoned.

In cases of languid and imperfect nutrition, often observed in children, where the appetite is capricious, and digestion slow and painful, and the body becomes weak and wasted, without any apparent disease, this Oil, after a few weeks, and sometimes in a few days, has produced the most extraordinary transition to a state of normal health.

THOMAS HUNT, Esq., F.R.C.S., *Surgeon to the Western Dispensary for Diseases of the Skin,* writes:—

"In badly nourished infants, DR. DE JONGH'S Light-Brown Cod Liver Oil is invaluable. The rapidity with which two or three teaspoonfuls a day will fatten a young child is astonishing. The weight gained is three times the weight of the Oil swallowed, or more; and, as children generally like the taste of DR. DE JONGH'S Oil, and when it is given them, often cry for more, it appears as though there were some prospect of deliverance for the appalling multitude of children who figure in the weekly bills of mortality issued from the office of the Registrar-General."

DR. ROBERT O. CROFT, *Author of "A Handbook for the Nursery,"* writes:—

"I have tried DR. DE JONGH'S Light-Brown Cod Liver Oil, and find that it contains all the properties which render the Oil so efficacious. I find, moreover, that many patients prefer it to the Pale Oils, and are able to retain it more comfortably. It is almost a specific in many of the diseases peculiar to infancy and childhood, and I have seen marked benefit produced by its use."

*** DR. DE JONGH'S LIGHT-BROWN COD-LIVER OIL is sold ONLY in bottles sealed with a metallic capsule impressed with his stamp, and bearing beneath the pink outside wrapper a label with his stamp and signature, and the signature of his Sole Consignees, ANSAR, HARFORD, and Co. A sixteen-page pamphlet, with stamp and signatures, accompanies each bottle. To this capsule, and to these marks on label and pamphlet, purchasers are earnestly requested to pay particular attention.

WITHOUT THESE NONE CAN POSSIBLY BE GENUINE.

IMPERIAL Half-Pints, 2s. 6d.; Pints, 4s. 9d.; Quarts, 9s.

Sole Consignees—ANSAR, HARFORD, and Co., 77, STRAND, LONDON.

SOLD BY ALL RESPECTABLE CHEMISTS, DRUGGISTS, AND STOREKEEPERS THROUGHOUT THE WORLD.

CAUTION.—*Purchasers are earnestly cautioned against mercenary attempts frequently made to substitute other inferior kinds of Cod Liver Oil when* DR. DE JONGH'S *is applied for. All offers of other Oil should therefore be firmly rejected.*

THE WEEK.

HIS EXCELLENCY THE VICEROY will leave Calcutta on Monday, the 15th instant. He will first proceed to Delhi, where he will remain in Camp till the 29th, and will afterwards visit Puttiala, arriving at Simla about the 2nd proximo.

H. H. THE MAHARAJAH HOLKAR on leaving Calcutta a week ago made a halt at Benares, which city has had little repose during the last few days, owing to his presence and that of Sir Jung Bahadoor and some other princes.

THE Government of India has granted an additional year to Mr. Talboys Wheeler to enable him to complete the fourth volume of his "History of India." The forthcoming volume of Mr. Wheeler's work will cover the Mussulman and Mahratta periods of Indian history, and bring down the narrative to the rise of British power.

WE are glad to learn that the Madras Government has received the Secretary of State's sanction to Mr. Parkes's scheme for a Madras harbour. Mr. Parkes intends to construct two stone piers one thousand yards apart, and to connect these by another pier in seven fathoms of water, with an entrance four hundred and fifty yards wide. A hundred and seventy acres will be enclosed. The cost will be fifty-six lakhs. Mr. Parkes, who is at Singapore, has been summoned by telegraph to begin the work at once.

THE last number of the *Indian Charivari* contains the following sketch, which appeared as an accompaniment to a cartoon of the Lieutenant-Governor.

In 1845, one of the first term youths at Haileybury was a shy, ungainly lad, fresh from Rugby, and known at the college by the cognomen of "Bumble." The Professors were unable to unveil any of his special talents, and of all the numerous gold medals and other prizes with which Haileybury was amply endowed, but few fell to the share of Bumble, who is the present Lieutenant-Governor of Bengal. But who would now assert that Sir R. Temple does not possess undoubted talent. And not the least of his talents is unbounded self-confidence. Excelsior should be his motto, for his confidence in his own powers is unbounded; and Sydney Smith's description of Lord John Russell, that he would undertake the command of the channel fleet or perform the operation for stone, is equally applicable to Sir Richard Temple. Witness his assumption of office as Finance Minister for India, without any previous knowledge of finance, and his annual glorification of himself in his budget statements, refusing to admit his error, even when it was discovered during his temporary absence that his *estimates* and calculations were erroneous. In Finance Sir Richard was a most decided failure. But as a Secretary, he was conspicuous. He may almost be said to have made the Panjab, when he drew the attention of the public to that province by his roseate reports, so much in contrast with the well-known proclivities of his master, Lord Lawrence. No doubt he thus helped in part to make Lord Lawrence's fame, and gratitude may have induced *Lord Lawrence to make him a Finance Minister.* We must, at any rate, *give* him the credit for having converted the Central Provinces from a *terra incognita* into one of the best governed and most progressive provinces in India, and this success has well earned him his present position. Whether in the more extended sphere of action, and in a better known part of the country, he will be equally successful, remains to be seen. At present his time as Lieutenant-Governor has been chiefly spent in combating the windmill of famine and travelling through his dominions; but there is an amount of Bumbledom about his proceedings which shows that he well deserved his college cognomen.

A correspondent is of opinion that the fees of pleaders on the Appellate Side of the High Court should be regulated by authority in the same way that fees are fixed on the Original Side. Recently a gentleman was charged Rs. 50 for a simple motion, and subsequently had to pay a like sum for a second motion. Having failed to make terms with his pleader he was powerless. The High Court, on being applied to, were of opinion that ministerially they could give him no help, and he is not consoled *by being informed* that in Special Appeals, valued at 2 or 3 rupees, the expenses often amount to 100 rupees, which sum the appellant has to pay. Mr. Hobhouse has here another opportunity for legislating. It is not clear that the High Court acting judicially in an action to recover fees would not be entitled to take into consideration the reasonableness of the amount.

A short time ago we noticed the fact that an Indian immigrant coolie in Trinidad had successfully run two horses at the Christmas races in that island. This notice has caused a gentleman to write to us enclosing an extract from a letter he has received from Trinidad bearing on the subject. The communication runs thus, "A coolie named Ajoon, who keeps the shop at the entrance to Santa Cruz, ran two horses at the races, and carried off the Governor's cup, Ladies' Purse, and I know not what else. He had been sirdar on several estates previously. He states publicly that he will import next year the best English racers. In the meantime he goes down to Demerara and elsewhere, to carry off the prizes." The contrast thus presented between the career open to a coolie in Bengal, and the possibilities within easy reach in Trinidad; is so marked as to need no comment.

AT the Meeting of the Council of the Governor General of India for the purpose of making Laws and Regulations, held on Tuesday, the 9th instant, the Hon'ble Mr. Hobhouse moved that the reports of the Select Committee on the Bill to regulate the Procedure of the High Courts in the exercise of their Original Criminal Jurisdiction, be taken into consideration, and that the Bill as amended be passed; this was agreed to. The Ports and Port-dues Bill was then discussed, but it was arranged that the passing of it should be postponed in order to admit of some points being considered that had been suggested by Sir Richard Temple and the Hon'ble Mr. Bullen Smith in Special Committee. The Bill to amend the law relating to Probates and Letters of Administration was also postponed.

The Hon'ble Mr. Ellis presented the Report of the Select Committee on the Bill to amend the law relating to Salt in the Presidency of Fort St. George. On an application by Mr. Ellis, His Excellency the President suspended the Rules for the conduct of business. The Bill was then taken into consideration and passed. The Council will reassemble on Monday next.

IN the Legislative Council on Tuesday, His Excellency the President made a few observations which will be read with great interest, in reference to Mr. Hobhouse's motion that the High Courts Criminal Procedure Bill should be passed as amended. The Viceroy remarked that Mr. Hobhouse had rightly said the Bill was of considerable importance, and he was sure the Council would agree with him that they were much indebted to Mr. Hobhouse for the great care and attention which he had displayed not only in the preparation of this particular Bill, but also with regard to other Bills of some complication and importance, which had been before them during the course of the present Legislative Session. Those Bills although they had been received by the Council without discussion at their various stages, with the exception of the explanations given by Mr. Hobhouse, had, in reality, received the most careful consideration in the Select Committees. The papers circulated to members of Council would, his Lordship was sure, be sufficient to show that the present measure was one which might safely be passed into law. He made those observations simply for the purpose of stating that the provisions of the Bill had not escaped attention, but had been most fully and carefully considered in its several stages before the Council.

AT the annual distribution of prizes to the pupils of the Free Church Mission, Madras, on the 4th instant, the Rev. W. Miller, M. A. read a report on the progress that has been made by the Madras Central Institution during the past year. The most noticeable fact is the rapid growth of the Collegiate department. At the end of 1874 it numbered 112 as against 78 in the year before, and it now numbers 139. Some of the classes have become as large as there is any desire to see them; in fact in nearly every class of the Institution there are as many pupils as the necessary regard for order and efficiency will allow the authorities to admit.

A large number of candidates for admission to the College have been refused from want of room. Mr. Miller says very justly: Such popularity in a Mission institution, so long continued and extending now to the most advanced classes, is not without a most important bearing on some of the problems connected with Indian education. In connection with the College classes not the least interesting feature is the rapid increase in the number of Christian students. Out of 84 students 20 per cent. (i. e. 17) were native Christians. This is largely owing to the fact that the Church Missionary Society now sends to the Free Church Institute those students from their different High Schools in the Mofussil, who mean to complete their education in Madras.

IN regard to the expenses in connection with the School Department of the Institute and some other matters, Mr. Miller made the following observations.

In point of regularity, as in point of numbers, we cannot think there is room for much improvement now. The percentage of absentees in 1874 stands at 6½ for the entire year, and at only an insignificant fraction above 5 for the last quarter. The state of matters seems to be nearly all that can be looked or even wished for. It is very different from that which prevailed even eleven years ago, when we find that it was noted with satisfaction that in the last quarter of the year the average number of absentees had fallen as low as 12 per cent.

In yet another and highly important point we can report steady progress,—the degree in which the fees meet the cost of education. In the school Department there is but little change, but the fees in the College for last year rose to, in round numbers, Rupees 3,400. The entire expense of that Department may be set down approximately at Rs. 16,000, so that instead of the students bearing one-sixth of the expense as we reported last year, they bear now considerably above one-fifth. This amply confirms the opinion expressed last year that in this Institution, and even in its highest classes, a change is going on which, if its healthy development be not interfered with, will soon result in a fair proportion of the expense of the higher education being borne by those who receive most of the direct advantage.

In another point still we are able to report some progress; that namely of the extent to which our pupils stand the test of examinations. At the date of our last Report the University had not yet published the results of the Degree examination for 1874. We should therefore notice here that of the six students that composed the then fourth class, five successfully graduated. Similarly, the results of the late examination are not yet known. The class that went up to it contained eight students, but we do not anticipate for them success so marked as that of their immediate predecessors. In December last, 24 students passed the First Examination in Arts, and 38 the Matriculation Examination; in both cases the largest numbers that have ever passed from this Institution. Again, in the Scripture examination that bears the name of Mr. Cator, the Institution has distinguished itself beyond all previous example;—more, however, from what may be termed the accident of our having good native Christian students in the classes from which candidates find it convenient to go up, than from any change in the ordinary course of affairs with regard to religious instruction. In the higher grade of this examination, the first and second prizes —in the lower grade the third, were gained by our students. We congratulate the individual competitors on their success; but as regards the Institution, we derive even more satisfaction from two other facts which should be noted. These are, first, that of the extra prizes awarded to non-Christian candidates, the highest, alike in the higher and in the lower grade, were awarded to students of this Institution; and, second, that of the 35 who actually appeared for examination in the lower grade 22, and of the 10 who competed in the higher, literally all, were judged deserving of the certificates of honour awarded to those who obtain one-half of the total marks. Such a result we cannot but regard as a testimony well worth having to the interest taken by our students in the most important of all their studies,—particularly when it is kept in mind that no special preparation is made for this examination beyond the studying in certain of the classes of as much of the subjects prescribed for it as can be conveniently overtaken in the hour ordinarily devoted to Scriptural instruction.

WE have quoted some interesting passages from Mr. Miller's report, but by far the most important is yet to come. In it Mr. Miller alludes to the attempt which is being made to render the Central Institute of Madras a permanent Christian College for Southern India. The most depraved of parents as well as the best, desire their children to be moral and good, hence it is that in every part of the world and in all sections of society there is a strong antipathy to religion and morality being divorced from the education of the young. Secularism may kick against this feeling, but it is of little advantage for it to *do so*; that institution will please the community most which turns out the best conducted children, and mere book knowledge will always be a secondary consideration. It happens in Madras that the only Institution which will take Hindoo and Mahomedan students to the highest honours of the University, and at the same time constantly bestow scrupulous care in founding all its teaching on a Christian basis, is the Free Church Institute. Side by side with this Institute there is the Presidency College, with a most elaborate and expensive organization, and with a small army of Government professors, but in the Presidency College all reference to religion is carefully tabooed, and morality is simply in an abstract form and in a special class. Yet the Free Church Institute is in the most marked favour with all castes and sects. The fact is accounted for, strange as it may appear to some, by the Christian character of the Free Church professorial staff. What is desired is that the Institute should now be endowed by the benevolence of the public with funds to enable it to stand firm hereafter, for all time, or at all events for many generations. It owes its present influence for good to the personal sacrifices of the principal and his colleagues, and it is unreasonable and unwise to calculate on equal enthusiasm from their successors. We should greatly rejoice if any observations of ours were privileged to prove beneficial to an Institute whose claims on the Christian public of India and Europe are of the strongest nature.

MR. MILLER thus referred to the hopeful project he has in view of building "on the firm rock" for the benefit of all classes in Southern India. "Probably the most important event in the history of the Institution for the year is the commencement of an attempt to set it on a more secure basis than it has rested on till now. The weakness of Mission Schools and Colleges in India has always been their want of permanence. They have prospered for a few years often, but so soon as the men that made them have passed away, their work has almost universally been neglected and suffered step by step to fall into decay. There seems no reason why such a state of matters should continue. There seems no reason why the Christian spirit to which every famous seminary of learning in Europe owes its origin should have failed in these modern days, or why the rising civilization and intellectual vigour of the East should not be vindicated by Christianity as its own, even as all that is enjoyed of such blessings in the West has been based expressly on it. It has seemed to us that Christian zeal and Christian beneficence if only they are fully awakened and properly directed, should be able to give as much permanence to the institutions that spring from them, as the Indian Government has given to the educational establishments it maintains by means of its unbounded wealth. The attempt has accordingly been made to bring the strength of the Christian Churches and Societies of Britain now at work in Southern India, to bear in some way upon the permanent and efficient maintenance of such a college in Madras as may worthily represent the Christian spirit, on which all the hopes of mankind are dependent still. The difficulties in the way are not all removed, nor indeed has the time arrived when anything very definite can be reported on the subject. Still the indications at present are all of a favourable kind; and though we do not wish to rejoice prematurely, it seems probable at present that, if spared for another year, we may be able to report that arrangements have been made rendering it certain, as far as anything human can be certain, that this Institution, or some nobler one developed from it, shall be not only for our fleeting lives, but for whole ages yet to come, a light to those who have sat in darkness long, but on whom a glorious dawning is assuredly destined to arise."

MR. MILLER concluded his report with a passage which will, we trust, be widely read.

It is proof enough that those entering upon life around us are far indeed from being unreceptive of moral impressions, when an Institution is so resorted to that has the moral and spiritual element for its main distinctive feature, which does not even profess to aim at, and which most assuredly has never won any overwhelmingly high position in the way of mere intellectual or university distinction. We would be the last indeed to deny that the Institution has had some external advantages on its side, and that these have aided in its growth. Without some favourable conditions, its very existence, to say nothing of its prosperity, would, circumstanced as it is, be simply a blank impossibility. But it is to deeper causes that its success hitherto must in the last resort be attributed mainly. Even should our College undergo eclipse from this day forward, as it may do if effort be intermitted and faith should fail, —ever should it fall back into the decay from which it has been rescued for a time, its past history alone is enough to furnish a new proof of the startling paradox, and yet when it is understood, the glorious truth, of the fervid orator of the early Church *anima naturalitér christiana*:—'The soul which is by nature christian.' For it is to our minds at least no longer doubtful that some real even if faint, appreciation of the Christian tone and spirit,—imperfectly though we are able to exemplify them—some stirrings of sympathy with Christian modes of regarding the world and human duty,—with the whole in fact of that nobler life which Christ laid open to sinful men, is the main, though we do not say the only, attractive power that brings so many to our class rooms. And still more does the saying we have quoted come home to us as true, when we see day by day how largely that nobler life, those higher motives, are finding their way into and moulding, though unconsciously for the most part to themselves, the whole feelings, thoughts and character of the students that assemble here. If so much has been done when it is confessedly in all respects the day of small things with us, what results may not be reaped if the Christian Church will but have faith to carry on this Institution through the trials, the attacks, the dangers, difficulties, and delays of many kinds that are undoubtedly before it, and some of them perhaps close at hand, until the set time for its bearing its ripened fruit shall have fully come?

THE PUNJAB BUDGET.

THE following is an abstract of the estimated Income and Expenditure for 1875-76. as finally approved and accepted by the Lieutenant-Governor :—

	INCOME. Provincial Services. Rs.	Local Funds. Rs.	Total. Rs.
Imperial Assignment	53,99,000	...	53,99,000
Taxes, Rates and Cesses ...	...	20,31,200	20,31,200
Departmental Receipts ...	9,55,000	19,700	9,74,700
Miscellaneous Receipts ...	71,000	8,46,890	9,17,890
Public Works Receipts	18,000	1,01,000	1,19,000
TOTAL ...	64,43,000	29,98,790	94,41,790
EXPENDITURE (EXCLUSIVE OF PUBLIC WORKS.)			
Refunds ...	10,000	6,000	16,000
Collection of Taxes and Cesses ...	...	1,21,000	1,21,000
Jails ...	11,57,000	...	11,57,000
Registration ...	1,22,000	...	1,22,000
Police ...	25,75,000	85,660	26,60,660
Education ...	6,54,000	3,99,200	10,53,200
Medical ...	3,40,000	1,17,110	4,57,110
Printing ...	1,50,000	...	1,50,000
Minor Establishments	51,000	3,65,140	4,16,140
Office Rent, Rates and Taxes ...	17,000	...	17,000
Miscellaneous ...	35,000	56,700	91,700
TOTAL ...	51,11,000	11,50,810	62,61,810
Balance ...	13,32,000	18,47,980	31,79,980

Municipal Income and Expenditure are not included in these figures. The estimate of Revenues and Receipts under Provincial Services shows a total income of Rs. 64,43,000, against Rs. 64.61,000 for 1874-75, a decrease occasioned by the reduction in the amount of the Imperial Assignment. The estimated expenditure on Provincial Services, exclusive of Public Works, is taken at Rs. 51,11,000, against Rs. 50.80.000 estimated for 1874-75, being an increase of expenditure for the coming year, amounting to Rs. 31,000, which, added to the difference under Revenue and Receipts, Rs. 18,000, reduces the balance available for Public Works by Rs. 49,000, as compared with that of the previous year. The following are the services for which an increased expenditure has been provided.

	1875-76. Rs.	1874-75. Rs.
Refunds ...	10,000	5,000
Jails	11,57,000	11,32,000
Registration ...	1,22,000	1,24,000
Police	25,75,000	25,59,000
Education	6,54,000	6,66,000
Medical	3,40,000	3,44,000
Printing	1,50,000	1,37,000
Minor Establishments ...	51,000	73,000
Office Rents, Taxes, &c.	17,000	...
Miscellaneous ...	35,000	40,000
TOTAL ...	51,11,000	50,80,000

The principal increases are under Jails, Police, and Printing, services which the Lieutenant Governor of the Punjab expects will cause a growing demand upon the resources of the Province as the population increases and administrative arrangements are perfected; on the other hand there has been a diminution in the amount assigned from Provincial Service Funds for "Education," but the demands on this account have been provided for by the transfer of certain charges to Local or District Funds. The Local Fund income is estimated at Rs. 29,98,790 against Rs. 30,21,740 in 1874-75 as under.

	1875-76 Rs.	1874-75. Rs.
Taxes, Rates, Cesses ...	20,31,200	20,29,360
Departmental Receipts	19,700	20,890
Miscellaneous Receipts	8,46,890	8,59,580
Public Works Receipts	1,01,000	1,12,000
	29,98,790	30,21,740

The falling off has been chiefly in ferry tolls, under Miscellaneous Receipts, due to the extension of railway communication which has lessened the amount of traffic passing along the Grand Trunk Road. The full effect of the change had not been felt until within the last year. It seems that the failure of both the bridges over the Sutlej and Beas rivers rendered necessary the maintenance and free use by the public of the boat bridges and ferries on those rivers, while railway communication was interrupted at these points. While there is this prospective falling off of income, there is an increase of Local Fund expenditure to be provided for as follows :—

	1875-76. Rs.	1874-75. Rs.
Refunds	6,000	5,000
Collection of Taxes ...	1,21,000	69,000
Police	85,660	80,170
Education ...	3,99,200	3,62,379
Medical	1,17,110	1,02,214
Minor Establishments...	3,65,140	2,45,268
Miscellaneous ...	56,700	2,24,569
	11,50,810	10,88,600

THE MEENAHS OF MARWAR.

THE year 1873-4 was conspicuous in Marwar by the unusual daring of that well-known robber tribe, the Meenahs. On one occasion a band of them was seen by the police at the foot of a defile near Dewair,—a frontier town situated at the head of the pass of that name,—evidently reconnoitering to see in what force the post was held; they subsequently committed a robbery, accompanied with violence, on a Bunjarra, who complained to the police. The latter took up the tracks of the robbers and went in pursuit, following them to a village in Marwar, rather a notorious haunt for dacoits. The police commenced a parley with the inhabitants, and were at first warned off, and then fired upon, when a head constable, a naick of the Mhairwarra Battalion, and the headman of the Dewair village were killed, and their bodies afterwards mutilated by the Meenahs.

On being informed of what had occurred, the Maharaja took energetic measures to trace out the offenders, but the murderers knowing that a hue and cry would be raised now that the blood of servants of the British Government had been shed, fled to their fastnesses in the Aravelli hills. The Maharaja met Mr. Walter, the officiating Political Agent, at the close of the year at Desooree, a large town situated near the Arravellies, which separate Marwar from Meywar, and there discussed the measures he proposed adopting for bringing these men to justice. Shortly afterwards an attack, inaugurated by the Maharaja in person when at Desooree, was made upon a gang of Meenahs, which ended in six of the most notorious of them, who are known to have been engaged in the attack on the police in the Dewair Pass, being slain. This attack, although satisfactory at the time, had its evil effect, as it roused the Meenahs to vengeance; the men belong alike to Marwar, Meywar, and Serohee, and when hotly pursued in one State, cross the border and conceal themselves in another; they seem to have friends everywhere, and are fed, harboured, and clothed by Thakoors and others, who doubtless receive a share of the ill-gotten gains. Since the attack above referred to was made, the deeds of violence of the rest of the gang have been very numerous; it is impossible to use disciplined troops against this class, for they have their haunts where our soldiers could not follow them. We can only carefully watch them by spies, who will report every movement, and have them constantly followed and arrested or shot down, wherever they may be found. Another system, too, is to severely punish all those found harbouring or supplying the men with food.

Eleven of the tribe lately suffered death at a place called Ballee, every one having been found guilty of the most heinous murders. When once the leaders of the gangs have been disposed of and the worst men arrested, the Maharaja intends offering an amnesty to the others. He is also entertaining a number of Meenahs for service in his army. Mr. Walter has wisely recommended him to have a complete regiment of them, and if he does this, he will find that this troublesome class of men will do him good service, and act as securities for the good behaviour of their brethren. To give an idea of the atrocious acts of these Meenahs, of late, this case is mentioned. A buffalo and two bullocks, the property of two merchants of the Marwar village of Dhanpoor, were stolen on the night of the 16th February; the next morning a party from Dhanpoor, numbering 19 men, went in search of the missing cattle, and found the buffalo in the Dhanpoor jungles. They then followed the tracks of the bullocks into Serohee, where they were lost, and the men being thirsty went in search of water. Whilst so engaged, they came across a band of Meenahs, who immediately fired a volley into them, killing five and wounding five others. In the beginning of the year the Maharaja of Jeypoor submitted, through the Political Agents, a scheme for the mutual extradition of border criminals on the direct requisition of the local authorities. When His Highness visited Marwar last year, the subject was dicussed by both Maharajas, and His Highness of Jodhpoor therefore readily acceded to the proposal, and formally sanctioned it. Since then a similar arrangement has been made with the Chiefs of Meywar, Serohee and Pahlunpoor, and all four Durbars have, in addition, agreed to allow the Police of one State to follow up criminals, when in hot pursuit, within the confines of another State, reporting themselves to the nearest Police officers of the State so entered, making over the criminals, if arrested, to the Police of the State in which they are captured, who are bound to give a receipt, and be responsible for the safe custody of the prisoners until their surrender is formally demanded. Similarly, if the Police of one State have proof of any known criminal being concealed, or living openly within the precincts of another State, they are to be allowed to cross the border, point out the individual or individuals to the Police of the State in which they are residing, or harboured, who are bound to arrest, give a receipt, and be responsible for their safe keeping, until formally demanded by the Durbar requiring them.

One of the main obstacles to the arrest of offenders has, according to Mr. Walter, hitherto been owing greatly to the jealousy

shown by the officials (not so much so the Chiefs) of the States. Each official of a State considers his own district as a separate kingdom governed by laws and regulations of its own, all based on that one great bane of Native Indian rule, "Kudeemee dustoor," or ancient custom. If the rules we have described are carried out loyally and cordially by the officers of the different States who have agreed to them, one great step will have been gained in breaking down this barrier of exclusiveness which has so long existed between the Chiefs and their officials of every State in Rajpootana, to the great detriment of all classes of society.

CHINESE PROVERBS.

Like the proverbs of all other countries, those of the Celestial empire present numerous and startling parallelisms, when compared with the sayings of alien nations, the resemblance being so literal sometimes as to suggest that a European or Indian proverb has been transplanted bodily from the literature of the west to the literature of China. An excellent paper in a late issue of the *China Review* points this out very clearly. The writer says, "It is a fact that in Chinese proverbs, as in Chinese everything else, the most instructive coincidences between Western and Eastern thought are to be found. Archbishop Trench remarks that the proverb, 'Man proposes, God disposes,' is possessed, he is inclined to believe, by every nation in Europe. But the same proverb exists, *totidem verbis*, in Chinese, and exists in the form of a sort of jingle, just as it does in several Western countries." The excellent Latin adage, *Maixma reverentia debetur pueris*, is exactly reproduced in a Chinese form, as is also that one used by our Lord against the obstructive Pharisees, "If the blind lead the blind both shall fall into the ditch."

Sometimes the same thing is said in a different way. At home we remember that, "Necessity is the mother of invention;" the Chinese more tersely put it that "Need breeds device." We say "Like master, like man;" but they, "Like mistress, like maid"; to which they also add this excellent warning, "Master easy, servant slack." Their comparison of a welcome service to "A present of coals in a time of snow," recalls Solomon's "Cold or snow in the time of harvest," and like many other proverbs points to a birth place in the North of China. But very often the Seric version does more than repeat or vary its Western counterpart; it expands, or even explains it. Such an expanded proverb will be found in this: "Happiness never comes double—misfortunes never single"; or in this: "The pitcher that is always at the well gets broken—your general hardly escapes death in battle." The English adages about the "new broom," and the "beggar on horse-back" are well reproduced in this: "Who came into office but this morning has the more orders to give," and this, "He lifts his feet high who has put on boots for the first time," both of which are proverbs turning essentially on Chinese habits and customs. He was a keen observer of human nature who first recorded the ingratitude of men for what cost them nothing in the saying "Free sitters at a theatre who cry down the play," or another unreasonable but very human trait in this: "The unrown-in is more thought of than the bought." Solomon has observed that the poor is hated even by his own neighbour, but the rich hath many friends. A Chinese proverb likewise reminds us that "Great folks may set the town in a blaze, common people mustn't even light a lantern;" another declares that "Polite attentions generally mean 'I want something;'" whilst another still further warns us that "The riches of one family are the hatred of many." "Simple birds fly first" wisely assert the celestials, who present a witty caricature of "raw haste, half sister to delay" in the portraiture of the man who plants a tree in the morning and must needs saw planks from it at night. There is a grain of wholesome consolation to those who vainly aspire after a higher social status in the reminder that "All ten fingers can't be the same length"; they are encouraged to look for better times by the hopeful saying "Even a potsherd gets a chance to be turned over" or as we should say, "every dog has his day"; and they are taught that all things cannot happen alike well to all by this: "Cheap grain is the death of the farmer." The writer of the article observes:

> Here is a wise reproof for one who will have everything done his way and no other. He is told, Horse and cow face wind differently, i.e. "there are more ways of killing a cat than choking her with cream." If it be his youthful inexperience that is at fault he is reminded that Old horses know the road, whilst he who is hurrying to that most haste which is worst speed is warned, Better go home and make a net than jump into a pool after fish. None but a shop-keeping people would have put a very common proverb into this form, Don't smash your goods to kill a rat. We say, "You must'nt burn your ship to kill the cockroaches," both proverbs throwing an uncomfortable light on the nature and number of uninvited visitors to ships and Chinese shops respectively. Another excellent piece of shop-keeping wisdom is this; If you don't run away from your goods, your goods won't run away from you. A waste of good material is deprecated in the following, uncomplimentary as it is to His Majesty's forces: Good iron is not used for nails, nor good men for soldiers; or in this; Any water will do to wash a boat. The duty of circumspection and foresight is enforced as follows; See your quest, then make your feast, and of economy in this; Save wine till guests come, in regard to which two last I may remark that no nation possesses more proverbs breathing a spirit of hospitality and politeness than the Chinese. Let the host rest when his guests are gone, not only points out a duty to those who have eaten our bread and salt, but also slyly hints at the relief which even the kindest host experiences when he has his house to himself again. That Hospitable detention is three parts false, whether detention is wholly true, is perhaps too analytical to be pleasant, but at least it points to an unfailing practice of politeness. The usefulness of sayings similar to some of those cited above in dealing with a people like the Chinese cannot be exaggerated. It is the peculiar advantage attaching to the citation of a proverb that it is something put beyond dispute, accepted and settled as true, a first principle, like the axioms of science, or the multiplication table.

The following are a few of the most trite of the proverbs of the Chinese: "A graduate may know all things without having stirred out of his door;" another, more terse than wise, bids us "Know a man by his looks;" another will have it that "Looks are borne in the heart," which is indeed what Solomon said; "As he thinketh in his heart so is he." But in opposition to these we are told, "A man is not always to be judged by his face any more than the sea measured with a bushel," and just as the seer of old was cautioned, Look not on his countenance, or on the height of his stature, "If you judged by appearances Tsze-yu would be now here." Now Tsze-yu was a statesman of whom Confucius was pleased to approve, and Confucius himself was so ugly that his face was called The Five Mountains. Finally, the controversy may be summed up in this witty saying: A red-nosed man may be no drunkard, but will always be called one. A wise man is cautious and avoids the appearance of evil, says one proverb, the canny carefulness of which is more than followed up by this: Don't lace your boot in a melon field, nor adjust your hat under a plum-tree, and this; If you don't belong to the family don't go into the house, i.e. lest you be taken for a thief or person on a worse errand. But there is also a proverb which heroically bids you "Never mind what other people think," and another which avers that "Right heart need not fear evil seeming," The following are equally good: The upright official cannot be altogether rid of rascally subordinates; The Magistrate is not so dreadful as his man; You may be arrested by mistake but not released; Thirty blows right or wrong, pull in your head or stick it out, off it must come; When you beat the mule the horse is frightened also; The people are a flock of sheep delivered over to the wolf and tiger; While we live let us keep out of the Courts, when dead out of Hell; Officials won't flog a bearer of presents; Even a pig's head is cooked when the fire once gets to it; When money gets to the judge there will hardly be justice; Public officers have their gates facing south, but he who has only cause and no cash had better keep out of them; Men who have have justice do not grumble, level water does not flow; Man has a thousand, a myriad plans for himself, God has only one plan for him; A good man protects three villages, a good dog three houses; Men grow old, pearls grow yellow, there is no cure for it; Man has a thousand purposes, Death comes one morning and ten thousand may wait; The harder the tree, the harder the weevil; He who failed to draw a tiger made it into a dog; A sheep was never known to climb a tree; Let your ideas be round, but your conduct square. There are many sly hits at matrimonial infelicity, made and circulated by wretched men no doubt, and including a version of our own—The hen that crows; but they are all compensated in this: "One day of wedded life deserves a hundred days of kindness." Finally, the head and crown of Chinese proverbs is that "'Do as you would be done by' will serve as a motto for a life-time."

THE TRAVANCORE OBSERVATORIES.

The late Director of the Travancore Observatories, Mr. John Allan Broun, F. R. S., has recently had reprinted an exceedingly interesting general report on the Trevandrum and Agustia Observatories during the years 1852-56; and the volume now lies before us. This work is published by Messrs. Henry King & Co., and has been turned out by them in truly first rate style. A few excellent woodcuts adorn the pages of the book, while the paper is of good quality, and the typography is such as to do credit to Messrs. Neill & Co., of Edinburgh, the printers. The first general report on the Trevandrum and Agustia Observatories was, as we learn from Mr. Broun's preface, written in January 1857, when it was laid before His Highness Martanda Vurmah, the late Rajah of Travancore, by the then resident, General Cullen. Subsequently to that date

provisional reports were communicated yearly to the Government, and selections of them were printed in the Dewan's Administration reports after 1862. Mr. Broun's second general report, written after the completion of the first volume of observations, refers not only to the Observatories, but also to other Governmental work and institutions which he directed in an honorary capacity. A considerable portion of the outcome of this gentleman's labours is embodied in the 116 pages of the volume to which we are referring. The author tells us: "If these Reports do not follow the general official track, and I have sought to vary occasionally the dulness of the way by descriptive matter not usually met with in the Reports from an Observatory, it should be remembered that the work done was not of an ordinary kind, nor done in a country where European precedents can always be followed. Some exceptions may be allowed in describing the erection (twice) of an Observatory, and the adjustment of a complete series of the best instruments on a nearly inaccessible peak, as well as in recording other scientific work performed amidst the surrounding forests, known only to a few savages, and inhabited by ferocious animals."

Mr. Broun on arriving in Travancore had a most laborious task before him. By patience and perseverance he finally overcame many difficulties, but he never could succeed in getting his scientific apparatus into equally good condition with that of a first-rate establishment like Greenwich. Everything had to be done by himself *ab initio*, and he had to encounter apathy and sullen opposition on all sides. But for the warm co-operation of the resident, General Cullen, and the support of the Maharajah the attempt at founding a home for philosophy in Travancore must have been a complete failure. The reader will have seen from what has gone before that there are now two observatories in the Maharajah's country, viz. one near the capital, and the other at Agustia. When Mr. Broun arrived there was not a single observatory worth speaking of, and on his beginning to build he naturally selected the easier site for a commencement; this was at Trevandrum. We will not accompany Mr. Broun through the history of all that was done before the Trevandrum Observatory was finally made weather-tight; the following is, however, a description he has given of the place when it was found that he could make use of it for observations.

The Observatory occupies the crown of a small hill, celebrated by travellers for the magnificent view which it commands. The sea, within three miles at the nearest, is seen from the south to the west-north-west points of the horizon, bordered by a thick and continuous grove of cocoa-nut trees. The surrounding country is an alternation of hill and valley,—the former crowned inland by forests and castellated masses of granite; the latter, covered with rice fields fringed with plantain and palm trees, presents in many places during the monsoon the appearance of lakes and winding rivers, and at other times that of fertile meadows, whose rich green covering is bending to the harvest. On the east the many-peaked Ghats rise up like a wall, shutting out the warmer world of the Madras Presidency. The nearest distance, as the crow flies, from the Observatory to the mountains will be about 22 English miles. Though the granite protrudes in huge masses from place to place, yet the Observatory hill, like most others within a few miles of the sea, is formed of the rock peculiar to India called laterite, sufficiently soft to be cut into blocks for building purposes with a hatchet; the walls of the Observatory are built of, and founded on, this rock. The plan of the original building, which has no architectural merits, was nearly rectangular, 78 feet long in the direction east and west, and 38 feet broad. The height from floor to ceiling is 14 feet; the central part, 25 feet by 14; was terraced, and the outer parts or verandahs were covered by sloping roofs. The transit room and circle room are each 14 feet by 12; the instrument pillars founded on the laterite rock were solidly built of granite. In the centre of the lobby (20 feet by 12) a well-built granite pillar, carried 20 feet above the floor, is covered on the terrace by a dome 10 feet in diameter. This pillar was intended for an altitude and azimuth instrument. The south corners, 13 feet square, were built of solid laterite to the height of the terrace, and covered with domes; one was intended for a refracting, the other for a reflecting equatorial; niches in the sides of the central pillar were made for clocks. The openings for the transit instrument and two circles were carried across the terrace and verandahs, and were composed of so many parts as to require men, on watch, to open or shut them by hand. The verandah rooms were occupied as computing rooms. In 1842 another building was erected to the north-west for the reception of an equatorial, constructed by Dolland. The central part was occupied by the instrument, and the small rooms around were used for the Library.

It was impossible for Mr. Broun to make all requisite observations himself, and it was not long before the necessity became apparent of bestowing much care not only on the scientific but also on the moral training of a small staff of assistants. The idea of accuracy was quite unknown at first to these young men; they falsified their returns, slept at their posts, and played many sad tricks to the vexation of the English astronomer. This is what he has to say about them:

On my arrival at Trevandrum, and after a general survey of the instruments, which showed me how much I had to do, I gave particular attention to my native assistants. A short period sufficed to convince me that, besides very great ignorance of the objects of the observations and of the scientific use of instruments, there was great carelessness, and in some cases gross dishonesty. It was difficult to decide how to bring such materials into useful play. An assistant once in the Observatory had hitherto considered himself fixed for life; the pay, though small, sufficed; continuous study and persevering effort together were unknown; and all he cared for was to work as little as possible. I had only one path open to me—to find out some of the dishonest observers; to dismiss them; to get honest ones, or others I might train to honesty, in their place; to teach all as much as possible the principles of general science and of the instruments they had to observe; and if possible to raise them a little higher in their own esteem. It was some time before this plan could be carried into effect. I had considerable difficulty in finding out those who manufactured observations, owing to the distance of my residence from the Observatory; it was only in May 1852, during stormy night watches of the monsoon, that I succeeded in seeing two observers sleep for hours, and finding in the following mornings that all the hourly observations were carefully interpolated. I dismissed the two with great disgrace, and my new system began. I assured each assistant of all the esteem that honesty merits, of my anxious desire to be useful to them, if they would only be so to me; and I took every opportunity to enforce the principles of truth, whether in the moral or scientific sense. In July 1852 I commenced a series of lectures on the instruments in the Observatory, their objects, and the results derived from them, the errors to which observations were liable, the precautions to be taken if they could be avoided, and the corrections to be applied, if not. I encouraged the assistants to take notes, examined them on the lectures, and gave prizes to the most meritorious set of notes.

By degrees the character of the assistants improved. As time passed on they began to realise the value of the work they were engaged in. Scientific study gradually enlarged their minds, and at last by dint of constant tuition from the astronomer-in-chief they became fair mathematicians. Mr. Broun's sketch of this portion of his work is deeply interesting. He says:

In succeeding years they all read over the first six books of Euclid, and knew enough Algebra to solve quadratic equations; one class of eight read with me Professor Kelland's Algebra, and Snowball's Analytical Trigonometry. I have taken occasion, from time to time, to give explanations and demonstrations of particular problems and processes used by them, have been accessible to them at all times, and ready to explain everything in my power, whether directly connected with their work or not. I believe I may affirm that, on the whole, the assistants now in the Observatory can observe as accurately as the ordinary class of observers in European Observatories, and that they have an intelligent comprehension of the precautions to be taken for accurate scientific observation, as well as (in the case of several of them) of the objects for which the observations are made. I have had to thank both His Highness the Rajah for an allowance of forty pounds or books required by the assistants in their studies, and Lieut. General Cullen for having supported my request for this purpose. I intimated to Lieut. General Cullen that my lectures might be attended by any one desiring to do so. Every precaution was taken to insure accurate and honest observation, and the checks ultimately adopted, by means of double instruments and otherwise, are sufficient to detect the smallest errors, while a system of pecuniary fines was employed to prevent the recurrence of any carelessness. I have been put to considerable inconvenience by having to train some young men, East Indians as well as Hindoos, who found, after receiving my instructions for two years or so, that it was in their power to obtain better salaries elsewhere. I was obliged, in consequence, with new assistants to make an agreement, in which they are bound to the Observatory for five years; while the Sirkar has engaged, on the other hand, to pay a salary increasing in each successive year till the end of the period. I have been fortunate enough to obtain, as assistants, several young men taught in His Highness the Rajah's Free School, where they had received a fair elementary education. All the native assistants speak and write English with more or less accuracy, as well, indeed, as most foreigners in Europe, who think themselves well versed in the language. It will be seen that I am not one of those who believe that any one will suffice to make observations of even the barometer and thermometer, nor do I think that observations of such instruments are of an inferior class requiring no skill to make or reduce them because many people keep one or other in their room or their verandah. To determine the mean temperature of a place is a much more difficult problem than to determine the mean position of a star, in whatever way we regard it; though observations can be made printed and published, for both purposes equally worthless, with equal facility.

No one would imagine that an astronomer on the south-west coast of India would possess the same advantages as a European confrere in a University town, but probably few persons, not well acquainted with the details of an observatory, would expect to find the position quite so bad as it appears to have been from Mr. Broun's narrative. After giving in detail a description of the various instruments in use and their condition, Mr. Broun says:—

Such is a brief account of the state in which I found the Astronomical, the Magnetical, and Meteorological Observatories; but this statement is far from giving an idea of the difficulties presenting themselves: scarcely an instrument was complete, almost all wanted screws or eye-pieces; and no tools, even of the simplest kind, were left in the Observatory. All these details, with many other things, had been disposed of as valueless, at the public sale of my predecessor's effects, having been removed to his residence some time before his death. No workman, acquainted with European instruments, was to be had in Trevandrum, and I was obliged to employ a native goldsmith, whom I could never teach to make a screw. In consequence of the system of caste which degrades all the handicrafts, my assistants were useless for the commonest manipulation. I was forced to occupy myself with the smallest working details of the Observatory, and had to regret that I had neither the time to do everything, nor the practical knowledge requisite for many things that were

essential. Add to all these the difficulties connected with obtaining anything in this corner of India from Europe. Four months should suffice to receive an answer to a letter from Europe; but when allowance is made for convenience of friends, or the occupations of men of business, the time may be doubled. Four years have not sufficed to obtain instruments I have required: those sent me after the long voyage round the Cape of Good Hope, or the shorter and more dangerous one to instruments by overland, have run such risks in native vessels from Bombay for a thousand miles along the coast of Malabar, or on the heads of coolies across the long tract, intercepted by swollen torrents, from Madras, that it has been a wonder I ever received them even in fragments; the coolie sometimes lying sick or even dying on the way. Professor Woodhouse has remarked, in the preface to the second edition of this Treatise on Astronomy, that the insufficient vicinity of the Cambridge Observatory to the London artists was one of the two circumstances unfavourable to that Observatory!

In a subsequent issue we purpose noticing again Mr. Broun's truly remarkable attempt to place Travancore in a respectable position in relation to Science. His labours were enormous, but a result of them is that the two Observatories at Agustia and Trevandrum would now do honour to any State, in any part of the world.

OPIUM.

Up to January 1873 licences for the sale of this drug had, for thirty-five years, been given to respectable persons without any fee being required, provided that the vendors obtained the whole of their stock from the Government Treasury. In 1872 the price of the drug rose considerably, but the consumption of opium continuing to be the same, the Government approved of the imposition of a monthly fee of Rs. 5 on each opium licence taken out in Calcutta and its suburbs, and, later on, the introduction of the measure was authorised in all other districts where the payment might seem desirable.

During the years 1872-73 and 1873-74 the number of licences issued for the sale of opium was 10,743 and 10,593. The decrease is apparent chiefly in Calcutta, owing to the reduction effected in the number of shops at the time of the arrangements for levying licence fees; in the 24-Pergunnahs to the closure of shops where sales were nominal, and in Bogra to the transfer of some shops to other districts, and to cessation of licences in places where there was no demand. Compared with the preceding year, although the consumption of the drug was less by 66 maunds 17 seers 15 chittacks, the revenue was larger by Rs. 1,30,647 during 1873-74, owing to the increase in the selling price. All the districts of the Presidency division exhibit an increase in consumption and in revenue, which exceeds the income of 1872-73 by Rs. 38,178. Of this sum Calcutta has yielded Rs. 26,312, partly in consequence of the higher selling price of the drug, and partly owing to the licence fee levied during the year for the first time. In the 24-Pergunnahs the Commissioner observes that the increase may to some extent be attributed to the decreased consumption of spirits. It is supposed that some persons who are no longer able to drink country spirits and rum, owing to the rise in the price of these stimulants, have taken to the use of opium, but the high price of the drug is against this supposition. In 1872-73 the vendors used to sell it at Rs 25 per seer, but they have since raised the price to Rs. 26. In Jessore the increase is the result of a larger demand and closer supervision. The consumption in Rajshahye was affected by the scarcity, and has diminished in all the districts of that division excepting Rajshahye itself, which shews a slight increase. The revenue, however, did not proportionately suffer, as the rise in the selling price of the drug from Rs. 22 to 24 per seer checked the decrease which would otherwise have occurred. In the Chittagong division, Tipperah shews a small increase of 15 seers, which the Collector explains as follows: "There was a failure of the poppy crop usually grown in Hill Tipperah, and no opium was consequently produced there this year. The hillmen were obliged to indent on us for their supplies, which led to the increased consumption. In ordinary years the process is somewhat reversed, and a good deal of their opium finds its way across our frontier, which is not well guarded to prevent smuggling." The decrease in Monghyr is attributed to the licensed vendors selling contraband opium under colour of their licences. Measures were taken in the first quarter of the year to secure three respectable Bengalees to take out opium and madat licences; but within a few months they were arrested by the police on what turned out to be a false charge of illicit dealing in opium, and though eventually they were acquitted, they were so much harrassed by the criminal prosecution that they gave up their licences.

Notwithstanding its enhanced price, opium yields a larger revenue and shows a greater consumption in the three districts of the Orissa Division. The revenue under this head, which even during the famine year 1866-67 exhibited remarkable stability, continues to expand, as the drug steadily finds favour with all classes of the people. It is not surprising that the consumption of spirits in this division is so small, as the people naturally prefer narcotics to stimulants. The Commissioner states that if the increased consumption is maintained, the selling price of the drug will have still to be increased As regards the Chota Nagpore Division, the Commissioner writes: "It is remarkable how the consumption of opium has continued to be much the same yearly in each district for the last six years, but how very much below that of the other districts is the consumption of opium in the Hazareebagh district. That is an old opium-growing district, and it has always been suspected that illicit sales are made by the cultivators; and the Deputy Commissioner observes that the difference in favour of the year under review was caused by sales during the last quarter of the year, when it is supposed that the cultivators have no more in hand to dispose of licitly or illicitly. It is satisfactory to find that the introduction of opium cultivation into Lohardugga and Manbhoom has not caused any diminution of Government revenue from sales in the two districts." It is to be noted that in Assam, where the largest quantity of Bengal opium is consumed, and where poppy used formerly to be grown, not a single case of illicit cultivation or dealing has been brought to light during the year, notwithstanding the rise in the selling price of the drug. The dealings in contraband opium are rife in the producing districts of Behar, and retard the sale of the licit drug there. Among others, the farmers of opium in Chandernagore are engaged in this trade, and they employ agents to bring down opium from Behar. Several seizures of contraband drug were made in the districts of Patna and Gya, and at the railway stations of Hooghly and Howrah, and it is to be hoped they have tended to check smuggling to some extent, the opium farm of French Chandernagore having fetched Rs. 2,500 in 1873, while in 1872 it was let out for Rs. 5,500. As the retail trade in opium in that settlement is small, and the farmers had hitherto been enabled to bid high because of the profits they made from the contraband traffic, the decrease in the amount bid goes to show that the trade must have received a check.

Under the orders of Government the experiment of reducing the consistency of excise opium from 90° was tried during the year; 64 cakes of 80° consistency were manufactured at the Benares Agency, and they were sent to the Collectors of Patna and Tirhoot for sale—34 to the former and 30 to the latter. In Patna 8 of the cakes, and in Tirhoot all the 30, were sold at the fixed price of Rs. 14 4 per seer or cake. The cakes, however, were afterwards found to be mouldy, and short in weight. The experiment thus failed, and the unsold cakes were ordered to be returned to the Agent.

BURMA.

A correspondent writes as follows: the Revd. Mr. Tollemache, late Chaplain of Rangoon, in preaching a farewell sermon to his congregation, full of pathos and Christian feeling, said, with reference to his departure, that he felt "the change most keenly. Of all official ties, that of the priest to his people, is surely one which should be the fastest bound and therefore the hardest to undo. In the few years that I have spent here, I have seen children, whom I knew in our Sunday School, grow up and become wives and mothers. They have been brought by me to receive the gift of the Holy Spirit in the laying on of hands from the Bishop. I have knit them to their husbands in the matrimonial blessing. I have baptised their little ones. I have ministered at the death-beds of not a few of your friends, and said the last office of the Church, commending their souls to a merciful Father." These sentiments expressed on the occasion of leave taking, touched a chord in the hearts of his auditors. The only discordant ring was in the following passage. "Some few have received at *my hands* the benefit of *absolution and gone away cleansed by the 'sprinkling of the blood of Jesus.'*" The Reverend gentleman, who clearly has a ritualistic tendency, avows that he has "sometimes urged doctrines which the Church of England emphatically teaches, but which have been for ages so thrust into a corner, that they sound to some novel and strange."

Complaints have reached us that the repeated shiftings of officers and subordinates in the Public Works Department are producing much mischief. Engineers from the North-West have been posted to Burma and officers from Burma, who have learnt the language and become useful, have suddenly found themselves under orders to proceed to Assam or to the Punjab. That it is *costly* to effect these transfers is apparent to the Financial Department only, but Chief Commissioners and Chief Engineers who re-

commend the changes, under a fit of spleen or bile, never reckon the extra outlay. One Chief Commissioner who has failed to carry out a pet scheme of his in an official report gives vent to his grievance by saying that so long as Engineer * * * is in his division, there is no hope that he can carry out his project. The reputation of able officers is sometimes blasted for a venial offence, and supersessions under such conditions are disheartening to the service.

The Baptist Missionaries, who were the first to sound the note of alarm that a Famine among the Karens impended in Toungoo, were ridiculed for their foresight. Some of the local officials persisted in saying that the deaths that had taken place were not from starvation, but from epidemics and a mortality that could not be stayed. The Commissioner of Moulmein at a public meeting declared that he had received authentic information that Famine did not then exist. In the Gazette of Burma of the 16th January is published a confession from the Deputy Commissioner who says—"It is very clear that we have to provide food gratis for the *next seven months* at least for the old, sickly and infirm." The Deputy Commissioner has set to, most energetically, to meet the difficulty. He has had 8 elephants in use which could carry 400 baskets at a time, and as the quantity that would be required there would be 5,000 baskets, this, by means of 40 bullocks could be carried over the mountains. The Rangoon Famine Fund has contributed 5,000 Rupees for the relief of the people in Toungoo, which sum will, according to Major Lloyd, "go far towards feeding every aged and helpless person." The sympathy of the public has been well expressed in the *Moulmein Advertiser*. It is but fair that more particulars should be given of the Toungoo famine. The authorities persist in calling it a "scarcity."

The celebration of the *Mohurrum* in Moulmein is, according to a friend of mine who resides there, practised from *no devotion* to the Mahomedan religion, but simply for the sake of ribaldry and as an indecent pastime. The Chulia Coolies, who parade *Tazeeahs*, do so in all manner of fantastic dresses, mimicking Faqueers, personating the officials and their wives, and by means of grotesque imitations of tigers and other wild animals, mocking the more respectable classes of Mahomedans and Moguls. The officials in Burma, who are noted for putting down nuisances with a high hand, have succeeded admirably in restricting the consumption and importation of Ganja, and with a sanitary object have forbidden the use of Mahomedan cemeteries in towns, to prevent the pollution of wells of water from their proximity. The Burmese, who love fun, are easily enticed to join in the Mohurrum festival, though they are only degrading themselves. The Burmese have no caste and care very little for religion, and under a Christian Government are descending in the scale of civilization instead of rising. They have quite enough of "merry making" in their own festivals. Will Mr. Eden see what can be done to elevate the Burmese? He has able co-adjutors in Colonels Brown and Duncan.

The Tariff Committee in Calcutta would act judiciously, before submitting a final report, to lay before the public the points that they are deliberating on and the views they hold. These put in the form of a Memorandum, circulated among all the Collectors and published by the Press, would produce a wholesome ventilation. The wisdom of Committee men is not always potent for good. The harm done by secret manipulation in matters of trade takes years to rectify. There is room for reforming and codifying the Customs laws. Since Act VI. of 1863 was passed, *mushroom* legislation has been the perennial consequence. The subsequent acts are

There are no proper Customs Manuals or Vade Mecums to guide the public, such as existed in the days of Campbell and O'Brien who made matters easy for the Preventive service. Will Captain Lawrell win his *laurels* by forming a new Manual to regulate procedure all over India and Burma? One Collector from Burma should be associated to carry out the work, under the direct supervision of Mr. Eden.

ELEMENTS OF PSYCHOLOGY.

ONE of the most useful features of modern criticism is, that it has necessitated the adoption of exacter methods, and of a clearer and better defined terminology, by public writers, than were generally employed in former times. Nowhere is this more apparent than in the wide field of philosophy. Not a few of the numerous difficulties presenting themselves in the discussion of this vast subject, arose from the misuse or ambiguous use of words and phrases. Now-a-days, the desire is everywhere felt, to know exactly the essential points of difference in argument, and great care is taken to avoid mere verbal disputes. Thus it has come to pass, that the philosophy of the human mind has been liberated from no little fog and vapour which encompassed it and prevented the right understanding of those intricacies and perplexities naturally belonging to it. It affords us great pleasure to find that Dr. Jardine's work is characterized by a precision of language in which the best critics and writers now excel. He is extremely anxious to avoid the use of a word having a double signification; and where he uses such word, he does so in one sense only, which he carefully explains. The word quality is a notorious offender among philosophers, and has given rise to infinite disputes and much jargon. Referring to the ambiguity of the term, Dr. Jardine remarks, that "when it is said that the quality of an object is one of its characters by which it is known to us, it is evidently a projected sensation, for all objects as known consist of such. When it is said that the quality of an object is that which produces a certain sensation in us, it is applied to something which, apart from the sensation, is unknown." The former of these two applications Dr. Jardine adopts, and in doing so calls attention to "a still further restriction to the term quality, or at least an important distinction between two kinds of qualities."

The scope of the work is contained in the following sentence: "the Psychology of cognition analyses knowledge into its primary elements, and seeks to ascertain the nature and laws of the processes through which all our knowledge passes in progressing from its simplest to its most elaborate condition." The sources from which the materials are drawn for the systematic exposition of the subject, are, the writer says, consciousness, the physical organism, and the results of mental activity as seen in human progress. He rightly states, that it is only by consciousness that we can become directly acquainted with mental phenomena; and shows continually throughout the dissertation the important part which consciousness plays in all the processes of the human mind. His analysis of self-consciousness is interesting and suggestive, although not likely to carry conviction to every one. Avoiding the theories which have been propounded on the nature of self, he defines self-consciousness as "the result of reflection upon the diversity of sensations succeeding one another in time. But only in a certain sense, because the very act of reflection involves the treating of the successive sensations as objects—that is, involves self-consciousness." Of course it does, and therefore the definition is of no value. That relativity is a condition of nearly all knowledge, is certainly true; but when our author regards it as a condition of universal knowledge, even of our knowledge of self, he is doubtless following in the steps of philosophers of great reputation, nevertheless he is stating that which seems contrary to human belief. For a man not to be conscious of his own existence except by the consciousness of the existence of some another object, implies delusion somewhere. Nor if, for the sake of argument, we grant this to be true, is consciousness thereby explained. For, according to the same reasoning, if all knowledge is relative, our consciousness of this other object is dependent on the knowledge of some other object still; and so on through an endless series.

The work has two principal divisions. One is on the acquisition of presentative knowledge; the other on the laws and kinds of representative knowledge. Under the former, sensations and perceptions are discussed. The writer gives a lucid analysis of the senses. He classifies our sensations into, first, those of organic life; and, secondly, those of intellectual life. He has a section on the revival and association of sensations, in which he shows the relations of idealised sensations; the order of sensations; and the independence of their order. In the section on sensations as objects, he makes some excellent critical observations on various theories of extension, himself adopting the intuitive theory. Perception is ultimately identified with sensation, and in fact "consists of sensations projected into space, and united together in a permanent group, supposed to have an existence independent of the mind which perceives." "Perception implies at least one actual sensation, and several other ideal ones connected with it; implies also a belief that these ideal sensations will become actual, if the necessary physical conditions are fulfilled. Now the sensible world, in perception, is separated from the mind, although in the analysis of the process of per-

* *The Elements of the Psychology of Cognition.* By ROBERT JARDINE, B.D., D.Sc., Principal of the General Assembly's College, Calcutta; and Fellow of the University of Calcutta.

ception this separation is not a real one." These points are presented in concise words and with considerable force of reasoning, showing a thorough mastery of the entire subject, and perfect freedom from dogmatism; and even where one may not altogether coincide with the writer's views, he is always interesting and instructive. One chapter in devoted to different theories of perception held by Descartes, Locke, Berkeley, Hume, Reid, Kant, and recent English philosophers. The history of philosophical opinions is of incalculable importance in the study of philosophy. Dr. Jardine discusses with much acuteness the fundamental opinions of these philosophers, exposes their errors, shows with admirable precision how far their sentiments accord with truth, and lays his finger on the exact points of divergence from sound reasoning.

The second great division of the book is on representation, or representative knowledge. How is representation possible? Here again the author appeals to consciousness. "What," he asks, "are the conditions upon which the representing in consciousness of forgotten knowledge depends? Sensations, once felt, disappear from consciousness." Then comes the question, how sensations are repeated without the concurrence of their original external cause? How is forgotten knowledge restored or revived? Dr. Jardine objects to the reply, that the permanent possibility of ideas is the condition of represented knowledge, because, he correctly observes, this is no explanation, but is the very thing to be explained. He then proceeds to discuss the problem, which is a supremely difficult one. But we must forbear from entering upon it. The laws of representation, more commonly spoken of as the laws of association, occupy a distinct section; and several are devoted to the various kinds of representation. In these latter phantasy, memory, expectation, and imagination, form the principal topics. An image comes spontaneously into the mind, supposed to be real, but without having any reference to time—this form of representation is phantasy. When the image is recognised, and has reference to past time, it is memory. When it has reference to future time, it is expectation. When the represented objects are modified and rearranged in various ways to suit the design of the individual, it is imagination. This mental power is elaborately described; and its operations are delineated in poetry, painting and sculpture, music and architecture, in ethics and religion. This chapter concludes with a section on the representation of abstractions, such as abstract sensations, extension or space, logical abstractions, the laws of nature, and non-phenomenal causes. "One of the most abstract of all ideas," the writer says, "is that of Being; but it is impossible to represent Being except as a predicate of particular existing things and consequently it is absurd to speak of Being as having any objective reality. Similar remarks might be made regarding other logical abstractions—such as, the Absolute, the Infinite." The author terminates his task by advancing to the exposition of a higher psychological process still, to which he gives the name of Elaboration, by which is meant the old-fashioned terms, Thought, Reasoning, Reflection. This elaboration of knowledge embraces predication, intuition, inference, induction, deduction, in short all the mental processes with which logic is concerned. There is not so much scope here for novelty as in the other portions of the book. Yet as forming an integral part of the subject in hand it is well considered and clearly set forth. No one can read the volume without feeling that its author is an independent thinker, and that he has brought together in a small space the results of much reading and investigation. As a compact philosophical treatise, well thought out, and well written, giving in few words the gist of modern criticism and research in one important region of intellectual life, it will, we doubt not, be of eminent service to all engaged in the study of the human mind.

M. A. S.

BATE'S HINDI DICTIONARY.

It is much to be regretted that so little attention has hitherto been given to the study and development of Hindi. For notwithstanding all that has been said and written to the contrary, we do not see how any one who has really mingled with the people outside of the large cities can doubt that Hindi and not Urdu is the language of the great mass of the population in the N. W. Provinces, and in most of the native states north of the Vindhya Mountains. It is indeed true that most Hindi speaking villagers, when the *sahib* comes around, will make a special effort to use all the Urdu that they know, supposing, often quite correctly, that the *sahib* will thus be much more likely to understand them. But under any other circumstances let one listen to the speech of these same villagers, and it will be found something so unlike even the plain Urdu of the city bazaars that the mere Urdu scholar will be sure to lose much that is said. It is very well to speak of this country-speech as corrupt patois and all that; but the fact remains that almost all the literature that the Hindus of N. India buy and really care for, *is in one or another of these dialects*. No one work, *viz.*, has more popularity and influence in N. India than the *Ramayan of Tulsi Das*. But no one in the least acquainted with this work needs to be reminded that the language of *Tulsi Das* is far enough from Urdu. As a matter of fact, most of the forms peculiar to the *Ramayan* and similar poetry, as, *e. g.*, the future in *b*, the oblique forms of the pronouns, *ehi, ohi, jihi*, etc. are just those current to-day in the colloquial language of millions of people in the eastern districts of N. India; as also the various peculiar Braj forms employed in other favorite books, are used the colloquial language far around Agra and Muttra.

To any one, therefore, civilian or missionary, who wishes to know the Hindus, to appreciate their feelings, their tastes and modes of thought, it is absolutely necessary that he should study that Hindi, in which, to the present day, despite the Government patronage of another tongue, the great multitude of these people still speak and think. Such books, especially, as the *Ramayan*, should become familiar to the student. The power and influence of this one poem upon the masses is truly wonderful. Every missionary must have noted many a time the look of quickened interest on the faces even of the most illiterate, which any reference to the Ramayan is sure to awaken.

But just here the student has hitherto met with a serious difficulty. No dictionary has existed which could be of much service. Forbes' Dictionary fails the student of the Ramayan half the time; for although containing many Hindi words, it does not profess to be a Hindi dictionary. Thompson's is indeed a Hindi dictionary, but very meagre and constantly disappointing. It is therefore with peculiar satisfaction that we have received a new Hindi dictionary, by the Rev. Mr. Bate of the Baptist Mission, Allahabad, which promises to do much toward supplying a great need. Instead of the 25,000 words comprehended in Mr. Thompson's work, this presents us with 50,000 words: and we have already so far tested it in philosophical and poetic Hindi as to be assured that, if not exhaustive, it will not often disappoint the student. Mr. Bate has evidently intended to present the language as it is, and not as mere theorists would have it. Accordingly we find a fair proportion of Arabic and Persian words, such as are found more or less in every Hindi book. No lexicographer could justly ignore them. We are, moreover, glad to see that the author has kept before him the difficulties of the student. Not only are the original or more usual forms of words given, but where words in any dialect or tense present peculiar and often puzzling forms, these also will be found in the appropriate place. Unusual forms, *e. g.* as *tishtai* 'he stands,' *tumtanau*, 'yours', *naumi*, 'I praise', are duly noted and explained. With the same object, peculiar terminations, common in some dialects to many words, are noted in due order. Thus we find, *e. g.*, *b* as the sign of the future, and *l* as the sign of the past tense; *hi* as a termination of the present tense, etc., etc. Under each letter we have a very full and valuable account of its various functions and changes, much of which information, as far as we are aware, is for the first time here made accessible to the general public. We might indeed be disposed sometimes to question the strict accuracy of some statements as to the changes of certain letters; but so long as Hindi philology is in such an unsettled state, it could hardly be expected that a philologist would always avoid errors. We regret that Mr. Bate has not uniformly indicated the locality to which various peculiar words and forms belong. This indeed is sometimes noted, but is very frequently omitted. So also we could have wished, for the sake especially of beginners in the language, that the origin of words, as Arabic, Sanskrit, etc. had been at least briefly indicated. Indeed, a note of the derivation of words, where known, would have added greatly to the value of the work, for scholars of every grade. But the great desideratum now remaining is the illustration of the definitions of words by apposite quotations. This will indeed require a great additional expenditure of time and labor, and we are glad that Mr. Bate did not defer the issue of a first edition until he could furnish such citations. But we are sure that all Hindi scholars will join us in the earnest desire that he will not stop with what he has already done for us, but that at no very distant day, he will publish another edition of this valuable dictionary with the additions which we have ventured to suggest.

K.

THE JAINS.

MR. ROBSON in the course of his work to which of late we have frequently alluded discusses the nature of the Jain religion. It appears that two divisions of Jains have sprung up, the Swetambras, clothed in white, and the Digambras, clothed in space. It is creditable to the latter, that, while generally speaking much the stricter sect of the two, they do not strictly carry out their notions with regard to dress. We have in this instance another illustration of the truth that men are frequently better than their principles.

CASTE.

MR. ROBSON represents caste as the most complicated of the many knots tied by pantheism in India In the South some German Missionaries have compromised matters by allowing caste to remain undisturbed within the pale of Christian communions. But the great majority of missionaries, German and English alike, are most unfavourable to the perpetuation of what they cannot help regarding as an enormous evil. Mr. Robson tells us "the equality and brotherhood of mankind is as hateful a doctrine to the Hindoos as was the idea of the equality of the Negro and European race to the planters of America; and as in India it is the distinctive social doctrine of a hostile creed, it makes them look with *suspicion and dislike on all its other teaching.* Even when they have been induced to study the Christian religion, and have become convinced of its truth and excellence, of the divinity and moral holiness of its Founder, they have not been able to accept the idea of all men being brethren, of the sweeper being naturally the same as the Brahman, and able through education and training to rise to the same social position." Caste derives its strength from a wide-spread belief in transmigration. Man's present lot is regarded as being a result of his conduct in prior states of existence, and the patient in this life are led to postpone any expectation of an improvement in their condition till after death.

EPITOME OF NEWS.

Bengal and Calcutta.

— Mr. Richard Garth, the new Chief Justice, will not arrive in India till July.

— The Viceroy will hold a levee in camp at Dehli on Wednesday, the 17th March.

— The death of the young Maharanee of Durbhunga, on the 22nd of February, is mentioned.

— Four thousand rupees have been distributed amongst the detectives who discovered the stolen jewels of the Maharaja of Travancore.

— It is intended to publish the Budget statement before the Viceroy leaves Calcutta. There will be no Budget speech.

— It is stated that a European officer of Gowhatty lately distinguished himself by assaulting a native school-master for omitting to salaam him.

— The Naga field force will comprise five hundred men of the Assam Regiments and five hundred Transport Corps coolies.

— The Lieutenant-Governor of Bengal goes to Shahabad at the end of March to open the Soane Canal, and afterwards visits Kooch Behar.

— A few days ago a native female, living in Punchanuntolah, Howrah, gave birth to two sons and one daughter. All died within three days.

— Besides Lieutenant Holcombe not less than 80 men of the Survey party were killed by the Nagas. One head constable and seven constables sent from Sylhet, were also massacred.

— Of 4,587 European and Eurasian heads of families with less than Rs. 300 a month to live on in Calcutta, 1,251, including 237 Europeans, possess no income at all.

— The Annual Convocation of the University of Calcutta will be held in the Senate House on Saturday at 4 P.M. The Hon'ble E. C. Bayley, C.S.I., Vice-Chancellor of the University, will deliver the address to the graduates.

— In the latest native musketry returns the 40th Native Infantry stands first with a figure of merit of 111·79, and the 29th Punjab Infantry next with 107·08; whilst the best figure obtained by any European regiment, the 21st Foot, is only 105·25.

— A place called Borsali, near Jaipoor, will be the base of operations against the Nagas. The offending villages, four in number, are only about sixteen miles from the plains. Captain Butler is to accompany the new force as political officer.

— A prominent Mahomedan official employed in the Foreign Department and another have been charged with attempting to bribe Dr. Moir, in order that he should bring his influence to bear on other public officers on behalf of the Maharajas of Joudhpore and Oodeypore.

— The last mail brings out these words, spoken in the House of Lords, by Lord Granville. "We understand that Her Majesty has been advised to confer a distinction on Lord Northbrook as a mark of the high admiration evoked by his energy in dealing with a formidable calamity. The noble marquis has also rendered justice to Lord Northbrook in a speech he made elsewhere; but I must remark it has also been stated that the whole credit belongs to the noble marquis, the Secretary of State. On both sides of the House it is admitte that Lord Northbrook displayed ability, sagacity, and industry, and that he resisted clamour, which made it all the more difficult for him to carry out his policy. I am sure the noble marquis will agree that the merit of selecting Lord Northbrook is due to the Duke of Argyll; that the instructions were drawn up by the Duke of Argyll, and that the claim of the noble marquis to credit is based on the fact that he made himself perfect master of the facts of the case, and, in spite of inducements to reverse the policy already adopted, he firmly supported it, and in the most public way gave his support to Lord Northbrook. It seems as if it was desired to make up for the little praise the noble marquis had received at the end of the last Parliamentary session by exaggerated credit in the recess.

Love, kisses, tears, and smiles,
Transient sorrows and simple wiles,

are charming ingredients in those who have to deal with young children, but they are not appropriate manifestations to be *indulged in* publicly as between the Prime Minister and some of his colleagues."

— According to the *Pioneer* General Stafford, with his Brigade Major, Captain Butler, left Narrainpore on the 25th ultimo for Debrooghur. Major Heathcote, Assistant Quartermaster-General, left on the 21st with 500 of the Coolie Corps, under Captain Wauchope and Lieutenant Egan, to join the force proceeding against the Nagas. Captain Palmer, A. D. C., has been appointed to act as assistant Quartermaster-General, in breaking up the Duffla Field Force, in Major Heathcote's room. The following officers are returning by river steamers and flats to Calcutta, where they should arrive about the 7th March, leaving by rail from Goalundo:—Colonel Bayne, C. B. Commanding; Captain A. P. Palmer, Major Hunt, Lieutenant-Colonel Montagu, Lieutenant Elliot, Captain Boyes, Captain Beghie, Captain de Latour, Lieutenant Morgan, Lieutenant Logan Home, R. E. and Drs. Raye and Keefer. Deputy Surgeon-General Ross will probably leave the boats at Gowhatty, and proceed on inspection duty in the Dacca Circle. Lieutenant Roberts marches with the elephants to Gowhatty, and Captain Huchison marches from Doobrie to Julpigorie with the coolies of the transport raised in Nepal. On arrival at Calcutta the Artillery and Sappers go into Fort William to make over their equipment, and the Transport Corps go on at once to Chinsurah for a day or two, till paid up and settled with, when they proceed by rail to the Punjab. The 16th N. I. go at present to Jaipur, and leave for Julpigorie about the 20th March if the Naga affair is settled by that time. At present 150 of the 43rd N. I. are under Captain Evans at Narrainpore as a reserve, in case more troops are required in the Naga Hills. It is expected, however, that before a fortnight is over all the Assam regiments will be returning to their respective stations, after having recovered all the heads of those ately massacred and properly punished the offenders.

— The *Englishman* says:—

An interesting case will shortly be heard in the Court of the Magistrate of the Southern Division, in which some of the principal members of the Calcutta Trades will be prosecutors, and the defendant an individual who has been going about under half a dozen *aliases*. This individual was arrested as he was on the point of leaving for Australia. His method of swindling has more the stamp of impudence than of ingenuity, and he conducted his business in Calcutta in the following manner. In December last he telegraphed to the Railway Hotel at Howrah under the name of "P. A. C. Dundas" to have baths and beds ready for a lady and gentleman, who were to arrive by the mail-train the same night; and he accordingly arrived with a female companion. A day or two after, he requested the proprietor of the hotel to get him a good conveyance, and he was recommended to apply to Messrs. Brown and Co. From this establishment he ordered a barouche and pair daily, and on the first day he asked the landlady of the hotel to accompany his wife and himself to make some purchases. Amongst other places he called at Mr. Jellicoe's where he purchased jewellery to the value of above Rs. 1,000; at Messrs. Newman's where he bought a case of instruments for Rs. 120, at Messrs. Baker and Catliff's, where he purchased a large quantity of millinery; at Messrs. Harley and Co.'s, from whom he purchased a large quantity of paint and oil for, as he said, the Lahore Church, which he had a contract to erect. For all these purchases, and for another to the amount of Rs. 1,500 from Messrs. Jessop and Co., he paid by cheques on "Lala Nund Kishore, banker at Delhi." It is almost needless to say that there is no banker of that name in that town, and when this fact was ascertained by his victims, and the police communicated with—another fact was also discovered, which was that the contractor for building the Lahore Church had left Calcutta after pawning the greater portion of his purchases to Mr. Mathewson the pawn-broker in Fancy Lane. It also turned out that he tried very hard to persuade the landlord of the hotel to accept payment by cheque, but as that gentleman would have nothing to do with "greenbacks" he was paid in cash from the money obtained from Mathewson. Just about this time an account of another swindle perpetrated at Goalundo on a gentleman returning to Calcutta from his tea-garden at Assam reached the police. The swindler in question, who, it is hardly necessary to add, is the same person had represented himself as Major Auckland, and had suddenly found that he had fallen short of money when he had to leave Goalundo the next day. The cool assurance of the Major, combined with his previous liberal behaviour to everybody, sufficed to draw the unwary tea-planter into the snare, and he accommodated Major Auckland with Rs. 700 in notes and cash, receiving in return a cheque on the Bank of Bengal, which was afterwards discovered to be useless. The Major left Goalundo the following day, and, probably on reaching Barrackur, discovered that he had obtained his long-expected promotion. At any rate, he was next seen at Serampore, where he was known as Colonel Abercrombie. He purchased tickets for himself and his wife for Allahabad, and was renowned for his unbounded hospitality to strangers at the stations on the road, whom he treated to champagne without end. From Allahabad he started for Jabalpore, where, disguised as Lieutenant Dunbar, R.E., he contrived to swindle a Parsee wine-merchant, named Karsetji, out of champagne and wines to the extent of Rs. 370, and a Mrs. Elmore, a hotel-keeper, out of a dog cart and horse, which he purchased for Rs. 800, paying for them by cheque as usual, and re-selling them for a lower price. He gave one or two grand picnics at the Marble Rocks near Jabalpore, and cleared away in due time, purchasing tickets for a place called Bhowanee, and leaving the train at a previous station, so as to elude pursuit. He then struck his course inland towards Bhopal, giving himself out on his road, to be an Inspector of Schools, and examining the lads at the *putshalas* with much seeming interest. His stay in Bhopal was, however, of short duration, for Inspector Reid, of the Detective Force, had been despatched to look after this gentleman, who had by this time become Mr. P. A. Duff, and, after a pretty extensive search, found him in the country mentioned. After some preliminary steps with a view to identification had been taken, Mr. Reid brought his charge down to Calcutta, and he is here now, awaiting his trial.

North India.

— The first section of the Northern Punjab State Railway from Lahore to Wuzeerabad, a distance of 61 miles, will be opened on the 15th instant.

— A copious fall of rain is reported from Dera Ismail Khan, and a fair amount has fallen in Peshawur. Elsewere the returns are blank.

— It is now stated that the murderer of Mr. Reade committed the deed because his domestic accounts were inaccurate.

— Sir. John Strachey goes to Bareilly about the 24th instant, stays there till the middle of April, and then proceeds to Nynee Tal.

— An action for defamation of character has been brought by Mr. Jackson, a Pleader of Lucknow, against Mr. Davies, a Barrister of the same place.

— The divorce case of Elphick *v.* Elphick and Short came on before Mr. Justice Turner in the Allahabad High Court on the 3rd instant, when a decree nisi was granted, with Rs. 3,000 damages and costs.

— Sir George Couper, having received a telegram from the Government of India, left Lucknow for Calcutta on the night of March 3rd with Captain Erskine, Personal Assistant. He returned on the 8th instant.

— While on a frolic lately two soldiers, stationed at Nagpore, fired their rifles into a crowd which threatened to chastise them. Two men were severely wounded and a woman was killed.

— In some of the villages of Allahabad, Mozuffernuggur and Budaon it has been found that instead of the sexes of the children being nearly equal, the boys were 84,756 and the girls 37,832, and it is presumed that between 40,000 and 50,000 girls have been murdered or allowed to die by neglect or cruelty within the last 12 years.

— The Government of India in acknowledging

the letter of the Punjab Government of June 1873 recommending the scheme framed by the Punjab Local Committee for providing adequate agency for the conduct of Judicial and Executive administrations in the Punjab, concur with the Committee's conclusions that it is not at present desirable to effect a complete separation between those services. His Excellency the Governor-General has adopted, with few alterations, the modified scheme recommended by His Honour the Lieutenant Governor in order to reinforce any weak points existing in the Judicial agency, as the revised establishment involves an additional charge of Rs. 2,05,890 yearly.

— The Lahore correspondent of the *Simla Gazette* writes: Another great chieftain in the Punjab, it is said, is almost as bad from intemperance as Kuppoorthulla. "It is very sad that the noble youth and manhood of the country should, as a rule, go to the dogs in this way. In every district there is a certain number of young men of good family and large property, under the charge of the Deputy Commissioner, who as they grow up to manhood, turn out in a manner not creditable to our administration. Their education and management are supposed to be superintended by the Deputy Commissioner, but he has far too much to do, so they are neglected. The colleges for wards, formed on the model of our universities, are intended to some extent to remedy this mischief, but they only receive a certain number. It is absolutely necessary—justice and policy demand it—that more care should be taken of these young men. While on this subject, I may remark that the Temperance movement, lately commenced in Lahore, seems to be spreading, and that, not only amongst Europeans, but amongst natives also."

— Some time ago, says the *Lucknow Times*, the District Superintendent of Police in Bharaitch, whilst out in camp, went on a shooting excursion towards the Frontier. On hearing of his approach, the Nepalese Authorities accompanied by a dozen of their soldiers stationed at a place called Bhainsa Gourhee, appeared and stopped his further progress. After much expostulation on the ground that Bhainsa Gourhee is fully three miles within our territory, as demarcated by a line of permanently fixed *sal* posts, the gallant Superintendent had to yield to the force of circumstances, and reluctantly to confine his sporting exploits to those parts of his jurisdiction which the Nepalese have not yet occupied. The *kunjars* and other wandering tribes, whose annual practice it has been to migrate across the Frontier for the purpose of cutting *Bankas* or *moonj*, from the fibres of which they manufacture coarse ropes, have this year been prevented from following their calling by a refusal to allow them to enter Nepal. In consequence there is such a scarcity of this coarse string or rope, that the poor villagers in the Bharaitch, Gonda, and Goruckpore Districts will have to forego the customary repairs to their *Chuppurs* before the rains, and will doubtless suffer more than usual from exposure to the inclemency of the weather.

— A correspondent of the *Indian Statesman* writes: A short paragraph appeared in your paper of the 19th, regarding the "Punjabees" who "are making a tour through the district (Agra), distributing cloth to the able-bodied men of villages, on no other security than a promise being exacted of payment on their return three months hence." The same is taking place in the Humeerpore District. The men appear to be Cabulese, and don't sell the cloth to the able-bodied alone, but any villager who asks receives. Men in the most indigent circumstances have had three and four rupees worth of cloth given to them. These men, I feel certain, will not be able to pay; which the sellers of the cloth ought to know as well as I. What their object is, in selling cloth to the poorest in the district on the condition of payment being made during the months of April and May, I have not been able to discover. The quantity of cloth (European-made evidently) disposed of in the Humeerpore District alone, is very considerable; and now there is a rumour that cash will be available at 4 *annas per cent.* for any man who chooses to take it. Perhaps the men have undertaken a very extensive speculation, in which the profits from the majority of the sales will be large. One of my servants asked the men how they could expect to receive payment from men who are covered with rags and live on jungle produce during a portion of the year, for the want of means to do otherwise. They replied "*Allah dega*" (God will give.)

— It is proposed to make Attock a terminus of the Northern State Railway instead of Peshawur, and there are certainly many arguments in favour of the idea which deserves every consideration at the hands of those who will have to decide. There is at present an excellent bridge of boats over the Indus at this point, capable of bearing the largest siege gun, available for nine months in the year. For the remaining three, ferry boats take over the heaviest goods in an incredibly short space of time with perfect safety. Peshawur is but forty-four miles off, and an army once arrived at Attock would get over the remaining ground in a very few days. Again, a force of ten or fifteen thousand men set down in Peshawur could not take the field thence without its adequate supply of carriage. This carriage would have almost wholely to be collected from the Rawul Pindee and Jhelum District, and could be therefore made over more easily at Attock, were that station the *rendezvous*, than at Peshawur. From Jhelum to Attock, a distance of 126 miles, the country is cut up by rain-floods into a network of deep ravines, nearly all of which will require bridging. This will be by far the most difficult section of the line, involving deep cuttings along its whole length to counteract the natural unevenness of the stiff clay soil. Leaving Jhelum the line, according to a writer in the *Pioneer*, will take a southerly direction towards Rotas and approach the Trunk Road again near Gujurkan, thus avoiding the stiff gradient of nearly one in thirty just outside the former town to the north-west. Thence the present road will be followed pretty closely as far as the Soan River, which will be crossed about half a mile to the south of the present bridge. Rawul Pindee will be entered to the south-west of the new fort, and the station will be situated close to the present native infantry parade ground.

— The following is an extract from a letter written by a Hindoostanee Moonshee, travelling in Russia: "I saw General Kufmann the Governor of Turkestan who began to question me about the affairs of India, which I explained to him. Among other things he alluded also to the various surmises entertained by foreign governments about the progress of the Russians in Central Asia, their fixing of boundaries and strengthening the approaches to Afghanistan; but I replied that we did not feel in the least concerned about these proceedings and that they may do whatever they like, but that we should like to know what the Russians mean to do when they arrive in Afghanistan and whether they intend to enter India? Hereon General Kaufmann laughed and said:—'If hostilities break out, we shall certainly not be slow to enter India.' He further asked whether the people of India hated the English Government. But it would be strange indeed if they were to hate it for the perfect liberty they enjoy under the British rule. The civilisation of India is not yet so far advanced that the people might be capable of self-government; the difference of religious sects is moreover so great even among Hindus, that they themselves should not like to be governed by Hindus. Then he said;—'Indians can neither in military nor in civil employments rise beyond a certain degree; do they ascribe this circumstance to the justice of the British Government or to the absence of it? I replied:—'This is based on political exigencies which the authorities understand; but they intend after a short while to promote Indians to the higher posts.' He replied:—'No by God! I know that the English do not understand how to govern humanely any except their own people. Many Russian travellers have been in India, and have informed us about the affairs of India, and we know that the English Government is very tyrannical!' To these words I made no reply and considered silence preferable; whereon the General continued to utter sentiments which it is not proper to record in this place."

Bombay.

— Mr. Grant Duff left for England by the last mail.

— Not far from 1,000 persons above the average number have died in Bombay this cold season.

— The Hon'ble Mr. Chapman has resigned his office as a Member of the Council of the Governor.

— The Interpreter to the Court at Baroda, Mr. Flynn, has been obliged to resign his post, an attack of fever having incapacitated him for the proper discharge of his duties,

— A serious accident took place on the railway near Egatpura on Thursday last. Twelve carriages were smashed to pieces, but fortunately no lives were lost. The accident was caused by the breaking of an axle-tree.

— The only cases of bank-note forgery reported in the course of the past year occurred at Bombay. In one instance a forged note for Rs. 1,000 was presented at the Currency Office for payment. In three other cases single forged notes, in two instances for Rs. 100 each and in one case for Rs. 50, were presented at the Currency Office for inspection.

— On Sunday week last, as Charles Gardner, a gunner in No. 4 Company, 6th Brigade Royal Artillery with one or two comrades, was walking along the Esplanade, opposite the New Secretariat, laughing and talking, he staggered, threw his hands above his head and without saying a word fell down dead. He was about thirty-eight years of age, and was a steady, sober man, and in the possession of four good conduct badges. Dr. J. T. Gray, who examined the body of the deceased, was of opinion that the death was caused by disease of the heart.

— It was originally intended by Captain A D Taylor, the newly-appointed Superintendent of Marine Surveys in India, to commence operations from False Point to Bimlipatam, but as the necessary officers and vessels could not arrive in time, these arrangements have been altered as follows: The *Clyde* steamer, under Staff Commander Ellis, R.N., will make an examination of some of the Laccadive Islands, and then proceed to Tuticorin and the Paumben Pass, where she ought to have arrived on the 1st March. Then she would make arrangements for the *Constance* to be towed through the channel into Palk Strait about the middle of March. After a few days' work there, in examination of the soundings, the *Clyde* will prosecute her voyage, calling either at Madras or Coringa about the 14th March, and being due at Calcutta on 21st March. The first duty of the schooner *Constance* (under Acting Commander Chapman, late I. N.) is a survey of Kolachul port on the Travancore Coast, where she ought to have arrived about 1st February, and be occupied till the middle of March. Then she is to go through the Paumben Channel, and be engaged upon the survey of Palk Strait, and perhaps the shoal of Moelitivo on the Ceylon north shore, till the middle of May, when the Madras cyclonic period is past. After witnessing the burst of the south-west monsoon at Paumben, she will proceed to Cocanada to remain there till the end of August, and carry out a fresh survey of the Bay.

Madras.

—Mr. Powell's testimonial fund has been raised to ten thousand rupees.

— Dr. King acts for Dr. Cornish, as Sanitary Commissioner.

— The machinery for the Alpha Gold Mining Company has arrived at Calicut.

— The Government has postponed its departure to the hills till May.

— Two more masters of Local Funds schools have been found guilty of fraudulent practices in order ot obtain an increased result grant.

—A breach-of-promise case, *Short* v. *O'Neil*, lately heard at Ootacamund, has resulted in a verdict of Rs. 1,000 as damages for the plaintiff, and Rs. 400 as costs.

— Hundreds of miles of coal have been discovered

near Sumbulpore by Mr. V. Ball, the Government Geologist.

— There are at present alive twenty-nine gentlemen who have drawn their pensions for twenty years and upwards since their retirement from the Civil Service.

— The report upon the condition of the Madras Municipality shows that its income has been decreasing annually for some years, and is now Rs. 67,000 a year less than in 1868-69.

— Colombo is passing through its hottest and most unhealthy season. Owing to insanitary conditions cholera has broken out in the native parts of the town, but the disease is sporadic, not epidemic.

— The population of Ceylon is about two and a half millions. Including Roman Catholics there are 250,000 Christians, or ten per cent. of the whole population. Of these the Protestants number only 50,000.

— The Madras Government has expressed its gratification at the success obtained in the additional destruction of tigers, in the Coimbatore District, by the agency of the Village Magistrates, whereby a saving of some 10,000 rupees value of cattle has been secured during the past year.

— Mr. Lavelle, who was unsuccessful in his applications to the Madras Government for the grant of mining rights, is said to have been more successful in Mysore, where the Government has granted him permission to carry on operations throughout its territory.

— The confidence still felt in the future of coffee may be inferred from the fact that the Dimbula properties of St. Clair, Glenomerah and Sterling, have been leased at the rate of sixty-thousand rupees per annum. The estates in question comprise about 800 acres in coffee, with 90 acres of reserve.

— A new Hotel Company for Colombo has been announced. The Hotel is to be in the Fort, and there seems no reason why it should not prove a success. The capital of the Company is set at Rs. 500,000, Rs. 300,000 of which are, it is said, to be devoted to the purchase of buildings and land.

— A tiger has met his death in the Bolamputty village of the Coimbatore district in a very unusual way. A jungle man had put a pointed bamboo facing a low part of the fence of his field, and a large tiger jumping the fence, got impaled thereon and died close to the spot.

— A very reprehensible practice has been brought to the notice of the District Magistrate of Godavery, namely, that of throwing the bodies of persons who die of small-pox into the canals. This practice is said to prevail throughout that District, and the Magistrate has therefore issued a notice warning all the inhabitants thereof, that "such throwing is a pollution to the water, and all persons having any part in thus polluting the water will be tried under Chapter XIV. of the Indian Penal Code." If dead bodies cannot be burnt, they should be buried.

— Nowhere did Mr. Grant Duff receive a heartier welcome than at Tanjore. From the house of the Collector, whose guest he was, to the railway station, the road was adorned with festoons. In front of the station there was erected a temporary porch, adorned with bright cloths, flowers, and heraldic devices. The arrival platform had a rich awning spread over it and the ground was carpeted. At the eastern end of the platform a guard of sepoys and the public band were drawn up. Long before the arrival of the mail train, the place was densely crowded.

— The *Mail* has received the following letter from Mr. O. B. Irvine, the District and Sessions Judge of South Arcot: "As from a paragraph which appeared in your issue of the 25th instant, it would appear that the friends of Mr. Broughton, the Government Quinologist, have cause for anxiety on his account and that the latest tidings received of him were contained in a letter to the Manager of the *Neilgherry Courier*, dated from Madras 11th December, I wish to inform you that Mr. Broughton was a passenger with me on board the B. I. S. N. Steamer *Ava* from Madras to Pondicherry on the 14th December, and that he then informed me his intention was to make a tour in Ceylon."

— It having come to the notice of the Collector of North Arcot that certain red stones resembling rubies are found in a field within the limits of the village of Kondapoliem in the Taluq of Poloor, he called on the Tahsildar to inquire into the matter, and submit a report with all available information. It appears that the field in which these stones were found has been under cultivation for the last forty or fifty years, and is now held on putta by one Parasooraman and five others. The stones are more plentiful after heavy rain, and can then be picked up in considerable numbers. They are not of any great intrinsic value, most of them being fragments of larger stones, and some have small holes in them. The inhabitants of the village and in the neighbourhood account for the broken appearance of the stones by declaring that in ancient times there was a town on the spot, and that the jewels belonging to the inhabitants were somehow or other destroyed by fire, and this is not impossible: for, if they were a natural production of the locality, it is likely that the stones would be found scattered over a larger area.

— The whole of the labour that has as yet been expended on the Colombo Breakwater, with the exception of that of the last three weeks, had been devoted to the fixing of the temporary lines of rails, the preparation of the machinery, the formation of the two block yards each 100 yards long, and other necessary preliminaries. At Mahara two steam cranes were started on the 8th February, and one has also been set at work on the Galle Buck for the raising of the rock required for the formation of the root work which forms the first portion of the structure properly connected with the Breakwater itself. Since the 12th ult. the convicts have been engaged on this work, and the quantities of rubble which have been thrown into such shape as to form the outer part of protection of the root are from Galle Buck 3,000 tons, and from Mahara 1,000 tons. The Mahara contribution is at present brought down by a train running every other day, but it is believed that shortly there will be 100 tons a day brought from each quarry. Again there has been a scarcity of waggons, the home contractor having been behind time. The root work of the pier, that is the structure running out from the shore to the beginning of the pier proper, has to be carried out a total distance of 700 feet. This root work is to be five feet above low water, and the 700 feet will be finished by the time the next monsoon comes on (that is about the middle of May) so as to allow of the force of the monsoon having full play upon it all the six months during which it prevails. The part of the work thus left to this natural agent is the important work of consolidation; and it is not until this has been thoroughly and effectually accomplished, that the building of the wall that is to be formed along the side of the root work can be commenced.

Feudatory.

— In future all European offenders whose offences are punishable with three years' rigorous imprisonment and a fine of one thousand rupees will be tried by the Courts of Travancore, but those who commit offences of a graver nature will be sent to the Madras High Court.

Burma and the East.

— Her Royal Highness Princess Smore Smay, thirty-second child of the late King of Siam, died on the 24th February.

— There are complaints in the Rangoon papers that many of the immigrants from Bengal have taken to begging in preference to working.

— A telegram from Mandalay reports the arrival at Bhamo of Captain Cooke from Minemow, where he had left Mr. Elias. Lee-Sie-hie, the Chinese General, who was at Minemow, is reported to have subsequently refused to send Mr. Elias further. Mr. Elias had written that he would return, but no further news has been received.

— A paragraph in the *Rangoon Times* states that the Burmo-Chinese Expedition met with some difficulties soon after leaving Bhamo, for we are told that they returned after their first start, and did not finally leave till the 5th of February. Suspicion seems to point to the king of Burma having put obstacles in their way.

— Six gunboats intended for the French service in Cochin China are now on their way eastward. These gunboats are 13 metres in length, 2¾ metres in beam, and the depth of the hold is 2 metres. Each is furnished with a single gun in the bow. The engine in each is nominally of 28 horse power, and in addition all are capable of carrying canvas. The crew of each gunboat will number 18 men, and there is accommodation on board for 40 soldiers.

— The Yunan Expedition has been treacherously attacked by Chinese near Manwein, on the upper route from Bhamo, and Interpreter Margary murdered. Colonel Brown and party, after some fighting, got back safe to Hitkaw, within the Burmese frontier. Mr. Ney Elias has been recalled from the Irrawaddy route, which he was exploring. As the expedition was protected by passports from the Chinese Government and mandates to provincial chiefs, the attack is unintelligible.

— Advices from Achin only come down to the 15th January. The operations of the Dutch forces were still confined to the immediate neighbourhood of the Kraton. They had taken possession of the mosque at Longbatta, and the Achinese had mustered in considerable force to recapture this position, but had been repulsed in the attempt with heavy loss. The Dutch commander afterwards took up a fresh position near the river, with a view, we presume, of better protecting his outposts.

— The *Arakan News* says that Mr. W. N. Porter, Assistant Superintendent of Police in the Hill Tracts, has started to examine and report on the ancient trade route connecting the town of Old Arakan in that District with Upper Burma, and known as the Loungshay route. This route is about 100 miles through, as at present known, a wild, sparsely populated country, but without any serious obstacles, to the banks of Irrawaddy river. Mr. Porter is likely to return within two months. It is surmised by many that the great travellers, Marco Polo and Ralph Fitch, traversed the Yoma Mountains by this road.

— According to the official report on the Cinchona culture in Java during the last quarter of 1874, the gathering of Cinchona bark there closed about the middle of November last; the quantity of dry produce thus obtained amounted to 33,000 kilogrammes. Of this, 31,000 kilos were destined for sale in the Netherlands, and 1,000 for sale at Batavia. A thousand kilogrammes of Cinchona powder have been prepared in the chemical laboratory. During the year just closed, 34,000 plants of the Calisaya Ledgeriana, and 110,000 of the Officinalis, were conveyed to the prepared ground. In the nurseries, there were at the date of the report, 112,200 Ledgeriana and 100,000 Calisaya plants. The total expense of the culture amounted in 1874 to *f*46,824.33, against *f*50,165.53 guilders in 1873.

— A deplorable *emeute* has taken place in the Singapore Jail. The *Straits Times* says: On Saturday afternoon, the 13th ultimo, the prisoners had finished work and were taking their meal, which they had nearly finished. Mr. Digby Dent, Superintendent of Prisons, was walking up and down the roadway as usual at this time, and the Warders were all at their stations, each watching the prisoners under his care, when suddenly, and without warning, two of the middle grade Chinese prisoners sprang from the ground behind one of the Warders, Mr. William B. Sandford. One stabbed him in the back with a small chisel or similar pointed instrument, while another aimed a blow at his head with a Chinese hatchet, which he had secreted below his waistband, but fortunately missed his aim, the handle merely inflicting a bruise over the bridge of Mr. Sandford's nose. Mr. Dent rushed in under the shed at once to

escue Mr. Sandford from them, when they turned upon him, one stabbing him repeatedly in the back and about the body, while the other made a blow with the hatchet, cutting a score from the shoulder down the breast, but inflicting only a flesh wound; at the same moment these two men shouted a word of signal, and in a moment fifty or sixty of the worst characters in the gaol,—pirates, robbers, and murderers,—sprang to their feet and rushed upon their keepers, with knives, chisels, hatchets, pointed pieces of iron, and such other weapons as they had secreted about their persons. Mr. Dent and the warders had no weapons save stout walking sticks, of which, however, they made good use. Mr. Dent and Warder Sandford, as also Warders Burton, Savage, and Francis Clarke lay about them with their sticks and drove off some of their assailants, while the native sub-warders, who were mostly old Indian convicts, fought bravely to rescue the Europeans, in endeavouring to do which they were nearly all wounded, two very severely. Mr. Dent, in addition to his other terrible wounds, was finally felled to the ground by a blow over the head with a chopper; Mr. Sandford received fresh wounds; Warders Burton, Clarke, Savage, and Reading received cuts and bruises, and others were beaten with carrying sticks used by the prisoners in bringing water into the gaol. All this occurred within two or three minutes.

— The European prisoners, mostly soldiers and sailors, begged hard to be let loose to assist the gaol authorities in putting down the uprising, and their gate was opened by Mr. Lamb, the Head Warder. The alarm had also been communicated to the European guard, three of whom came in with their rifles. A soldier named Felton, who is undergoing imprisonment for killing a police peon with his belt, we are told, seized a rifle from one of the guard, and, with another soldier named Headley, who followed his example, was enabled to save the life of Warder Lamb, who had been borne down by two Chinese, who, with axes uplifted, would in another second have hurled him into eternity, had not these two soldiers providentially shot them dead on the instant. The European prisoners had muskets placed in their hands, but the key of the magazine was not to be found, and the door had to be burst in with a sledge-hammer, and the ammunition chest to be afterwards broken open before they could obtain cartridges. Eventually, however, this was effected, and then the work of slaughter began. The mutineers, desperate savages though they were, found the European prisoners a terrible enemy to deal with; a few attempted to make a stand, but the muskets did deadly execution among them, and they were either mercilessly shot down or bayoneted by the Europeans, whom the sight of blood seemed to infuriate even more than it had the Chinese. At the conclusion of the fight, the gaol yard resembled a battle-field. Dead and wounded were lying about in all directions. Thirteen dead bodies were picked up, and two more, who were discovered to be alive, died in hospital during the night, swelling the number of dead to fifteen. The total number of wounded prisoners was 24, of whom 11 are in the gaol hospital; the other 13 not having been sufficiently injured to necessitate hospital treatment. The total killed and wounded was thus 39. Mr. Digby Dent survived the mutiny by some hours but died on that night.

Asia.

— A Japanese is about to start an English newspaper in Yedo.

— A merchant was recently caught selling European merchandise in Russian territory, and as the prohibition of the same had been notified by the Russians, they have confiscated it.

— It is stated that the Tekkas, Yamouths, and Toorkomans, lately mustered together 5,000 strong and made a sudden attack on the Russian Cantonments of Kniva, killing many men and plundering property. A report has been made to the Governor of Tashkend. The Russians intend to imprison the Valee of Urgunj, as they believe he instigated the Toorkomans and others to make the attack.

— An accident occurred lately at the Taku forts by the bursting of two cannon, while the soldiers were practising; four men were killed and six others wounded. The cannon were of a lot said to have been made in China lately, after foreign models. The powder, made at the Tientsin works, is equal to the best manufactured English; and owing to its great strength, it requires cannon to be well made, and of the best quality of metal, to withstand its explosive power.

— A cuttle-fish of enormous size is on exhibition in the vicinity of Yokohama. It is from 10 to 12 feet in length, its arms or suckers being 6 feet long, and in some parts as thick as a man's thigh. Stories of the existence of such monsters are common enough amongst the Japanese, but as anything of the kind larger than a plate is seldom to be seen exposed in the market, the accounts which from time to time have been circulated respecting such leviathans of the deep have generally been treated as fabulous.

— The Russian expedition force which, with the Khan of Oorgunge, marched to punish the Ullamanees had skirmishes with that tribe and after some fighting gained the day. Many Ullamanees were killed and wounded and several were made prisoners. The men, women, children and cattle which had been taken away by the raiders were liberated and restored to the villagers. Thannas have been placed at different stations where the Ullamanees generally take refuge and arrangements have been made to keep peace towards the Persian frontier.

— The traveller M. Ladislaus Berezenczey, so much *feted* in India, has, it appears, become insane. If the antecedents of the man had been known the Indian papers would, says the *Standard*, certainly not have sung his praises so heartily. It was M. Berezenczey who, in 1848, as "Kormany bistos" (commissioner) of Kossuth, penetrated from the moors of Agyafalva into the plains of Transylvania, burnt all the villages of the Maros Valley, killed hundreds of Roumanians, used women and children as targets for his wild hordes, nailed the burghers of Saxon Regen to their own doors by their ears, but on the first approach of the Austrians took to flight with his ill-gotten booty. Elected to the diet in 1865, he was obliged to retire on account of private affairs, and to leave Hungary: This led to his journey through Asia, and now he is in a mad-house.

— The late Emperor of China was the eighth of his line, and was born on 27th April 1856, his age being thus eighteen years and nine months. The death of his father, which took place at Jehol on 17th August 1861, after his flight from Peking in the autumn of the previous year, when the allied forces menaced the capital, left the guardianship of the young heir apparent a prize to be disputed for by the powers at Court. The dispute which was naturally to be expected in an Oriental palace took place. The Princes Su-shun, Ts'ai-yuen and Twan-hwa, members of the Blood Royal, strongly opposed to the peace policy of which Prince Kung was the foremost representative, having proclaimed the Emperor, endeavoured to seize the reins of government and form a Regency in which their own party should have unlimited sway. The Empress-Dowager ("Mother of the State") and the Mother of the Sovereign were admitted to the Council of Regency, nominally as guardians of the Boy-Emperor. Prince Kung was excluded; and the Empresses being dissatisfied with Su-shun's conduct and policy, arranged a *coup d'état* with the former Prince. The three conspiring Princes were arrested, tried, and condemned to be cut to pieces; but this sentence was commuted to self-strangulation in the case of two of them, and to decapitation in that of Su-shun. Minor punishments were meted out to other nobles and officials.

— Nominally ascending the throne in the year 1862 (the year in which one Emperor dies is not counted as part of the reign of his successor), the child Emperor then had the affairs of his vast dominions administered for him by the Empresses-Dowager as regents, with his uncle Prince Kung for their chief adviser. On 15th October 1872, he was married; and on 23rd February following he assumed the reins of Government, which he has so soon again had to surrender to the hands that guided the chariot of state during his minority, and which apparently had scarcely relaxed their hold. We have but meagre data at present upon which to form an estimate of the character and the capacity of the deceased Emperor, and must therefore postpone any remarks of this nature. In the last decree or testament of his father, Hien Feng, by which the young Prince was appointed successor, he was said to be "humane" (a term which is probably used here in a wide sense) "dutiful, quick, and intelligent." These qualities were no doubt carefully cultivated by his tutors according to the best Chinese standard; and judging by certain of his public acts, there appears to be ground for believing that to them was added a will by no means weak. It was hoped the bent of that will would eventually declare itself in a direction which would rouse China from her lethargic and backward condition, and give *eclat* to his reign.

— A new element of loss to tea shippers has become prominent during the past season, and this is the risk they incur by the scandalous way in which their property is treated by nearly every line of steamers from Shanghai, with the exception of those belonging to Holt's and the Mail Companies. It has been found lately that many outside steamers deliver a portion of their tea so burnt and dried up through being stowed near the boilers, that heavy claims are put in by the retail buyers of the tea for difference in sample. There is no hope of obtaining restitution from the ship, as no proof can be maintained. An instance was advised a few mails ago, in which an invoice was sold and gave £150 profit, but on inspection a great many of the chests were so dried up that instead of a profit the loss is nearly £200. In another line the owners have the vessel put into dock and work overside, so that it is generally two or three weeks before the lower tiers of teas come to light; and even samples can only be obtained with difficulty, application to the owners themselves being met with the utmost discourtesy and contempt. Another item is the careless way in which Singapore cargo is taken in without any pains to separate it properly from the tea. Captains of steamers leaving China, and calling at Hongkong and Singapore and other ports for freight to fill up, place essential oils, pepper, &c., &c., and such like deleterious matters, on the top of the tea; and whole cargoes are not unfrequently deteriorated 1d. a 2d. per lb., through this cause. It is so difficult to enforce any claim on this account, that instances frequently are allowed to pass without notice.

— *Indian Opinion* gives the following items of intelligence regarding Cabul affairs and the taking of Herat, received from two independent sources, one direct from Cabul, and the other *via* Dera Ismail Khan. The accounts are circumstantial, and are certainly believed in some quarters, while doubted in others. The Cabul correspondent states that two rumours are current in Cabul, with regard to Mahomed Ayoob Khan's flight. The well-wishers of the Ameer state that he has actually fled, and the friends of Yakoob Khan, that he has not, for the following reasons: "1stly. One day Qazee Abdool Qadir went to the Ameer and informed him that if he gave him permission, he would communicate the fact of Ayoob Khan's flight from Herat to the newspapers. 2ndly. That if Ayoob Khan had actually fled, there would be no necessity for the strong guard over Yakoob Khan in the Bala Hissar Balla. Two Regiments have been added to the present guard over Yakoob Khan. The Ameer has given out the above rumour with regard to Ayoob Khan's flight in order to pacify the friends of Ayoob Khan and Yakoob Khan. Ayoob Khan is, however, still in Herat. His forces have vowed not to abandon him, and state that they will sacrifice their lives sooner than allow any harm to be done him. Ayoob Khan is vigorously engaged in storing supplies in the fort at Herat. The friends of Yakoob Khan state that Sirdar Meer Afzul Khan, the grandfather of

Abdoola Jan, is a prisoner in Herat by Ayoob Khan's orders. The Turkomans, through Khan Aka, have promised to aid Sirdar Ayoob Khan."

Literary.

— Sanction has been granted by the Government of Madras for reprinting the "Verses of Vemana" as edited by Mr. C. P. Brown, and for the book being prescribed as the Test book in Poetry for the High Proficiency Examination in Teloogoo.

— The new Hindee Grammar which is in course of preparation by the Rev. S. H. Kellogg of Allahabad is making rapid progress. The various dialects, such as Kanuji, Braj, Marwari, Garhwali, Kumaoni, Old Purbi, Avadhi, Riwai, Bhojpuri, &c., are extensively illustrated, and there are copious examples, all taken from standard native authors, under every section. It will make when completed a good sized volume of some 350 octavo pages.

— Of an important Sanskrit grammatical work, the 'Ganaratnamahodadhi,' two incomplete copies exist in England; and the late Prof. Goldstücker in vain exerted himself for many years to obtain another copy from India. Since his death, two copies of this work had been discovered by Dr. Bühler, and we now learn that another excellent MS. has just been found by him at Bhuj, in Kutch. Of other recent finds we may mention the 'Rajavinoda,' a history of Sultan Mahmud Begadha, written by his Pandit Gangadasa; the Yudhishthiravijaya' in stanzas: a second complete MS. of the 'Vasishthasmriti,' and a comment on the 'Naradasmriti' (both ancient law books), and the Mahaviracharita, or life of the Jain Saint Mahavira, by Hemachandra. At the meeting of the Oriental Congress in September last, the Sanskrit scholars intended to propose a resolution, to be forwarded to the Government of India, urging the desirability in the interest of Sanskrit studies, of a competent European Sanskrit scholar being commissioned to examine the libraries in North-west India and Kashmeer. The arrangements of the Congress did not, unfortunately, allow sufficient time for ventilating the subject.

— Mr. Wedderburn, Collector of Coimbatore, lately wrote to Government, "I have now the honour (my attention having been called thereto by the novel position in which a Collector is now placed as President of the Local Fund Board) to lay before Government what I cannot but consider is a great drawback to our system of education, both high and low. It is the prevalence of 'cram.' I believe the fact is admitted by those who have to pass boys for examinations, and that it is not the fault, but the misfortune, of schoolmasters that they must work at a high pressure to obtain results and position for their schools in written and oral examinations." The text-books are of too high a stamp for the tests in what is, to the natives of India, a foreign language. Poetry of an involved character, requiring a knowledge of classics to comprehend, is set as a text-book, and, with copious notes, is not so much understood as learned by heart. History, ancient and modern, is neglected, or not made sufficiently a study. Useful and permanent information is not sought to be given. To pass a standard and to work up the text-books till the contents can be transferred to paper is the object, and the precocious Indian youth is stimulated till his brains are addled, and a reaction follows. Common objects of life are unnoticed and unknown. A whole school at Caroor did not know what a tadpole was; although they swarmed in their paddy fields! They have their school lessons to learn, and, while naturally precocious, have eyes and ears for nothing else. Grammar or the science of language is taught before the language itself is mastered. Mr. Wedderburn advocates simpler text-books, more thorough grounding in the meaning of words, their synonyms and parallel passages, derivations, proverbs, observations of things in daily use and life; for if a boy by looking at a kettle boiling was the originator of the greatest power of modern life and civilization, such common observations, and the exercise of minds thereon, are of more value than pages of parrot learning.

Ecclesiastical.

The Bishop of Calcutta returned on Thursday [illegible] tour in Chutia Nagpore.

— The Rev. Charles Drury officiates as Archdeacon of Madras.

— A school in connection with one of the American Missionary Society's Chapels at Canton has been burned down. The fire is supposed to have been the work of incendiaries.

— At Moradabad there are four female Missionaries, one Inspectress of schools, two medical Bible-women, and nine Bible-women and teachers, altogether "sixteen handmaidens, European and Native, at work in behalf of their unconverted sisters."

— The Rev. Mr. Marks has succeeded in getting down to Rangoon from Mandalay, some 120 Shan men, women, boys and girls whom he had, while in charge of the mission up there, been successful in converting to Christianity. One of the females is said to be of great beauty.

— It is said that the Patriarch of Antioch, perplexed by the rival claims of two schismatic Syrian Bishops in Southern India, has appealed to the Marquis of Salisbury to settle the matter. The Marquis, perplexed by this novel appeal, has appealed to Canon Liddon, the Ritualist.

— The meeting of the Bombay Auxiliary Bible Society was held on Friday week last, when the Rev. Gunputrao R. Navalkar spoke very disparagingly of the Marathi translation of the Bible, stigmatizing it as the worst possible, and conveying the impression that Natives had not taken part in the preparation of it. His remarks created a good deal of sensation. Dr. Wilson averred that Natives had co-operated in the preparation of the Marathi text; and the Chairman, referring to the list of the Marathi Translation Committee in the Report, pointed out that several Native Christians were on the Committee.

— It was voted at the recent Allahabad Conference on Christian Literature that libraries of all current publications in the two languages be collected at the various trade centres such as Allahabad, Lucknow, Lahore, and other places, all Societies sending copies of their issues for this purpose. In order that there be no clashing on the part of the different publishing bodies, and also that unnecessary republication of books be prevented, it was voted as very desirable that information of books in preparation be early given to the Secretaries of Societies, who should keep a careful record of the same that they might be able to warn prospective authors applying to them, in case they had been forestalled. Sub-committees were appointed to draw up a descriptive catalogue of those Indian publications suitable on the one hand for Hindoos, on the other for Mahomedans, with special mention of those found so generally useful as to warrant translation into English. The advantage of this latter proposal would be that when once these controversies were put into an English dress, they could then be made use of by Missionaries in other Mahomedan countries. A desire that this might be done, has been strongly expressed in at least one influential quarter. And the Conference put on record its wish that Missionaries in the Turkish Empire be requested, on their part, to draw up similar lists with a sketch of the efforts to reach Mahomedans in Western Asia. To these same sub-committees was assigned the task of reviewing the Hindoo and Mahomedan controversies and making suggestions as to what further might be necessary; also of preparing a treatise showing wherein the so-called refutations by Mahomedans of works written against them have failed to successfully reply.

— The Rev. Dr. Sargeant, writing from Courtallam, gives a deeply interesting narrative of the conversion of a Hindoo gentleman in Tinnevelly, who, some six or seven years ago, vehemently protested against Dr. Sargeant receiving his son (Ramasawmy Pill[illegible] and baptizing him. "Imagine my surprise," [illegible] S., "to see the same man come to me the [illegible] and apply for baptism! His account [illegible] this. He says he had occasion to go [illegible] one of our converts in Palamcotta. [illegible] lay, whose wife read a few vers[illegible] and this was repeated on tw[illegible] somewhat softened his m[illegible] A short time after, he went to Tuticorin to get his son Ramasawmy to sign a document in reference to the sale of some land. Without this necessity he never would have entered his house, as all friendly intercourse between father and son had ceased from the day of his baptism. The son delayed signing the document, and so detained his father, who daily seeing his son read the Bible and have family prayer in his house, observed that the course his son had adopted was a very different thing from what he had expected. He seems to have supposed that Christianity was simply a licence to eat and drink things prohibited by Hindooism and caste—a liberty, in short, to do as he pleased, containing no element of piety or devotion or private moral rectitude. His surprise was greatly excited, and he determined to observe everything minutely. It ended in his conviction that Christianity was a matter of the heart and of the life—that it induced a man to act as under the eye of an ever-present God. He was resolved to read for himself the book that had wrought such wonders; and now, convinced of his need of a Saviour, he accepted Jesus Christ as the source of all spiritual good, and applied to me for baptism."

TELEGRAMS.

THURSDAY, MARCH 4TH.

The Homeward Mails, *via* Brindisi, which left Calcutta, 5th ultimo, were delivered in London yesterday.

In the House of Commons last night, Mr. Gathorne Hardy, replying to Mr. Reilly, said that it was our duty, in regulating exchanges, to prevent a recurrence of the purchase system.

The bill for relaxing exceptional legislation in Ireland has been read for a second time, although the Irish members opposed it.

Montenegro has notified to the Great Powers that the Podgoritza affair, which was supposed to have been settled, is still open to question.

The troop-ship *Crocodile* which left Portsmouth on the 12th ultimo, and the *Jumna*, which was detained at Gibraltar, owing to a defect in the screw, have both passed through the Canal, outward-bound.

The steamer *Surat*, in passing through the Canal, damaged her screw. The passengers, mails, and specie have been transferred to the steamer *Baroda* at Suez.

The Assembly have re-elected M. Buffet as President by a large majority, thus demonstrating its confidence in the future ministry: the formation of which, however, has been delayed through the death of M. Buffet's mother.

The Senate at first tabled the revenue bill, but afterwards yielding to the representations of President Grant and Mr. Bristowe adopted the bill in an unamended form.

In the Commons Mr. Gregory announced his intention after Easter to call the attention of the House to the Report of the Commissioners on the affairs of the Bank of Bombay.

Sir Andrew Clarke has been Gazetted an ordinary member of the Viceroy's Council for public works purposes.

Turkey manifests irritation at the intervention of Russia, Germany and Austria in questions concerning her vassal states.

Obituary.—Sir Hope Grant, Sir Arthur Helps.

The Heavy Mails, *via* Southampton, which left Calcutta 5th ultimo, were delivered in London yesterday.

WEDNESDAY, 10TH.

Turkey has accepted the explanations of Spain that the notification of Alfonso's accession was inadvertently made to Roumania.

In the House of Commons last night, Mr. Gathorne Hardy in moving the Army estimates denied the asserted deterioration in our recruits or army generally; and said it was his intention to give Cardwells' reorganisation scheme a fair trial. A Departmental Committee of enquiry he said had been appointed, and he should not hesitate to ask its authority to redress defects if necessary.

LETTERS TO THE EDITOR.

NATIVE RAILWAY OFFICIALS.

SIR,—I beg to draw your attention to the following circumstance which occurred between me and the E. I. Railway Officials, on Sunday evening last.

Having bought some glasses in Calcutta, I put them in a fir-wood packing box, and kept the box open, as there was no necessity for covering it. I took the box to the weighing clerk of the Howrah Station, who weighed it, and found it to be thirty seers, whereupon he gave me a free luggage ticket, telling me at the same time that as the box was open, the Railway Company was not responsible for it, and that I must take the box with me in the passenger carriage, and not put it in the luggage van attached to the end of the train. I did accordingly. As soon as I was seated in the train with the box of glasses by my side, a chupprassee came to each of the carriages enquiring for a man named Grish Gangooly, but as I am not Grish Gangooly, I took no notice of the enquiry. Ten minutes after this two Railway policemen began looking into all the carriages, and when they came to my carriage, they took hold of the box, and told me to come out from the train, and threatened me, saying that I should have to go to the police for a fault of which I knew nothing. No sooner had I come out, quite surprised at the treatment to which I was subjected by the chupprassee, than two English gentlemen who were standing near me kindly asked me about the matter, and I told them that I could not understand why I was subjected to such treatment, and I shewed them my free luggage ticket; they at once perceived my innocence, and ordered the chupprasse to call the weighing clerk who came at once, and after writing the words "with the owner" on my luggage ticket, went off.

Now, Sir, I am not dwelling on the inconvenience and shame that I had to undergo by a mistake either of myself or of the weighing Clerk, which is not worth while to enter into, so long as the case was amicably settled, but what I wish to point out to my Native brethren is the vast difference that exists between the English and Native officials, and that the latter can hardly carry on their business without the superior genius of the former. The dignified way in which these two English gentlemen (who are unknown to me), settled my case is, to my mind, a proof of the superiority of the English intellect. The Almighty in providing us with kind and humane rulers like the English has given us a boon [illegible] to which we know not how to express our [illegible] his unbounded mercy.

[illegible] you will be kind enough to give [illegible] urnal, I beg to remain,

Sir,

Your obedient Servant,

GOPAL CHUNDER GANGOOLY.

[illegible] AND SILVER MONEY.

[illegible] and uniform postage, so [illegible] last twenty-one years [illegible] cale to the whole of [illegible] letter is now con- [illegible] f Indian terri- [illegible] morin, from [illegible] e, for the [illegible] won- [illegible] ce

the lowest price of silver currency. It is not therefore obligatory on a post master or deputy post master to receive coppers in payment for postage stamps except as regards fractions of two annas."

The result is that no man can pay two pice for the postage of a letter or purchase a stamp for less than two annas.

A poor coolie who has seldom occasion to write, and can ill afford a day's wages to invest in postage-stamps, is deprived of the advantages of cheap postage. What objection has the Director of the Post Office to receive the current copper coin for the payment of postage stamps? Let no one who reads this question fancy that I am perplexing his soul with a conundrum, and that to answer it he must rack his brains and ransack his memory as if he were asked by some angelic being, but by

Your humble servant,

A BOX WALLAH.

BEE BEE GANJ,
DINAPORE,
March, 8th 1875.

[This letter comes to us apparently from a Mahomedan gentleman of respectability, who has enclosed his card. We have not put his complaint in the waste paper basket, though it is either groundless, or should be so if the district postmasters are abstaining from cheating the poorer classes. The writer shows us how systematically Government Orders of the most simple nature are misunderstood and misrepresented. We would recommend him to reconsider the terms of the Order to which he has referred, when he will find he has altogether misconstrued the intention of the Postmaster General.—ED. F OF I.]

THE TRIAL AT BARODA.

DURING the past week the chief points of interest in the inquiry into the charges laid against the Gaekwar have been Colonel Phayre's and Dr. Seward's cross-examination by Serjeant Ballantine, and the evidence of Rowjee, who is the chief witness for the prosecution.

COLONEL PHAYRE *versûs* THE SERJEANT.

I want to get two or three dates from you, Colonel Phayre?—I believe it was on the 18th of March, was it not, that you came to Baroda to take the position to which you were appointed?—Yes, the 18th March 1873.

Where had you been previously to that?—I had just come from Palanpore.

Were you holding any official appointment there?—Yes.

Is that in Sind?—No, it is in Northern Guzerat. What was your position there?—Political Superintendent.

How long did you hold that?—A very short time—six weeks, I think.

Had you held any official appointment before that?—I had held a great number of appointments before that.

What was the previous appointment?—Political Superintendent in Upper Sind, and Commandant-in-Chief of the Frontier Brigade.

When did you quit that office?—I quitted that office to go home in the latter end of 1872 on leave for six months.

Does that imply, Colonel Phayre, that you quitted it of your own accord?—How do you mean?

You say that you were going home on leave?—Yes, I certainly put it upon that ground.

Did you ever return to it?—No.

Was your appointment cancelled, or what?—No, it was not cancelled.

I used an improper word, perhaps? Pray use the words that come into your mind?—I have nothing to conceal at all.

It was an appointment under the Government of Bombay, was it not?—Yes, under the Government of Bombay.

Have you in your posse[illegible] nating that appointment? [illegible] have or not. I may have [illegible] I have in my possessio[illegible] vernment exonerating [illegible] in the whole matter.

Have you the document [illegible] appointment?—I don't know wh[illegible] have it. I do not know. It is not [illegible]

I shall have to ask you presently w[illegible] aware that the Gaekwar was in possessio[illegible] document or of a copy of that document?—[illegible] was not aware of it.

It is the same thing, by the Gaekwar I mean his minister?—Nor his minister. It was a Government document, and I do not see how they could come into possession of it honestly.

But, honestly or not, you say you did not know he was in possession of it?—I did not know that he was in possession of it; and I add that he could not have honestly come by it.

The President—Allow me to suggest to you, Colo[illegible] Phayre, that you should answer only the questions [illegible] you—Very well, my Lord.

[illegible]t Ballantine—I can assure you that there [illegible]n my part to give you any offence—

[illegible]ayre (interrupting)—I do not want any [illegible] do not require them.

[illegible]ine.—As you make that observation [illegible]urt to prevent you making these [illegible] or not, it is not for you to [illegible] or not, did you know they possessed such a document?—It would have come through the Resident, if it had come properly.

The President—We are again getting away.

Serjeant Ballantine—At all events for my purpose, you were not aware that the Gaekwar was in possession of that very document. Have you never heard that he was?—No.

Have you not heard that it was shown by his minister to Sir Lewis Pelly?—No.

Will you cast your eye down that paper and tell me whether you believe that to be an accurate copy of the communication you received from the Bombay Government removing you from the office you held?

The President.—I think Serjeant Ballantine is entitled to go into it for the first purpose of showing what knowledge the Gaekwar had of these resolutions of the Government of Bombay. I put it upon that ground.

Serjeant Ballantine.—And upon that ground simply I intended to argue it. I would not have asked it upon any other ground. I need not say that I deem it to be very important in the argument which I shall have to address to you hereafter.

Cross-examination continued—Colonel Phayre, I will only ask you whether or not, as far as your memory goes, this is a correct copy of the document you received?—This is marked "private" and I never saw a private document.

Do you or do you not believe that this is substantially a correct copy?—I do not.

Can you tell me in what you would say that it is inaccurate?—I don't recognize it at all. If I saw the printed Government Resolution I should recognize it, and the complete reply that I gave to it.

I have no doubt that you could do it effectually?—I know that.

I am going now into the matter of what the Gaekwar knew, which of course may be untrue?—I will give you every information.

It may be an utter delusion from beginning to end, but it is what the Gaekwar believed, and that is what we have got to do with?—So far from wishing to conceal or withhold anything, I wish to give you everything.

Inasmuch as you were completely cleared afterwards, of course you can have no objection to do so?—I know that.

During the time that you were in Sind, did you in point of fact advise a prosecution of various persons for gross frauds?—Yes, I did for certain frauds.

I am obliged to read this to you, as you do not seem to recognize it. Now, let me ask you, Colonel Phayre, because it may save you time, pain, and trouble. Can you put your hand on the original document?—I could not here. But when you have said frauds, I should like to know if you refer to the Barron frauds, or the extensive system of frauds which have been brought to light in the High Court of Bombay, that I may know to what frauds you refer.

Will you *kindly answer this question*. Can you within a reasonable time obtain the original document? If you can, all I want is that you should produce it?—I could not use any Government paper without the sanction of Government.

You could do with the sanction of this Commission.—With the sanction of this Court I shall be delighted to produce the papers in the whole of the Barron frauds.

The President—All that you are asked is whether you can procure this document?—Which, this single document? I do not know where it is, my Lord, but I have the one Resolution dated the 5th May and I have the final decision of the Bombay Government.

The Advocate-General—We will undertake to telegraph to Bombay for this document. I may say that we have had no notice whatever from the other side to produce these files, nor has Colonel Phayre them in his possession.

The President—Can you get these original documents?

The Advocate-General—I will just ascertain from Colonel Phayre. (To Mr. Serjeant Ballantine).—What is the date of this document.

[illegible]r. Serjeant Ballantine (referring to the copy in his [illegible]d).—This purports to be dated the 4th *May* 1872 [illegible]s numbered 1023.

[illegible]e Advocate-General—We will send for the whole

[illegible] Serjeant Ballantine—*The files will be more* [illegible]nt *than anything I can say. (To Colonel* [illegible]—*I shall be sincerely glad if it turns out that* [illegible] quite correct?—It is so.

[illegible] not the least objection to your saying so, [illegible] very glad to hear it. In November 1873, [illegible]ion commenced sitting in Baroda. I think [illegible]te about the date?—Yes, November 1873.

I a[illegible]

To [illegible]e into certain charges of maladministra- [illegible]tion on th[illegible]art of the Gaekwar?—Yes.

I believe [illegible]hat General Meade was the President of that Commission. Is that so?—Yes.

And it ended on the 24th of December in the same year?—Yes.

And subsequently an elaborate report appeared?—Yes.

Was the Gaekwar married on the 7th May, 1874?—Yes.

And I believe I may take it that there was some unpleasantness between you and His Highness upon that subject, and that he complained of what he deemed to be want of respect on your part?—A khureeta was written.

There were certain forms he insisted were due to him, and that you did not consider it proper to carry out?—No.

At all events, he made some complaints?—The real cause was that the Government had directed me *not to go* to the marriage.

The President—The question is, did the Gaekwar make complaints of want of respect.

Colonel Phayre—The Gaekwar made a complaint which is couched in a khureeta, and the whole correspondence is with the Government of India. There is a decision of the Government of India upon it.

Mr. Serjeant Ballantine—He admitted, did he not, that you were bound to obey the Government of India, but that you might have received his messenger notwithstanding?—There was nothing personal in the matter. It was entirely connected with my official position towards Government. His Highness continued to visit me privately all the same.

Are you aware of the fact that there was a khureeta from the Gaekwar to the Viceroy on the 17th May or about that time?—Any khureeta that went from the Gaekwar would go through me.

I mean a khureeta promising reform?

The Advocate-General—I must ask my learned friend, if he is going to rely upon any of the khureetas, to put them in the regular way.

Mr. Serjeant Ballantine—I am only asking now as to the dates—most likely I shall put in these khureetas.

The Advocate-General—We must have the whole contents, if they go in at all.

Mr Serjeant Ballantine—I have not the least objection to the whole contents being given from beginning to end, but it does not appear to me that it is necessary to do so.

(Question repeated to Colonel Phayre)—Yes

Do you know of a khureeta from the Viceroy of 25th July, in answer to the one from the Gaekwar?—I do.

And was the effect of that khureeta to give the Gaekwar an opportunity of reformation until the end of the year 1875?—Yes, progress being reported upon by me to Government whenever I thought it necessary.

Of course, asking about these matters, I am bound to put them in; but I think it more convenient to place the salient points before the Court than if I were to read a mass of unintelligible matter.

Had there been any question between you and the Gaekwar about the appointment of Dadabhoy Nowrojee as his minister?—There had been no question between me and the Gaekwar. His Highness asked me my opinion about his minister.

And you disapproved of him?—I informed His Highness what my opinion was.

Very well, was that adverse?—It was adverse to Mr. Nowrojee, but that according to His Excellency the Viceroy and Governor-General's orders, His Highness was to judge for himself exclusively.

That gentleman continued to act as minister?—He was minister.

He was appointed by a khureeta? No, he was appointed by His Highness. He was confirmed in fact.

And continued to act?—He had been minister for nine or ten months previously. He was then confirmed.

Now, I believe that you were in constant communication with Mr. Dadabhoy for some months after that date?—From what date?

From July 25th, say, up to November?—From about the 10th or 12th August 1874, my communications commenced with Mr. Dadabhoy as minister. Before that Mr. Dadabhoy had carried on the administration himself.

Now, without going into the question who was right or who was wrong, were there any complaints made by Mr. Dadabhoy as to your conduct in the matter?—I don't know of any complaints.

I mean to yourself?—To me?

To you personally—did he complain about your hurrying matters on?—I did not hear any. We met daily and discussed matters, but I heard nothing about complaints. I made complaints to His Highness the Gaekwar, and His Highness summoned Mr. Dadabhoy.

I only want to come up to November 2nd, 1874. We are near the scene of action now. Was there a khureeta sent by the Gaekwar on that date to the Viceroy?—Yes. It was on the same day that I sent in my first Progress Report that he sent in a khureeta.

You sent a Progress Report and he a khureeta—so you do not seem to have been on very pleasant terms with each other?—Only in the way of business.

Mr. Serjeant Ballantine—There is one other date that may not be unimportant hereafter. Were you aware of the birth of a child of this marriage on the 16th October 1874?—Yes. His Highness was married on the 7th or 9th May 1874, and the child was born on the 16th October 1874.

Still it was after the marriage?—Yes, after the marriage.

That of course involves a question of law that I at all events do not now propose to discuss. That it was after the marriage is sufficient. Now in the months of September and October preceding the date of this attempt to poison you, you say that you were suffering from a boil on the forehead?—Yes. Dr. Seward was then attending upon me.

From the commencement he supplied the plaster that you used?—He both supplied and applied it.

And it was at that time, I understand you to say, that you had slight fever, a sense of fullness about the head and watering of the eyes?—Yes, about that time and subsequently.

Can you tell me whether these sensations existed before or after the plaster?—I am speaking of the period. It was unconnected with the plaster. It commenced before the plaster, and lasted after the plaster. In fact, I imagined the boil was the cause of the giddiness.

And then at that time you began to wonder whether the sherbet was made with proper pummelo?—Yes.

At that time used you to drink the whole of it?—I used sometimes to drink the whole of it, and sometimes not. I used generally to drink the whole of it.

You were not prevented by any opinion of its badness from drinking it?—Sometimes I threw it away and sometimes not. I said something to my servant Abdoola. I asked him why he did not make it properly. He brought me two pummeloes and said they were bad, and therefore he did not make it. That was on one or two occasions.

You did not at that time enter into any investigation about the pummelo juice?—Oh, no.

If I understand you correctly, Colonel Phayre, it was on the 6th November that you noticed a peculiar taste?—In what?

In the pummelo juice?—Oh dear, no.

That is quite sufficient. I think that you said you took a sip or two and then threw the rest away?—Do you mean on the 6th?

Yes—Yes.

And upon that day you did not feel well?—Yes, afterwards.

Heavy about the head, and I think you used the expressions "much as you had felt in September and October?"—Yes.

On the 7th you did not drink the sherbet?—I did not drink the whole of it.

I noticed in my learned friend the Advocate-General's examination that he did not question you about the 8th. Did you try the sherbet that day?—No. It was Sunday, and I felt so ill that I did not take anything.

Then we have heard your account of what took place on the 9th, and you have told us that you threw the contents, or a great portion of the contents, of the tumbler out of the window?—Yes.

What quantity do you suppose was left in the tumbler?—There was no liquid scarcely. It was all a dark substance.

Would you describe the residuum as being a damp substance, or was there any liquid?—I saw a dark substance at the bottom of the tumbler, and some liquid pouring down the side of it—a very small portion.

How much do you suppose altogether there was after the liquid had deposited itself at the bottom?—It covered the bottom of the tumbler. I should think there was a couple of tea-spoons full—There might have been a little less, perhaps a tea-spoonful and a half.

How much of this did Dr. Seward see?—He saw the whole of it; I never touched it.

You say it had a dark appearance. Can you illustrate that expression in any way?—I have seen pummelo juice.—This that I saw was not pummelo juice; it was another substance.

Was it another colour?—Certainly; pummelo juice is red.

I should have thought it was brown. I take it, then that it was a perfectly different colour?—Yes.

Now I hold in my hand, Colonel Phayre, what purports to be a copy of a letter from you. I believe it is referring to your demi-official letter of the 13th November. The last paragraph in that is—"Previous to the receipt of your letter under reference I had received secret and confidential information that the poison administered to me did consist—first, of common arsenic; secondly, finely powdered diamond dust; and thirdly, copper?"—Yes.

From whom did you receive that information?—I received it from persons who generally give me information. I could not tell exactly who gave it.

Serjeant Ballantine thought it desirable to read the whole.

Just tell me, were there any persons attached to the Residency who were in the habit of giving you information?—There were none attached to the Residency in particular, but a number of persons used to come to the Residency and give me information, and I could give you a roll of their names.

Did they receive any money?—No.

Never?—Never.

You never paid at all for that infomation? No, I had plenty of information without paying for it. A broken-hearted people do not require to be paid.

Don't make a speech about broken-hearted people. This is a serious political trial, Colonel Phayre—So it is.

And the reference to a broken-hearted people is not required. If I wish to indulge in such language I might just as well talk about a persecuted prince. So be kind enough not to repeat it. Now be good enough to answer the questions I put to you, Colonel Phayre. Have the persons who have given you such information, received money, to your knowledge, for such information?—No.

On any occasion?—Never from me, nor do I know that they have.

What is your belief upon the subject? Do you believe that they have, or have not?—I believe they have not.

And now, sir, to run back to the point where you have described this as information received from the parties who gave it. Am I to understand that you can give the Commission no clue to the secret and confidential information that led you, among other things, to suggest copper?—I can give no information. Amongst the persons who gave me the information, it was one or the other amongst them, but which particular person it was I could not say without enquiry. I can give a list of all the persons who used generally to give me information, and it was one or other among them.

Wait a moment. You are writing this to Dr. Gray, and you are telling him that the importance of verifying the information is obvious. You know this is written four days after the supposed attempt to poison you, and is written with the object of governing the analysis of the Chemist?—I had no such object, sir.

You say "the importance of verifying this information is obvious." What do you mean?—Certainly not to govern the analysis of the Chemical Analyser or anybody else.

That is not the question. You say the importance of verifying the information is obvious?—Of course, the importance of verifying whether it contained diamond dust or not. And it did not matter, because the answer came to me before that letter was received.

The reason I call your attention to this letter is, that it occurs to me that, written at that time, and under the peculiar circumstances, it is odd that you do not remember who your informants were?—I have told you I will give you a list of my informants, and try and tell you who it was.

You examined several persons. Why, if anybody told you or gave you reason to suppose that you had been nearly poisoned with arsenic, diamond dust, or copper, did you not take down his evidence and make a memorandum of his name?—I did not think it necessary. I wanted to ascertain correctly from the Chemical Analyser. There is the correspondence. I wanted to get the evidence of a proper person.

Colonel Phayre, I must remind you that you assert a most important and vital fact, that "secret and confidential information had been given to you," and that a portion of the poison was at all events copper. I ask you to give any good reason to the Commission why you did not examine this person, make a note of his name, and produce him before the Court?—Because it was secret and confidential information, and I did not think it was right, and according to the evidence it has turned out that a portion of it was correct.

Of course you know Bhow Pooniker?—I do.

Was it he?—I do not know. It may have been

Was it adverse sometimes ?—In cases where it would be adverse. he was adverse to the Gaekwar——

Mr. Serjeant Ballantine—I shall not occupy the time of the Commission by constant questions, but I must ask you, Colonel Phayre, as an officer and a gentleman, whether in your judgment Bhow Pooniker was not adverse to the Gaekwar. That is a question a gentleman and a man of honor can thoroughly understand ?—Yes, I have given you my answer.

Give it to me again—say "yes" or "no" ? (To the President)—I think, my Lord, you will hold that this quesion is capable of a "yes" or "no" answer ?—Not always.

Was he, as a general rule, adverse to the Gaekwar ? —Not as a general rule.

Did not Bhow Pooniker, as a matter of fact, get up cases against the Gaekwar before the Commission ?—He gave information regarding many of the cases, but not all of them.

Amongst other cases. in which you say he gave information, was the complaint of Saaduk Ali, the camel driver, one of them ?—No. Saaduk Ali gave it himself.

Now I ask you, Colonel Phayre, to your perfect knowledge, did not Bhow Pooniker get up or manage the case of Saaduk Ali ? - Get up or manage ? I received it first from Government to report upon it.

I ask you, Colonel Phayre, whether to your knowledge Bhow Pooniker did not get up or manage the case of Saaduk Ali before the Commission ?—He did not get up the case for Saaduk Ali before the Commission as far as I know.

Did he manage it ?—He did not manage it in the full sense of the term. He may have got up information about it, it was a case got up long before. He may have helped Saaduk Ali, but I don't know. I have no doubt that he gave Saaduk Ali advice. The case was got up long before. I have no doubt that he gave Saaduk Ali a little assistance.

What did Bhow Pooniker or the other men (one of those two men) tell you about the copper ?—As far as I recollect, he told me that he had heard that the ingredients to be put into that tumbler were arsenic, diamond dust, and copper. That is the information as I got it—so much and no more. I never asked about it since.

Mr. Melvill—Bhow Pooniker or the other man ?—
s. whoever it was, I did not put down the name.
t was what we call kutcha kubber.

terpreter—That means imperfect information.

itness—Kutcha kubber is gup, it comes in daily.

. Serjeant Ballantine—But you see this was an important subject. Did you ask him what rounds were for supposing that those ingredients be put in the tumbler ?—No, I did not go into tter at all ; I was engaged about other matters.

ame in as kutcha kubber.

ppery the ht

the effects I felt. I did not feel the effects until twenty minutes or half an hour after.

Am I to understand then that you did not throw away the contents of the tumbler for twenty minutes or half an hour?—Certainly, if you are alluding to the ninth?

Yes, then, the feelings which you experienced twenty minutes or half an hour afterwards was what induced you to throw away the liquid?— It was that.

Now upon the 6th and 7th November, when you did not continue drinking the liquid, did I misunderstand you when you said that you had a taste in your mouth then?—No, I had not.

Did you have any taste?—No.

Then why did not you continue drinking it on the 6th and 7th?— I cannot account for it except that by the mercy of God I was protected from drinking it, that is all.

In courts of justice we look for human causes. Was there anything that induced you not to drink it except the mercy of God? There was no reason. There it was, I took it up and took a slip or two and threw it away under the impression that I did not want it or something of that sort.

Then there was no reason patent to your mind for throwing it away?— No, none whatever.

No feeling and no taste?—There had been. To which of those are you alluding to? On the 7th I had been unwell after drinking that on the 6th, and therefore on the 7th I might have been influenced by the feelings of the previous day.

First of all, tell me what prevented you from drinking it on the 6th?— The reason of that I have already given I have no other. I know I simply took it up and put it down again and threw it away. I can give no other reason, so far as I know.

Was the reason that you did not drink it on the 7th because you had been ill on the 6th?—On the 6th I was not well—I cannot say what the actual reason was—but I dare say that that had an influence upon me, because I had been unwell the day before. I had doubts about the sherbet.

That was not from any taste in the sherbet at all ? —No, not from the taste of the sherbet, but from the effects upon my health that I have described before.

But that was not from any taste in the sherbet?— Not from the taste of the sherbet, but from the effects upon my health.

Amongst the persons that you examined, was Rowjee bin Rama one of them?—Yes, Rowjee Havildar

Did he say, among other things, "I suspect Faizoo because he has for a long time past been engaged in all kinds of intrigues both in the time of Colonel Barr and Colonel Shortt ?—In Colonel Shortt's time he used to go with Colonel Shortt's butler to the house of Rahoorkur, Nana Saheb and others for the purpose of giving them information. I have myself seen Faizoo go with Colonel Shortt's butler and others to the city for this purpose"—Yes, he did.

Had Bhow Pooniker access to the Residency ?— When do you mean ?

During the time when you were there ?—Yes.

Had he access to this private office of yours ?—Yes.

In your absence ?—No, in my presence. Many others had access to it

I did not ask you that. Do you mean that you never found Bhow Pooniker in your office when you came back ?—I never found him in that office when I came back.

Now, Colonel Phayre, am I to take it that you answer with deliberation ?—I am answering with deliberation ; I never found Bhow Pooniker in that private office when I returned from being out.

Not at any time ?—Very often I may have had to go into another room during the time that he had been there, and on such occasions I may have found him when I came back with others.

Does that imply that you never found him there, when you did not leave him there ?—I never found him there in the morning.

That is not an answer to my question ? I beg your pardon for assuming that you did not understand what was perfectly plain. Have you never found Bhow Pooniker in your office on any occasion when you had not left him there ?—Never.

In no instance ? —In no instance that I know of.

Then am I to take it that such was not constantly the case. I am assuming that it was not frequently the custom to Bhow Pooniker to come to your private office, and if you were out to wait until your return ? —Certainly, never in my private office ; he may have been in the ante-room with the native assistants or clerks.

Or he may have been alone ?—No, not that I know of.

If he were in the ante-room, would he not have access to your private office ?—Yes ; but not without other persons seeing him.

That again, sir, I did not ask you. Did you hear from Bhow Pooniker that the khureeta of the 2nd November was about to be sent in to the Government
ndia ?—I did.

n did you hear that ?—I cannot say exactly. have been on the day or the day before, but I know.

the best of your recollection upon the l Phayre ?—It was either on the day or some time about that time, I can-

iker know anything about it ?—Did you ask him ?—No.

And he told you, then, of a private khureeta about to be sent to the Viceroy and Governor-General of India some time before you knew anything of it officially ?—No, he mentioned that such a paper or the "jawab" was under preparation.

Did he tell you where he had learned his information from ?—No.

Did he tell you the nature of it ?—No, not that I am aware of.

Not that you know of ? Pray be cautious, Colonel Phayre, did he tell you the nature of it ?—No.

What did he tell you ?—He merely said that a letter was under preparation to the Governor-General. I tell you as far as I know.

Was that complaining of you ?—I did not know what it was, but that is what I tell you.

Complaining of you, Colonel Phayre. I repeat, you must tell me, Colonel Phayre, whether you know of the contents of a private letter that was being prepared by the Gaekwar ?—I swear positively that I do not.

That you do not what ?—That I did not learn the contents of the khureeta.

Did you learn generally the nature of the contents ? —I did not.

Did you learn that it was a general complaint against you ?—I did not, so far as I know.

I won't put it to a gentleman in your position and with your education that you are upon your oath. But will you state that you did not know that this khureeta being prepared was a complaint against yourself ?—I did not know, although I had formed an idea that it was such a thing.

Was Bhow Pooniker then a spy upon the Gaekwar or what was he ?—He was an agent of one of the nobles of the state, Meer Ibrahim Ali.

Then how came he to give you information, was he constantly at the Residency giving you information ? —He came upon business often. The first time I saw him he came on business connected with the Nawab Meer Zool Fuckeer Ali.

Then you did not ask him where he got his information ?—I did not.

Now just tell me, Colonel Phayre, when had you seen Bhow Pooniker after you had taken the pummelo juice and you thought you had been poisoned ? —I really cannot say—he was there that day.

I almost know as much myself. What time was he there that day ?—I remember him after breakfast on the 9th—that was the time he usually came.

Did you tell him about this circumstance ?—No.

Are you quite sure ?—Yes, I am quite sure, I did not tell anybody until after I had seen Dr. Seward.

When did you tell Bhow Pooniker ?—I really cannot tell.

If he was the person who told you about the copper, when did he tell you ?—I think it was upon the 12th or 13th—my letter is on the 19th. Have you seen Bhow Pooniker lately ?—Yes.

When did you see him ?—I saw him since I left this court.

Dr. Seward's Cross-Examination

Had you known that the ayah had been examined by Mr. Souter before she came to the hospital ?—Yes.

Had you learned from Mr. Souter what the nature of her communications were ?—Not a syllable.

Of course you know what the nature or purport of the enquiry was ?—Yes.

And you say that when she was in hospital she was uneasy and restless ?—That was so.

She had a blister on, had she not ?—I don't know whether she had at that time. She was not blistered by me.

Did you know whether she had a blister ?—I do not know.

She says she had one on about that time.—I do not know ; all I ordered was an application of belladonna. I know nothing about a blister.

Her liver was queer, was it not ?—It was She was then under Dr. Lewis's care.

And you attributed the restlessness and uneasiness that she exhibited to some mental depression ?—I did.

You did not think it was her liver ?—No.

Then it was a kind of mental disturbance ?—Yes.

Differing from the appearance that would be created by physical pain ?—Yes. She had been much relieved by the treatment she had received from me.

But still there was a depression of her mind, and a painful appearance upon her countenance ?—Yes.

As if her conscience was at work ?—It so struck me.

What hospital was she at ?—At the hospital of the 22nd.

Is that what you call the regimental hospital ?—It is the regimental hospital or staff hospital.

Are you the regular attendant at the hospital ?—No. Surgeon-Major Lewis is the attendant there.

I may take the liberty of asking you how it happened that you were put in attendance upon her ?—I attended her because she was the ayah of a friend of mine, and I liked to do it.

Is it perfectly regular that you should have gone like that ?—I had an interest in the ayah, and as Surgeon-Major Lewis was a personal friend of mine I thought I might take the liberty to go and see her and examine her.

So you went to see her because you had an interest in her ?—Yes. In that sense no more.

Did you communicate with Dr. Lewis before you did so ?—I did not, because it was not necessary.

I did not ask your reason. You did not, in point of fact?—No.

Am I to understand that you prescribed for her without seeing Dr. Lewis?—I am not aware that I did prescribe for her.

You prescribed a plaster at least?—That was outside.

But don't you call that a prescription?—That was when she was outside the hospital.

Oh, I thought you meant outside of her. But when she got inside am I to understand that you did nothing for her?—If you will call the hospital assistant——

No, no, I won't call the hospital assistant. I have such respect for you, Dr. Seward, that I prefer asking you. Do you mean to say that you did nothing for her?—If you will be good enough to call the hospital assistant you will find out properly.

You have given us a minute account on minor points, and you might tell me this?—I cannot tell you, or I would tell you at once.

Then it occurs to me to ask you what you went for?—I have already told you—out of interest for her.

Not to prescribe for her?—Not to prescribe for her.

On noticing her apparently troubled state, you assisted her in unburdening her conscience?—It was so.

Tell me, did you and the ayah understand each other's language?—Yes.

Did she speak to you in her own language?—Yes, in Hindustani, and I understood her.

You had no interpreter?—No.

Is your memory clear upon that subject?—I had no interpreter. There was a policeman there.

It was sure to compose her mind, if the policeman was there. Who was the policeman?—Heaven knows, I don't know.

Never mind saying that. We cannot ask heaven anything on the subject?—You ask me a question as to what I know nothing about. I have no idea who it was.

Do you know Akbar Ali?—I do know him.

Was it he?—No.

Or Abdool Ali?—I don't know.

There was a policeman standing there?—Yes.

What was he doing in a sick room?—I believe she was under police surveillance at the time.

Was that at the time you advised her to unburden her mind when there was a policeman in her room?—Whether he was in the room or standing at the door, I don't know.

With all respect to you, Dr. Seward, I must ask you whether it was in accordance with medical practice for you to visit the patient of another doctor without communicating with him?—I know nothing about what the usual medical practice may be, but I am very friendly with Surgeon-Major Lewis, and I went to see her because she was the ayah of a friend of mine, and I took an interest in her.

I ask you, Dr. Seward—I am sure you cannot misunderstand me—was it in accordance with the usual rule of your profession, that you should visit the patient of another medical man without communicating with him. Is it usual or is it not? A "yes" or "no" answer is all I want.—It is not. But you forget the circumstances.

I don't forget any circumstance. But I ask you whether that is the usual practice?—It may or may not be—it depends on the relations of the medical officers concerned.

Am I to understand by that that you mean, that if you feel you are on friendly terms with a medical officer you may visit his patients without communicating with him?—No.

Then please convey your idea on the subject to me?—I tell you, Mr. Ballantine, simply what occurred in the matter. I have nothing to hide.

The President—You can surely say whether it is usual or not. You will have an opportunity afterwards of explaining the circumstances.

Witness—With a private patient it would not be etiquette.

Mr. Serjeant Ballantine—And with a patient in an hospital you would never presume, would you, of visiting a patient there?—Not usually.

Very well. Do you know a person named Bhow Poonikur at all?—I have seen him once, but I cannot say that I know him.

When was it that you saw him?—It was after the departure of Mr. Beevey from Baroda.

You had seen him before?—Not as far as I know.

Yes, that is all I can ask you. Have you seen him since?—Since what occasion?

You said that you had only seen him once?—Yes, that was at my house, so far as I know. I have not seen him since.

When did Mr. Beevey go away?—I cannot say.

Well, that there may be no mistake about the matter, I ask you again, are you quite sure that you have not seen Bhow Poonikur since that occasion?—To the best of my belief and knowledge, I have not.

That is quite sufficient. And now, Dr. Seward, in relation to this conversation with the ayah and to her message, and what you said to her, am I to understand that it was a conversation between you and the ayah, and nobody was there?—As far as I know, it was simply a conversation between myself and the ayah.

Do you mean that this policeman who was present did not interpret?—To the best of my belief he did not.

That is rather apart from what I asked you. Did the policeman interpret?—I cannot tell you.

Well, I shall be obliged to press that question?—You may press me, Sir, from this time until doomsday, sir, but I persist in saying that I cannot tell you, because I do not know.

I shall not do that.—You will.

Not unless something which I don't anticipate or wish should take place. Do I understand you to say that the policeman did, in point of fact, interpret?—I have told you, sir.

Then tell me again?—I tell you again.

That you don't remember?—I don't remember.

May he have done so?—It is possible.

Do you think he did?—I don't know whether he did or not. I tell you it may be possible, but I don't remember.

I asked you, Dr. Seward, whether you did not get every single word of her message out of the mouth of the policeman?—I really do not know. I will swear I did not. You are asking me about a matter in which I have not the least reason for being a go-between between this woman and Mr. Souter. It is apparently your intention to make me a go-between between Mr. Souter and the ayah.

If you were always as right in your medical diagnosis, as you are in finding out my intentions you might often be very far wrong. Now, did you or did you not get the substance of her message from the policeman?—I cannot tell you.

Now, don't be angry. What do you think?—I think nothing of it. I simply cannot tell you. I don't know himself.

What is your belief? (To the President) My Lord, I have no other reason. (Witness here appealed to the President and said that he would have to ask for the protection of the commission if the questions were pressed further).

The president—Mr. Serjeant Ballantine has a duty to perform, and he is entitled to ask you what your belief is. If you know, you can tell him, and if you have no belief on the subject you can say so?—I have no belief upon the subject.

Mr. Serjeant Ballantine—Do you understand Hindustani? I talk it, but not fluently.

I will now take you to the events of the 9th—Unless I am mistaken, Colonel Phayre said that he had some intimation that it was probable he might be poisoned. I am referring to your examination.—That must be a misstatement of mine. He told me that his life had been threatened.

Colonel Phayre told you that he had heard that attempts would be made?—Against him?

Yes, against him, "that he had heard that foul play would be attempted against him?"—Yes.

Did he tell you from whom he had heard this or what he had heard?—To the best of my belief, he only said that his life had been threatened, but that, up to that time, it had never been attempted

When you got to the Residency, you saw the tumbler in which was contained a little of the liquid and the sediment?—Yes.

When you saw it, was the sediment in solution, or did it appear at the bottom independently of any liquid?—I saw it in the lower part of the tumbler.

Was it mixed with the liquid, or was the liquid independent of it at the time?—It was a sediment not diffused in the liquid.

Was there sufficient sediment to exhaust the liquid so as to make it merely damp, or did it when shaken up, get into solution?—There was just a liquid—it would be difficult to give any accurate description of what there was, but there was a liquid.

Colonel Phayre has said that the sediment was at the bottom and that the liquid was trickling down the side of the glass. Was the sediment at the bottom, or attached to the side of the glass?—There was some dripping down.

Now, Colonel Phayre has stated that this was of a darkish brown colour. That would not be consistent with its being diamond dust or arsenic?—It would not be dark brown, as you say.

You can answer my question?—It would not be consistent with arsenic or diamond dust.

So that there must at all events have been some additional element to either of these two, supposing it to have had a dark colour?—I can give you no opinion upon that.

The first question I put to you was whether a dark colour was not inconsistent with the presence of arsenic and diamond dust, and I ask now, must there not have been some other element.

The question was referred to the President.

Witness—(To Commission)—I can only tell Mr. Ballantine what I did see. Anything beyond that does not come under my cognizance.

The President took a note of Dr. Seward's answer.

Cross-examination continued—I decline to give my opinion as to whether there was something else.

Now, I suppose that what you mean by its not coming under your cognizance is that it did not come under your observation by analysis—? I saw no dark brown sediment in it.

Then how will you describe the sediment you saw?—It appeared to me to be a fawn colour—something like some sea sand.

Would you call it—I don't ask whether you have done so; it is merely my recollection of the evidence—a pale grey?—I think that might be a very fair description of the colour.

I then understand you that you mixed a little water with it?—Yes.

I take it for granted, Dr. Seward, that you had not the means and did not analyse that water before you put it in?—I did not analyse that water.

I suppose, Dr. Seward, I may take it that an analytical chemist analyses all the substances which he works with for the purpose of his analysis, as a general rule?—As a general rule.

And there are instances—I was going to say numerous instances—are there not, in which the very poison supposed to be found, has came from the tests the analyst used?—There are such instances.

Now, you said that in the *liquid* there was about, I think you said, three-fourths of a dessert spoonful?—I said about a dessert or tea-spoonful of the liquid, as far as I remember, of what remained of the sherbet.

And I think you said five grains of powder?—That was an estimate.

What did you do with the liquid?—You added some water to it, and what became of the remainder after you had added the water? I mean on the morning of the 9th? Keep now in Colonel Phayre's room up to the time you departed. What was the next thing done; you added some liquid. What did you do?—I did nothing more. After that I took it home.

How did you take it home?—I took it home in my pocket.

Then you eliminated the powder?—I took the whole of it in a tumbler—in the very tumbler.

Yes, you are correct, because I remember you said that it was the size of the tumbler that attracted a man's attention, as you suppose?—Yes.

You then used the charcoal test: they call that testing by reduction, don't they?—Yes.

Which eliminates certain portions that can subsequently be re-converted into its original element? I am right about that, am I not?—Yes.

So that what you suppose to be arsenic upon this metallic ring, you could actually show to be arsenic?—Undoubtedly.

You can bring out the actual salt of the arsenic completely?—Yes, in combination with other things.

Then I suppose that that ring, supposing your, tests were correct, although it shows the presence of metal, does not prove that that metal is arsenic?—So far as the appearance of these octohedral crystals is concerned they are regarded as an almost conclusive sign of arsenic.

And are those the crystals that exist in the tube?—They are.

Would not some other mineral substance produce exactly the same appearance?—Other mineral poisons would not produce similar crystals, I think, under the microscope.

Might not corrosive sublimate have produced the same appearance upon the tube?—No, they would not stand the test of the microscope.

Tell me where you got the charcoal from?—It was sent to me by my hospital assistant, together with the other apparatus.

Brought to you or sent?—I think that he brought it to me himself.

Did you test the charcoal at that time?—No.

Did you test the remainder of the charcoal afterwards?—I did not. Afterwards, it was tested by Dr. Gray.

I take it then that you yourself did not test the charcoal that you used?—Yes.

Very well, I suppose you tested both the liquid and the sediment?—I had no chemicals with me and I did not test the liquid. I merely tested the sediment.

Very well, the sediment?—Yes, the liquid was thrown away.

Then you eliminated the sediment from the liquid and tested the sediment only?—That is so.

Did you ever hear of such a course being taken before, namely to throw away a part of what was supposed to be poison?—That may have been an omission of mine.

That is quite sufficient. You only tested for arsenic, did you?—Only for arsenic.

There are poisons, are there not, the foundations of which are copper?—Yes.

What do they call them?—I believe they are called verdigris.

Have you no test for copper?—No.

Was there anything to indicate the presence of copper at all?—Nothing.

I suppose the liquid would have told at once?—I think the liquid would have done so.

From anything that you discovered from your analysis, did you find anything that would account for the coppery taste that Colonel Phayre describes as having experienced?—No.

What is the specific gravity of arsenic in relation to water?—I do not know.

Is it not 3½ to 1?—I am not prepared to answer that. Dr. Gray will tell you at once.

But I suppose you can tell me this, it is very much heavier than water?—Yes, it is, but some of it will float, and some of it will sink. It is a peculiar habit of arsenic.

Supposing a quantity of arsenic has been mixed and shaken up in a bottle and thoroughly mixed, and then poured into a tumbler, would it ever get to the top?—I cannot say.

Is this the first time you have made the test for arsenic?—Not quite. I have tested it in England and elsewhere under Hauffmann.

Well, have you made experiments since, by sending for arsenic?—Yes, I have made one experiment.

Did you weigh the sediment to ascertain how much there was?—I did not.

How much in proportion to the whole did you experiment upon?—About a third.

Rather more than a grain?—Yes, I think it must have been a grain or two.

"A grain or two" is rather a wide expression, and you must know that a grain or two is rather important in a question of poison. Was it a grain and a half?—It was between a grain and two grains.

I understand your first process perfectly, but I did not understand your second process by which you bring out these acids that exhibited glittering globules. Did you use the same materials that you used before? Did you use the whole that you had got of the sediment?—Yes.

And this brought out the metallic ring?—Yes.

Was there any residuum from your experiments with the arsenic?—There was not.

Assuming that you experimented upon an amount between one and two grains, did you use it all?—Yes, I took the whole of that into the reduction tube.

You used it all up?—I cannot say I used it all up, because I brought out certain appearances.

You brought out certain appearances which we have seen upon the tube; and you say that subsequently you brought out something else upon the slides?—Yes.

Upon what did you operate to bring out something else upon the slides?—That which I had already operated upon through the tube after subjecting it to heat. I did not say I had worked all the arsenic out of it. I merely detected the presence of arsenic and ceased the experiments.

Supposing you are right in the supposition that that tube is really coloured by arsenic, is that more than an eighth of a grain?—I cannot say.

May there be more than the sixteenth of a grain?—I won't venture to estimate. The tube is there.

Very well, then you know nothing about it, and the tube is here for the purpose of inquiry. Now, was the residuum left in the tube a powder or a liquid?—It was the dry charcoal and whatever was mixed with it. I took out the whole for further experiments.

How much was there of what you took out for your further experiments? How much charcoal did you use?—I did not weigh it.

Am I to understand that you did not weigh the quantity of charcoal upon which you experimented?—There was no necessity for it.

Am I to understand that you did not do it?—I did not do it. I have already said so.

Were your last experiments made upon a pinch of the dust that you took out of the tube?—I cannot say how much charcoal I took out.

And you say that by the process you adopted you brought that out, and what I call (my eyes not being microscopic) colouring on the slides?—I brought out a crystallised appearance on the slides.

I suppose, if you were correct about this, the scratch indicated on the slide would come by a renewal of the same experiments with other slides?—Yes.

In a letter from Dr. Gray to you it commences, "My dear Seward—I have duly received your letter and its enclosures—viz., a demi-official from Colonel Phayre, and a small packet which contained a few grains of greyish-coloured powder," and so on. That implies that there was a letter besides. Did you write any letter?—The letter referred to is, I think, Colonel Phayre's.

The extract I have read implies the existence of another letter. Was there one?—Perhaps it refers to what was written on the outside of the envelope.

But that was your first communication with Dr. Gray, was it not?—Yes, it was.

You did not write to him the result of your analysis?—I do not remember what I wrote upon the envelope. The envelope will show. (Shown exhibit D.) That is the only communication I made so far as I know.

Is arsenic used in the manufacture of glass?—I believe it is in some varieties of glass.

Is there any other substance than diamonds that might scratch glass?—I think corrundum will.

What is corrundum?—I think it is a metallic oxide, but Dr. Gray will give you the information at once.

You have given an account of noticing certain peculiarities about Rowjee and Nursoo on the morning of the 9th, and you said that Rowjee offered you an umbrella, a thing which he had never done before. Am I right?—Yes.

Now, until Rowjee had said that he had put this stuff into his master's glass, did you ever mention that fact, or your opinion in relation to these persons, to any human being?—Yes, to Mr. Boevey.

You mentioned the demeanour of the servants?—Yes.

When did you mention it him?—I cannot tell.

It is rather important to know. Can't you tell?—It was before Mr. Boevey left Baroda.

I am told that Mr. Boevey left about the 25th December?—I do not know exactly. I must have mentioned it shortly after the enquiry. I can only undertake to say it was before the 25th.

At Mr. Serjeant Ballantine's request Dr. Seward then took a clean piece of glass and scratched it with sediment as he had scratched the piece of glass marked exhibit S.

This terminated the cross-examination.

Re-examined by the Advocate-General:—

The ayah, I understand, had been your patient before she went into the hospital?—Yes.

Do you remember how many days she had been under treatment by you before her removal to the hospital?—Only one day.

Was it part of your duty as Residecy Surgeon to attend the Residency servants?—Yes; in serious cases.

What reason had you for having her removed to hospital?—Because she appeared to me to be too seriously ill to remain where she was without attendance in Mr. Boevey's compound.

Was your visit to her in the hospital for the purpose of prescribing to her?—I went to ascertain how she was. I examined her lungs, but did not prescribe.

My visit to her in the hospital was not to prescribe for her, but I took an interest in her because she was Mrs. Boevey's ayah.

In the hospital was she in a separate room or in a general ward with other patients?—In a separate room.

Whereabouts was the policeman when you went in?—I think he was either standing or sitting at the door. I made no particular note of the circumstance.

Did anybody come into the room when you were there upon this occasion?—I think I remember one of the hospital assistants coming in. I do not remember which hospital assistant.

You say you do not remember who the policeman was that you saw. Can you describe him? Was he a Bombay policeman or a local policeman?—He was a Bombay policeman. There are no local policemen.

Serjeant Ballantine—If you can tell us who he was we shall accept the fact.

The Advocate-General—I do not know who he was. I only want to show that he was ordinary police sepoy.

Examination continued:—The sepoy seemed to be an ordinary police sepoy rather shabbily dressed, without any ornaments upon him.

You say you speak Hindostani but not fluently?—Yes.

Do you speak it well enough to dispense with an interpreter in ordinary conversations?—Yes.

Would it be an ordinary thing for you to ask for the assistance of an interpreter in an ordinary conversation with a native?—I frequently get one if I find myself unable to carry on a conversation.

Now we come to the 9th November. You say that to you the sediment in the tumbler appeared of a dull fawn colour or pale grey?—Yes.

Did you notice the colour of the liquid when you first saw the tumbler?—Yes, it was a dull pink colour.

About how much water did you add?—possibly about a table-spoonful.

Do you remember from what vessel you took that water?—It was from a vessel standing on the wash-hand-stand. I think it may have been from a water goblet, but I have no distinct remembrance.

But you took the first water that came?—Yes.

On your going home, you say, you got some charcoal and your apparatus brought by your hospital assistant?—Yes.

Who is he?—A man named Ebrahimjee, a Jew, who has now left Baroda. I do not remember whether I sent a note for him or whether he was called.

Did you communicate the purpose for which you wanted the charcoal or the apparatus?—I did not do so to Ebrahimjee, nor to any one else.

You were asked by my learned friend whether, if arsenic had been shaken in a small bottle before being poured into a tumbler or other vessel in which it was to be administered, that would make it sink to the bottom, and you said you could not say?—Yes, I cannot say.

Would a preliminary shaking of arsenic in a small bottle before pouring it into a tumbler have the effect of diffusing the arsenic more thoroughly over the liquid in the tumbler?—It might have.

Diamond dust, I suppose, would naturally sink to the bottom if any length of time elapsed?—Yes.

You say that when you detected the presence of arsenic you ceased from further trial?—Yes.

What was your reason for that?—I had no apparatus.

You say you believe corrundum would scratch glass as well as diamonds?—Yes.

And you think it is a metallic oxide?—Yes.

Would chemical tests be available to discover the presence of corrundum?—I am not sufficiently acquainted with chemistry to say.

Very well. We shall reserve that question for Dr. Gray. When was it that you noticed the film you spoke of?—I observed it before I added any water.

By Sir Dinkur Rao—In your opinion, was the poison arsenic or diamond dust?—Arsenic.

If diamond dust is administered to a person, can he digest it without a poisonous effect?—I have no knowledge of that.

ROWJEE'S EVIDENCE.

Rowjee bin Rama examined by Mr. Advocate-General:—

After my return from Nowsaree I went to visit the Maharaja with a person named Jemadar Nursoo. This was about two or three days after my return to Baroda from Nowsaree. A punkawalla named Kabhai also went with me. About fifteen days after my return from Nowsaree Rs. 300 were paid to me by Nursoo Jemadar. After receiving that money, I again went to visit the Maharaja. About four or five months after I received the money—I guess it would be about that time—Nursoo Jemadar went with me then. On this occasion I went from here (the camp bazaar) at seven o'clock in the evening; I went first to Yeshwuntrao's house, where I met Salim sowar. Nursoo Jemadar was also seated there. Besides myself, Nursoo, and Salim, Yeshwuntrao was also there. From Yeshwuntrao's house we went to the Maharaja's Haveli. We went into the Haveli by the entrance situated on the Nuzzur Bagh side. I saw the Maharaja on that occasion. He was seated in his bath-room. It was upstairs. When I went to the Maharaja, I and Nursoo Jemadar sat down, and Yeshwuntrao and Salim were standing near the Maharaja. Then the Maharaja said to us "The saheb practices great *zoolum* (oppression) on me. I will tell you something; will you listen to it?" Then I and the jemadar said "Yes, we will listen." Then the Maharaja said "what is the saheb in the habit of eating?" I then said "He does not eat anything in my presence, but he drinks juice (*rus*) sherbet." Then the Maharaja said to us "If I give you something will you put it in" (*dalna*). Then we said "What will be the effect of it?" (*Kya hoega.*) Nursoo it was who said this. Then the Maharaja said to us, "I will send a packet by the hands of Salim sowar." I thereupon asked the Maharaja—"What will be the effect of it?" (Interpreter explains that the word "pudi," which he interpreted by the word "packet," may also mean powder.) When I asked what substance is it (or rather thing)—

Mr. Serjeant Ballantine—Then the correct rendering of the word must be "packet," because he says "what thing"?

Mr. Advocate-General—A thing is not necessarily a substance in the ordinary sense of the term.

Witness—Then the Maharaja said, "It is poison," (*zohar*) I then said to the Maharaja, "If I put it in and if anything happens to the saheb all of a sudden, what then?" The Maharaja said "It will not produce any immediate effect, but will produce an effect in the course of two or three months." Then the Maharaja said to us, "I will give you a present of a lakh each if you will do this thing, and I will employ you (*asami*) or give you service, and I will protect your children and family. Do not entertain any apprehensions." I myself asked the Maharaja,—"In what way or manner shall I put this in?" Then the Maharajah said—"Take a small bottle or vial, put some water and the powder in it, shake it well and put that in." Then I asked the Maharaja—"If I put the powder thus, what will be the effect?" The Maharaja said—"If, without shaking it, you put it in the juice, it will come to the top; therefore you should shake it before putting it in." Then Salim sowar and Yeshwuntrao both said—"It will be good for you if you do this job; do not have any apprehensions." The Maharaja said "Make three powders of this and finish them in three days." At that time no powder was shewn me, nothing was shewn me then. The Maharaja said—"I will send to the jemadar's house by the hands of Salim or Yeshwuntrao." I said, "Very well." Nothing more occurred. After the Maharaja said this, we left. I cannot fix the day on which this conversation took place. I don't remember the day of the week or month, nor what season it was. I don't remember the 9th of November. I remember when Colonel Phayre found out the attempt to poison him. It was before this discovery that I had had this interview with the Maharaja. It would be about fifteen or twenty days before. After this interview with the Maharaja the jemadar brought a packet and gave it to me. The above-described interview with the Maharaja took place at seven o'clock in the evening—not morning. When the jemadar gave me the packet, it was, as far as I remember, on the day following that on which I had had the interview with the Maharaja. I opened the packet he gave me, and found it contain two powders, one white and the other rose-coloured. (The quantity in these powders he tried to illustrate with his fingers.)

By Mr. Serjeant Ballantine—I do not think there was quite a tea-spoonful.

By the Advocate-General—I did not form any estimate of the weight. (Shown a sand-box used for drying ink.)

The witness divided the sand into two separate parts, and said that the portion he meant to represent the white powder should be a little more than the other. The sand that had been used for illustration was handed to the Secretary to the Commission.

Examination continued—When Nursoo gave me these powders he spoke to me. After I got these two powders from Nursoo I divided them into three portions, taking more of the rose powder and less of the white. Of the white powder I used only a little, so that some of it was left. To make up the three mixtures I took a pinch of the white powder, and a good deal remained. I don't remember whether I used half of the white powder, but I used up the whole of the rose-coloured powder. When these three mixtures were made up I kept them in the pocket of my putta or belt. The remainder of the white powder I put on one side of my belt—I mean the lower part of it. It was put in the same pocket of the belt as I put the three powders, but in a separate division. The three packets that I had thus mixed I threw them into the saheb's sherbet. I threw the three packets into the sherbet, not at one time but at different times. I put these powders in

on alternate days, although I do not remember the particular days. I put the powders in a bottle.

Mr. Melvill—He did not say powders. He only said one.

Question repeated and examination continued—I put one powder into a bottle, leaving the other two. I put some water in the bottle and shook it and threw the contents in the glass—I mean the glass which contained Colonel Phayre's sherbet. When I speak of the glass of sherbet, I refer to the glass of sherbet that used to be placed in Colonel Phayre's private room every morning. I adopted the same practice in regard to each of these three powders. The bottle I used I got from the Maharaja. That was about the time when the sahib had a boil on his head. The bottle contained some white liquid like water. I was at the Maharaja's Haveli when I got this bottle, and Nursoo jemadar was with me on that occasion. When the Maharaja gave me this bottle I asked him, "What does this bottle contain?" He said "It contains something which you ought to throw into the sahib's bathing tub or gindy." I took the bottle with me. I tucked the bottle up in my drawers, and it produced a wound, or sort of swelling.

Mr. Melvill—He said he put it between his strings.

The Interpreter—His meaning is that he put it between the strings of his drawers and the drawers.

Examination continued—The injury was like a boil.

Interpreter—I think he means a blister.

Witness (asked for explanation)—It was a boil; when a man gets a burn it produces that kind of thing. The wound was here (showing his stomach.) As it produced a boil on me I thought it would produce some great injuries on the sahib, and therefore I threw it away. I threw away the medicine which the bottle contained. The mouth of the bottle was stopped with cotton which was covered over with bees' wax, not sealing-wax. I got the bottle about a month or a month and a quarter before I got the powders. I took the bottle with me to the Residency. Nursoo jemedar asked me, "Did you put it in?" I told him I had put it in. I said to Nursoo jemadar, "Look here, I have been burned here" (pointing to my stomach). The bottle I kept in the Residency underneath a box belonging to the sahib kept near a form on which the jemedars used to sit near the sahib's office. This box was near the form on which I used to sit. After I put the three powders into the sherbet, as I have described, I saw the Maharaja about eight days afterwards. After that the Maharaja used to come to the Residency to see the sahib, and perhaps he thought that nothing had happened to the sahib. The Maharaja sent a message to me through Salim. I and Nursoo jemedar both went. This was at night. To the best of my recollection no other person went with me on that occasion. I first went to Yeshwuntrao's house. When I got there Nursoo jemedar was there as well as Salim sowar, who was sitting there. Yeshwuntrao was also there. I went to the Maharaja's Haveli with Yeshwuntrao, Nursoo jemedar, and Salim sowar. I saw the Maharaja at the Haveli, in his bath-room in the same place as I had seen him on previous occasions.

Tell us what took place between you and the Maharaja on the occasion of that visit.

Witness.—The Maharaja gave me coarse abuse and said, "You did not do anything." I said to the Maharaja, "I did it, but I cannot account for its not happening." Then the Maharaja said. "I will give you another thing which you should put in." I said "Very well." As I was about to go, Salim stretched forth his hand, but I did not see whether he gave anything to the jemedar or not. He did not say anything at the time—no one said anything at that time. I did not hear anything then, I and the jemadar went away from there. On the next day, when the jemadar came from his house, he gave me something—it was a packet. I opened and examined the packet. There was some black or dark-coloured substance in it. (Interpreter explains that it may mean either one or the other.) The colour of the Interpreter's coat is too dark. I think the colour was like this (pointing to a drab-coloured helmet on the table.) That is about the colour. This powder I kept by me for one day. I went on Friday, and it was brought by the jemadar to me on Saturday. The next day was Sunday, and I did not go to my duty that day. I went to my duty on the Monday following. I am speaking of Monday, the day on which the report about the poisoning was heard. On Monday I put the poison in the sahib's sherbet. I put in the packet that was sent to me by the jemedar from the Maharaja on the last occasion. I put the powder in a bottle, shook it, and put it in the glass of sherbet. I put it in the bottle which had been given to me by the Maharaja. I put nothing else in but the powder. I shook it in some water in the bottle. When I poured the contents of the bottle into Colonel Phayre's sherbet, no one was present. I put it in to the sahib's glass at half-past six o'clock, when I went to my duty. This was about twenty minutes of thereabouts, before Colonel Phayre returned. I saw Colonel Phayre return. I remember Colonel Phayre writing a note. He gave it into the hands of the jemadar, who gave it to me, and I gave it to a puttiwalla. I do not remember what puttiwalla. I remember telling him to take the note to the doctor sahib. Salim sowar was present when I told the puttiwalla to take the note to the doctor sahib. I first saw Salim sowar that morning about seven o'clock. First Salim sowar asked me, "Did you do that job or not?" I said, "Yes, I did it." I said "A note has this day been written and sent to Dr. Gray, and I think you will be disgraced."

Salim said nothing to me when I told him this. I left him immediately afterwards. I told him about the note to the doctor sahib at the same time as I told him about my having given the poison. I remember the doctor coming. I was standing there. I remained on duty at the Residency all that morning. On that same day I was not placed under arrest. I was suspended on that day. I was desired to take off my belt and keep it there and go home. I left my belt in the sahib's office. My belt has never been returned to me. On that Monday I was examined a little by Colonel Phayre, and Mr. Bovey was present on the occasion. I was placed in arrest on the following morning at seven o'clock. I remained under arrest on the night of that day. The next day at five o'clock in the evening I was released by orders of the sahib. I was not allowed to return to my duties. I have already told you about receiving Rs. 500 on the occasion of my marriage, and afterwards Rs. 300 from the jemadar. I did not receive any more money. How can I tell what the Maharaja gave to the jemadar? I had some ornaments made out of the money I received at the time of my marriage. (Ornaments produced.) These were the ornaments which I caused to be made. For these ornaments I paid about Rs. 500 or Rs. 550. I don't remember exactly what amount I paid. I told you yesterday that I had been requested by the Maharaja to communicate with him through Salim. I have communicated with the Maharaja in writing. I caused Jugga to write for me on one or two occasions. I know Jugga's handwriting. I can read Guzeerathee a little, and I can write a little, but not well. (Shown letter.) This is in Jugga's handwriting. I don't think I can read this letter. Besides Jugga didn't employ anybody else to write for me. I wrote myself on two or three occasions. These letters or communications that I caused to be written, and which I wrote, were all conveyed by the jemedar. I remember making a statement before Mr. Souter, The first day on which I made my statement to Mr. Souter was on a Tuesday, the 22nd, so far as I remember. I do not remember what month.

The Advocate-General—We take it, my Lord, as the 22nd December.

Examination continued—My statement was not taken down by Mr. Souter on the 22nd. It was on a subsequent day. Early one morning, about five o'clock, Mr. Souter sent for me. On that morning I did not say anything to the sahib. He questioned me till about eight or nine o'clock that morning, but I did not confess anything correctly. I was then brought to the Residency. I saw Mr. Souter in Colonel Barton's bungalow. I was then taken to the Residency, and was desired to sit down in the garden of the Residency. I continued sitting there till five or six o'clock. Kureem and Faizoo were there. We began to discuss or argue amongst ourselves. Faizoo and Kureem said, with regard to themselves and the ayah, "We have told the truth; you had better tell the truth, and you also will be saved." They said, "We have stated that we have been there." Thereupon I sent for Mr. Souter's havildar, who was near there. I don't remember his name. I would know him if I saw him. (Shown havildar No. B 1130, Meer Imam Ally.) This is the man. I said to him, "Do you take me to the senior Khan Sahib Akbar Ali." Then I went to the senior Khan Sahib, and said to him, "I will tell before you the truth regarding the poison. If you save my life, and get a promise given to me by the sahib I will tell you the truth." I did obtain a promise of free pardon if I made a full statement, and under that promise I made a full statement to Mr. Souter. From the time I first saw Mr. Souter at six o'clock until the present moment I have had no communication with the jemadar Nursoo, with this exception—on the day Nursoo was taken up the Khan Sahib said "Tell before Nursoo the truth that you have told."

A doubt was raised about the correctness of the interpretation of the answer, and the question was repeated, but no difference was found in the interpretation.

Examination continued.—The great Khan Sahib sent for me. He said, "Tell the truth before Nursoo and the Rao Sahib and Chota Khan Sahib." I was then taken to near the jemadar, and addressing him I said, "I have told all that was to be told even up to my neck." That was all that passed between us, and he was taken away to the police guard-room. (Shown belt.) This is the belt that was taken away from me. (Shown pocket at the bottom of the belt.) This was where I put the three packets, and the remainder of the white powder that was not used was put in the pocket at the side. I was present when something was found in that belt. The Rao Sahib and Akbar Ali and Khan Bahadoor were present. On that occasion one powder or packet was found in my belt. The Khan Sahib asked me, "Where used you to put it?" I said "In the pocket of my putta or belt." Then he asked "Where is your belt, ?" I said, "It is in the possession of Bhoodur Puttiwalla. Mr. Souter's sepoy named Chand went and brought Bhoodur Puttiwalla there. When he came he was wearing it on his neck. The Khan Sahib took it off his person, and then Khan Sahib, Rao Sahib and Khan Sahib Junior began to search. Then the Khan Sahib senior introduced his finger into the belt. (Illustrates the manner.) He found something hard, and then remarked, "There is something there." Then he left it as it was and sent for Mr. Souter, who was in the room opposite. The sahib opened the lower part of the belt, took out the packet, and found it wrapped in a piece of white paper. The contents of that packet were poison—I mean a white powder. When the packet was taken out in the way I described I recognised it. The sahib asked me and I said, "I could identify it." I said, "This is the packet which was left with me by mistake or oversight." I said nothing more on this occasion. After this inquiry the sahib took some information from me, and then I left. I don't remember when this packet was found. It was about two days after I gave him my deposition. It was on the third day. One day had elapsed. I think the sahib was busy on the previous day.

BARÓDA, *March* 8.

Dámodhur Punt, Private Secretary to the Gaekwar examined by Mr. Scoble. Said that about September or October last the Maharaja told him to get two tolas of arsenic for the itch, and the witness wrote a note to the Fouzdaree Department giving the order. The order was produced and put in. It was as follows, and dated 4th October: For medicine to a horse, arsenic weighing two tolas is required; please send and permit. He did not then get the arsenic, but did get it afterwards from Nurudeen Bhora, the man who was formerly connected with the dispensary. He brought two tolas of arsenic to the witness, who asked the Gaekwar what was to be done with it. The Gaekwar said, give it to Salim. Witness did so. The Gaekwar then ordered the witness to get one tola of diamonds and give them to Yeshwuntrao; which was done.

The Gaekwar used to give orders for diamonds every four or eight days. Witness also gave a small bottle of medicine to Salim which the Gaekwar had given him for that purpose. The bottle had been received from Goojaba, a servant of the Nana Sahib Kanvulker, the hereditary minister and brother-in-law of the Gaekwar.

The witness was also ordered by the Gaekwar on another occasion to get arsenic weighing two tolas and one tola of diamonds.

The witness got the arsenic from Nurudeen Borah and gave it to Salim. Got the diamonds from the jewel-room. It was diamond powder. The Maharaja ordered the witness to give it to Yeswuntrao, and he did so. The Gaekwar said that the diamonds were for the purpose of making a crown for the Swami or the high priest of Akulkote. When the witness gave the diamonds to Yeshwuntrao he asked him what they were for. Yeshwuntrao replied to be made into powder and to be given to Colonel Phayre.

Witness remembered the Gaekwar visiting Colonel Phayre on the day on which the report got about that an attempt has been made to poison him. He was in the carriage with the Gaekwar.

The Maharaja said that Rowjee has put it in. It was a bad job for this time.

Remembers Mr. Souter coming to Baroda. Remembers the arrest of Rowjee. Rowjee was then released. The Maharaja said that the man with the proof has been released, and now there is no apprehension. When Rowjee was arrested for the second time, the Maharaja said to Yeshwuntrao, Salim and the witness that if any enquiry takes place here don't confess anything.

Witness then detailed his capture and imprisonment. Said he had confessed because he was tired of being in prison. No one had told him what Nursoo or Rowjee had said.

Witness was then examined on the seventeen yads which showed that certain sums of money had been paid for fruits and fireworks, but which, it was maintained, had been in reality paid to the Residency servants.

Baroda, March 9th.

Dámoodur Punt's examination continued.—He spoke of having debited the price of the diamonds against the lighting and nuzzerana account savings. He said that Nowradin Borah was never paid for the arsenic supplied, but was promised the superintendence of the palace dispensary. Salim told him that Col. Phayre was suffering from a boil on the forehead. That Rowjee put the arsenic into the plaster, but took it off when Col. Phayre complained of a burning sensation. Under the Gaekwar's orders, he ordered a medicine, composed of large ants, serpents, and urine from a black horse. Got medicine from Hakimjee and gave to Salim. Under the Gaekwar's directions, he blotted with ink the entries of payment made to Salim in the daily journals.

Sérjeant Ballantine cross-examined.—He admitted receiving general orders from the Gaekwar to falsify the accounts when he heard of the attempt. He did not destroy criminating papers, because copies were in five different places. He made confession, because he had been in confinement sixteen days. He knew he would not be released until he did so. Several items in the accounts were fictitiously entered as paid to Salim, but really to the Residency servants for affording information.

Baroda, 9 h March.

Damoodhur's cross-examination continued—Arsenic was obtainable from the fouzdari by order of the Gaekwar. The Gaekwar on that occasion ordered it to be brought from the bazaar.

Hemchund Futtehchund, jeweller, denied having sold diamond dust to the Gaekwar's agents. He retracted the deposition made to Mr. Souter to be above effect. Cross-examined with permission of the President by Mr. Inverarity on his deposition and the account books. He said he was compelled to sign the deposition and make false entries by order of the police.

Serjeant Ballantine to-day asked the President whether it was not possible to change the hour of sitting. The President said he was afraid it was not practicable. Would inform him to-morrow. The heat is unbearable. Dust storms commencing.

THE MASSACRE IN THE NAGA HILLS.

(To the Editor of the "Indian Medical Gazette.")

Sir,—It may interest you to know the nature of the wounds received by the members of the unfortunate Topographical Survey Party who were in the Naga Hills at their eastern extremity.

It appears that the party consisting of two Europeans (Lieutenant Holcombe, the Assistant Commissioner of Jeypore, and Capt. Badgley, of the Survey Dept.) 42 men of the 44th S. L. I., 12 police men and 141 coolies, &c., had passed through a village called Nino and had encamped on the evening of the 1st of February. On the morning of 2nd February, at 6 o'clock, the Nagas of that and the adjoining villages came, as usual, into the camp to parley and sell what they had to sell: it is supposed that about 300 came and they quietly surrounded the men.

Lieutenant Holcombe was talking to a chief in front of the tents when suddenly a Naga sprung from behind the chief and killed him with one blow of his dhao, a signal was given and every Naga drew his dhao (which he carried behind him) and struck down the nearest man. Four men rushed into Capt. Badgley's tent (he was tying up his shoe lace at the time), he took his revolver from his tent peg, but had received 4 wounds before he could use it. He rushed out of the tent to Lieutenant Holcombe's assistance, and after a minute's firing the Nagas left the camp.

He says that two minutes after the signal shout was given there was not a Naga in the camp, and 78 dead and 51 wounded men were lying on the ground.

The camp at the moment of attack was entirely unarmed, the men were either finishing their food or rolling up their bedding, most of them being without their guns, and those who had them by them had no time to use them.

A large proportion of men were struck on the back of the neck.

No killed or wounded Nagas were found in the camp, for it is a point of honor for the nearest man to carry away the body of a friend who is killed or wounded, so as to save the head which is a great trophy.

The Naga dhao is a two-handed hatchet beautifully sharpened.

After the Nagas had left the camp Capt. Badgley (although wounded on the thigh) looked after the wounded and collected them, and the men not being willing to storm the village after such a massacre he decided upon retreating with his wounded.

He first emptied all the ammunition pouches and divided the cartridges and ammunition boxes among the unwounded men, and with his 66 unwounded he carried his 51 wounded and formed a guard. Too much praise cannot be given him for the way he brought these men down, for they marched the whole of that day and night without rest or food, harassed the whole time by the enemy. Here Capt. Badgley's wound began to get stiff and painful, so considering that he was out of the way of the hostile Nagas he determined upon forming a camp until succour could be obtained from Debrooghur. Fortunately his dak-walla came up and being a strong man he carried him down to Jeypore, which place they reached on February 6th.

The men were carried down in baskets made of bamboo, split and fastened at the bottom and a seat placed in the middle forming a beautiful chair which could easily be carried on the back of a Khosia coolie who carry weights by means of a band round their forehead.

The news reached Debrooghur on the morning of the 6th. I was ordered up and reached Jeypore on the afternoon of that day. I found that the wounds had not been touched, the state they were in was really awful. On taking of each kupra large gaping sloughing wounds were disclosed with a smell I could hardly stand. I dressed them all and seeing there was a great scarcity of lint and bandages I considered it best to have all the wounded removed to Debrooghur.

On the 8th I had a dhoolie made, and took Captain Badgley and some of the slightly wounded men with me to Debrooghur, which place we arrived at on the 10th. I sent out two Native Doctors to look after the remainder of the wounded on their passage down.

On the 11th I started to meet them, but hearing that they had not left Jeypore I returned, not liking to leave the station for so long.

All the men arrived on the 13th.

One man died on the way down, and two sepoys died in hospital 3 days after admission.

The rest of the wounded are getting on better than one could have expected from the terrible wounds received.

The men say that had it not been for the skilful retreat of Captain Badgley no one would have been left to tell the tale.

The Native Doctor was killed at the surprise.

The following shows the strength of the survey party on the 1st of February before the attack at Ninu and on the 7th at Jeypore:—

	No. on 1st of February.	Killed on 7th February.	Wounded 2nd February.	Unwounded.

Total ...	197	80	51	66

1 Havildar and 1 Sepoy (44th) died on the march, and 1 Kalassie died at Jeypore.

1. Capt. Badgley.—Wound of the inner side of right thigh in exactly the position where one would make the incision for tying the femoral artery in Scarpa's triangle. The artery and the crural nerves were seen at the bottom.

This wound is about 3 inches long.

A wound on the outer part of thigh, 4 inches long, skin deep. A compound fracture of left ulna at its middle third; a slight wound of right arm.

2. M. R.—Wound of palm of right hand almost severing the index finger and the thumb with its metacarpal bone (very severe.)

Wound of left hand cutting through half the hand (the metacarpal bones of little and ring fingers) the wound extending more along the back than the palm of hand (very severe.)

Three wounds of left side of head, one of these extended from behind the left ear to two inches below the jaw. This man died in hospital at Debrooghur.

3. A severe wound on the back of neck extending more to the left. This was done with an upward cut of the dhao.

A wound of 1½ inch on his left shoulder.

4. D. B. T.—A wound 3 inches long at the back of right ear exposing the mastoid cells, the hole in the skull would have admitted the top of the ring finger.

5. K. R.—Two slight wounds on left forearm and one on the top of head.

6. K. D.—Horizontal deep wound on the lower part of back of neck.

7. J. B. R.—A wound of back of right shoulder and a nasty wound of the left ring finger. This man has several small wounds.

8. K. R.—A very severe wound 3½ inches long, a little to the left of top of head cutting through the skull and exposing the brain. If the dhao had gone ⅛ inch further the piece must have been detached. This is a beautiful specimen of a clean cut.

9. B. S. R.—Long wound of top of head (severe) a wound of the back of left hand cutting into the metacarpo-phalangeal joint of little, ring and middle finger.

10. R. F. R.—A wound of back of neck severing all the muscles. Two wounds of left side of head. This man had symptoms of compression and died in hospital at Debrooghur.

11. J. B. R.—Two wounds on back of right shoulder.

12. G. B.—Wound of ball of left thumb.

Coolies, &c.

1. S. M.—Three long cuts on top of head and one very deep upward cut on back of neck.

2. O.—Long cut on forehead and one on right shoulder.

3. U.—A slice was taken off this man's forehead, exposing the brain, and a deep vertical cut 5 inches long into the muscles of the left side of back.

4. P.—A deep wound extending from the outer side of left eyebrow across the top of nasal bone, exposing the frontal sinuses, cutting through the upper eyelid into the right eye and terminating on the right malar bone.

5. S.—A horizontal wound on the outside of left heel almost severing it. A punctured wound of left calf. A cut almost severing the right ear at its base. A fracture of left forearm and several fingers cut. A long skin deep wound on back.

6. U.—A compound fracture of right forearm. A severe wound of right side of head, slicing off a bit of the parietal bone.

7. U.—Severe wound of right side of back and one severing the lower portion of triceps of right arm.

8. M.—A severe cut on top of head and back of neck. A deep wound of left buttock.

9. U.—A severe wound of arm left separating the outer condyle. A bad cut of upper left arm, also one of the shoulder.

A vertical cut on left side of face cutting into the superior maxilla. A cut on the outside of upper part of thigh down to the bone. A slight wound on the top of head 2½ inches long.

10. T.—Three cuts on right side of head, one severe.

11. U.—A deep cut on the back of neck. A slight one on right side of face. A vertical deep cut on right side of back and one on the left thigh.

12. U.—A vertical cut over left side of jaw, 2 inches long.

13. U.—Wound of back of left arm.

14. B.—A deep wound on right side of neck and a slight one of right shoulder.

15. U.—A deep cut on side of upper part of left hip.

16. U.—A deep cut on inner side of the right tuber ischii.

17. M.—Compound fracture of right forearm. Wound of right arm.

18. J.—A skin deep wound on back of neck.

19. U.—A slight wound of right breast and left index finger.

20. P.—Slight wound of right side of back.

21. A.—Wound of left side of lower jaw and top of head.

22. L. B.—A wound of posterior fold of the axilla severing the latissimus dorsi. A deep wound just above the crest of left ilium anteriorly, not penetrating the abdomen.

23. U.—Three cuts on the top of head and one slight one on the side.

24. U.—Two slight cuts on head.

25. A.—A slight cut on outer corner of left eye, which stunned him and he fell with both his feet in the fire, where he remained for sometime and suddenly came too with a shriek. Both his feet and legs were burnt like a piece of charcoal. When I saw this man at Jeypore he was delirious and so near death that I decided upon not operating. I should have had to have amputated at both knee joints.

26. S.—Slight cut on head.

27. J.—Slight cut on right shoulder.

28. D.—Slight cut on back of head.

29. G. S.—Slight cut on left shoulder.

These are all the wounded men who were in hospital when I arrived at Jeypore, there were some more slightly wounded, but they needed no treatment.

I dressed them all with water, and on arrival at Debrooghur used carbolic oil 1-8. At present all the wounds are looking beautifully healthy. The men eat well and are cheerful.

I hope to have no more deaths. Two sepoys died in hospital, and one Khitmutgar on the way down from Jeypore.

H. K. McKay,
Surgeon in officiating charge of 44th S. L. I.

"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley, for the above named Pills, for wind in the stomach, from which I suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted. —I am, Sir, yours truly, HENRY ALLPASS.—To the Proprietors of NORTON'S CAMOMILE PILLS."

DESIGNS FOR CANNING COLLEGE LUCKNOW.

COMPETITIVE designs are invited for the proposed Canning College at Lucknow, estimated to cost one lac and twenty thousand Rupees, including out-offices. The building, including Verandahs, will cover about 23,000 feet, to be distributed as detailed below :—

	Including walls.	S. feet.
Examination Hall, ...	100 × 60 =	6,000
Eight class rooms	160 × 60 =	9,600
European Professors, ...	25 × 30 =	750
Principal	25 × 30 =	750
Native Professors	25 × 30 =	750
Bath rooms	10 × 30 =	300
Office	25 × 30 =	750
Library	60 × 30 =	1,800
Graduates' room	25 × 30 =	750
Total ...		21,450
Add for Verandahs &c. ...		1,550
Grand total, Superficial feet,		23,000

The building will be erected contiguous to the Kaisur Bagh buildings, and the character of the design must be in general keeping with the architectural features of these buildings.

A premium of Rs. 2,500 will be paid to the successful competitor in one sum on the submission of the general drawings—plans, elevations and sections with specification and approximate Estimate, together with the working and detailed drawings.

The plan of the site, photographs of the adjacent buildings, and other particulars will be available for intending competitors on application at the office of the Superintending Engineer, Public Works Department, Oudh. Each design will bear a distinguishing mark, device or motto, and the same, with name and address of each competitor in a separate sealed cover, will be forwarded to the address of the Superintending Engineer, Public Works Department, Oudh, Lucknow, with the designs, which will be received up to 1st June 1875, and to no later date.

BRITISH INDIA STEAM NAVIGATION COMPANY "LIMITED."

The following are the movements of the Company's steamers during March and April, 1875.

From Calcutta.

For *Chittagong*, *Akyab* and *Kyouk Phyoo*, 22nd March, 5th and 19th April.

,, *Akyab* and *Rangoon*, 15th and 29th March, 12th and 26th April.

,, *Rangoon* and *Moulmein*, 15th and 29th March, 12th and 26th April.

,, *Singapore*, calling at *Rangoon*, *Moulmein*, *Penang* and *Malacca*, 22nd March, 5th and 19th April.

,, *Port Blair* and *Camorta*, 24th March and 21st April.

,, *Bombay*, calling at *False Point*, *Gopaulpore*, *Bimlipatam*, *Vizagapatam*, *Coconada*, *Madras*, *Pondicherry*, *Negapatam*, *Galle*, *Colombo*, *Tuticorin*, *Alleppey*, *Cochin*, *Beypore*, *Calicut*, *Tellicherry*, *Cannanore*, *Mangalore* and *Carwar*, 11th, 18th and 25th March, 1st, 8th, 15th, 22nd and 29th April, receiving cargo for *Kurrachee*, *Guador*, *Muscat*, *Bunder Abbas*, *Linga*, *Bushire*, *Fao*, *Bussorah* and *Baghdad*, to be transshipped at *Bombay* to steamer leaving for the *Persian Gulf* immediately after arrival of steamer from Calcutta. *Baghdad* cargo transferred at *Bussorah* to steamers of the Euphrates and Tigris Steam Navigation Company.

From Calcutta.

For *London*, 26th March.

From Madras.

For *Rangoon*, calling at *Masulipatam*, *Coconada*, *Vizagapatam* and *Bimlipatam*, returning to *Madras viâ* same ports; 17th and 31st March, 14th and 28th April.

From Bombay.

,, *Kurrachee* only 15th, 22nd and 29th March, 6th, 9th, 12th, 19th and 26th April.

,, *Kurrachee*, *Guador*, *Muscat*, *Bunder Abbas*, *Linga*, *Bushire*, *Fao* and *Bussorah*, receiving cargo for *Baghdad*;

,, *Calcutta*, calling at same ports as the steamers from Calcutta, 12th, 19th and 26th March, 2nd, 9th, 16th, 23rd and 30th April.

From Aden.

For *Zanzibar*, 26th March and 23rd April.

From Zanzibar.

For *Aden*, 11th March and 10th April.

,, *Mayotte* and *Nossi Bé*, 6th April, arriving at *Zanzibar* on the return trip 24 hours before the departure of the steamer for *Aden*.

ESTABLISHED IN 1820.

C. LAZARUS AND CO.

(Incorporated with Shearwood & Co.,)

CABINET MAKERS, UPHOLSTERERS,

Billiard Table Manufacturers,

BY APPOINTMENT

To His Excellency the Viceroy and Governor-General of India,

AND

His Royal Highness the Duke of Edinburgh

CALCUTTA.

THE NEW PATENT

ELECTRIC BILLIARD MARKER.

C. LAZARUS & Co. beg to draw the attention of Clubs, Messes, and the public in general, to this wonderful and very ingenious adaptation of the great principle of

ELECTRICITY

As applied to the noble recreation of

BILLIARDS.

One of the greatest inconveniences attendant on this scientific game and the one most felt by players, is the interruption to play by having continually to run to the wall marking board to mark the score, and the liability to mistakes in so marking. By this new invention mistakes are impossible, and annoyances and inconveniences are done away with, and the interest in the game is doubled. *Every player can now mark his score without leaving the table and from the cushion he is standing near.*

The apparatus itself is so simple in construction, that an Amateur can put it together in half an hour, without the assistance of an Electrician. The Battery will last for months, without being refilled, and when it needs to be renewed can be done at any time, for a few annas.

The extreme simplicity of the ELECTRIC MARKER and the low charge for the same will, C. L. & Co., are satisfied, make it as popular with the Billiard-playing community of India and the East, as it has already become in England and on the Continent. C. L. & Co. have at present only a very limited supply of the ELECTRIC MARKERS, but are expecting fresh consignments shortly. Meanwhile all orders will be registered for execution.

The MARKERS can be seen in full work, and all particulars may be ascertained from C. L. & Co., who have been appointed by the Patentees sole Agents for India and the East. They cannot therefore be procured elsewhere.

MIRRORS.

THE Mirror has undoubtedly, in this Country, long been esteemed and sought after as a beautiful and Appropriate Embellishment to the Indian Mansion. Knowing that Mirrors hold such an important position in Decorative Art, C. Lazarus & Co. have made arrangements for the supply of Mirrors from the most celebrated manufacturers. They have just received, and have now on view at their show rooms,

A Magnificent and most varied Assortment of

Plate Glass Mirrors,

Of every design and size, by far

THE HANDSOMEST AND LARGEST

Ever imported into this Country, and which for brilliancy of reflective power, truthfulness of reproduction, and Style of Mounting have never been surpassed. The Silvering also of these Plates is on a new and most approved principle, not so liable to deterioration as the old method of Mercurial Silvering.

C. L. & Co. earnestly and respectfully solicit an inspection, satisfied that, what they would here desire to pronounce, *viz.*,—An opinion on the Intrinsic Excellence of the Mirrors, will be better done by those who may favour them with a visit than by any description in a trade Advertisement, which must of necessity fail to convey to the mind an adequate idea of these really superb works of Decorative Art.

In order to effect a speedy sale with a view to further importations, C. L. & Co. are prepared to offer these Mirrors to the Public at exceptionally low rates, being in fact very little over manufacturer's prices.

Billiard Tables.

The numerous flattering testimonials received by C. LAZARUS & Co. from all parts of India, China Burma, Persia, Java, Ceylon and the Straits, prove that their tables are now considered the best manufactured and are the only ones appreciated in the places enumerated.

(213)

DR. J. COLLIS BROWNE'S CHLORODYNE.

THE ORIGINAL AND ONLY GENUINE.

ADVICE TO INVALIDS.—If you wish to obtain quiet, refreshing sleep, free from headache, relief from pain and anguish, to calm and assuage the weary aching of protracted disease, invigorate the nervous media, and regulate the circulating systems of the body, you will provide yourself with that marvellous remedy discovered by Dr. J. COLLIS BROWNE (late Army Medical Staff, Member of the College of Physicians, London,) to which he gave the name of

CHLORODYNE,

And which is admitted by the Profession to be the Most Wonderful and Valuable Remedy ever discovered.

CHLORODYNE is the best remedy known for Coughs, Consumption, Bronchitis, Asthma.
CHLORODYNE effectually checks and arrests those too often fatal diseases—Diptheria, Fever, Croup, Ague.
CHLORODYNE acts like a charm in Diarrhœa, and is the only specific in Cholera and Dysentery.
CHLORODYNE effectually cuts short all attacks of Epilepsy, Hysteria, Palpitation, and Spasms.
CHLORODYNE is the only palliative in Neuralgia, Rheumatism, Gout, Cancer, Toothache, Meningitis, &c.

CAUTION.—BEWARE OF PIRACY AND IMITATIONS.

From LORD FRANCIS CONYNGHAM, Mount Charles, Donegal, Dec. 11th, 1868 :—"Lord Francis Conyngham. who this time last year bought some of Dr. J. Collis Browne's CHLORODYNE from Mr. Davenport, and has found it a most wonderful medicine, will be glad to have half-a-dozen bottles sent at once to the above address."

*** EARL RUSSELL *Communicated to the College of Physicians that he had received a despatch from Her Majesty's Consul at Manilla, to the effect that Cholera has been raging fearfully, and that the* ONLY REMEDY *of any service was* CHLORODYNE.—*See Lancet, Dec.* 31. 1864.

J. LOWE, M. R. C. S. E., Missionary in India, states—"In nearly every case of Cholera in which Dr. J. Collis Browne's CHLORODYNE has been administered in the earlier stages of the attack the patient has recovered. Every traveller in India should carry a supply."

Extracts from the GENERAL BOARD OF HEALTH, LONDON, as to its efficacy in Cholera :—"First Stage or Premonitory. In this stage the remedy acts as a *charm*. One dose is generally sufficient.

From DR. THOMAS SANDIFORD, Passage West Cork :—"I will thank you to send me a further supply of CHLORODYNE. It was the most efficacious remedy I ever used, affording relief in violent attacks of Spasms within a minute after being taken. One patient in particular, who has suffered for years with periodical attacks of Spasms of a most painful nature, and unable to obtain relief from other remedies, such as opium, &c., finds nothing so prompt and efficacious as CHLORODYNE."

DR. M. MILLMAN, of New Galloway, Scotland :—"I consider it the most valuable medicine known."

DR. GIBBON, Army Medical Staff, Calcutta :—"Two doses completely cured me of Diarrhœa."

From DR. B. J. BOULTON & CO., Horncastle :—"We have made pretty extensive use of CHLORODYNE in our practice lately, and look upon it as an excellent Sedative and Anti-spasmodic. It seems to allay pain and irritation in whatever organ, and from whatever cause. It induces a feeling of comfort and quietude not obtainable by any other remedy, and it seems to possess this great advantage over all other Sedatives, that it leaves no unpleasant after-effects.

CAUTION.—VICE-CHANCELLOR SIR W. PAGE WOOD stated that Dr. J. COLLIS BROWNE was undoubtedly the Inventor of CHLORODYNE; that the story of the defendant, FREEMAN, was deliberately untrue, which, he regretted to say, had been sworn to.—See *Times*; July 13, 1864.

Sold in Bottles, at 1*s.* 1½*d.*, 2*s.* 9*d.*, 4*s.* 6*d.*, and 11*s.* each. None is genuine without the words "Dr. J. COLLIS BROWNE'S CHLORODYNE" on the Government Stamp. Overwhelming Medical Testimony accompanies each bottle.

Sole Manufacturer—J. T. DAVENPORT, 33, Great Russell Street, Bloomsbury, London.

COOLING, REFRESHING & INVIGORATING

Are the effects of

ROWLANDS' KALYDOR

On the face and skin of all exposed to the scorching Sun, and suffering from prickly heat, sunburn, freckles, and cutaneous eruptions for which it is a complete cure.

ROWLANDS' MACASSAR OIL

Prevents the hair falling off or turning grey, eradicates scurf and dandriff, strengthens weak hair and makes it beautifully soft, pliable and glossy.

ROWLANDS' ODONTO

Whitens and preserves the teeth, prevents and arrests their decay, strengthens the gums and gives a pleasing fragrance to the breath.

ROWLANDS' ESSENCE OF TYRE

Produces immediately a perfect change in red or grey hair, whiskers and eyebrows, to a glossy and permanent brown or black, which colour neither washing or perspiration will remove. **GREAT CARE** must be taken to ask for Rowlands' Articles of 20, Hatton Garden, London, and to see that their signature, A. ROWLAND & SONS, is in RED ink on the wrapper of each, no others being genuine. Sold by all chemists, perfumers, druggists, and at all Bazaars throughout India.

The Rangoon Medical Hall.

(135)

UNIVERSAL LIFE ASSURANCE SOCIETY.

ESTABLISHED IN THE YEAR 1834.

Head Office, 1, *King William Street, London.*

Insurances effected with or without participation in profits.

Committee of Management, Indian Branch, Calcutta.

CECIL STEPHENSON, Esq., East Indian Railway Co.
WILLIAM THOMAS BERNERS, Esq., of Messrs. Ashburner & Co.
GEORGE MILLER, Esq., of Messrs. Hoare, Miller & Co.
JAMES WALTER LOWE, Esq., Barrister-at-Law.
JOHN MATHESON LYALL, Esq., of Messrs. Lyall, Rennie & Co.

ASSURERS under the participating scale share in the Society's profits after six years' premia have been paid, and thus receive back each and every year thereafter, either in the form of an addition to the original sum assured, or of a reduction of the next year's premium, at their option, a Bonus, the amount of which is governed by the annual valuation of the Society's Assets and Liabilities.

This principle was adopted on the establishment of the Society in 1834, and it is manifest that on a business where *stability* is the first necessity, an undeviating rule which limits the distribution of all profits to the existing condition of the Society's affairs in each year, is the true and *only principle on which stability can be guaranteed*, whilst the assured are relieved from the payment of any higher premium than is absolutely necessary from year to year to maintain that stability.

During the past eleven years, Policy-holders so assured in the Universal Life Assurance Society have been thus relieved to the extent of 50 *per cent. of their yearly Premium*, the sum allotted for Bonuses this year being £34,065.

Medical Adviser:

DR. T. EDMONSTON CHARLES, 10, Harrington Street.

Hour of attendance—10 A.M.

Capital	...	£500,000-0-0.
Available Funds	...	£971,942-10-10.

Agents and Secretaries,
40, Strand, Calcutta.

(463)

COLT'S NEW GOVERNMENT ARMY REVOLVER,

as recently adopted for the United States Cavalry, takes the ·450 central fire service Boxer Cartridge. It equals a rifle in range and in accuracy of fire, and is unequalled for durability of construction. It can be easily loaded and unloaded when dark, and can be carried with perfect safety when loaded. It far surpasses in efficiency and quality of make the numerous cheap pistols of various make which now flood the market.

COLT'S LARGE BORE BREECH-LOADING DERINGER,

for the waistcoat pocket, shoots hard and straight.

COLT'S DERINGER REVOLVER,

for personal and house defence, fires a larger ball than any other Revolver of the same weight and size.

To be had through any respectable Gunmaker or Dealer in Arms, or from

Colt's Fire Arms Manufacturing Company,

14, PALL MALL, LONDON, S. W.

(335)

ESTABLISHED 1840.

CHURCH OF ENGLAND.

LIFE ASSURANCE INSTITUTION.

HEAD OFFICE, 9 & 10, KING STREET, CHEAPSIDE, LONDON.

Empowered by Special Act of Parliament, 4 & 5, Victoria, Cap. XCII.

CAPITAL—ONE MILLION.

(A list of Proprietors periodically enrolled in the High Court of Chancery).

ALL BILIOUS COMPLAINTS

And every Disorder depending on either *Functional Derangement* of the LIVER or *Obstruction of the Hepatic* or *Biliary Ducts*, such as INDIGESTION, JAUNDICE, HEARTBURN, DYSPEPSIA, PAIN IN THE RIGHT SIDE AND SHOULDER, BLOTCHES, HABITUAL COSTIVENESS, OFFENSIVE BREATH, DEPRESSION OF SPIRITS, OPPRESSION AFTER MEALS, NERVOUS AND GENERAL DEBILITY, RESTLESSNESS, WASTING, &C., &C., &C., have their appropriate Remedy in

Dr. E. J. LAZARUS'S

ESSENCE OF CHIRETTA.

That it is the only Preparation that has a *really beneficial* influence on the LIVER has already been proved, *beyond all doubt*, by the 97,500 CASES in which it has been tried. It has already saved *thousands* of valuable lives [*see the numberless Testimonials in the Pamphlet of Directions that is wrapped round each bottle*], and has enabled very many thousands more to continue their residence in India in the enjoyment of perfect health and comfort; hence it has, with all truth, been generally styled

THE GREAT INDIAN REMEDY.

Prepared only by Messrs. E. J. LAZARUS & Co., at the MEDICAL HALL, BENARES, from the Original Receipt of E. J. LAZARUS, M.D., and sold by all Medicine Vendors at 4 Rs. each bottle.

CAUTION.—We have a host of unscrupulous imitators—*an indubitable proof of its value*—against whom the Public are warned. Please observe that every bottle is capsuled, and bears on its labels the facsimile of our signature.

(2)

LEA & PERRINS'

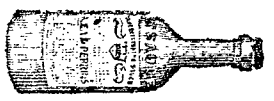
CELEBRATED

WORCESTERSHIRE SAUCE,

DECLARED BY CONNOISSEURS

TO BE

THE ONLY GOOD SAUCE.



CAUTION AGAINST FRAUD.

The success of this most delicious and unrivalled Condiment having caused certain dealers to apply the name of "Worcestershire Sauce" to their own inferior compounds, the Public is hereby informed that the only way to secure the genuine is to

ASK FOR LEA & PERRINS' SAUCE,

and to see that their names are upon the *wrapper, labels, stopper*, and *bottle*.

Some of the foreign markets having been supplied with a spurious Worcestershire Sauce, upon the wrapper and labels of which the names of Lea and Perrins have been forged, L. and P. give notice that they have furnished their correspondents with power of attorney to take instant proceedings against *Manufacturers* and *Vendors* of such, or any other imitations by which their right may be infringed.

Ask for LEA & PERRINS' Sauce, and see Name on Wrapper, Label, Bottle, and Stopper.

Wholesale and for Export by the Proprietors, Worcester; Crosse and Blackwell, London, &c., &c.; and by Grocers and Oilmen universally.

To be obtained of

BISSONAUTH LAW & CO.,

(339) *Calcutta.*

TESTS FOR SELECTION OF A LIFE OFFICE.

The Tests recommended by the Board of Trade.

"Taking insurance business as it exists in this country, the public cannot be misled if, when seeking an office in which to effect an insurance, they select one which transacts its business at a small percentage of working cost, and does not anticipate its profits."—*Extract from Report by the Assistant Secretaries to the Board of Trade, ordered to be printed by the House of Commons.*

How these Tests are fulfilled by the "Royal."

"It is exceedingly satisfactory to see that, *of all the English provincial offices, and all the Scotch offices, the Royal's ratio of expenses to its income is the lowest,* and to complete the requirements of the official standard that it may be added that the Company has *never anticipated a single shilling of profit.*"—*Extract from the Speech of the Chairman at the Annual Meeting, 7th August,* 1874.

Terms of Proposal, Tables of Rates, &c., forwarded on application to

PEEL, JACOB & CO., Agents,

ROYAL INSURANCE COMPANY.

CALCUTTA.
